**Court Approves Liquidmetal® Technologies Class Action Settlement**

**LAKE FOREST, Ca. October 20th, 2006-Liquidmetal® Technologies, Inc. (OTCBB: LQMT)** announced today that the federal judge presiding over the consolidated class action entitled *Primavera Investors v. Liquidmetal Technologies, Inc., et al.*, which was pending in the United States District Court for the Middle District of Florida, has approved the previously-disclosed settlement of the class action. In connection with the settlement, Liquidmetal's directors and officers' liability insurers contributed \$7,025,000 to a settlement fund, from which claims of eligible class members will be paid in accordance with a Court-approved plan of allocation.

The consolidated class action arose from a number of lawsuits filed in 2004 under the federal securities laws against Liquidmetal and certain of its former and current directors and officers. The class action settlement is part of a previously-disclosed agreement to settle the class action and two pending derivative actions, which were also filed in 2004 based upon the same facts and circumstances underlying the class action, for a total of \$7.5 million: \$7,025,000 for the consolidated class action, and \$475,000 for the two derivative actions. In addition, Liquidmetal will commit to maintain or implement various corporate governance measures in connection with the settlement of the derivative actions. Final documentation and approval of the settlement of the derivative actions remains outstanding.

**About Liquidmetal Technologies**

Liquidmetal Technologies ([www.liquidmetal.com](http://www.liquidmetal.com)) is the leading developer, manufacturer, and marketer of products made from amorphous alloys. Amorphous alloys are unique materials that are characterized by a random atomic structure, in contrast to the crystalline atomic structure possessed by ordinary metals and alloys. Bulk Liquidmetal® alloys are two to three times stronger than commonly used titanium alloys, harder than tool steel, and relatively non-corrosive and wear resistant. Bulk Liquidmetal alloys can also be molded into precision net-shaped parts similar to plastics, resulting in intricate and sophisticated engineered designs. Liquidmetal Technologies is the first company to produce amorphous alloys in commercially viable bulk form, enabling significant improvements in products across a wide array of industries. The combination of a super alloy's performance coupled with unique processing

advantages positions Liquidmetal alloys for what the company believes will be The Third Revolution in material science.

(f) **Enforcement and Remedies.** In the event of any breach of any of the covenants set forth in this Section 6, the Consultant recognizes that the remedies at law will be inadequate and that in addition to any relief at law which may be available to the Company for such violation or breach and regardless of any other provision contained in this Agreement, the Company shall be entitled to equitable remedies (including an injunction) and such other relief as a court may grant after considering the intent of this Section 6. Additionally, the period of time applicable to any covenant set forth in this Section 6 will be extended by the duration of any violation by the Consultant of such covenant. **Liquidmetal® Technologies Announces Change to Board of Directors**

**Lake Forest, Ca. October 24th, 2006** Liquidmetal® Technologies Inc. (LQMT.OB) today announced the addition of retired General Patrick P. Caruana to the Liquidmetal Technologies board of directors. Caruana, a retired United States Air Force General and a recently retired vice president for Northrop Grumman Space Technology, a 29 billion dollar global defense enterprise, replaces Liquidmetal Technologies company founder James Kang, resulting in the creation of a board that has a majority of independent members.

New board member Caruana is a 36 year veteran of the U.S. Air Force retiring as a Lieutenant General. During that time he served in a full range of leadership and staff positions, including an air campaign planner and commander during the first Gulf War, directing the combat operations of twelve aircraft wings in six nations and the Indian Ocean. Mr. Caruana was also responsible for the oversight of several large development and procurement programs while supporting the Office of the Assistant Secretary of the Air Force for Acquisition at the Pentagon. He completed his military service in a capacity responsible for all of the space and missile operations of the U.S. Air Force at Air Force Space Command, in Colorado Springs, Colorado. A graduate of the U.S. Air Force Academy where he earned a Bachelor's degree in engineering, Caruana received a Master of Science degree in mathematics from Texas A&M University. Mr. Caruana is the former Northrop Grumman Corporate lead for Missile and space Defense business development in the Asia market, and he is currently a consultant with Northrop Grumman Space Technology.

Chairman, John Kang, stated, "We are excited to have General Caruana join our board. His experience and knowledge of the military as well as his wisdom in running a large organization will be a tremendous asset for the company. With the recent addition of new company President and CEO Larry Buffington, who has a history of growing companies, and General Caruana's addition to the board, Liquidmetal is well positioned for the next phase.

The resignation on the part of James Kang now aligns the Liquidmetal Technologies board of directors with four independent members, Dean Tanella, Bobb Biehl, CK Cho and Patrick Caruana, and two inside board members, John Kang and Professor William Johnson, the creator of the Liquidmetal alloy. James

Kang will provide consulting services to the Company as he advises the management on the future of the technology and manufacturing.

#### **About Liquidmetal Technologies**

Liquidmetal Technologies ([www.liquidmetal.com](http://www.liquidmetal.com)) is the leading developer, manufacturer, and marketer of products made from amorphous alloys. Amorphous alloys are unique materials that are characterized by a random atomic structure, in contrast to the crystalline atomic structure possessed by ordinary metals and alloys. Bulk Liquidmetal® alloys are two to three times stronger than commonly used titanium alloys, harder than tool steel, and relatively non-corrosive and wear resistant. Bulk Liquidmetal alloys can also be molded into precision net-shaped parts similar to plastics, resulting in intricate and sophisticated engineered designs. Liquidmetal Technologies is the first company to produce amorphous alloys in commercially viable bulk form, enabling significant improvements in products across a wide array of industries. The combination of a super alloy's performance coupled with unique processing advantages positions Liquidmetal alloys for what the company believes will be The Third Revolution in material science.
