(Name, telephone, e-mail and/or facsimile number and address of company contact person)

Securities registered or to be registered pursuant to Section 12(b) of the Act:

Title of Each Class	Name of Each Exchange on Which Registered
American Depositary Shares, each representing 2 Ordinary Shares, 5 pence par value each	New York Stock Exchange
Ordinary Shares, 5 pence par value each	New York Stock Exchange*
6.75% Perpetual Subordinated Capital Securities Exchangeable at the Issuer's Option into Non-Cumulative Dollar Denominated Preference Shares	New York Stock Exchange
6.50% Perpetual Subordinated Capital Securities Exchangeable at the Issuer's Option into Non-Cumulative	New York Stock Exchange

Dollar Denominated Preference Shares

Securities registered or to be registered pursuant to Section 12(g) of the Act:

None

Securities for which there is a reporting obligation pursuant to Section 15(d) of the Act:

None

The number of outstanding shares of each of the issuer's classes of capital or common stock as of 31 December 2014 was:

2,567,779,950 Ordinary Shares, 5 pence par value each

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act.

Yes No

If this report is an annual or transition report, indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or 15(d) of the Securities Exchange Act of 1934.

Yes No

Indicate by check mark whether the registrant: (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports) and (2) has been subject to such filing requirements for the past 90 days.

Yes No

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web sites, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§ 232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files).

Yes No

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, or a non-accelerated filer. See definition of "accelerated filer and large accelerated filer" in Rule 12b-2 of the Exchange Act. (Check one):

Large accelerated filer Accelerated filer Non-accelerated filer

Indicate by check mark which basis of accounting the registrant has used to prepare the financial statements included in this filing:

U.S. GAAP International Financial Reporting Standards as issued by the International Accounting Standards Board Other

If Other has been checked in response to the previous question, indicate by check mark which financial statement item the registrant has elected to follow:

Item 17 Item 18

If this is an annual report, indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act).

Yes No

* Not for trading, but only in connection with the registration of American Depositary Shares.

As used in this document, unless the context otherwise requires, the terms "Prudential", "the Group", "we", "us" and "our" refer to Prudential plc, together with its subsidiaries, while the terms "Prudential plc", "the Company" or "the parent company" each refer to Prudential plc.

Limitations on Enforcement of US Laws against Prudential, its Management and Others

Prudential is an English public limited company. Most of its directors and executive officers are resident outside the United States, and a substantial portion of its assets and the assets of such persons are located outside the United States. As a result, it may be difficult for you to effect service of process within the United States upon these persons or to enforce against them or Prudential in US courts judgments obtained in US courts predicated upon the civil liability provisions of the federal securities laws of the United States. We believe that there may be doubt as to the enforceability in England and Wales, in original actions or in actions for enforcement of judgments of US courts, of liabilities predicated solely upon the federal securities laws of the United States.

Table of Contents**Item 3. Key Information****Selected Historical Financial Information of Prudential**

The following table sets forth selected consolidated financial data for Prudential for the periods indicated. Certain data is derived from Prudential's audited consolidated financial statements prepared in accordance with International Financial Reporting Standards (IFRS) as issued by the International Accounting Standards Board (IASB) and as endorsed by the European Union (EU). EU-endorsed IFRS may differ from IFRS as issued by the IASB if, at any point in time, new or amended IFRSs have not been endorsed by the EU. As at 31 December 2014, there were no unendorsed standards effective for the years presented below affecting the consolidated financial information of Prudential and there were no differences between IFRSs endorsed by the EU and IFRSs issued by the IASB in terms of their application to Prudential. Accordingly, the selected consolidated financial data presented below that is derived from Prudential's audited consolidated financial statements is derived from audited consolidated financial statements prepared in accordance with IFRS as issued by the IASB. This table is only a summary and should be read in conjunction with Prudential's consolidated financial statements and the related notes included elsewhere in this document, together with Item 5, Operating and Financial Review and Prospects.

Income statement data

	Year ended 31 December

Equivalent cents per share ⁽⁶⁾		58.44¢	50.58¢	40.68¢	40.39¢	30.15¢
Market price per share at end of period ⁽⁷⁾	2,324.2¢	1,492.0p	1,340.0p	865.5p	638.5p	668.0p
Weighted average number of shares (in millions)		2,549	2,548	2,541	2,533	2,524
New business:						
Single premium sales ⁽⁴⁾	38,179	24,508	22,976	22,358	18,889	18,177
New regular premium sales ⁽³⁾⁽⁴⁾	3,426	2,199	2,125	1,959	1,792	1,667
Funds under management	772,669	496,000	443,000	406,000	352,000	340,000

(1) Amounts stated in US dollars in the 2014 US dollar column have been translated from pounds sterling at the rate of \$1.5578 per £1.00 (the noon buying rate in New York City on 31 December 2014).

(2) This measure is the formal profit (loss) before tax measure under IFRS but is not the result attributable to shareholders. See Presentation of results before tax in note A3.1 to Prudential's consolidated financial statements in Item 18 for further explanation.

(3) New regular premium sales are reported on an annualised basis, which represents a full year of instalments in respect of regular premiums irrespective of the actual payments made during the year.

- (4) The new business premiums in the table shown above are provided as an indicative volume measure of transactions undertaken in the reporting period that have the potential to generate profits for shareholders. The amounts shown are not, and are not intended to be, reflective of premium income recorded in the IFRS income statement. Internal vesting business is classified as new business where the contracts include an open market option.

The details shown above for new business include contributions for contracts that are classified under IFRS 4 Insurance Contracts as not containing significant insurance risk. These products are described as investment contracts or other financial instruments under IFRS. Contracts included in this category are primarily certain unit-linked and similar contracts written in UK insurance operations and Guaranteed Investment Contracts and similar funding agreements written in US operations.

- (5) Under IFRS, dividends declared after the balance sheet date in respect of the prior reporting period are treated as a non-adjusting event. The appropriation reflected in the statement of changes in equity, therefore, includes the final dividend in respect of the prior year. Parent company dividends relating to the reporting period were an interim dividend of 11.19p per share in 2014 (2013: 9.73p, 2012: 8.40p) and a final dividend of 25.74p per share in 2014 (2013: 23.84p, 2012: 20.79p).
- (6) The dividends have been translated into US dollars at the noon buying rate on the date each payment was made.
- (7) Market prices presented are the closing prices of the shares on the London Stock Exchange on the last day of trading for each indicated period.

Table of Contents**Dividend Data**

Under UK company law, Prudential may pay dividends only if distributable profits of the holding company are available for that purpose. Distributable profits are accumulated, realised profits not previously distributed or capitalised less accumulated, realised losses not previously written off, on the applicable GAAP basis. Even if distributable profits are available, under UK law Prudential may pay dividends only if the amount of its net assets is not less than the aggregate of its called-up share capital and undistributable reserves (such as, for example, the share premium account) and the payment of the dividend does not reduce the amount of its net assets to less than that aggregate. For further information about the holding company refer to Schedule II. The financial information in Schedule II has been prepared under UK GAAP reflecting the legal basis of preparation of the Company's separate financial statements as distinct from the IFRS basis that applies to the Company's consolidated financial statements.

As a holding company, Prudential is dependent upon dividends and interest from its subsidiaries to pay cash dividends. Many of its insurance subsidiaries are subject to regulations that restrict the amount of dividends that they can pay to the Company. These restrictions are discussed in more detail in Item 4, Information on the Company Supervision and Regulation of Prudential UK Supervision and Regulation Regulation of Insurance Business Distribution of Profits and With-profits Business and Item 4, Information on the Company Supervision and Regulation of Prudential US Supervision and Regulation General .

Historically, Prudential has declared an interim and a final dividend for each year (with the final dividend being paid in the year following the year to which it relates). Subject to the restrictions referred to above, Prudential's directors have the discretion to determine whether to pay an interim dividend and the amount of any such interim dividend but must take into account the Company's financial position. The directors have discretion to recommend payment of a final dividend, such recommendation to be approved by ordinary resolution of the shareholders. The approved amount may not exceed the amount recommended by the directors.

The following table shows certain information regarding the dividends per share that Prudential declared for the periods indicated in pence sterling and converted into US dollars at the noon buying rate in effect on each payment date. Interim dividends for a specific year now generally have a record date in August and a payment date in September of that year, and final dividends now generally have a record date in the following March/April and a payment date in the following May.

Year	Interim Dividend (pence)	Interim Dividend (US Dollars)	Final Dividend (pence)	Final Dividend (US Dollars)
2010	6.61	0.1039	17.24	0.2818
2011	7.95	0.1221	17.24	0.2706
2012	8.40	0.1362	20.79	0.3143
2013	9.73	0.1558	23.84	0.4019
2014	11.19	0.1825	25.74	

The Board has decided to rebase the full year dividend upwards by 10 per cent, reflecting the 2014 financial performance of the Group. In line with this, the directors recommend a final dividend of 25.74 pence per share (2013: 23.84 pence), which brings the total dividend for the year to 36.93 pence (2013: 33.57 pence). This rebase has been made possible by the continued exceptionally strong performance of the Group.

Although the Board has been able to recommend such a rebase in 2014, the Group's dividend policy remains unchanged. The Board will maintain its focus on delivering a growing dividend from this new higher base, which will continue to be determined after taking into account the Group's financial flexibility and our assessment of opportunities to generate attractive returns by investing in specific areas of the business. The Board believes that in the medium term a dividend cover of around two times is appropriate.

Table of Contents**Exchange Rate Information**

Prudential publishes its consolidated financial statements in pounds sterling. References in this document to US dollars, US\$, \$ or ¢ are to US currency, references to pounds sterling, £, pounds, pence or p are to UK currency (100 pence to each pound) and references to euro or ¤ are to the single currency adopted by the participating members of the European Union. The following table sets forth for each year the average of the noon buying rates on the last business day of each month of that year, as certified for customs purposes by the Federal Reserve Bank of New York, for pounds sterling expressed in US dollars per pound sterling for each of the five most recent fiscal years. Prudential has not used these rates to prepare its consolidated financial statements.

Year ended 31 December	Average rate
2010	1.54
2011	1.61
2012	1.59
2013	1.56
2014	1.65

The following table sets forth the high and low noon buying rates for pounds sterling expressed in US dollars per pound sterling for each of the previous six months:

	High	Low
September 2014	1.65	1.61
October 2014	1.62	1.59
November 2014	1.60	1.56
December 2014	1.57	1.55
January 2015	1.54	1.50
February 2015	1.55	1.50

On 20 March 2015 the latest practicable date prior to this filing, the noon buying rate was £1.00 = \$1.49.

Table of Contents

Risk Factors

A number of risk factors affect Prudential's operating results and financial condition and, accordingly, the trading price of its shares. The risk factors mentioned below should not be regarded as a complete and comprehensive statement of all potential risks and uncertainties. The information given is as of the date of this document, and any forward-looking statements are made subject to the reservations specified below under "Forward-Looking Statements".

Risks relating to Prudential's business

Prudential's businesses are inherently subject to market fluctuations and general economic conditions

Prudential's businesses are inherently subject to market fluctuations and general economic conditions. Uncertainty or negative trends in international economic and investment climates could adversely affect Prudential's business and profitability. Since 2008 Prudential has operated against a challenging background of periods of significant volatility in global capital and equity markets, interest rates (which in some jurisdictions have become negative) and liquidity, and widespread economic uncertainty. For example, government interest rates remain at or near historic lows in the US, the UK and some Asian countries in which Prudential operates. These factors have, at times during this period, had a material adverse effect on Prudential's business and profitability.

In the future, the adverse effects of such factors would be felt principally through the following items:

investment impairments or reduced investment returns, which could reduce Prudential's capital and impair its ability to write significant volumes of new business, increase the potential adverse impact of product guarantees, or have a negative impact on its assets under management and profit;

higher credit defaults and wider credit and liquidity spreads resulting in realised and unrealised credit losses;

failure of counterparties to transactions with Prudential that could give rise to a negative impact on Prudential's financial position and on the accessibility or recoverability of amounts due or, for derivative transactions, adequate collateral not being in place;

estimates of the value of financial instruments being difficult because in certain illiquid or closed markets, determining the value at which financial instruments can be realised is highly subjective. Processes to ascertain such values require substantial elements of judgement, assumptions and estimates (which may change over time); and

increased illiquidity also adds to uncertainty over the accessibility of financial resources and may reduce capital resources as valuations decline.

Global financial markets are subject to uncertainty and volatility created by a variety of factors, including concerns over sovereign debt, general slowing in world growth, the timing and scale of quantitative easing programmes of central banks and socio-political events. Upheavals in the financial markets may affect general levels of economic activity, employment and customer behaviour. For example, insurers may experience an elevated incidence of claims,

lapses, or surrenders of policies, and some policyholders may choose to defer or stop paying insurance premiums. The demand for insurance products may also be adversely affected. In addition, there may be a higher incidence of counterparty failures. If sustained, this environment is likely to have a negative impact on the insurance sector over time and may consequently have a negative impact on Prudential's business and its balance sheet and profitability. For example, this could occur if the recoverable value of intangible assets for bancassurance agreements and deferred acquisition costs are reduced. New challenges related to market fluctuations and general economic conditions may continue to emerge.

For some non-unit-linked investment products, in particular those written in some of the Group's Asian operations, it may not be possible to hold assets which will provide cash flows to match those relating to policyholder liabilities. This is particularly true in those countries where bond markets are not developed and in certain markets where regulated surrender values are set with reference to the interest rate environment prevailing at the time of policy

Table of Contents

issue. This results in a mismatch due to the duration and uncertainty of the liability cash flows and the lack of sufficient assets of a suitable duration. While this residual asset/liability mismatch risk can be managed, it cannot be eliminated. Where interest rates in these markets remain lower than those used to calculate surrender values over a sustained period, this could have a material adverse effect on Prudential's reported profit.

In the US, fluctuations in prevailing interest rates can affect results from Jackson which has a significant spread-based business, with the majority of its assets invested in fixed income securities. In particular, fixed annuities and stable value products written by Jackson expose Prudential to the risk that changes in interest rates, which are not fully reflected in the interest rates credited to customers, will reduce spread. The spread is the difference between the rate of return Jackson is able to earn on the assets backing the policyholders' liabilities and the amounts that are credited to policyholders in the form of benefit increases, subject to minimum crediting rates. Declines in spread from these products or other spread businesses that Jackson conducts, and increases in surrenders levels arising from interest rate rises, could have a material impact on its businesses or results of operations.

Jackson also writes a significant amount of variable annuities that offer capital or income protection guarantees. The value of these guarantees is affected by market factors (such as interest rates, equity values, bond spreads and realised volatility) and policyholder behaviour. There could be market circumstances where the derivatives that Jackson enters into to hedge its market risks may not fully cover its exposures under the guarantees. The cost of the guarantees that remain unhedged will also affect Prudential's results.

Jackson hedges the guarantees on its variable annuity book on an economic basis and, thus, accepts variability in its accounting results in the short term in order to achieve the appropriate economic result. In particular, for Prudential's Group IFRS reporting, the measurement of the Jackson variable annuity guarantees is typically less sensitive to market movements than for the corresponding hedging derivatives, which are held at market value. However, depending on the level of hedging conducted regarding a particular risk type, certain market movements can drive volatility in the economic results which may be less significant under IFRS reporting.

A significant part of the profit from Prudential's UK insurance operations is related to bonuses for policyholders declared on with-profits products, which are broadly based on historical and current rates of return on equity, real estate and fixed income securities, as well as Prudential's expectations of future investment returns. This profit could be lower in a sustained low interest rate environment.

Prudential is subject to the risk of potential sovereign debt credit deterioration owing to the amounts of sovereign debt obligations held in its investment portfolio

Prudential is subject to the risk of potential sovereign debt credit deterioration on the amounts of sovereign debt obligations held in its investment portfolio. In recent years, rating agencies have downgraded the sovereign debt of some countries. There is a risk of further downgrades.

Investing in sovereign debt creates exposure to the direct or indirect consequences of political, social or economic changes (including changes in governments, heads of states or monarchs) in the countries in which the issuers are located and the creditworthiness of the sovereign. Investment in sovereign debt obligations involves risks not present in debt obligations of corporate issuers. In addition, the issuer of the debt or the governmental authorities that control the repayment of the debt may be unable or unwilling to repay principal or pay interest when due in accordance with the terms of such debt, and Prudential may have limited recourse to compel payment in the event of a default. A sovereign debtor's willingness or ability to repay principal and to pay interest in a timely manner may be affected by, among other factors, its cash flow situation, its relations with its central bank, the extent of its foreign currency reserves, the availability of sufficient foreign exchange on the date a payment is due, the relative size of the debt

service burden to the economy as a whole, the sovereign debtor's policy toward local and international lenders, and the political constraints to which the sovereign debtor may be subject.

Moreover, governments may use a variety of techniques, such as intervention by their central banks or imposition of regulatory controls or taxes, to devalue their currencies' exchange rates, or may adopt monetary and other policies (including to manage their debt burdens) that have a similar effect, all of which could adversely impact the value of an investment in sovereign debt even in the absence of a technical default. Periods of economic

Table of Contents

uncertainty may affect the volatility of market prices of sovereign debt to a greater extent than the volatility inherent in debt obligations of other types of issuers.

In addition, if a sovereign default or other such events described above were to occur, other financial institutions may also suffer losses or experience solvency or other concerns, and Prudential might face additional risks relating to any debt of such financial institutions held in its investment portfolio. There is also risk that public perceptions about the stability and creditworthiness of financial institutions and the financial sector generally might be affected, as might counter party relationships between financial institutions. If a sovereign were to default on its obligations, or adopt policies that devalue or otherwise alter the currencies in which its obligations are denominated this could have a material adverse effect on Prudential's financial condition and results of operations.

Prudential is subject to the risk of exchange rate fluctuations owing to the geographical diversity of its businesses

Due to the geographical diversity of Prudential's businesses, Prudential is subject to the risk of exchange rate fluctuations. Prudential's operations in the US and Asia, which represent a significant proportion of operating profit based on longer-term investment returns and shareholders' funds, generally write policies and invest in assets denominated in local currencies. Although this practice limits the effect of exchange rate fluctuations on local operating results, it can lead to significant fluctuations in Prudential's consolidated financial statements upon translation of results into pounds sterling. This exposure is not currently separately managed. The currency exposure relating to the translation of reported earnings could impact on financial reporting ratios such as dividend cover, which is calculated as operating profit after tax on an IFRS basis, divided by the current year interim dividend plus the proposed final dividend. The impact of gains or losses on currency translations is recorded as a component of shareholders' funds within other comprehensive income. Consequently, this could impact on Prudential's gearing ratios (defined as debt over debt plus shareholders' funds). The Group's surplus capital position for regulatory reporting purposes may also be affected by fluctuations in exchange rates with possible consequences for the degree of flexibility the Prudential has in managing its business.

Prudential conducts its businesses subject to regulation and associated regulatory risks, including the effects of changes in the laws, regulations, policies and interpretations and any accounting standards in the markets in which it operates

Changes in government policy, legislation (including tax) or regulatory interpretation applying to companies in the financial services and insurance industries in any of the markets in which Prudential operates, which in some circumstances may be applied retrospectively, may adversely affect Prudential's product range, distribution channels, competitiveness, profitability, capital requirements and, consequently, reported results and financing requirements. Also, regulators in jurisdictions in which Prudential operates may change the level of capital required to be held by individual businesses or could introduce possible changes in the regulatory framework for pension arrangements and policies, the regulation of selling practices and solvency requirements. In addition, there could be changes to the maximum level of non-domestic ownership by foreign companies in certain jurisdictions. Furthermore, as a result of interventions by governments in response to recent financial and global economic conditions, it is widely expected that there will continue to be a substantial increase in government regulation and supervision of the financial services industry, including the possibility of higher capital requirements, restrictions on certain types of transactions and enhanced supervisory powers.

Current EU directives, including the EU Insurance Groups Directive (IGD) require EU financial services groups to demonstrate net aggregate surplus capital in excess of solvency requirements at the group level in respect of shareholder-owned entities. The test is a continuous requirement, so that Prudential needs to maintain a higher amount of regulatory capital at the group level than otherwise necessary in respect of some of its individual businesses to

accommodate, for example, short-term movements in global foreign exchange rates, interest rates, deterioration in credit quality and equity markets. The EU is also developing a new prudential regulatory framework for insurance companies, referred to as Solvency II .

The Solvency II Directive covers valuation, the treatment of insurance groups, the definition of capital and the overall level of capital requirements. A key aspect of Solvency II is that the assessment of risks and capital requirements are intended to be aligned more closely with economic capital methodologies, and may allow

Table of Contents

Prudential to make use of its internal capital models, if approved by the Prudential Regulation Authority (PRA). The Solvency II Directive was formally approved by the Economic and Financial Affairs Council in November 2009 and the Omnibus II Directive, which amended certain aspects of the Solvency II Directive, was adopted by the Council of the European Union in April 2014. As such, Solvency II is expected to be implemented as of 1 January 2016, although the European Commission and the European Insurance and Occupational Pensions Authority (EIOPA) are continuing to develop the detailed rules and guidelines that will supplement the high-level rules and principles of the Solvency II and Omnibus II Directives, including the Delegated Acts relating to third-country equivalence. These detailed rules and guidelines are not currently expected to be finalised until mid to late 2015. Further, the effective application of a number of key measures incorporated in the Omnibus II Directive, including the provisions for third-country equivalence, is subject to supervisory judgement and approval. As a result there is a risk that the effect of the measures finally adopted could be adverse for Prudential, including potentially a significant increase in the capital required to support its business and that Prudential may be placed at a competitive disadvantage to other European and non-European financial services groups.

Currently there are also a number of other global regulatory developments which could impact the way in which Prudential is supervised in its many jurisdictions. These include the Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) in the US, the work of the Financial Stability Board (FSB) on Global Systemically Important Insurers (G-SIIs) and the Common Framework for the Supervision of Internationally Active Insurance Groups (ComFrame) being developed by the International Association of Insurance Supervisors (IAIS).

The Dodd-Frank Act represents a comprehensive overhaul of the financial services industry within the United States that, among other reforms to financial services entities, products and markets, may subject financial institutions designated as systemically important to heightened prudential and other requirements intended to prevent or mitigate the impact of future disruptions in the US financial system. The full impact of the Dodd-Frank Act on Prudential's businesses is not currently clear, as many of its provisions have a delayed effectiveness and/or require rulemaking or other actions by various US regulators over the coming years.

In July 2013 the FSB announced the initial list of nine insurance groups that have been designated as G-SIIs of which Prudential was one. Designation as a G-SII has led to additional policy measures being applied to the designated group. Based on the policy framework released by the IAIS and subsequent guidance papers these additional policy measures include enhanced group-wide supervision, effective resolution measures of the group in the event of failure, loss absorption, and higher loss absorption capacity. Prudential is monitoring the development and potential impact of the framework of policy measures and is continuing to engage with the PRA on the implications of the policy measures and Prudential's designation as a G-SII. The G-SII regime also introduces two types of capital requirements; the first, a Basic Capital Requirement (BCR), designed to act as a minimum group capital requirement and the second, a Higher Loss Absorption (HLA) requirement that should reflect the drivers of the assessment of G-SII designation. G-SIIs will be required to report on their BCR to group-wide supervisors on a confidential basis from 2015. The HLA requirement will apply from January 2019 to the insurance groups identified as G-SIIs in November 2017.

ComFrame is also being developed by the IAIS to provide common global requirements for the supervision of insurance groups. The framework is designed to outline a set of common global principles and standards for group supervision and may increase the focus of regulators in some jurisdictions. One of the framework's key components is an Insurance Capital Standard (ICS) which would be expected to form the group solvency capital standard under ComFrame. This new framework is expected to be implemented in 2019.

Various jurisdictions in which Prudential operates have created investor compensation schemes that require mandatory contributions from market participants in some instances in the event of a failure of a market participant. As a major participant in the majority of its chosen markets, circumstances could arise where Prudential, along with

other companies, may be required to make such contributions.

The Group's accounts are prepared in accordance with current International Financial Reporting Standards (IFRS) applicable to the insurance industry. The International Accounting Standards Board (IASB) introduced a framework that it described as Phase I, which permitted insurers to continue to use the statutory basis of accounting for insurance assets and liabilities that existed in their jurisdictions prior to January 2005. In July 2010, the IASB published its first Exposure Draft for its Phase II on insurance accounting, which would introduce significant

Table of Contents

changes to the statutory reporting of insurance entities that prepare accounts according to IFRS. A revised Exposure Draft was issued in June 2013. The IASB is currently re-deliberating the Exposure Draft proposals in light of comments by the insurance industry and other respondents. The timing of the final proposals taking effect is uncertain but not expected to be before 2019.

Any changes or modification of IFRS accounting policies may require a change in the future results or a retrospective adjustment of reported results.

The resolution of several issues affecting the financial services industry could have a negative impact on Prudential's reported results or on its relations with current and potential customers

Prudential is, and in the future may be, subject to legal and regulatory actions in the ordinary course of its business, both in the UK and internationally. These actions could involve a review of types of business sold in the past under acceptable market practices at the time, such as the requirement in the UK to provide redress to certain past purchasers of pension and mortgage endowment policies, changes to the tax regime affecting products, and regulatory reviews on products sold and industry practices, including, in the latter case, lines of business it has closed.

Regulators' interest may include the approach that product providers use to select third party distributors and to monitor the appropriateness of sales made by them. In some cases, product providers can be held responsible for the deficiencies of third-party distributors.

In the US, there has been significant attention on the different regulatory standards applied to investment advice delivered to retail customers by different sectors of the industry. As a result of reports relating to perceptions of industry abuses, there have been numerous regulatory inquiries and proposals for legislative and regulatory reforms. This includes focus on the suitability of sales of certain products, alternative investments and the widening of the circumstances under which a person or entity providing investment advice with respect to certain employee benefit and pension plans would be considered a fiduciary which would subject the person or entity to certain regulatory requirements. There is a risk that new regulations introduced may have a material adverse effect on the sales of the products by Prudential and increase Prudential's exposure to legal risks.

In Asia, regulatory regimes are developing at different speeds, driven by a combination of global factors and local considerations. There is a risk that new requirements are introduced that challenge current practices, or are retrospectively applied to sales made prior to their introduction.

Litigation, disputes and regulatory investigations may adversely affect Prudential's profitability and financial condition

Prudential is, and may be in the future, subject to legal actions, disputes and regulatory investigations in various contexts, including in the ordinary course of its insurance, investment management and other business operations. These legal actions, disputes and investigations may relate to aspects of Prudential's businesses and operations that are specific to Prudential, or that are common to companies that operate in Prudential's markets. Legal actions and disputes may arise under contracts, regulations (including tax) or from a course of conduct taken by Prudential, and may be class actions. Although Prudential believes that it has adequately provided in all material aspects for the costs of litigation and regulatory matters, no assurance can be provided that such provisions are sufficient. Given the large or indeterminate amounts of damages sometimes sought, other sanctions that might be applicable and the inherent unpredictability of litigation and disputes, it is possible that an adverse outcome could, from time to time, have an adverse effect on Prudential's reputation, results of operations or cash flows.

Prudential's businesses are conducted in highly competitive environments with developing demographic trends and continued profitability depends upon management's ability to respond to these pressures and trends

The markets for financial services in the UK, US and Asia are highly competitive, with several factors affecting Prudential's ability to sell its products and continued profitability, including price and yields offered, financial strength and ratings, range of product lines and product quality, brand strength and name recognition, investment

Table of Contents

management performance, historical bonus levels, developing demographic trends and customer appetite for certain savings products. In some of its markets, Prudential faces competitors that are larger, have greater financial resources or a greater market share, offer a broader range of products or have higher bonus rates. Further, heightened competition for talented and skilled employees and agents with local experience, particularly in Asia, may limit Prudential's potential to grow its business as quickly as planned.

In Asia, the Group's principal competitors in the region are international financial companies, including global life insurers such as Allianz, AXA, AIA, and Manulife and multinational asset managers such as J.P. Morgan Asset Management, Schroders, HSBC Global Asset Management and Franklin Templeton. In a number of markets, local companies have a very significant market presence.

Within the UK, Prudential's principal competitors include many of the major retail financial services companies and fund management companies including, in particular, Aviva, Legal & General, Lloyds Banking Group, Standard Life, Schroders, Invesco Perpetual and Fidelity.

Jackson's competitors in the US include major stock and mutual insurance companies, mutual fund organisations, banks and other financial services companies such as AIG, AXA Financial Inc., Allianz, Prudential Financial, Lincoln National, MetLife and Aegon.

Prudential believes competition will intensify across all regions in response to consumer demand, technological advances, the impact of consolidation, regulatory actions and other factors. Prudential's ability to generate an appropriate return depends significantly upon its capacity to anticipate and respond appropriately to these competitive pressures.

Downgrades in Prudential's financial strength and credit ratings could significantly impact its competitive position and damage its relationships with creditors or trading counterparties

Prudential's financial strength and credit ratings, which are used by the market to measure its ability to meet policyholder obligations, are an important factor affecting public confidence in Prudential's products, and as a result its competitiveness. Downgrades in Prudential's ratings, as a result of, for example, decreased profitability, increased costs, increased indebtedness or other concerns, could have an adverse effect on its ability to market products; retain current policyholders; and on the Group's financial flexibility. In addition, the interest rates Prudential pays on its borrowings are affected by its credit ratings, which are in place to measure the Group's ability to meet its contractual obligations.

Prudential plc's long-term senior debt is rated as A2 by Moody's, A+ by Standard & Poor's and A by Fitch. These ratings have a stable outlook.

Prudential plc's short-term debt is rated as P-1 by Moody's, A-1 by Standard & Poor's and F1 by Fitch.

The Prudential Assurance Company Limited's financial strength is rated Aa2 (negative outlook) by Moody's, AA (stable outlook) by Standard & Poor's and AA (stable outlook) by Fitch.

Jackson's financial strength is rated AA by Standard & Poor's and Fitch, A1 by Moody's, and A+ by AM Best. These ratings have a stable outlook.

Prudential Assurance Co. Singapore (Pte) Ltd's financial strength is rated AA (stable outlook) by Standard & Poor's.

In addition, changes in methodologies and criteria used by rating agencies could result in downgrades that do not reflect changes in the general economic conditions or Prudential's financial condition.

Table of Contents***Adverse experience in the operational risks inherent in Prudential's business, including failure in information technology and cyber-security, could disrupt its business functions and have a negative impact on its results of operations***

Operational risks are present in all of Prudential's businesses, including the risk of direct or indirect loss resulting from inadequate or failed internal and external processes, systems and human error or from external events. Prudential's business is dependent on processing a large number of transactions across numerous and diverse products, and is subject to a number of different legal and regulatory regimes. Further, because of the long-term nature of much of the Group's business, accurate records have to be maintained for significant periods.

These factors, among others, result in significant reliance on and require significant investment in information technology (IT), compliance and other operational systems, personnel and processes. In addition, Prudential outsources several operations, including a significant part of its UK back office and customer-facing functions as well as a number of IT functions, resulting in reliance upon the operational processing performance of its outsourcing partners.

Although Prudential's IT, compliance and other operational systems and processes incorporate controls designed to manage and mitigate the operational risks associated with its activities, there can be no assurance that such controls will always be effective. Due to human error among other reasons, operational incidents do happen periodically and no system or process can entirely prevent them although there have not been any material such events to date. For example, although Prudential has not identified a material failure or breach in relation to its legacy and other IT systems and processes to date, it has been, and likely will continue to be, subject to computer viruses, attempts at unauthorised access and cyber-security attacks. Prudential's legacy and other IT systems and processes, as with operational systems and processes generally, may be susceptible to failure or breaches.

Being part of the financial services sector, Prudential and its business partners are increasingly exposed to the risk that third parties may attempt to disrupt the availability, confidentiality and integrity of its IT systems. This could result in loss of trust from Prudential's customers, reputational damage and financial loss. The cyber-security threat continues to evolve globally in sophistication and potential significance as Prudential increasingly moves to digitalize its business and provide on-line business operations for its customers. Whilst a focus of Prudential is on being proactive to the exposure faced from emerging threats through continually reviewing and enhancing its IT environment to remain robust and secure, together with increasing its ability to detect system compromise, and recover should such an incident occur, there can be no assurance that such events will not take place with adverse consequential effects on Prudential's business and financial position.

Such events could, among other things, harm Prudential's ability to perform necessary business functions, result in the loss of confidential or proprietary data (exposing it to potential legal claims and regulatory sanctions) and damage its relationships with its business partners and customers. Similarly, any weakness in administration systems (such as those relating to policyholder records or meeting regulatory requirements) or actuarial reserving processes could have a material adverse effect on its results of operations during the effective period.

Adverse experience relative to the assumptions used in pricing products and reporting business results could significantly affect Prudential's results of operations

In common with other life insurers, the profitability of the Group's businesses depends on a mix of factors including mortality and morbidity levels and trends, policy surrenders and take-up rates on guarantee features of products, investment performance and impairments, unit cost of administration and new business acquisition expense.

Prudential needs to make assumptions about a number of factors in determining the pricing of its products, setting reserves, for reporting its capital levels and the results of its long-term business operations. For example, the assumption that Prudential makes about future expected levels of mortality is particularly relevant for its UK annuity business. In exchange for a premium equal to the capital value of their accumulated pension fund, pension annuity policyholders receive a guaranteed payment, usually monthly, for as long as they are alive. Prudential conducts rigorous research into longevity risk, using data from its substantial annuitant portfolio. As part of its pension annuity pricing and reserving policy, Prudential's UK business assumes that current rates of mortality continuously improve over time at levels based on adjusted data and models from the Continuous Mortality

Table of Contents

Investigations (CMI) as published by the Institute and Faculty of Actuaries. Assumptions about future expected levels of mortality are similarly relevant to the Guaranteed Minimum Withdrawal Benefit (GMWB) of Jackson's variable annuity business. If mortality improvement rates significantly exceed the improvement assumed, Prudential's results of operations could be adversely affected.

A further example is the assumption that Prudential makes about future expected levels of the rates of early termination of products by its customers (persistence). This is particularly relevant to its lines of business other than its UK annuity business, especially Jackson's portfolio of traditional and variable annuities. Prudential's persistence assumptions reflect recent past experience for each relevant line of business. Any expected change in future persistence is also reflected in the assumption. If actual levels of future persistence are significantly different than assumed, the Group's results of operations could be adversely affected. Furthermore, Jackson's variable annuity products are sensitive to other types of policyholder behaviour, such as the take-up of its GMWB product features.

Another example is the impact of epidemics and other effects that cause a large number of deaths. Significant influenza epidemics have occurred three times in the last century, but the likelihood, timing, or the severity of future epidemics cannot be predicted. The effectiveness of external parties, including governmental and non-governmental organisations, in combating the spread and severity of any epidemics could have a material impact on the Group's loss experience.

As a holding company, Prudential is dependent upon its subsidiaries to cover operating expenses and dividend payments

The Group's insurance and investment management operations are generally conducted through direct and indirect subsidiaries.

As a holding company, Prudential's principal sources of funds are remittances from subsidiaries, shareholder-backed funds, the shareholder transfer from long-term funds and any amounts that may be raised through the issuance of equity, debt and commercial paper.

Certain of the subsidiaries are restricted by applicable insurance, foreign exchange and tax laws, rules and regulations that can limit remittances. In some circumstances, this could limit Prudential's ability to pay dividends to shareholders or to make available funds held in certain subsidiaries to cover operating expenses of other members of the Group.

Prudential operates in a number of markets through joint ventures and other arrangements with third parties (including in China and India), involving certain risks that Prudential does not face with respect to its consolidated subsidiaries

Prudential operates, and in certain markets is required by local regulation to operate, through joint ventures (including in China and India). For the Group's joint venture operations, management control is exercised jointly with the venture participants. The level of control exercisable by the Group depends on the terms of the joint venture agreements, in particular, the allocation of control among, and continued co-operation between, the joint venture participants. Prudential may face financial, reputational and other exposure (including regulatory censure) in the event that any of its joint venture partners fails to meet its obligations under the joint venture, encounters financial difficulty, or fails to comply with local or international regulation and standards such as those pertaining to the prevention of financial crime. In addition, a significant proportion of the Group's product distribution is carried out through arrangements with third parties not controlled by Prudential and is dependent upon continuation of these relationships. A temporary or permanent disruption to these distribution arrangements, such as through significant deterioration in the reputation, financial position or other circumstances of the third party or material failure in controls (such as those pertaining to

the prevention of financial crime) could adversely affect the results of operations of Prudential.

Prudential's Articles of Association contain an exclusive jurisdiction provision

Under Prudential's Articles of Association, certain legal proceedings may only be brought in the courts of England and Wales. This applies to legal proceedings by a shareholder (in its capacity as such) against Prudential and/or

Table of Contents

its directors and/or its professional service providers. It also applies to legal proceedings between Prudential and its directors and/or Prudential's professional service providers that arise in connection with legal proceedings between the shareholder and such professional service provider. This provision could make it difficult for US and other non-UK shareholders to enforce their shareholder rights.

Changes in tax legislation may result in adverse tax consequences

Tax rules, including those relating to the insurance industry, and their interpretation, may change, possibly with retrospective effect, in any of the jurisdictions in which Prudential operates. Significant tax disputes with tax authorities, and any change in the tax status of any member of the Group or in taxation legislation or its scope or interpretation could affect Prudential's financial condition and results of operations.

Forward-Looking Statements

This document may contain forward-looking statements with respect to certain of Prudential's plans and its goals and expectations relating to its future financial condition, performance, results, strategy and objectives. Statements that are not historical facts, including statements about Prudential's beliefs and expectations and including, without limitation, statements containing the words may, will, should, continue, aims, estimates, projects, believes, intends, plans, seeks and anticipates, and words of similar meaning, are forward-looking statements. These statements are based on plans, estimates and projections as at the time they are made, and therefore undue reliance should not be placed on them. By their nature, all forward-looking statements involve risk and uncertainty. A number of important factors could cause Prudential's actual future financial condition or performance or other indicated results to differ materially from those indicated in any forward-looking statement. Such factors include, but are not limited to, future market conditions, including fluctuations in interest rates and exchange rates and the potential for a sustained low-interest rate environment, and the performance of financial markets generally; the policies and actions of regulatory authorities, including, for example, new government initiatives related to the financial crisis and the effect of the European Union's Solvency II requirements on Prudential's capital maintenance requirements; the impact of continuing designation as a Global Systemically Important Insurer or G-SII; the impact of competition, economic growth, inflation, and deflation; experience in particular with regard to mortality and morbidity trends, lapse rates and policy renewal rates; the timing, impact and other uncertainties of future acquisitions or combinations within relevant industries; the impact of changes in capital, solvency standards, accounting standards or relevant regulatory frameworks, and tax and other legislation and regulations in the jurisdictions in which Prudential and its affiliates operate; and the impact of legal actions and disputes. These and other important factors may for example result in changes to assumptions used for determining results of operations or re-estimations of reserves for future policy benefits. Further discussion of these and other important factors that could cause Prudential's actual future financial condition or performance or other indicated results to differ, possibly materially, from those anticipated in Prudential's forward-looking statements can be found under the Risk Factors heading of this annual report, as well as under the Risk Factors heading of any subsequent Prudential Half Year Financial Report furnished to the US Securities and Exchange Commission on Form 6-K.

Any forward-looking statements contained in this document speak only as of the date on which they are made. Prudential may also make or disclose written and/or oral forward-looking statements in reports filed with or furnished to the US Securities and Exchange Commission, the UK Prudential Regulation Authority and Financial Conduct Authority or other regulatory authorities, as well as in its annual report and accounts to shareholders, proxy statements, offering circulars, registration statements, prospectuses and, prospectus supplements, press releases and other written materials and in oral statements made by directors, officers or employees of Prudential to third parties, including financial analysts. All such forward-looking statements are qualified in their entirety by reference to the factors discussed under the Risk Factors heading of this document, as well as under the Risk Factors heading of any

subsequent Prudential Half Year Financial Report furnished to the US Securities and Exchange Commission on Form 6-K. These factors are not exhaustive as Prudential operates in a continually changing business environment with new risks emerging from time to time that it may be unable to predict or that it currently does not expect to have a material adverse effect on its business. Prudential expressly disclaims any obligation to update any of the forward-looking statements contained in this document or any other forward-looking statements it may make, whether as a result of future events, new information or otherwise except as required pursuant to the UK Prospectus Rules, the UK Listing Rules, the UK Disclosure and Transparency Rules, the Hong Kong Listing Rules, the SGX-ST listing rules or other applicable laws and regulations.

Table of Contents

EEV Basis, New Business Results and Free Surplus Generation

In addition to IFRS basis results, Prudential's filings with the UK Listing Authority, the Stock Exchange of Hong Kong, the Singapore Stock Exchange and Group Annual Reports include reporting by Key Performance Indicators (KPIs). These include results prepared in accordance with the European Embedded Value (EEV) Principles and Guidance issued by the Chief Financial Officers (CFO) Forum of European Insurance Companies, New Business and Free Surplus Generation measures.

The EEV basis is a value-based method of reporting in that it reflects the change in the value of in-force long-term business over the accounting period. This value is called the shareholders' funds on the EEV basis which, at a given point in time, is the value of future cash flows expected to arise from the current book of long-term insurance business plus the net worth (based on statutory solvency capital or economic capital where higher and free surplus) of Prudential's life insurance operations. Prudential publishes its EEV results semi-annually in the UK, Hong Kong and Singapore markets.

New Business results are published quarterly and are provided as an indicative volume measure of transactions undertaken in the reporting period that have the potential to generate profits for shareholders. New business results are categorised as single premiums and annual regular premiums. New business results are also summarised by annual premium equivalents (APE) which are calculated as the aggregate of regular new business amounts and one-tenth of single new business amounts. The amounts are not, and are not intended to be, reflective of premium income recorded in the IFRS income statement. EEV basis new business profits and margins are also published quarterly.

Underlying free surplus generation is used to measure the internal cash generation by our business units. For the insurance operations it represents amounts maturing from the in-force business during the period less investment in new business and excludes other non-operating items. For asset management it equates to post-tax IFRS operating profit based on longer-term investment returns for the period.

Table of Contents

Item 4. Information on the Company

Business of Prudential

Overview and Summary of Strategy

Overview

Background

Prudential is the parent company of the Prudential group (the Prudential Group or the Group). The Group is an international financial services group, with significant operations in Asia, the United States and the United Kingdom. It has been in existence for over 160 years, serves around 24 million insurance customers and has £496 billion in assets under management (as at 31 December 2014). Prudential is not affiliated with Prudential Financial, Inc. or its subsidiary, The Prudential Insurance Company of America.

Prudential is structured around four main business units: Prudential Corporation Asia (incorporating the asset management business, Eastspring Investments), Jackson, Prudential UK and Europe insurance operations and M&G. These are supported by central functions which are responsible for Prudential strategy, cash and capital management, leadership development and succession, reputation management and other core group functions.

Asia

Prudential Corporation Asia has operations in Hong Kong, Malaysia, Singapore, Indonesia and other Asian countries. Its core business is health, protection, either attached to a life policy or on a standalone basis, other life insurance (including participating business) and mutual funds. It also provides selected personal lines property and casualty insurance, group insurance, institutional fund management and consumer finance (Vietnam only). The product range offered is tailored to suit the individual country markets. Insurance products are distributed mainly through an agency sales force together with selected banks, while the majority of mutual funds are sold through banks and brokers. Joint venture partners are mandatory in some markets, as reflected in Prudential's life insurance operations in China (through its joint venture with CITIC) and in India (through its joint venture with ICICI) and Prudential's Takaful business in Malaysia (through its joint venture with Bank Simpanan Nasional). In the fund management business, Prudential has joint venture operations in India (through its joint venture with ICICI), China (through its joint venture with CITIC) and Hong Kong (through its joint venture with Bank of China International).

As at 31 December 2014, Prudential Corporation Asia had:

over 13 million insurance customers with life and fund management operations in 14 markets; access to 5,155 branches across Asia with our top 5 partners; Standard Chartered Bank (SCB), United Overseas Bank Limited (UOB), joint venture partners ICICI in India and CITIC in China and Thanachart (Thailand); one of the largest networks of tied agents in Asia; and consistently high brand recognition, outperforming many other financial services companies and had received multiple awards for its customer service. Prudential was in the top three for market share of new business in China, India, Indonesia, Malaysia, Singapore, the Philippines, Vietnam⁽¹⁾, Hong Kong and Cambodia.

United States

In the United States, Prudential offers a range of products through Jackson, including fixed annuities (fixed interest rate annuities, fixed index annuities and immediate annuities), variable annuities and institutional products (including guaranteed investment contracts and funding agreements). Jackson distributes these products through independent insurance agents, independent broker-dealers, regional broker-dealers, wirehouses, registered investment advisers, as well as banks, credit unions and other financial institutions. Although Jackson historically also offered traditional life insurance products, it discontinued new sales of life insurance products effective 1 August 2012.

⁽¹⁾ Source: Based on formal (competitors' results release, local regulators and insurance associations) and informal (including industry exchange) market share data. Ranking based on new business (APE). Malaysia including Takaful sales at 100%. Private sector only for India. China ranking amongst foreign joint ventures only.

Table of Contents

Jackson also offers fee-based separately managed accounts and investment products through Curian Capital, LLC, which is Jackson's registered investment adviser.

As at 31 December 2014, in the United States, Jackson:

was among the 15 largest life insurance companies in terms of general account assets⁽²⁾;
was the number one writer of variable annuities in the US⁽³⁾;
was once again awarded the Highest Customer Satisfaction by Industry award for the ninth successive year from Service Quality Measurement Group; and
was once again rated as a World Class service provider for the ninth successive year by Service Quality Measurement Group.

United Kingdom

In the United Kingdom, Prudential is structured into Prudential UK & Europe (comprising the insurance operations) and M&G (the UK and European fund manager of the Group) and offers a range of retail financial products and services, including long-term insurance and asset accumulation and retirement income products (life insurance, pensions and pension annuities), retail investment and unit trust products, and fund management services. Prudential in the United Kingdom primarily distributes these products through financial advisers, partnership agreements with other financial institutions, and direct marketing, by telephone, mail, internet and face-to-face advisers.

As at 31 December 2014, Prudential UK & Europe:

was one of the market leaders in the individual annuity market and the with-profits market⁽⁴⁾; and
had total company assets of £175 billion on the balance sheet, comprising £102 billion within the with-profits sub fund, £66 billion within shareholder-backed business and £7 billion in the Scottish Amicable Insurance Fund.
As of 31 December 2014, M&G, which is the UK and European fund manager of the Prudential Group;

had responsibility for £264 billion of investment on behalf of both internal and external clients; and
has been recognised for its investment performance with numerous awards, including the Real Estate Manager and Fixed Income Manager of the Year at the Financial News Awards 2014 for the second consecutive year.

Changes to directors and senior management

On 10 March 2015, Prudential announced that Tidjane Thiam had informed the Board of his intention to step down from his role as Group Chief Executive and from the Board. Further information on this announcement and other changes in directors and senior management is provided in Item 6, Directors, Senior Management and Employees .

Table of Contents

Group Strategy Overview

Our strategy is designed to create sustainable economic value for our customers and our shareholders. It is focused on three long-term opportunities:

- a. The significant protection gap and investment needs of the Asian middle class;
- b. The transition of US baby boomers into retirement; and
- c. The UK savings gap and ageing population in need of returns and income.

Our strategy is underpinned by a set of key operating principles.

Focus on customers & distribution

We believe that in order to do well for our shareholders we must first do good for our customers. Hence, customers are at the centre of our operating principles.

Our products are designed to provide peace of mind to our customers, whether that be in relation to saving for retirement or insuring against the risks of illness, death or critical life events. Satisfied customers are a key driver of our growth as they become our advocates, recommending our products and services to their friends and families.

Distribution plays a key role in our ability to reach, attract and retain these valued customers across our regions. Building out and diversifying our distribution capabilities in order to reach a growing customer base will help ensure that we fully capitalise on the opportunities available to us in each of our regions.

Balanced metrics and disclosures

We aim to have clarity and consistency internally and externally in the performance indicators that drive our businesses. Alongside this we develop our financial disclosures to enable our stakeholders to fairly assess our long-term performance. We have three objectives:

- (i) To demonstrate how we generate profits under the different accounting regimes; for example, by analysing our IFRS profit by source a set out in Item 5, Operating and Financial Review and Prospects Summary Consolidated Results and Basis of Preparation of Analysis ;

(ii) To show how we think about capital allocation via measures that highlight the returns we generate on capital invested in new business, including internal rates of return, payback periods and new business profitability; and

(iii) To highlight the cash generation of our business, which over time is the ultimate measure of performance.

Disciplined capital allocation

We rigorously allocate capital to the highest-return products and geographical locations with the shortest payback periods, in line with our risk appetite. This has had a positive and significant impact. Over the last five years, new business capital investment has declined slightly, while new business profits have increased substantially. This has, in turn, transformed the capital dynamics of our Group: for example, the free capital generated from our existing life and asset management operations has increased substantially compared to five years ago. This transformation enabled our business operations to remit £1,482 million to the Group in 2014, nearly double the level of remittance five years ago.

Table of Contents**Proactive risk management**

Balance sheet strength and proactive risk management enable us to make good our promises to customers and are therefore key drivers of long-term value creation and relative performance. We have continuously strengthened our capital position since 2008, in spite of the challenging macroeconomic environment that followed. Management actions that have been taken over this period include:

(i) The sale of our capital-intensive Taiwan agency business in 2009, improving our IGD capital position;

(ii) The establishment of £2.2 billion of credit default reserves⁽⁵⁾ in the UK annuity business; and

(iii) Controlling sales of US variable annuities in a manner which appropriately balances value, volume, capital generation and balance sheet risk.

Company Address and Agent

Prudential plc is a public limited company incorporated on 1 November 1978 and registered in England and Wales. Refer to Item 10, Additional information Memorandum and Articles of Association for further information on the constitution of the Company.

Prudential's registered office is Laurence Pountney Hill, London EC4R 0HH, England (telephone: +44 20 7220 7588). Prudential's agent in the United States for purposes of Item 4 of this annual report on Form 20-F is Jackson National Life Insurance Company, located at 1 Corporate Way, Lansing, Michigan 48951, United States of America.

Significant Subsidiaries

The table below sets forth Prudential's significant subsidiaries.

	Main activity	Country of incorporation
The Prudential Assurance Company Limited	Insurance	England and Wales
Prudential Retirement Income Limited (PRIL)*	Insurance	Scotland
M&G Investment Management Limited*	Asset management	England and Wales
Jackson National Life Insurance Company*	Insurance	US
Prudential Assurance Company Singapore (Pte) Limited*	Insurance	Singapore
PT Prudential Life Assurance*	Insurance	Indonesia
Prudential Hong Kong Limited*	Insurance	Hong Kong

* Owned by a subsidiary undertaking of the Company.

The Company has 100 per cent of the voting rights of the subsidiaries except the Indonesian subsidiary, where the Company has 94.6 per cent of the voting rights attaching to the aggregate of the shares across the types of capital in issue. The percentage of equity owned is the same as the percentage of the voting power held.

Each subsidiary operates mainly in its country of incorporation, except for PRIL, which operates mainly in England and Wales.

Asian Business

Life Insurance

Introduction

Asia's economic transformation continues to generate material increases in personal wealth and drives significant demand for solutions to individuals' financial planning needs. During 2014 macro-economic and geopolitical turbulence, both regional and international, created some short term impacts but the region's fundamental economic drivers remain highly compelling.

Asia (excluding Japan) is leading the world in terms of Gross Domestic Product growth. In the period 2014 to 2018 it is expected to generate US\$5.5 trillion⁽⁶⁾ of new Gross Domestic Product, more than the US and the other advanced economies combined.

The degree of state sponsored financial provision for healthcare and other social services varies by market, but is typically very basic and it is widely appreciated that the private sector has a very important complementary role. Protection gaps remain high across the region and the regulators have tasked the industry with improving levels of financial literacy and addressing this issue. Consequently the regulations governing the industry continue to evolve in largely positive ways with good outcomes for customers and shareholders.

There is a healthy competitive environment with a good mix of domestic, regional and international companies although barriers to entry remain high in terms of the availability of new licences, the significant capital investment and the challenge in building distribution scale and quality.

Given the low penetration rates of insurance and investment products we see considerable growth opportunities over the long term.

Economic growth is translating into the rapid increase of the Asian middle class. Between 2009 and 2020 it is estimated that there will be over 1.2 billion people who will have been elevated from rural subsistence to urban lifestyles. Within our preferred 'sweet spot' markets of South East Asia and Hong Kong, the middle class will be represented by over 400 million people. Families are getting smaller, life expectancies are lengthening and the incidence of chronic diseases is increasing significantly.

As people move into the middle class, their increased wealth and higher income provide the incentive to make financial plans. Typically the first stage is to provide protection for the family and establish a regular savings plan through a life insurance policy.

Traditionally Asians would have relied on their children to provide for them in their retirement, but increasingly people are making their own financial provisions and life insurance policies are a popular part of a retirement plan.

Once the savings and protection solutions are in place there is the opportunity to invest. Single premium insurance policies are also important in more developed markets and it is also likely that customers will increasingly seek access to different asset classes through mutual funds as their wealth grows and financial needs become more sophisticated.

Although Prudential has been operating in Asia for over eighty years we began building our business in earnest in 1994 with the establishment of Prudential Corporation Asia (PCA). Since then PCA has entered new markets, added considerable agency scale and launched bank distribution, developed product capabilities particularly unit linked -

and built a customer centric brand anchored on the tag line Always Listening, Always Understanding .

Today PCA is focused on leveraging this platform to grow in a disciplined way for the benefit of our customers, shareholders and communities. Success is defined by metrics that ensure we deliver both volume and value.

⁽⁶⁾ Prudential estimates based on IMF data October 2013

Table of Contents

Each market is unique and our overarching regional strategy is very specifically tailored to the opportunities that reflect the many differences in each country including its stage of economic development, cultural preferences, regulation, the competitive landscape and our own risk appetite.

Markets with highly attractive economic and demographic characteristics representing the greatest potential for us at present we collectively term the Sweet Spot and comprise Indonesia, Hong Kong, Singapore, Malaysia, Vietnam, Thailand and the Philippines. We have strong market positions in all of them, including four countries where we have the leading market share.

The life insurance markets in India and China, while attractive in terms of scale, are more challenging for non-domestic life insurers to participate in. Working within these constraints, PCA has two of the market leading joint ventures in these countries and is very well placed as these markets continue to develop.

Since 2008 we have de-emphasised Korea and Taiwan as the mass life insurance markets are currently driven by product and distribution options that are not attractive to us and consequently we have concentrated on developing successful niche positions. In February 2015 we completed the sale of our Japanese life business, PCA Life Insurance Co, Ltd, however, the mutual fund industries in these markets are highly attractive and through Eastspring Investments, we are able to take advantage of exciting growth opportunities.

Following the successful launch of our life business in Cambodia in 2013, we are now the market leader. We also opened a representative office in Myanmar during 2014 and recently received a licence for a representative office in Laos.

Distribution

Prudential Corporation Asia is well positioned in terms of its scale and diversity of distribution. Over 500,000 agents produce a meaningful majority of sales with the remainder mainly coming from bancassurance that includes exclusive agreements with Standard Chartered Bank, UOB and Thanachart. At the core of our distribution model is face-to-face interaction with customers that delivers high quality, needs based advice.

Our success with agency is driven by a relentless focus on quality and professionalism starting with the initial recruitment and training. We actively manage agency activity and agency productivity.

Our multi-channel distribution platform continues to play a key role in our strategy. In the agency channel we continued to add to the existing scale of our platform during 2014 through recruitment. In parallel we also improved individual productivity, thanks to our investments in agency management technology and analytics. We also announced in the first quarter that we extended and expanded our long-established and market-leading partnership with Standard Chartered Bank for another 15 years to 2029, effective since July 2014. Encouragingly second half sales from Standard Chartered Bank grew strongly compared to the same period in 2013, including a record month in December. The distribution channel mix remained in line with prior year, with agency generating most sales, bancassurance a significant minority and mainly direct and telemarketing making up the remainder.

Products

The life insurance products offered by Prudential in Asia include with-profits (participating) and non-participating term, whole life and endowment and unit-linked policies often combined with protection riders and typically with regular premium payments. Prudential in Asia also offers stand-alone health, disablement, critical illness and accident cover to supplement its core life products.

Our product portfolio is centred around providing a robust financial safety net to customers at a reasonable cost. The product mix reflects this with around 1/3 of premiums directed to Health and Protection products, 1/3 to unit linked products and 1/3 to Participating products. This profile shows that we are de-risking the financial aspects of our customers' lives whilst also de-risking the business from the shareholders' perspective.

It is part of our strategy to focus on regular premium products which allow our customers to invest over the long term and smooth the impact of timing on their investment returns. We aim to make most of our sales as regular premiums and the proportion of regular premium has been consistently high, which ensures the profitability and

Table of Contents

resilience of our growing in-force book. Although single premium products can provide appropriate opportunities for customers with lump sums, we believe that regular premium policies with protection riders best meet the majority of our customers' needs.

Unit-linked products combine savings with protection, with the cash value of the policy depending on the value of the underlying unitised funds. At the end of 2014, Prudential is offering unit-linked products in all markets except Cambodia. However, given the recent volatility in the financial markets, we have seen a shift towards non-linked products. With unit-linked products, shareholders receive the profits arising from managing the policy, its investments and the insurance risk. Policyholders within the underlying unitised fund receive investment gains.

Participating products provide savings with protection where the basic sum assured can be enhanced by a profit share (or bonus) from the underlying fund as determined at the discretion of the insurer. Policyholder and insurer share the profits from participating policies (typically in a 90:10 ratio) in the same way as with-profits business in the UK.

Non-participating products offer savings with protection where the benefits are guaranteed or determined by a set of defined market-related parameters. Accident and health products provide mortality or morbidity benefits and include health, disablement, critical illness and accident cover. These products are commonly offered as supplements to main life policies, but can also be sold separately. The profits from accident and health and non-participating products come from any surplus remaining after paying policy benefits.

In Malaysia and Indonesia, Prudential also offers life insurance policies that comply with Islamic principles known as Takaful. The main principles are that policyholders co-operate amongst themselves for the common good, uncertainty is eliminated in respect of subscription and compensation and there is no investment in prohibited areas such as gambling or alcohol.

In addition to providing value directly to our customers through our products and services, we aim to provide wider benefits to the community where we operate.

During 2014, Prudential extended its highly successful children's financial literacy programme, *Cha-Ching*. We also launched the SafeSteps programme with an initial series of six infomercials featuring SafeSteps ambassador Manny Pacquiao that provide life saving advice in the event of a natural disaster. These have been very well received.

In November 2013, the Philippines suffered one of the worst disasters in its history, Typhoon Haiyan. Prudential has now made three trips to the area with volunteer staff and agents who have assisted in the rebuilding efforts.

New Business Premiums

In 2014, total sales of insurance products were £4,282 million, up 6 per cent from 2013 (£4,047 million). Of this amount, regular premium insurance sales increased 5 per cent to £2,010 million and single premium insurance sales increased 6 per cent to £2,272 million.

* Actual Exchange Rates (AER) are actual historical exchange rates for the specific accounting period, being the average rates over the period for the income statement and the closing rates for the balance sheet at the balance sheet date.

Eastspring Investments

Eastspring Investments, Prudential's asset management business in Asia, manages investments for Prudential's Asia, UK and US life companies and also has a broad base of third-party retail and institutional clients. It has extended distribution reach to the US and Europe.

Eastspring Investments won multiple awards at the 2014 Asia Asset Management s Best of the Best Awards including Best Asset Management and Asian Bond House , Best performance over three years for Japanese Equities , Best Korean Equity Manager and Best Indian Fund House .

Distribution

In order to capitalise on the sizeable opportunities in Asia s retail financial services market, Eastspring Investments maintained its focus on building a strong third-party customer retail franchise. The customer proposition is driven by Eastspring Investments investment capabilities, which enable it to develop innovative product suites, and distribute them through diverse channels including regional banks, local banks, private banks, and securities houses and an internal sales force.

Table of Contents

The mutual fund industry continues to diversify its investments, with expectations for a significant increase in net flows over the coming years. Bank distribution continues to be important in most markets in Asia, with Prudential having established strong relationships with both regional and local banks and placing significant emphasis on providing good service. Prudential's Asian asset management business is also growing its third party institutional and pension fund management business.

Products

Eastspring Investments offers mutual fund investment products in India, Taiwan, Japan, Singapore, Malaysia, Hong Kong, Korea, Vietnam, China, Indonesia and United Arab Emirates, thus enabling customers to participate in debt, equity and money market investments across the region.

Net flows and funds under management

Eastspring Investments levies management fees on assets under management and in some countries, transaction charges (initial and/or surrender depending on the type of fund and the length of the investment) and also a service charge based on assets under management. The charges vary by country and fund, with money market style funds generally having the lowest charges and equity funds the highest. Eastspring Investments also levies performance related fees on certain funds, particularly institutional mandates and life funds, if the investment performance exceeds the pre-agreed benchmark(s).

Eastspring Investments generated record third-party inflows of £5.4 billion, 3.8 times higher than 2013, with success in securing new equity flows, particularly from institutional clients, mitigating lower net inflows in fixed income. Including internal funds, total funds under management as at 31 December 2014 were a record £77.3 billion, up 28 per cent on the prior year as a result of net inflows and positive market movements. Further information on Eastspring Investment's funds under management is provided in Item 5 Other results based information Funds Under Management.

Table of Contents**US Business**

Prudential conducts its US insurance operations through Jackson National Life Insurance Company (Jackson) and its subsidiaries, including Curian Capital, LLC (Curian), a registered investment adviser. The US operations also include PPM America, Inc. (PPMA), Prudential s US internal and institutional investment management operation, and National Planning Holdings, Inc. (NPH), Prudential s US affiliated independent broker dealer network. As at 31 December 2014, Prudential s US operations had more than 4.2 million policies and contracts in effect and PPMA managed approximately £65.8 billion of assets. In 2014, new business premiums totalled £15,555 million.

Jackson

Jackson is a leading provider of retirement income and savings solutions in the mass and mass-affluent segments of the US market, primarily to retirees and those planning for retirement. It offers tools that help people plan for their retirement, and offers products with specialised features and guarantees to meet customers needs. By seeking to add value to both the representatives who sell Jackson products, and to their customers, Jackson has built a strong position in the US retirement savings and income market with an over six-fold increase in variable annuity sales over the past decade. Over the same period, Jackson improved its total annuity market share from 3.0 per cent in 2004 to 11.0 per cent in 2014 and moved from 10th in total annuity sales to 1st⁽⁷⁾.

Jackson s strategy remains focused on providing value to its customers and driving shareholder value while operating within a conservative risk management framework. This approach has enabled Jackson to successfully navigate the significant macroeconomic and financial market challenges of the last six years and ensured a continuation of its strong performance in 2014.

Jackson s long-term strategy consists of capitalising on the profitable growth opportunities created by the demands for retirement income and accumulation products due to the demographic transitions within the world s largest retirement market. Jackson takes a disciplined approach to this opportunity by leveraging its distinctive distribution capabilities and asset liability management expertise to offer prudently priced annuity products aligned with its risk appetite. Jackson continues to see strong consumer demand for its products and will continue to drive product innovation as a way of meeting the needs of customers and generating shareholder value. With a long-term focus on balancing the needs of multiple stakeholders, Jackson has forged a solid reputation among advisers for financial stability, innovative product solutions and market leading wholesale support. Jackson s relentless pursuit of excellence has earned it a leading position within the industry.

National Planning Holdings, an affiliate of Jackson, is the sixth⁽⁸⁾ largest independent broker-dealer network in the country. Leveraging the collective strength of the four broker-dealers within the network, National Planning Holdings is able to meet the specific needs of three key distribution channels: independent representatives, financial institutions, and tax and accounting professionals. We offer registered representatives and investment advisors access to industry-leading mutual fund/asset management companies, insurance carriers, and to thousands of brokerage products. National Planning Holdings provides significant benefits for Jackson by being an outlet for Jackson products and providing market intelligence.

Curian is Jackson s retail asset management arm, distributing investment solutions which include separate accounts, mutual funds, mutual fund wraps and exchange traded funds through an online platform. Curian gives financial advisors efficient access to a broad range of investment solutions that are developed with institutional-level investment manager due diligence, portfolio construction and asset allocation resources.

Jackson was awarded by Service Quality Measurement Group, Inc. World Class Certification in customer satisfaction and received the Highest Customer Satisfaction by Industry award in 2014, achieving the top rating for the financial industry, for the ninth consecutive year. High-quality information technology systems are critical for providing award-winning customer service. We leverage technology to minimise processing errors and reduce the time required to process new business and commissions. The flexibility of our information technology systems contributes to our ability to manufacture, distribute and service an unbundled product design and to distinguish us from others in the industry.

⁽⁸⁾ Investment News Broker-Dealer Rankings - April 2014 (as reported at the 2014 Investor Conference).

Table of Contents

This focus on our operational platforms, and the efficiencies achieved as a result, has provided us with among the lowest general and administration expense to asset ratio relative to competitors.

Jackson operates within a well-defined risk framework aligned with the overall Prudential Group risk appetite. The type and number of products we sell remains balanced with the acceptance of risks we retain. Our conservative and disciplined economic approach to pricing is designed to achieve both adequate returns on our products and sufficient resources to support our hedging program.

Our hedge philosophy has not changed in 2014. Jackson is able to aggregate financial risks across the company, obtain a unified view of our risk positions, and actively manage net risks through economically-based hedging programmes. A key element of our core strategy is to protect the company from severe economic scenarios while maintaining adequate regulatory capital. We benefit from the fact that the competitive environment continues to favour companies with good financial strength ratings and a strong track record of financial discipline, both key elements of our long-term strategy.

Products

Jackson develops and distributes products that address the retirement needs of its customers through various market cycles. These include variable annuities, fixed interest rate annuities, fixed index annuities and separately managed accounts. As would be expected in the current historically low interest rate environment, variable annuities continue to outsell fixed rate products. Other than Elite Access, variable annuity products offer the optional lifetime guarantee where customers can access a stream of payments with downside protection while still being able to invest in a broad range of assets, as well as enjoy the benefit of tax deferral on the investment growth within the product. The breadth of Jackson's product offering, strength of its distribution relationships and its ability to maintain financial stability through the crisis and remain as a consistent presence within the market, has resulted in Jackson being the number one⁽⁹⁾ writer of variable annuities in the US.

The following table shows total new business premiums in the United States by product line and distribution channel for the periods indicated. Total new business premiums include Jackson's deposits for investment contracts with limited or no life contingencies.

⁽⁹⁾ Based on total annuity sales, LIMRA US Individual Annuities Sales Survey Participant s Report as of 30 September 2014.

Table of Contents

Of the total new business premiums of £15,555 million in 2014 (2013: £15,712 million; 2012: £14,516 million), £14,904 million (2013: £14,842 million; 2012: £14,125 million) were single premiums, nil (2013: £2 million; 2012: £12 million) were regular premiums and £651 million (2013: £868 million; 2012: £379 million) were institutional product premiums.

Annuities**Fixed Annuities****Fixed Interest Rate Annuities**

In 2014, fixed interest rate annuities accounted for 3 per cent (2013: 3 per cent) of total new business premiums and 9 per cent (2013: 10 per cent) of policy and contract liabilities of the US operations. Fixed interest rate annuities are primarily deferred annuity products that are used for asset accumulation in retirement planning and for providing income in retirement. They permit tax-deferred accumulation of funds and flexible payout options.

The contract holder of a fixed interest rate annuity pays Jackson a premium, which is credited to the contract holder's account. Periodically, interest is credited to the contract holder's account and in some cases administrative charges are deducted from the contract holder's account. Jackson makes benefit payments at a future date as specified in the policy based on the value of the contract holder's account at that date. On more than 93 per cent (2013: 84 per cent) of in-force business, Jackson may reset the interest rate on each contract anniversary, subject to a guaranteed minimum, in line with state regulations. When the annuity matures, Jackson either pays the contract holder the amount in the contract holder account or begins making payments to the contract holder in the form of an immediate annuity product. This latter product is similar to a UK annuity in payment.

At 31 December 2014, Jackson had fixed interest rate annuities totalling £11.7 billion (US\$18.3 billion) (2013: £11.2 billion (US\$18.5 billion)) in account value with minimum guaranteed rates ranging from 1.0 per cent to 5.5 per cent and a 3.03 per cent average guaranteed rate (2013: 1.0 per cent to 5.5 per cent and a 3.05 per cent average guaranteed rate).

Fixed interest rate annuities are subject to early surrender charges for the first six to nine years of the contract. In addition, the contract may be subject to a market value adjustment at the time of surrender. During the surrender charge period, the contract holder may cancel the contract for the surrender value. Jackson's profits on fixed interest rate annuities arise primarily from the spread between the return it earns on investments and the interest credited to the contract holder's account, less expenses. The fixed interest rate annuity portfolio could be impacted by the continued low interest rate environment as lower investment portfolio earned rates could result in reduced spread income. In addition, increased surrenders and lower sales could result if customers seek higher yielding alternative investment opportunities elsewhere.

Approximately 57 per cent (2013: 50 per cent) of the fixed interest rate annuities Jackson wrote in 2014 provide for a market value adjustment (MVA) that could be positive or negative on surrenders in the surrender period of the policy. This formula-based adjustment approximates the change in value that assets supporting the product would realise as interest rates move up or down. The minimum guaranteed rate is not affected by this adjustment. While the MVA feature minimizes the surrender risk associated with certain fixed interest rate annuities, Jackson still bears a portion of the surrender risk on policies without this feature, and the investment risk on all fixed interest rate annuities.

Fixed Index Annuities

Fixed index annuities accounted for 2 per cent (2013: 6 per cent) of total new business premiums in 2014 and 6 per cent (2013: 7 per cent) of Jackson's policy and contract liabilities. Fixed index annuities vary in structure, but generally are deferred annuities that enable the contract holder to obtain a portion of an equity-linked return (based on participation rates and caps) and provide a guaranteed minimum return. These guaranteed minimum rates are generally set at 1.0 per cent to 3.0 per cent on index funds. At 31 December 2014, Jackson had fixed index annuities allocated to index funds totalling £6.3 billion (US\$9.8 billion) (2013: £6.1 billion (US\$10.2 billion)) in account value with minimum guaranteed rates on index accounts ranging from 1.0 per cent to 3.0 per cent and a 1.83 per cent average guaranteed rate (2013: 1.0 per cent to 3.0 per cent and a 1.85 per cent average guarantee rate). Jackson also offers fixed interest accounts on some fixed index annuity products. At 31 December 2014, fixed interest accounts on fixed index annuities totalled £1.8 billion (US\$2.8 billion) (2013: £1.5 billion (US\$2.5 billion)) in account value with minimum guaranteed rates ranging from 1.0 per cent to 3.0 per cent and a 2.53 per cent average guaranteed rate (2013: 1.0 per cent to 3.0 per cent and a 2.56 per cent average guarantee rate).

Table of Contents

Jackson's profit arises from the investment income earned and the fees charged on the contract, less the expenses incurred, which include the costs of hedging the equity component of the interest credited to the contract. Fixed index annuities are subject to early surrender charges for the first five to 12 years of the contract. During the surrender charge period, the contract holder may cancel the contract for the surrender value.

Jackson hedges the equity return risk on fixed index products using futures and options linked to the relevant index as well as through offsetting equity exposure in the variable annuity product. The cost of these hedges is taken into account in setting the index participation rates or caps. Jackson bears the investment risk and a portion of the surrender risk on these products.

Immediate Annuities

In 2014, immediate annuities accounted for less than one per cent (2013: less than one per cent) of total new business premiums and one per cent (2013: one per cent) of Jackson's policy and contract liabilities. Immediate annuities guarantee a series of payments beginning within a year of purchase and continuing over either a fixed period of years and/or the life of the contract holder. If the term is for the life of the contract holder, then Jackson's primary risks are mortality and reinvestment. This product is generally used to provide a guaranteed amount of income for contract holders and is used both in planning for retirement and in retirement itself. The implicit interest rate on these products is based on the market conditions that exist at the time the policy is issued and is guaranteed for the term of the annuity.

Variable Annuities

The market share shift in the US annuity market has slowed down, and Jackson continues to hold the leading position in the industry while generating healthy margins. Variable annuity providers continue to modify their product offerings through reductions in fund availability and increased fees. Several insurers with challenging legacy blocks of variable annuity business continue to implement policy changes to help mitigate the risk of their back book of business, including fee increases on older benefits, changes to the availability of investment options, subsequent premium restrictions on in-force contracts and buyback offers to their existing policyholders. Despite positive demographic trends, these activities have the potential to lead to overall contraction in the industry, and likely further market share adjustments, as customers and distributors seek insurers that offer consistency, stability and financial strength.

In 2014, variable annuities accounted for 90 per cent (2013: 85 per cent) of total new business premiums and 69 per cent (2013: 65 per cent) of Jackson's policy and contract liabilities. Variable annuities are deferred annuities that have the same tax advantages and payout options as fixed interest rate and fixed index annuities. They are also used for asset accumulation in retirement planning and to provide income in retirement.

The contract holder can allocate the premiums between a variety of variable sub-accounts with a choice of fund managers and/or a guaranteed fixed interest rate option. The contract holder's premiums allocated to the variable accounts are held apart from Jackson's general account assets, in a separate account, which is analogous to a unit-linked fund. The value of the portion of the separate account allocated to variable sub-accounts fluctuates with the underlying investments. Variable annuities are subject to early surrender charges for the first four to nine years of the contract. During the surrender charge period, the contract holder may cancel the contract for the surrender value. Jackson offers one variable annuity that has no surrender charges.

At 31 December 2014, Jackson had variable annuity funds in fixed accounts totalling £4.4 billion (US\$6.8 billion) (2013: £4.2 billion (US\$7.0 billion)) with minimum guaranteed rates ranging from 1.0 per cent to 3.0 per cent and a

1.81 per cent average guaranteed rate (2013: 1.0 per cent to 3.0 per cent and a 1.85 per cent average guarantee rate).

Jackson offers a choice of guaranteed benefit options within its variable annuity product portfolio, which customers can elect for additional fees. These include the guaranteed minimum death benefits (GMDB), which guarantee that, upon death of the owner, the beneficiary receives a minimum value regardless of past market performance. These guaranteed death benefits might be expressed as the return of original premium, the highest past anniversary value of the contract, or as the original premium accumulated at a fixed rate of interest. In addition, there are three other types of guarantees: guaranteed minimum withdrawal benefits (GMWB), guaranteed minimum accumulation benefits (GMAB) and guaranteed minimum income benefits (GMIB). GMWBs provide a guaranteed return of the principal invested by allowing for periodic withdrawals that are limited to a maximum percentage of the initial premium. One version of the GMWBs provides for a minimum annual withdrawal amount

Table of Contents

that is guaranteed for the contract holder's life without annuitisation. GMABs generally provide a guarantee for a return of a certain amount of principal after a specified period. Jackson stopped offering the GMAB in 2011. GMIBs provide for a minimum level of benefits upon annuitisation regardless of the value of the investments underlying the contract at the time of annuitisation. Jackson no longer offers GMIBs, with existing coverage being substantially reinsured with an unaffiliated reinsurer.

As the investment return on the separate account assets is attributed directly to the contract holders, Jackson's profit arises from the fees charged on the contracts, less the expenses incurred, which include the costs of hedging and eventual payment of any guaranteed benefits. In addition to being a profitable book of business in its own right, the variable annuity book also provides an opportunity to utilise the offsetting equity risk among various lines of business to effectively manage Jackson's equity exposure. Jackson believes that the internal management of equity risk coupled with the utilisation of external derivative instruments where necessary, continues to provide a cost-effective method of managing equity exposure.

Profits in the variable annuity book of business will continue to be subject to the impact of market movements on both sales and allocations to the variable accounts and the effects of the economic hedging programme. Hedging is conducted based on an economic approach so the nature and duration of the hedging instruments, which are recorded at fair value through the income statement, will fluctuate and produce some accounting volatility.

Jackson launched Elite Access in March 2012. Elite Access is a variable annuity without guarantees, offering customers tax deferred growth and access to a wide range of alternative investments. In less than three years after its launch, Elite Access is the fourth best-selling variable annuity product in the US. As of third quarter 2014, Jackson offers three of the top ten best-selling variable annuity products in the industry.

Jackson's Elite Access is a new style of variable annuity that enhances traditional investing through diverse investment options, access to portfolios previously unavailable to retail investors, and tax advantages which help customers seek opportunities and manage risk throughout the economic cycle.

Elite Access is a logical extension of Jackson's variable annuity investment freedom philosophy, which provides customers with a large set of investment options and the ability to tailor the portfolio as they desire. Elite Access helps customers prepare for any market conditions by offering:

- a wide array of traditional equity and fixed income investments that provide core market exposure;
- additional diversification from alternative assets and strategies that help customers modernise their portfolio;
- access to expertise previously available to only institutional and accredited investors, through ready-to-go Guidance Portfolio managed and crafted to meet specific investment objectives using a complement of investments and strategies;
- tactical management strategies designed to provide asset allocation flexibility that adjust to all market cycles – positive or negative; and
- tax-deferred investment growth and legacy planning options through all phases of the economic cycle.

The success of Elite Access has helped increase the diversification of Jackson's product mix with a substantial portion of its 2014 variable annuities sales not featuring living benefit guarantees. As a percentage of total sales, variable annuities with living benefit guarantees were in-line with 2013, which was their lowest since 2008.

Aggregate distribution of account values

The table below shows the distribution of account values for fixed annuities (fixed interest rate and fixed index) and variable annuities fixed options within the range of minimum guaranteed interest rates as described above as at

31 December 2014 and 2013:

Minimum guaranteed interest rates - annuities	Account value £m	
	2014	2013
1.0%	3,927	3,012
> 1.0% - 2.0%	7,887	8,349
> 2.0% - 3.0%	9,365	8,867
> 3.0% - 4.0%	1,239	1,163
> 4.0% - 5.0%	1,567	1,460
> 5.0% - 5.5%	207	197
Total	24,192	23,048

Table of Contents***Life Insurance******Background***

Jackson's life insurance products accounted for none (2013: less than one per cent) of the total new business premiums and 12 per cent (2013: 14 per cent) of Jackson's policy and contract liabilities in 2014. Jackson discontinued new sales of life insurance products effective 1 August 2012. Life products include term life and interest sensitive life (universal life and variable universal life.) Term life provides protection for a defined period and a benefit that is payable to a designated beneficiary upon death of the insured. Universal life provides permanent individual life insurance for the life of the insured and includes a savings element. Variable universal life is a type of life insurance policy that combines death benefit protection with the ability for the contract holder account to be invested in separate account funds. Jackson's life insurance book has delivered consistent profitability, driven primarily by positive mortality and persistency experience. For certain fixed universal life plans, additional provisions are held to reflect the existence of guarantees offered in the past that are no longer supported by earnings on the existing asset portfolio, or for situations where future mortality charges are not expected to be sufficient to provide for future mortality costs.

Aggregate distribution of account values

Excluding the REALIC business that is subject to the retrocession treaties, at 31 December 2014, Jackson had interest-sensitive life business in force with total account value of £5.9 billion (US\$9.3 billion) (2013: £5.7 billion (US\$9.5 billion)), with minimum guaranteed interest rates ranging from 2.5 per cent to 6.0 per cent with a 4.65 per cent average guaranteed rate (2013: 2.5 per cent to 6.0 per cent with a 4.65 per cent average guaranteed rate). The table below shows the distribution of the interest-sensitive life business' account values within this range of minimum guaranteed interest rates as at 31 December 2014 and 2013:

Minimum guaranteed interest rates	Account value £m	
	2014	2013
> 2.0% - 3.0%	195	182
> 3.0% - 4.0%	2,265	2,182
> 4.0% - 5.0%	1,971	1,908
> 5.0%	1,514	1,456
Total	5,945	5,728

Institutional Products

Institutional products consist of traditional guaranteed investment contracts (GICs), funding agreements (including agreements issued in conjunction with Jackson's participation in the US Federal Home Loan Bank of Indianapolis (FHLBI) programme) and medium-term note funding agreements. In 2014, institutional products accounted for 4 per cent (2013: 6 per cent) of total new business premiums and 3 per cent (2013: 3 per cent) of Jackson's policy and contract liabilities. In 2014 and 2013, Jackson participated in the institutional market on a limited and selective basis, taking advantage of high returns available at particular times during the year. The GICs are marketed by Jackson's institutional products department to defined contribution pension and profit sharing retirement plans. Funding agreements are marketed to institutional investors, including corporate cash accounts and securities lending funds, as well as money market funds, and are issued to the FHLBI in connection with its programme. Jackson makes its profit on the spread between the yield on its investments and the interest rate credited to contract holders.

Traditional Guaranteed Investment Contracts

Under a traditional GIC, the contract holder makes a lump sum deposit. Interest is paid on the deposited funds, usually on a quarterly basis. The interest rate paid is fixed and is established when the contract is issued.

Traditional GICs have a specified term, usually two to three years, and typically provide for phased payouts. Jackson tailors the scheduled payouts to meet the liquidity needs of the particular retirement plan. If deposited funds are withdrawn earlier than scheduled, an adjustment is made that approximates a market value adjustment.

Jackson sells GICs to retirement plans, in particular 401(k) plans. The traditional GIC market is extremely competitive, due in part to competition from synthetic GICs, which Jackson does not sell.

Table of Contents

Funding Agreements

Under a funding agreement, the contract holder either makes a lump sum deposit or makes specified periodic deposits. Jackson agrees to pay a rate of interest, which may be fixed but which is usually a floating short-term interest rate linked to an external index. Interest is paid quarterly to the contract holder. The average term for the funding agreements is one to two years. At the end of the specified term, contract holders may re-deposit the principal in another funding agreement.

Typically, brokerage accounts and money market mutual funds are required to invest a portion of their funds in cash or cash equivalents to ensure sufficient liquidity to meet their customers' requirements. The funding agreements permit termination by the contract holder on seven to 90 days notice, and thus qualify as cash equivalents for the clients' purposes. In 2014 and 2013, there were no funding agreements terminable by the contract holder with less than 90 days notice.

Jackson is a member of the FHLBI. Membership allows Jackson access to advances from FHLBI that are collateralised by mortgage related assets in Jackson's investment portfolio. These advances are in the form of funding agreements issued to FHLBI.

Medium Term Note Funding Agreements

Jackson has also established European and global medium-term note programmes. The notes offered may be denominated in any currency with a fixed or floating interest rate. Notes are issued to institutional investors by a special purpose vehicle and are secured by funding agreements issued by Jackson. Jackson's medium-term note programme re-opened in 2013 with 2014 sales of £485 million (2013: £224 million).

Distribution and Marketing

Jackson distributes products in all 50 states of the United States and in the District of Columbia, although not all products are available in all states. Operations in the state of New York are conducted through a New York insurance subsidiary. Jackson markets its retail products primarily through advice based distribution channels, including independent agents, independent broker-dealer firms, regional broker-dealers, and wirehouses, banks and registered investment advisers. Up to August 2012, Jackson also marketed life insurance and fixed annuity products through its captive insurance agency. In conjunction with Jackson's withdrawal from retail life insurance sales, the captive insurance agency was terminated in 2012.

Jackson focuses on independent distribution systems and supports its network of independent agents and advisers with education and training programs.

Jackson's distribution teams set it apart from competitors within the markets in which Jackson competes. Jackson's wholesaling force is the largest in the industry, supporting thousands of advisers across multiple channels and distribution outlets. Jackson's wholesalers provide extensive training to these advisers.

Independent Agents and Broker Dealers

Jackson's subsidiary, Jackson National Life Distributors, LLC (JNLD), is the primary marketing and distribution organisation for Jackson's annuities. The fixed annuity products are distributed through independent agents located throughout the United States. These approximately 17,000 appointed insurance agents or brokers at 31 December 2014, who also may represent other companies, are supported with marketing materials and multi-media presentations

to help advisers choose the right solutions for their clients' individual financial situations. JNLD generally deals directly with writing agents and brokers thereby eliminating intermediaries, such as general agents. This distribution channel has enabled Jackson to generate significant volumes of business on a low, variable cost basis.

JNLD's wholesalers meet directly with independent broker dealers and financial planners and are supported by an extensive internal sales staff. At 31 December 2014, Jackson had active selling agreements with independent broker dealer organisations throughout the United States providing access to more than 66,800 appointed agents. Jackson provides training for its broker dealers and also provides them with product information and sales materials.

Table of Contents

Regional Broker Dealers

JNLDC's Regional Broker Dealer (RBD) team provides dedicated service and support to regional brokerage firms and wirehouses. Regional broker dealers are a hybrid between independent broker dealers and wirehouses. Like representatives who work for wirehouses, financial representatives at regional broker dealers are actual employees of the firm. However, unlike wirehouses, RBD firms have limited institutional investment banking services. The RBD team develops relationships with regional firms throughout the US and provides customised materials and support to meet their specialised advisory needs.

Jackson's RBD team also provides support for the wirehouse channel, which produced £1.9 billion of premium in 2014.

Jackson's RBD team supports more than 37,600 representatives in regional broker dealers and wirehouses.

Banks, Credit Unions and Other Financial Institutions

Jackson's Institutional Marketing Group distributes annuity products through banks, credit unions and other financial institutions and through third party marketing organisations that serve these institutions. Jackson is a leading provider of annuities offered through banks and credit unions and at 31 December 2014 had access to more than 32,500 financial institution representatives through existing relationships with banks and credit unions. Jackson has established distribution relationships with medium sized regional banks, which it believes are unlikely to develop their own insurance product capability.

Independent Broker Dealers

Jackson's retail distribution is managed by Prudential's independent broker dealer network, NPH, which is described in more detail above. NPH had more than 3,500 registered representatives at the end of 2014.

Institutional Products Department

Jackson markets its institutional products through its institutional products department. It has direct contacts with banks, municipalities, asset management firms and direct plan sponsors. Institutional products are distributed and marketed through intermediaries to these groups.

Registered Investment Adviser

As described above, Curian is Jackson's registered investment adviser channel.

The registered investment adviser industry began as a service offered to very high net worth investment clients, focusing on platforms rather than specific products, and providing institutional quality management, custom portfolios and tax services. The industry has evolved to offer personalised investment advice, high-quality money management, good returns and reasonable costs to a broader range of clients.

Curian's sales, not included in Jackson's premiums and deposits, totalled £1,593 million and £1,747 million in 2014 and 2013, respectively.

Factors Affecting Pricing of Products and Asset Liability Management

Jackson prices products based on a variety of assumptions including, but not limited to, mortality, investment yields, expenses and contract holder behaviour. Pricing is influenced by Jackson's objectives for return on capital and by competition. Although Jackson includes a profit margin in the price of its products, the variation between the assumptions and actual experience can result in the products being more or less profitable than originally assumed. This variation can be significant.

Jackson designs its interest sensitive products and conducts its investment operations to match closely the duration of the assets in its investment portfolio with the annuity, life, and guaranteed investment contract product obligations. Jackson seeks to achieve a target spread between what it earns on its assets and what it pays on its liabilities by investing principally in fixed-rate securities. Jackson also enters into options and futures contracts to hedge equity related movements in its products.

Jackson segregates its investment portfolio for certain investment management purposes, and as part of its overall investment strategy, into four portfolios: life and fixed annuities without market value adjustment, fixed annuities with market value adjustment, fixed index annuities and institutional liabilities. The portfolios backing life and fixed

Table of Contents

annuities with and without market value adjustments and the fixed index annuities have similar characteristics and differ primarily in duration. The portfolio backing the institutional liabilities has its own mix of investments that meet more limited duration tolerances. Consequently, the institutional portfolio is managed to permit less interest rate sensitivity and has limited exposure to mortgage backed securities. At 31 December 2014, three per cent of the institutional portfolio was invested in residential mortgage backed securities.

The fixed-rate products may incorporate surrender charges, market value adjustments, two-tiered interest rate structures or other limitations relating to when policies can be surrendered for cash, in order to encourage persistency. As of 31 December 2014, 62 per cent of Jackson's fixed annuity reserves had surrender penalties or other withdrawal restrictions. Substantially all of the institutional portfolio had withdrawal restrictions or market value adjustment provisions.

Fixed index annuities issued by Jackson also include an equity component that is hedged using equity options and futures contracts issued on the corresponding exchange. The equity component of these annuities constitutes an embedded derivative under IAS 39 Financial Instruments: Recognition and Measurement that is carried at fair value, as are other derivative instruments.

Guaranteed benefits issued by Jackson in connection with the sales of variable annuity contracts expose Jackson to equity risk as the benefits generally become payable when equity markets decline and contract values fall below the guaranteed amount. As discussed previously, the liability for certain of these benefits is carried at fair value under IAS 39 with changes in fair value recorded in income. Jackson manages the exposure of the tail risk associated with the equity exposure using equity options and futures contracts, which are also carried at fair value under IAS 39. Jackson seeks to manage the economic risk associated with these contracts and, therefore, has not explicitly hedged its fair value risk as determined for IAS 39. In addition, certain benefits have mortality risk and are therefore precluded from being carried at fair value. As a result of these factors, the income statement may include a timing mismatch related to changes in fair value. However, as demonstrated during the economic crisis, subsequent rebound and recent volatility in the equity markets, Jackson's hedges have effectively operated as designed.

Reserves

Except for certain non-insurance deposit-type accounts and as allowed under IFRS, Jackson uses reserves established on a grandfathered US GAAP basis as the basis for consolidation into Prudential's IFRS accounts.

For the fixed interest rate and variable annuity contracts and institutional products, the reserve is the contract holder's account value. For the fixed index annuities, the reserve is based on two components, 1) the imputed value of the underlying guaranteed host contract and 2) the fair value of the embedded option component of the contract. For the immediate annuities, reserves are determined as the present value of future policy benefits. Mortality assumptions are based on the 1983 Individual Annuitant Mortality Table and the Annuity 2000 Mortality Table for newer issues. Interest rate assumptions currently range from three per cent to six and a three tenths per cent.

The IFRS accounting for guarantees on Jackson's variable annuity contracts has a mixed measurement approach due to requirements of the accounting guidance. GMWB not for life contract features are fair valued under IAS 39 and current US GAAP for embedded derivatives, with a capping feature to prevent early anticipation of expected fees for guarantees. However, the GMDB and GMWB for life blocks of business are accounted for under US GAAP guidance related to valuing life-contingent guarantees, which does not, and is not intended to, fair value the liabilities.

For the traditional term life contracts, reserves for future policy benefits are determined using the net level premium method and assumptions as to mortality, interest, policy persistency and expenses. Mortality assumptions generally

range from 25 per cent to 175 per cent of the 1975-1980 Basic Select and Ultimate tables, depending on underwriting classification and policy duration. Interest rate assumptions range from two and one half per cent to six per cent. Persistency and expense assumptions are based on Jackson's experience.

For the interest sensitive and single premium life contracts, reserves approximate the contract holder's account value.

Table of Contents

Reinsurance

Jackson reinsures portions of the coverage provided by its life insurance products with other insurance companies under agreements of indemnity reinsurance. Indemnity reinsurance agreements are intended to limit a life insurer's maximum loss on a large or unusually hazardous risk or to obtain a greater diversification of risk for the life insurer. Indemnity reinsurance does not discharge the original insurer's primary liability to the insured. Jackson's reinsured business is ceded to numerous unaffiliated reinsurers and the amount of reserves ceded to any one reinsurer is not material to Jackson's overall financial position. Typically, the reinsurers have an AM Best Co rating of A or higher.

As a condition to the REALIC acquisition and after receipt of all required regulatory approvals, REALIC entered into three retrocession reinsurance agreements with Swiss Re. Pursuant to these reinsurance agreements, REALIC ceded to Swiss Re on a 100 per cent coinsurance basis, subject to pre-existing reinsurance, certain blocks of business written or assumed by REALIC. The effective date of the three retrocession agreements was 1 July 2012. In addition and pursuant to these reinsurance agreements, Jackson holds certain assets, primarily in the form of policy loans and fixed maturities, as collateral. This collateral is reported as a funds held liability. The three retrocession agreements are further collateralized (total collateral exceeds the reinsurance recoverable) by Swiss Re assets held in trust accounts.

At 31 December 2014, Jackson's largest amount ceded to one reinsurer totalled £3.8 billion, which is primarily related to the retrocession reinsurance arrangements.

In force level premium term products are generally 90 per cent reinsured. Jackson discontinued new sales of life insurance products effective 1 August 2012.

Jackson cedes the guaranteed minimum income benefit previously offered on variable annuities to an unaffiliated reinsurer.

Policy administration

Jackson provides a high level of administrative support for both new and existing contract holders. Jackson's ability to implement new products quickly and provide quality customer service is supported by integrated computer systems that issue and administer complex life insurance and annuity contracts. Jackson continues to develop its fixed and variable annuity administration systems to enhance the service capabilities for both new and existing customers. The REALIC business is currently administered by several third party administrators.

PPM America

PPMA is Prudential's US institutional investment management operation, with its primary offices in Chicago and New York. PPMA manages assets for Prudential's US, UK and Asian affiliates. PPMA provides affiliated and unaffiliated institutional clients with investment services including managing assets for separate accounts, US mutual funds and similar foreign pooled investment vehicles, a collateralised loan obligation and private equity funds. PPMA's strategy is focused on managing existing assets effectively, maximising the benefits derived from synergies with our international asset management affiliates, and leveraging investment management capabilities across the Group. PPMA also pursues third-party mandates on an opportunistic basis.

UK Business

Introduction

As at 31 December 2014, Prudential's UK business was structured into two business units, each focusing on its respective target customer markets. Prudential's UK business units are Prudential UK & Europe (Prudential UK&E, being the insurance operations) and M&G (being the asset management business).

In 2014, Prudential's UK business generated new business insurance premiums of £6,870 million and gross investment inflows of £38,017 million. At 31 December 2014, M&G had £264 billion of funds under management.

Prudential UK & Europe business overview

The UK life and pensions industry continues to undergo significant change. The announcement by the UK Chancellor in the 2014 Budget to remove compulsory annuitisation and introduce new pension freedoms from April

Table of Contents

2015 has been described as a once in a 100-year change. We are supportive of this change and more generally of policy initiatives that will help encourage people to save in greater numbers, and more often, particularly in an environment where there is a significant savings gap. Simultaneously, we are witnessing a shift in how customers view retirement. The distinction between accumulating funds and then using them to provide an income in retirement is no longer clear-cut. We expect to see further opportunities created in the saving and investment market with demand for financial advice increasing and customers engaging more frequently with their providers.

These new developments represent major changes to the way business is conducted in a number of areas of the markets in which we operate in the UK, and impact not only insurance and investments providers, but also distributors and consumers.

The configuration of the UK market is unchanged, characterised by an ageing population with wealth concentrated in the 50+ age group and a younger generation of savers who are typically less well-funded. While the announcement of pensions freedoms in the 2014 Budget has significantly reduced restrictions on how these individuals will access their savings to help fund an income in retirement, the need to accumulate savings remains. We believe these new developments constitute a significant opportunity for companies with a good strong brand and a solid track record in the long-term savings market.

With a pedigree stretching back over more than 166 years the Prudential UK business has built the foundation of the Group's iconic brand and its cash, capital and credit ratings performance. Our approach in the UK is driven by a focus on providing long-term value to our customers based on our longevity experience, multi-asset investment capabilities and our financial strength. In the UK the Prudential brand is long established, well-known and importantly it is well-trusted both in the intermediary financial adviser and the retail marketplaces. This trust and recognition positions us favourably to help customers save with confidence and understand how to secure a dependable retirement income, through our range of market leading with-profits and retirement income products.

In the UK we focus on those areas of the market where we are able to bring superior value to our customers and where we enjoy a competitive advantage, primarily in with-profits and retirement income provision.

We continue to focus on meeting customer needs:

products and retirement solutions to help customers take advantage of the new pension freedoms; offering a range of ways to do business with us: through intermediaries; through our Prudential Financial Planning partners providing advice to customers in their homes; or by telephone and internet; our market leading PruFund investment range with optional guarantees to suit customers' attitude to risk; and driving year-on-year improvement in service for both customers and intermediaries. Our on-going commitment to customer service improvement was recognised at the Financial Adviser Service Awards, where we retained our two 5-Star ratings in the Life & Pensions and Investment categories while also receiving the Outstanding Achievement Award for 2014.

Our new life company, Prudential Polska conducted its second year of business in 2014, growing ahead of plan. Headquartered in Warsaw, the business now has 15 branches across the country and 712 financial planning consultants.

We are also positive about the long-term opportunities in Africa, where we see many of the favourable structural characteristics of our Asian markets, although most sub-Saharan life insurance markets are in the very early stages of development and therefore are not likely to be material for many years. During 2014 we acquired Express Life in

Ghana and Shield Assurance Company in Kenya, both of which have been renamed using the Prudential brand name.

In November 2014, we sold our 25 per cent equity stake in the PruHealth and PruProtect businesses to Discovery Group Europe Limited for £155 million in cash. This creates the future strategic flexibility to participate in the UK protection market.

Prudential UK & E will continue to focus on its core strengths of with-profits and retirement income while utilising its highly regarded brand franchise in order to help its consumers accumulate savings to help fund a dependable income in retirement.

Table of Contents**UK&E Products and profitability**

Prudential UK&E's long-term products consist of life insurance, pension products and pension annuities. In common with other UK long-term insurance companies, Prudential UK&E's products are structured as either with-profits (or participating) products, or non-participating products including annuities in payment and unit-linked products. Depending on the structure, the level of shareholders' interest in the value of policies and the related profit or loss varies.

With-profits policies are supported by a with-profits sub-fund and can be single premium (for example, Onshore Bonds) or regular premium (for example, certain pension products). Prudential UK&E's primary with-profits sub-fund is part of The Prudential Assurance Company Limited (PAC)'s long-term fund. The return to shareholders on virtually all Prudential UK&E's with-profits products is in the form of a statutory transfer to PAC shareholders' funds. This is analogous to a dividend from PAC's long-term fund, and is dependent upon the bonuses credited or declared on policies in that year. Prudential's with-profits policyholders currently receive 90 per cent of the distribution from the main with-profits sub-fund as bonus additions to their policies, while shareholders receive 10 per cent as a statutory transfer.

We have a competitive advantage in with-profits and an investment franchise in the PruFund range which in 2014 celebrated its 10th anniversary. Demand remains strong for our products, offering downside protection against the volatility of the market, while still providing a steady return over the medium to long-term. In addition to our customers, our shareholders also continue to benefit from the steady performance of our with-profits based products and the cash they generate. The performance of our with-profits fund has allowed us to add an estimated £1.9 billion to with-profits policies in the year and policyholders will typically see year-on-year increases of between 5 per cent and 8 per cent in accumulating with-profits policy values over the past year.

The Defined Charge Participating Sub-Fund (DCPSF) forms part of the PAC long-term fund. It comprises the accumulated investment content of premiums paid in respect of the defined charge participating with-profits business issued in France and the defined charge participating with-profits business reassured into PAC from Prudential International Assurance plc and Canada Life (Europe) Assurance Ltd. It also includes the portfolio of with-profits annuity policies acquired from Equitable Life in 2007. All profits in this fund accrue to policyholders in the DCPSF.

The profits from almost all of the new non-participating business accrue solely to shareholders. Such business is written in the non-profit sub-fund within PAC's long-term fund, or in various shareholder-owned direct or indirect subsidiaries. The most significant of these is Prudential Retirement Income Limited (PRIL), which writes conventional annuities including all new conventional annuities arising from vesting deferred annuity and personal pension policies in the with-profits sub-fund of PAC. There is also a substantial volume of in-force non-participating business in PAC's with-profits sub-fund, part of which was originally written in that fund's wholly owned subsidiary Prudential Annuities Limited (PAL). On 1 October 2014, the business of PAL transferred into PAC following a Part VII Transfer under the Financial Services and Markets Act 2000.

The traditional life insurance product offered by UK life insurance companies was a long-term savings product with a life insurance component. The life insurance element conferred tax advantages that originally distinguished the traditional life insurance products offered in the United Kingdom from the savings products offered by banks, building societies and unit trust companies. The gradual reduction of these tax advantages and increasing sales of single premium life products has resulted in the distinction between life insurance and other long-term savings products becoming less important. Pension products remain tax-advantaged within certain limits.

Prudential UK&E has a well-established individual annuity business, sourced from maturing pension policy customers. The significant reforms of the pensions industry announced by the UK Government, including removal of the requirement to purchase a pension annuity from April 2015, have resulted in an increasing proportion of customers deferring the decision to convert their pension savings into retirement income. Sales of individual annuities in 2014 were 49 per cent lower than in 2013, reflecting the market contraction since the UK Budget announcement, and we expect the annuities market to continue to be impacted by the new choices available to consumers after April 2015. The extent to which consumer behaviour will change and the degree of market dislocation are still unclear but could be significant.

Table of Contents

The increased flexibility afforded by these reforms should ultimately help create an environment where more people are encouraged to save. The changes have also opened up opportunities for us to meet customer needs for alternative retirement solutions, including income drawdown. In December 2014, we launched a Flexible Drawdown product ahead of the introduction of the April 2015 pension reforms. This product will allow customers to access income drawdown without limits from April 2015, and is suited to customers who want more choice over how they use their retirement savings for income.

Prudential UK&E provides a comprehensive range of risk managed investments, including with-profits bonds and pensions, which continue to outperform competitors' propositions. We will continue to develop our with-profits proposition, enhancing the range of investment choices available to policyholders and developing our presence in the Individual Savings Accounts (ISA) market.

Distribution

Retail financial services products are distributed face to face through independent financial advisers (IFAs) and restricted advisers, or directly by mail, telephone and over the internet. IFAs dominate the advice market and offer products from a range of insurance companies selected from the whole of the market. Restricted advisers do not need to select from the whole market and are typically tied to a single insurer or a small panel of insurers. Direct and e-commerce distribution methods are generally non-advised and therefore operate on a lower-cost basis than other distribution channels. Accordingly, products distributed directly are generally aimed at more simple financial planning needs.

The former FSA's review of the retail distribution marketplace called the Retail Distribution Review (RDR) came into force on 31 December 2012. The changes implemented increased the clarity with which advisory firms describe their services and charges. They stipulate that the adviser must be paid by the customer. Providers are no longer permitted to pay commission on new sales of retail investment products. Comparable rules have been introduced for group pensions business. Sales of protection business and general insurance can still attract commission. The changes have also significantly increased the requirements for firms who seek to describe themselves as independent. More information on RDR is given in Item 4 Supervision and Regulation of Prudential UK Supervision and Regulation.

This higher threshold to remain independent saw an increased trend towards advisory firms moving to restricted advice. Typically these models see adviser firms limiting their range to smaller number of products and providers. Prudential is well placed in such models with distribution agreements in place with a number of major advice firms.

Prudential UK&E has a diversified distribution model focusing on intermediaries, Prudential Financial Planning (our direct advice service) and individual customers via mail, email and telephone.

In 2012-2014, Prudential UK&E's new business premiums by channels are as follows:

	Year Ended 31 December £m		
	2014	2013	2012
Individual Annuities:			
Direct & Partnerships	162	284	297
Intermediated	139	488	653
Internal Vesting *	764	1,305	1,456
Total Individual Annuities	1,065	2,077	2,406

Other Products:

Direct & Partnerships	713	673	642
Intermediated	3,382	2,315	2,922
Wholesale	1,710	275	408
Total Other Products	6,870	3,263	3,972
DWP Rebates	-	1	115
Total New Business Premiums	6,870	5,341	6,493

* Internal vesting business is classified as new business where the contracts include an open market option.

Prudential's 25 per cent share of PruProtect and PruHealth products are included to the date of the sale of our share on 14 November 2014.

Table of Contents***Direct and Partnerships***

Our direct distribution channels are primarily charged with increasing revenue from existing Prudential UK&E customers and retention of our existing customer base. Direct distribution channels include the telephone, mail and internet, and focus on annuities, investments, and protection and health products. Prudential UK&E's direct advice service, Prudential Financial Planning (PFP), focuses primarily on the financial planning needs of our existing direct customer base. At the end of 2014, its third year of trading, adviser partner numbers had reached 210.

Partnerships are primarily arrangements with other insurers whereby we offer our annuity products to their vesting pension customers.

Intermediaries

Strong growth in sales through our intermediary channel reflected the strength of our PruFund proposition and our relationships with key intermediary firms. Increased sales of with-profits bonds, individual pensions and income drawdown outweighed the impact of the slow down in the annuities market. With-profits bond sales through intermediaries grew by 36 per cent, largely due to our PruFund bond proposition, where our track record of investment performance differentiates us from our competitors. The value of UK invested assets on platforms continues to increase, and we are seeking to develop new solutions to target this opportunity.

Wholesale

Our approach to bulk transactions in the UK will continue to be one of selective participation, where we can bring both significant value to our customers and meet our shareholder return requirements. Seven bulk annuity buy-in insurance agreements were signed in 2014 totalling £1,710 million of new business premiums. Through our longstanding presence in this segment of the life and pensions market, we have developed considerable longevity experience, operational scale and a solid investment track record, which together represent expertise and capabilities that are increasingly in demand.

Long-term Products

Prudential's long-term products in the United Kingdom consist of life insurance, pension products and pensions annuities. The following table shows Prudential UK&E's new business insurance and investment premiums by product line for the periods indicated. New business premiums include deposits for policies with limited or no life contingencies. Prudential UK&E also distributes life insurance products, primarily investment bonds, in other European countries and has started up a business in Poland which primarily sells with-profits savings and protection products. The volume of such business is relatively small and is included in the table below.

	Year Ended 31 December £m		
	2014	2013	2012
Pension annuities	1,065	2,077	2,406
Corporate pensions	230	281	459
Onshore bonds	2,318	1,754	2,276
Other products	1,547	953	946
Wholesale	1,710	276	408
Total new business premiums	6,870	5,341	6,495

Of the total new business premiums of £6,870 million (2013: £5,341 million; 2012: £6,495 million), £6,681 million (2013: £5,129 million; 2012: £6,286million) were for single premiums and £189 million (2013: £212 million; 2012: £207 million) were for regular premiums.

Pension Annuities

Prudential UK&E offers individual conventional immediate annuities that are either fixed or retail price indexed (referred to as RPI), where annuity payments are guaranteed from the outset, or with-profits annuities, where annuity payments are variable dependent on the investment performance of underlying assets but with an income floor.

A total of £1,065 million of individual annuities were sold in 2014. Of this total, £764 million was sold through internal vesting, that is existing Prudential UK&E customers with maturing pension policies. The other £301 million were sold to new customers, typically individuals with a pension maturing with another provider who chose

Table of Contents

Prudential UK&E to provide their annuity. Prudential UK&E's immediate annuity products provide guaranteed income for a specified time, usually the life of the policyholder, in exchange for a lump sum capital payment. No surrender value is available under any of these products. The primary risks to Prudential UK&E from immediate annuity products are mortality improvements and credit risk.

Conventional Annuities

Prudential UK&E's conventional annuities include level (non-increasing), fixed increase and RPI annuities. Prudential UK&E's fixed increase annuities incorporate automatic increases in annuity payments by fixed amounts over the policyholder's life. The RPI annuities provide for a regular annuity payment to which an additional amount is added periodically based on the increase in the UK Retail Prices Index. In 2014, sales of RPI annuities were £2,557 million (including £1,276 million of bulk annuities). In 2014, sales of level and fixed increase conventional annuities amounted to £1,614 million (including £434 million of bulk annuities).

With-profits Annuities

Prudential UK&E's with-profits annuities combine the income features of annuity products with the investment smoothing features of with-profits products and enable policyholders to obtain equity-type returns over time. In 2009, Prudential UK&E launched the Income Choice Annuity, which allows customers to choose an income between a defined maximum and minimum level, with the option of re-setting this every year. It also provides an opportunity for pension income to grow based on the returns of the with-profits fund. Through this product, Prudential UK&E brings its product development strengths to bear while also capitalising on people's need for protection from inflation through increasingly long periods of retirement.

Prudential is one of only a few companies in the United Kingdom which are active in the with-profits annuities market and has been operating in this market since 1991. In 2014, Prudential UK&E's premiums for this business were £314 million. Prudential UK&E had new business market share of investment linked annuities of 80 per cent in the first nine months of 2014⁽¹⁰⁾.

Pension Products

Prudential UK&E provides both corporate and individual pension products. Corporate pension products are discussed below whilst individual pension products are discussed under **Other Products**. Pension products are tax advantaged long-term savings products that comply with rules established by the HM Revenue and Customs (HMRC) and are designed to supplement state provided pensions.

These products provide policyholders with a number of options at retirement. From age 55 onwards, policyholders may elect to use part or all of their maturity benefits to purchase a pension annuity, they may choose to draw-down funds without purchasing an annuity (currently subject to a number of rules and restrictions on the amount able to be drawn down each year which will be removed in 2015 -see **Prudential UK & Europe business overview** section above), they may delay taking any benefits, or take a combination of these options. They are also permitted to take a portion as a tax-free lump sum.

For products with drawdown features, the investment risk remains with the policyholder, payments are not guaranteed, and tend to cost more to administer. In the past, this has meant that the option to drawdown tended to apply mainly to more sophisticated policyholders and to larger retirement funds. While the rules governing access to pension savings are to be changed and consumers will have more choice and flexibility in how they access their retirement income, draw-downs from pension savings that are greater than the tax-free lump sum will be taxable at the

individual's marginal tax rate.

Many of the pension products Prudential UK&E offers are with-profits products or offer the option to have all or part of the contributions allocated to a with-profits fund. Where funds invested in the with-profits fund are withdrawn prior to the pension date specified by the policyholder, Prudential UK&E may apply a market value adjustment to the amount paid out. The remaining pension products are non-participating products, which include unit-linked products.

Table of Contents

Corporate Pensions

There are two categories of corporate pension products: defined benefit and defined contribution. Prudential UK&E has an established defined benefit plan client base covering the small to medium-sized employer market. Prudential UK&E's defined contribution client base ranges from small unlisted companies to some of the largest companies in the United Kingdom as well as a number of clients in the public sector (in particular where Prudential UK&E offers the Additional Voluntary Contribution (AVC) facility). Additional Voluntary Contribution plans enable employees to make additional pension contributions, either regularly or as a lump sum, to supplement their occupational pension plans. Prudential UK&E administers corporate pensions for over 600,000 scheme members sponsored by some of the UK's largest employers and has also built a very strong position in the provision of with-profits AVC arrangements. Prudential UK&E provides AVCs to 72 of the 99 Local Government Authorities in England & Wales.

Defined benefit plans and products have previously dominated the corporate pensions market in terms of funds under management. In recent years, however, most new plans established have been defined contribution products. In addition, there is an increasing trend among companies to close defined benefit plans to new members or to convert existing schemes from defined benefit to defined contribution in order to stabilise or reduce potential pension liabilities.

Prudential UK&E offers group unit-linked policies and with-profits policies to the corporate pensions market. Prudential UK&E's defined contribution products are AVC plans, Group Money Purchase plans, Group Personal Pension plans, Group Stakeholder Pension plans and Executive Pension plans.

In addition, Prudential UK&E has a Company Pension Transfer Plan (or Bulk S32), designed to accept benefits from both defined benefit and defined contribution pension schemes which are winding up (ceasing to exist or being replaced by a new type of scheme). Prudential UK&E also has the facility to accept enhanced transfers from deferred members of a corporate's defined benefit pensions scheme into Prudential UK&E Personal Pension plan where the member has received advice from an independent financial adviser (often called an enhanced transfer value exercise).

From 2012, individuals who are not already in a pension scheme, who are over 21 and below retirement age and whose earnings are over a minimum amount have had to be automatically enrolled in a pension scheme by their employer, who will be required to make contributions. These requirements were applied first to larger employers and are being rolled out gradually to medium-sized and smaller employers.

From April 2015 corporate pension providers are required to implement a charge cap for default funds of 0.75 per cent of funds under management. Prudential is in the process of implementing this change, which affects a relatively small number of our schemes. We are also putting in place a new Independent Governance Committee.

Onshore Bonds

Prudential UK&E offers customers a range of investment funds to meet different risk and reward objectives. Prudential UK&E's main onshore bond product wrapper is the Prudential Investment Plan (PIP). Through this plan, based on a single premium with no fixed term, customers have the option to invest in the with-profits fund through PruFund or in a range of unit-linked investment funds.

PIP also gives financial advisers the opportunity to choose from different external fund management groups and the flexibility to make changes to portfolio and asset allocation over time. In 2014, sales of the unit-linked option within on-shore bond wrappers, including PIP were £179 million.

Prudential Dynamic Portfolios, launched in 2010, offer advisers a choice of portfolio options to match a client's risk/reward profile as an alternative to building an individual portfolio.

Prudential UK&E offers a unitised and smoothed with-profits investment fund entitled PruFund, which is designed to provide increased transparency and smoothed investment returns to the customer with a choice of Cautious, Growth or risk-managed funds. PruFund also offers clients an optional guarantee on the initial investment in either the Cautious or Growth funds with a term from six to eight years depending on the client's requirements. PruFund is available across Prudential UK&E's range of tax wrappers including individual pensions, income drawdown and onshore and offshore bonds. In 2014, total new business premiums attributable to PruFund, including new business through PIP, was £1,865 million.

Table of Contents

With-profits bonds aim to provide capital growth over the medium to long term, and access to a range of investment sectors without the costs and risks associated with direct investment into these sectors. Capital growth for the policyholder on with-profits bonds apart from PruFund is achieved by the addition of reversionary or annual bonuses, which are credited to the bond on a daily basis from investment returns achieved within PAC's long-term with-profits fund, offset by charges and expenses incurred in the fund. A final bonus may also be added when the bond is surrendered. The PruFund return to policyholders is based on a published expected growth rate, updated quarterly, which aims to deliver more stable growth. In contrast the capital return on unit-linked bonds directly reflects the movement in the value of the assets underlying those funds. When funds invested in PAC's long-term with-profits fund are either fully or partially withdrawn, PAC may apply a market value adjustment to the amount paid out.

The sales growth across Prudential UK&E's with-profits range has been achieved on the back of sustained strong investment performance in its Life Fund over a number of years, reflecting the benefits of its diversified investment policy. Prudential believes that this market will continue to see further growth as investors turn to trusted and financially strong brands and products offering an element of capital protection.

Other Products

Other products comprise individual pensions, income drawdown, offshore bonds, healthcare, life insurance and equity release mortgages.

Individual Pensions

Prudential UK&E's individual pension range offers unit-linked and unitised with-profits products, including products that meet the criteria of the UK government's stakeholder pension program.

The stakeholder pension is intended for individuals earning enough to be able to afford to make contributions to a pension but who are not currently doing so. The introduction of stakeholder pensions has had implications for, among other things, how Prudential UK&E designs, administers and charges for and distributes pension products. The most significant requirements involve capped charges and a low minimum contribution which must be accepted by the provider. The UK government has capped charges at 1.5 per cent per annum of the policyholder account balance for stakeholder pensions for the first ten years, decreasing to 1 per cent thereafter, which is below the charges on personal pension products previously offered by the UK pensions industry.

In previous years Prudential UK&E provided individual personal pension products through the DWP Rebate arrangement. Under this arrangement, individuals could elect to contract out of the UK's State Second Pension (S2P) administered by the UK Department of Work and Pensions and could designate a pension provider, such as Prudential UK&E, to receive rebates. These rebates represented the amount that would otherwise have been paid into S2P. The option to contract out was removed from April 2012 and no further contributions will be received, although Prudential will continue to administer in-force policies.

Income Drawdown

Income drawdown products have historically provided a bridge between pensions and annuities, allowing customers to access pension savings from age 55, subject to certain limits. These products help customers manage their pensions through the various stages of retirement, and also offer flexibility while providing potential for capital growth. Prior to the pension reforms announced in the 2014 UK Budget, the market had seen good growth, reflecting an increasingly sophisticated consumer population and the rising incidence of second careers and semi-retirement as a result of increasing longevity. In the interim period created by the Budget 2014 announcement before the introduction of

pension reforms in April 2015, income drawdown has proved popular with customers seeking greater flexibility than offered by a traditional annuity product. In 2014, Prudential UK&E sold £352 million of income drawdown products.

In December 2014 we launched a new Flexible Drawdown product ahead of the introduction of the April 2015 pension reforms. This product will allow customers to access income drawdown without limits from April 2015, and is suited to customers who want more choice over how they use their retirement savings for income. Until April 2015, to be eligible for Flexible Drawdown, customers need to have a guaranteed secure income of at least £12,000 a year - which can come from a workplace pension, an annuity, a state pension, an overseas pension or a combination of these.

Table of Contents

Offshore Bonds

Prudential UK&E's offshore bond products are the Prudential International Investment Bond and the Prudential International Investment Portfolio offering clients access to a wide range of quoted UK investments. Prudential UK&E's offshore bond sales grew by 42 per cent to £616 million in 2014.

Healthcare

PruHealth was launched in 2004 as a private medical insurance provider backed by Prudential and Discovery of South Africa. On 14 November 2014 Prudential sold its remaining 25 per cent share in PruHealth to Discovery and no further sales are included after that date.

Life Insurance Products

Prudential's UK life insurance products are predominantly pure protection (term) products, and include the PruProtect product previously sold through an associate company. On 14 November 2014 Prudential sold its remaining 25 per cent share in PruProtect to Discovery and no further sales are included after that date. PAC continues to write PruProtect business under a white labelling agreement but has no economic interest in the business written.

Equity Release Mortgage

In November 2009, Prudential UK&E announced the decision to close its equity release operation to new business. Existing customers may, however, still draw down additional funds, subject to their overall borrowing limits.

Wholesale

Wholesale business comprises bulk annuities. Prudential UK&E offers bulk annuities selectively, whereby it manages the assets and accepts the liabilities of a company pension scheme. The volume of Prudential UK&E's bulk annuity sales is unpredictable as the business maintains a very strict focus on value and only participates in capital-efficient transactions that meet its return on capital requirements.

Reinsurance

In view of the size and spread of PAC's long-term insurance fund, there is little current usage of reinsurance to protect this business. Some limited reinsurance is maintained and treaties relating to annuities, critical illness, term insurance and certain unit-linked products are in place.

Reserves

In the United Kingdom, a life insurance company's reserve and other requirements are determined by its Board, with advice from its Actuarial Function Holder, subject to minimum reserve requirements. These minimum reserve requirements are established by the rules and guidance of the PRA.

The reserves are published in annual returns to the PRA. In practice, similar provisions are included in the life insurance company's statutory accounts with limited adjustments. The Actuarial Function Holder must pay due regard to the fair treatment of policyholders in making recommendations to the company's board. The Actuarial Function Holder is required to report directly to the PRA any serious concerns regarding the company's ability to treat its customers fairly.

Prudential UK&E's regulatory reserving for with-profits products, as required by UK regulation, takes into account annual bonuses/annual interest credited to policyholders because these are attached to the policies and are guaranteed. Realistic reserves are also calculated for with-profits products under UK regulation. These include an allowance for final bonuses based on the asset share or a prospective valuation of the policies and the cost of guarantees, smoothing and enhancements.

Prudential UK&E reserves for unit-linked products on the basis of the value of the unit fund and additional reserves are held for expenses and mortality where this is required by the contract design.

As well as the reserves, the company's assets must also cover other capital requirements set out in the PRA Prudential Sourcebook. These comprise a with-profits insurance capital component, which is a measure of the difference in the surplus assets on regulatory and realistic bases; a resilience capital requirement for entities other

Table of Contents

than PAC, which makes prudent allowance for potential future adverse movements in investment values; and the long-term insurance capital requirement, which must be held by all EU insurance companies. See [Financial Strength of PAC's Long-term Fund](#) for further information on solvency and [Realistic Financial Strength Reporting](#) for further information on realistic reporting.

Financial strength of PAC's with-profits fund

The PAC's with-profits fund is supported by a large inherited estate, with the free assets of the with-profits fund valued at approximately £7.2 billion (as at 31 December 2014), on a regulatory realistic basis. This provides the working capital required to support the fund for the long-term benefit of current and future policyholders. The strength of the with-profits fund offers strong policyholder protection and assists in generating positive returns for both policyholders and shareholders.

The table below shows the change in the investment mix of PAC's main with-profits fund:

	2014 %	2013 %	2012 %
UK equities	19	19	17
International equities	24	17	17
Property	16	14	12
Fixed Interest	34	41	44
Cash and other asset classes	7	9	10
Total	100	100	100

The with-profits sub-fund earned a return of 8.3 per cent before tax in 2014 on investments covering policyholder liabilities. The with-profits sub-fund has delivered investment returns of 109.5 per cent over 10 years for policyholder asset shares in the fund, compared with the FTSE All-share index (total return) of 96.1 per cent over the same period (figures are to 31 December 2014, before tax and charges).

Realistic Financial Strength Reporting

In accordance with the PRA Prudential Sourcebook, PAC has to demonstrate solvency on a realistic valuation basis as well as the regulatory basis. In the aggregate, the basis has the effect of placing a value on the liabilities of UK with-profits contracts that reflects the amounts expected to be paid based on the current value of investments held by the with-profits funds and current circumstances.

This basis makes companies' financial health more transparent to policyholders, intermediaries and regulators alike, and enables more informed choices to be made by policyholders. The PAC long-term with-profits sub-fund is strong with the inherited estate (free assets) measured on a realistic basis, valued at approximately £7.2 billion at the end of 2014 before deduction for the risk capital margin.

In line with PRA requirements, PAC produces an Individual Capital Assessment (Pillar II) which is an assessment of the economic capital required to ensure that there is a high likelihood that the company can meet its liabilities as they fall due.

Shareholders' Interests in Prudential UK&E's Long-term Insurance Business

In common with other UK long-term insurance companies, Prudential UK&E's products are structured as either with-profits products or non-participating (including unit-linked) products. With-profits policies are supported by a with-profits fund. Prudential UK&E's primary with-profits fund is part of PAC's long-term fund. For statutory and management purposes, PAC's long-term fund consists of a number of sub-funds in which shareholders and policyholders have varying interests.

With-profits Products

With-profits products provide an equity-type return to policyholders through bonuses that are smoothed. There are two types of bonuses: annual and final. Annual bonuses, often referred to as reversionary bonuses, are declared once a year and, once credited, are guaranteed in accordance with the terms of the particular product. Unlike annual bonuses, final bonuses are only guaranteed until the next bonus declaration. Final bonuses are only credited on a product's maturity or surrender or on the death of the policyholder. Final bonuses can represent a substantial portion of the ultimate return to policyholders.

Table of Contents

With-profits products provide benefits that are generally either the value of the premiums paid, less charges and fees and with the addition of declared bonuses, or the guaranteed death benefit with the addition of declared bonuses. Smoothing of investment returns is an important feature of with-profits products. It is designed to reduce the impact of fluctuations in investment return from year to year and is accomplished predominantly through the level of final bonuses declared.

The return to Prudential's shareholders in respect of with-profits business Prudential UK&E writes is an amount equal to up to one-ninth of the value of the bonuses Prudential UK&E credits or declares to policyholders in that year. Prudential UK&E has a large block of in-force with-profits business with varying maturity dates that generates a relatively stable stream of shareholder profits from year to year.

PAC's board of directors, with the advice of its Actuarial Function Holder and its With-Profits Actuary, determines the amount of annual and final bonuses to be declared each year on each group of contracts.

When determining policy payouts, including final bonuses, PAC follows an actuarial practice of considering asset shares for specimen policies. Asset shares broadly reflect the value of premiums paid in respect of a policy accumulated at the investment return on the assets PAC notionally attributes to the policy. In calculating asset shares, PAC takes into account the following items:

- the cost of mortality risk and other guarantees (where applicable);
- the effect of taxation;
- management expenses, charges and commissions;
- the proportion of the amount determined to be distributable to shareholders; and
- the surplus arising from surrenders, non-participating business included in the with-profits fund and other miscellaneous sources.

However, Prudential UK&E does not take into account the surplus assets of the long-term fund, or investment return earned on them, in calculating asset shares. Asset shares are used in the determination of final bonuses together with treating customers fairly, the need to smooth claim values and payments from year to year and competitive considerations.

Prudential UK&E is required by UK law and regulation to consider the fair treatment of its customers in setting bonus levels. The concept of treating customers fairly is established by statute but is not defined. In practice, it provides one of the guiding principles for decision-making in respect of with-profits products.

The overall return to policyholders is an important competitive measure for attracting new business. The ability to declare competitive bonuses depends, in part, on the financial strength of PAC's long-term fund, enabling it to maintain high levels of investment in equities and real estate, if it wishes to do so. Equities and real estate have historically over the long-term provided a return in excess of fixed interest securities.

In 2014, PAC declared a total surplus of £2,012 million (2013: £2,134 million) from PAC's primary with-profits sub-fund, of which £1,812 million (2013: £1,922 million) was added to with-profits policies and £200 million (2013: £212 million) was distributed to shareholders. These amounts included annual bonus rates of 2.0 per cent for Prudence Bond and 2.0 per cent for personal pensions.

The closed Scottish Amicable Insurance Fund (SAIF) declared total bonuses in 2014 of £362 million compared to £475 million in 2013. Shareholders have no interest in profits from the SAIF fund, although they are entitled to the

investment management fees paid by this business. For greater detail on the SAIF fund, see The SAIF sub-fund and accounts below.

Surplus Assets in PAC's Long-term With-profits Fund

The assets of the main with-profits sub-fund within the long-term fund of PAC comprise the amounts that it expects to pay out to meet its obligations to existing policyholders and an additional amount used as working capital. The amount payable over time to policyholders from the with-profits sub-fund is equal to the policyholders' accumulated asset shares plus any additional payments that may be required by way of smoothing or to meet guarantees. The balance of the assets of the with-profits sub-fund is called the inherited estate and has accumulated over many years from various sources.

Table of Contents

The inherited estate, as working capital, enables Prudential UK&E to support with-profits business by providing the benefits associated with smoothing and guarantees, by providing investment flexibility for the fund's assets, by meeting the regulatory capital requirements that demonstrate solvency and by absorbing the costs of significant events or fundamental changes in its long-term business without affecting the bonus and investment policies. The size of the inherited estate fluctuates from year to year depending on the investment return and the extent to which it has been required to meet smoothing costs, guarantees and other events.

Depletion of Surplus Assets and Shareholders' Contingencies

As a proprietary insurance company, PAC is liable to meet its obligations to policyholders even if the assets of the long-term funds are insufficient to do so. The assets, represented by the unallocated surplus of with-profits funds, in excess of amounts expected to be paid for future terminal bonuses and related shareholder transfers (the excess assets) in the long-term funds could be materially depleted over time by, for example, a significant or sustained equity market downturn, costs of significant fundamental strategic change or a material increase in the pension mis-selling provision. In the unlikely circumstance that the depletion of the excess assets within the long-term fund was such that the Group's ability to satisfy policyholders' reasonable expectations was adversely affected, it might become necessary to restrict the annual distribution to shareholders or to contribute shareholders' funds to the long-term funds to provide financial support.

In 1998, Prudential stated that deducting personal pensions mis-selling costs from the inherited estate of the with-profits sub-fund would not impact its bonus or investment policy and it gave an assurance that if this unlikely event were to occur, it would make available support to the fund from shareholder resources for as long as the situation continued, so as to ensure that policyholders were not disadvantaged. The assurance was designed to protect both existing policyholders at the date it was announced, and policyholders who subsequently purchased policies while the pension mis-selling review was continuing.

This review was completed on 30 June 2002. The assurance will continue to apply to any policy in force at 31 December 2003, both for premiums paid before 1 January 2004, and for subsequent regular premiums (including future fixed, retail price index or salary related increases and Department of Work and Pensions rebate business). The assurance has not applied to new business issued since 1 January 2004. New business in this context consists of new policies, new members to existing pension schemes plus regular and single premium top-ups, transfers and switches to existing arrangements. The maximum amount of capital support available under the terms of the assurance will reduce over time.

The bonus and investment policy for each type of with-profits policy is the same irrespective of whether or not the assurance applies. Hence removal of the assurance for new business has had no impact on policyholder returns.

Prudential and Prudential Assurance Company Limited have put in place intra-group arrangements to formalise circumstances in which capital support would be made available by Prudential (including in the scenarios referred to in pension mis-selling review above). While Prudential considers it unlikely that such support will be required, the arrangements are intended to provide additional comfort to Prudential Assurance Company Limited and its policyholders.

In addition, Prudential has put in place intra-group arrangements to formalise undertakings by Prudential to the regulators of the Hong Kong subsidiaries, which from 1 January 2014, contain the domesticated branch business from PAC as noted in note D2 to the consolidated financial statements in Item 18 regarding their solvency levels. In addition, the scheme of transfer of the Hong Kong branch includes short-term support arrangements between Prudential and PAC to underpin similar arrangements between PAC and the newly domesticated business. It is

considered unlikely that support will need to be provided under these arrangements.

The SAIF Sub-fund and Accounts

The SAIF sub-fund is a ring-fenced sub-fund of PAC's long-term fund and was formed following the acquisition of the mutual Scottish Amicable Life Assurance Society in 1997. No new business may be written in SAIF, although regular premiums are still being paid on policies in-force at the time of the acquisition and top-ups are permitted on these policies.

Table of Contents

This fund is solely for the benefit of those Scottish Amicable Life Assurance Society policyholders whose policies were transferred to SAIF. Shareholders have no interest in the profits of this fund, although they are entitled to the investment management fees paid on this business. The brand name and rights to profit on new business were transferred to a new PAC subsidiary, Scottish Amicable Life plc, which operated for the benefit of shareholders.

SAIF with-profits policies contain minimum levels of guaranteed benefit to policyholders. In addition, as mentioned below, certain pensions products have guaranteed annuity rates at retirement. Should the assets of SAIF be inadequate to meet the guaranteed benefit obligations of the policyholders of SAIF, the PAC long-term fund would be liable to cover any such deficiency in the first instance.

Non-participating Business

The majority of Prudential-branded non-participating business is written in the non-profit sub-fund of PAC's long-term fund or in subsidiaries owned by PAC. Since mid-2004, Prudential UK&E has written the majority of its new non-profit annuity business through Prudential Retirement Income limited (PRIL), from which the profits are attributed solely to shareholders. Prior to that time, certain non-profit annuity business was written through Prudential Annuities Limited (PAL), which is wholly owned by PAC's with-profits fund. The profits on this business are attributable to the fund and not to shareholders, although indirectly shareholders get one-ninth of additional amounts paid to policyholders through the declaration of bonuses.

The unit-linked business written by PAC and Prudential International Assurance is written with capital provided by shareholders.

Guaranteed Annuities

Prudential used to sell guaranteed annuity products in the United Kingdom and held a technical provision of £50 million as at 31 December 2014, within the main with-profits fund to honour guarantees on these products. PAC's main exposure to guaranteed annuities in the United Kingdom is through SAIF and a provision of £549 million was held in SAIF as at 31 December 2014, to honour the guarantees. As SAIF is a separate sub-fund of PAC's long-term business fund, wholly attributable to the policyholders of the fund, the movement in this provision has no impact on shareholders.

M&G

M&G is the UK and European fund manager of the Prudential Group with responsibility for investments on behalf of both internal and external clients.

Across its chosen markets, M&G serves the needs of both retail and institutional investors. Retail clients favour pooled funds such as open-ended investment companies (OEICs) which they buy directly from M&G or more typically through an intermediary such as an independent financial adviser or discretionary fund manager. Institutional clients require investment strategies that help them meet future outgoings, from a pension scheme making payments to retired employees to a sovereign wealth fund that finances schools, transport and other infrastructure developments. M&G's ability to design and commercialise investment strategies for such clients is founded on the quality of its people and their acknowledged expertise in the world's credit and real estate markets.

In the retail market M&G operates a range of UK domiciled funds which are now distributed across Europe and Asia. Today, clients outside the UK account for more than 45 per cent of M&G's retail assets under management.

In the institutional market, M&G provides a range of strategies that help pension funds, sovereign wealth funds and other large investors wealth liabilities and active growth targets. Some of these strategies were developed originally for Prudentials insurance funds.

Today M&G is an international asset manager with a physical presence in 17 countries and retail products which are distributed in 22 jurisdictions.

Through its proven ability to convert investment performance into significant fund flows, M&G is able to increase its exposure to markets and so maximise revenue from the long-term stock of funds under management.

Table of Contents

The pillars of M&G's business that support this approach are:

People - an environment that attracts, fosters and retains talented individuals

Performance - an investment-led business focused on the delivery of long-term returns through active investment management

Innovative investment ideas which meet client needs and a proven ability to convert these ideas into significant fund flows

Diversification by asset class, client type, fund and investment strategy and country

A committed focus on long-term investment returns means that the interests of M&G and its customers are always aligned, whether clients are individual savers, institutional investors or the funds of Prudential's insurance operations.

M&G has a strong investment brand, built over decades and based on a reputation for honesty, innovation and a commitment to building long-term wealth for our investors.

Since launching the UK's first open-ended fund in 1931, we have brought a succession of new investment strategies to the retail and institutional markets. In combination with this tradition of innovative investment thinking, M&G has a proven ability to convert ideas into significant fund flows. It is these two qualities in combination that make M&G distinctive.

M&G has become a pioneer in fixed income investing over the last two decades with the backing of one of the most experienced and well-resourced teams in the UK. Since the launch of the group's first retail corporate bond fund in 1994, the company has created a suite of fixed income products designed to suit the varying needs of investors.

Our latest offering, the M&G Global Floating Rate High Yield Bond Fund, was successfully launched in September 2014 and registered in the UK and across Continental Europe. We believe that this is the first time that retail investors have been given access to the high yield floating rate note market through a collective fund. For bond investors concerned about the risk of an increase in interest rates, this Fund offers a means not only to protect their savings but also to gain benefit from rising yields.

Diversification

M&G has pursued business diversification across:

- (i) Asset class: expertise across equities, fixed income, real estate and mixed-asset strategies;
- (ii) Client type: retail customers and institutional clients including pension funds, sovereign wealth funds, and Prudential's own long-term insurance funds;
- (iii) Investment strategy: Over 60 pooled retail funds covering domestic, global and emerging market strategies, 13 of which have funds under management of over £1 billion. Institutional clients benefit from a wide-range of pooled and/or segregated fixed income, equity and real estate strategies;
- (iv) Country.

M&G's investment expertise spans all the principal asset classes – equities, fixed income and real estate – so that we can always offer investment solutions to our clients as market conditions and investor sentiment change.

Equities: Our fund managers have the freedom to develop their own investment approaches. Their main strength lies in stock selection, focusing on fundamental company analysis. M&G's size and standing enables our fund managers to develop an effective dialogue with the management teams of the companies in which they invest.

Fixed Income: M&G is one of Europe's largest fixed income investors. Our fund managers benefit from one of the region's largest and most experienced in-house credit research teams, whose knowledge covers the full range of fixed income investment, from the management of sovereign debt and public corporate bond portfolios, through to private debt such as leveraged finance, real estate finance, direct lending and infrastructure. In a global ranking of global private debt managers for 2014, M&G ranked fifth⁽¹¹⁾ and was the only European firm in the top 10⁽¹²⁾.

⁽¹¹⁾Private debt investor figures based on amount of capital raised over the last 5 years for discrete private debt strategies.

⁽¹²⁾Lipper FMI FundFile, 31 December 2014, based on Europe ex. UK and International region. M&G data sourced internally.

Table of Contents

Real Estate: M&G Real Estate is a leading global property investor and manager covering all major real estate sectors including business space, retail and leisure, residential and alternatives sectors. We actively manage our assets, drawing on our long heritage of expertise and knowledge and our extensive network of contacts. This approach enables the business to identify and capitalise on attractive investment opportunities. We also have a track record for identifying and exploiting real estate development opportunities and for the successful delivery of projects. M&G concluded 2014 with circa £4 billion of global transactions. This included £3.2 billion of acquisitions with an average deal size of £50 million.

The following table shows funds managed by M&G at the dates indicated.

	At 31 December £bn		
	2014	2013	2012
Retail fund management	74	67	55
Institutional fund management	63	59	57
Internal fund management	127	118	116
Total	264	244	228

Table of Contents

Group Risk Framework

Risk and Capital Management

Introduction

We generate shareholder value by selectively taking exposure to risks that are adequately rewarded and that can be appropriately quantified and managed. We retain material risks only where consistent with our risk appetite and risk-taking philosophy, that is: (i) they contribute to value creation; (ii) adverse outcomes can be withstood; and (iii) we have the capabilities, expertise, processes and controls to manage them. The Group aims to help customers achieve their long term financial goals by providing and promoting a range of products and services that meet customer needs, are easy to understand and that deliver real value.

The control procedures and systems established within the Group are designed to manage rather than eliminate the risk of failure to meet business objectives. They can only provide reasonable and not absolute assurance against material misstatement or loss and focus on aligning the levels of risk-taking with the achievement of business objectives.

Risk governance

(Unaudited)

Our Group Risk Framework requires that all our businesses and functions establish processes for identifying, evaluating and managing the key risks faced by the Group. The framework is based on the concept of three lines of defence comprising risk taking and management, risk control and oversight and independent assurance.

Primary responsibility for strategy, performance management and risk control lies with the Board, which has established the Group Risk Committee to assist in providing leadership, direction and oversight in respect of the Group's significant risks, and with the Group Chief Executive and the Chief Executives of each of the Group's business units. Some of the key responsibilities of the Group Risk Committee include the responsibility for recommending the Own Risk and Solvency Assessment and other regulatory submissions to the Board, keeping the three lines of defence framework under review and monitoring the effectiveness of the Group Chief Risk Officer.

Risk taking and the management thereof forms the first line of defence and is facilitated through both the Group Executive Committee and the Balance Sheet and Capital Management Committee.

Risk control and oversight constitutes the second line of defence, and is achieved through the operation of the Group Executive Risk Committee and its sub-committees which monitor and keep risk exposures under regular review. These committees are supported by the Group Chief Risk Officer, with functional oversight provided by Group Risk, Group Compliance and Group Security.

Group Risk has responsibility for establishing and embedding a capital management and risk oversight framework and culture consistent with our risk appetite that protects and enhances the Group's embedded and franchise value. Group Compliance provides verification of compliance with regulatory standards and informs the Board, as well as the Group's management, on key regulatory issues affecting the Group. Group Security is responsible for developing and delivering appropriate security measures with a view to protecting the Group's staff, physical assets and intellectual property.

Principles and objective

(Unaudited)

Risk is defined as the uncertainty that Prudential faces in successfully implementing its strategies and objectives. This includes all internal or external events, acts or omissions that have the potential to threaten the success and survival of Prudential.

The control procedures and systems established within the Group are designed to manage rather than eliminate the risk of failure to meet business objectives. They can only provide reasonable and not absolute assurance against material misstatement or loss and focus on aligning the levels of risk-taking with the achievement of business objectives.

Material risks will only be retained where this is consistent with Prudential's risk appetite framework and its philosophy towards risk-taking. The Group's current approach is to retain such risks where doing so contributes to value creation and the Group is able to withstand the impact of an adverse outcome, and has the necessary capabilities, expertise, processes and controls to appropriately manage the risk.

Table of Contents

Risk objectives

In keeping with this philosophy, the Group has five objectives for risk and capital management which are as follows:

Framework	Monitoring	Control	Communication	Culture
Design, implement and maintain a capital management and risk oversight framework, which is consistent with the Group's risk appetite and philosophy towards risk taking	Establish a risk management culture by identifying the risk landscape, assessing and monitoring risk exposures and understanding change drivers	no surprisesImplement suitable risk mitigation strategies and remedial actions where exposures are deemed inappropriate, and to manage the response to potentially extreme events	Effectively communicate the Group's risk, capital and profitability position to both internal and external stakeholders	Foster a risk management culture, providing quality assurance and facilitating the sharing of best practice

RISK MANAGEMENT THE FIRST LINE OF DEFENCE

Risk-taking and the management thereof forms the first line of defence and is facilitated through both the Group Executive Committee and the Balance Sheet and Capital Management Committee.

Group Executive Committee

Balance Sheet and Capital Management Committee

(GEC)

(BSCMC)

Purpose:

Supports the Group Chief Executive in the executive management of the Group and is comprised of the Chief Executives of each of the Group's major business units, as well as a number of functional specialists.

Meets: Usually fortnightly

Purpose:

Supports the Chief Financial Officer in the management of the Group's balance sheet, as well as providing oversight to the activities of Prudential Capital, which undertakes the treasury function for the Group. The BSCMC is comprised of a number of functional specialists.

Meets: Monthly

RISK OVERSIGHT THE SECOND LINE OF DEFENCE

Risk control and oversight constitutes the second line of defence, and is achieved through the operation of a number of Group-level risk committees, chaired by either the Chief Financial Officer or the Group Chief Risk Officer, which monitor and keep risk exposures under regular review.

Group Executive Risk Committee

(GERC)

Purpose: Oversees the Group's risk exposures, including market, credit, liquidity, insurance and operational risks, and also monitors the Group's capital position.

Reports to: Group Chief Executive

Meets: Monthly

<i>Technical Actuarial Committee (TAC)</i>	<i>Group Credit Risk Committee (GCRC)</i>	<i>Group Operational Risk Committee (GORC)</i>	<i>Solvency II Technical Oversight Committee (STOC)</i>
<p>Purpose:</p> <p>Sets the methodology for valuing Prudential's assets, liabilities and capital requirements under Solvency II and the Group's internal economic capital basis.</p> <p>Reports to: GERC Meets: Usually monthly and more often as required</p>	<p>Purpose:</p> <p>Reviews the Group's investment and counterparty credit risk positions</p> <p>Reports to: GERC Meets: Monthly</p>	<p>Purpose:</p> <p>Oversees the Group's operational risk exposures.</p> <p>Reports to: GERC Meets: Quarterly</p>	<p>Purpose:</p> <p>Provides ongoing technical oversight and advice to the Board and executive in respect of their duties with regard to the Group's Internal Model.</p> <p>Reports to: GERC Meets: Usually 10 times annually</p>

Table of Contents

The Group-level risk committees are supported by the Group Chief Risk Officer, with functional oversight provided by Group Security, Group Compliance and Group Risk. Group Security is responsible for developing and delivering appropriate security measures with a view to protecting the Group's staff, physical assets and intellectual property. Group Compliance provides verification of compliance with regulatory standards and informs the Board, as well as management, on key regulatory issues affecting the Group. Group Risk has responsibility for establishing and embedding a capital management and risk oversight framework and culture consistent with Prudential's risk appetite that protects and enhances the Group's embedded and franchise value.

INDEPENDENT ASSURANCE – THE THIRD LINE OF DEFENCE

Group-wide Internal Audit (GwIA)

The third line of defence comprises the Group-wide Internal Audit function, which provides independent and objective assurance to the Board, its Audit and Risk Committees and the Group Executive Committee, to help protect the assets, sustainability and reputation of the Group.

Risk appetite and limits

(Audited)

The extent to which we are willing to take risk in the pursuit of our objective to create shareholder value is defined by a number of risk appetite statements, operationalised through measures such as limits, triggers and indicators. These appetite statements and measures are approved by the Board on recommendation of the Group Risk Committee and are subject to annual review.

We define and monitor aggregate risk limits based on financial and non-financial stresses for our earnings volatility, liquidity and capital requirements as follows:

Earnings volatility: the objectives of the limits are to ensure that:

- a. the volatility of earnings is consistent with the expectations of stakeholders;
- b. the Group has adequate earnings (and cashflows) to service debt, expected dividends and to withstand unexpected shocks; and
- c. earnings (and cashflows) are managed properly across geographies and are consistent with funding strategies.

The two measures used to monitor the volatility of earnings are EEV operating profit and IFRS operating profit, although EEV and IFRS total profits are also considered.

Liquidity: the objective is to ensure that the Group is able to generate sufficient cash resources to meet financial obligations as they fall due in business as usual and stressed scenarios.

Capital requirements: the limits aim to ensure that:

- a. the Group meets its internal economic capital requirements;
- b. the Group achieves its desired target rating to meet its business objectives; and
- c. supervisory intervention is avoided.

The two measures used are the EU Insurance Groups Directive (IGD) capital requirements and internal economic capital requirements. In addition, capital requirements are monitored on both local statutory and future Solvency II regulatory bases.

Table of Contents

We also define risk appetite statements and measures (i.e. limits, triggers, indicators) for the major constituents of each risk type as categorised and defined in the Group Risk Framework, where appropriate. These appetite statements and measures cover the most significant exposures to the Group, particularly those that could impact our aggregate risk limits. The Group Risk Framework risk categorisation is shown in the table below.

Category	Risk type	Definition
Financial risks	Market risk	The risk of loss for the Group's business, or of adverse change in the financial situation, resulting, directly or indirectly, from fluctuations in the level or volatility of market prices of assets and liabilities.
	Credit risk	The risk of loss for the Group's business or of adverse change in the financial position, resulting from fluctuations in the credit standing of issuers of securities, counterparties and any debtors in the form of default or other significant credit event (e.g. downgrade or spread widening).
	Insurance risk	The risk of loss for the Group's business or of adverse change in the value of insurance liabilities, resulting from changes in the level, trend, or volatility of a number of insurance risk drivers. This includes adverse mortality, longevity, morbidity, persistency and expense experience.
	Liquidity risk	The risk of the Group being unable to generate sufficient cash resources or to meet financial obligations as they fall due in business as usual and stress scenarios.
Non-financial risks	Operational risk	The risk of loss arising from inadequate or failed internal processes, or from personnel and systems, or from external events other than those covered by business environment risk.
	Business environment risk	Exposure to forces in the external environment that could significantly change the fundamentals that drive the business's overall strategy.
	Strategic risk	Ineffective, inefficient or inadequate senior management processes for the development and implementation of business strategy in relation to the business environment and the Group's capabilities.

Our risk appetite framework forms an integral part of our annual business planning cycle. The Group Risk Committee is responsible for reviewing the risks inherent in the Group's business plan and for providing the Board with input on the risk/reward trade-offs implicit therein. This review is supported by the Group Risk function, which uses submissions by business units to calculate the Group's aggregated position (allowing for diversification effects between business units) relative to the aggregate risk limits.

Risk policies**(Audited)**

Risk policies set out specific requirements for the management of, and articulate the risk appetite for, key risk types. There are policies for credit, market, insurance, liquidity, operational and tax risk, as well as dealing controls. They form part of the Group Governance Manual, which was developed to make a key contribution to the sound system of internal control that we are expected to maintain under the UK Corporate Governance Code and the Hong Kong Code on Corporate Governance Practices. Group Head Office and business units confirm that they have implemented the necessary controls to evidence compliance with the Group Governance Manual.

Risk culture

(Unaudited)

We work to promote a responsible risk culture in three main ways:

- a. by the leadership and behaviours demonstrated by management;
- b. by building skills and capabilities to support management; and
- c. by including risk management (through the balance of risk with profitability and growth) in the performance evaluation of individuals.

The remuneration strategy at Prudential is designed to be consistent with its risk appetite, and the Group Chief Risk Officer advises the Group Remuneration Committee on adherence to our risk framework and appetite.

Table of Contents**Risk reporting****(Unaudited)**

An annual top-down identification of our top risks assesses the risks that have the greatest potential to impact the Group's operating results and financial condition. The management information received by the Group Risk Committees and the Board is tailored around these risks, and it also covers on-going developments in other key and emerging risks. A discussion of the key risks, including how they affect our operations and how they are managed, follows below.

Key risks**Market risk*****(i) Investment risk*****(Audited)**

In Prudential UK investment risk arising on the assets in the with-profits fund impacts the shareholders' interest in future transfers and is driven predominantly by equities in the fund as well as by other investments such as property and bonds. The value of the future transfers is partially protected against equity falls by hedging conducted outside of the fund. The fund's large inherited estate (estimated at £7.2 billion as at 31 December 2014 (1 January 2014: £6.8 billion, after the domestication of Hong Kong business)) can absorb market fluctuations and protect the fund's solvency. The inherited estate is partially protected against falls in equity markets through an active hedging policy within the fund.

In Asia, our shareholder exposure to equities relates to revenue from unit-linked products and to the effect of falling equity markets on its with-profits businesses.

In Jackson, investment risk arises in relation to the assets backing the policies. In the case of the spread business, including fixed annuities, these assets are generally bonds. For the variable annuity business, these assets include equities as well as other assets such as bonds. In this case the impact on the shareholder comes from value of future mortality and expense fees, and additionally from guarantees embedded in variable annuity products. Shareholders' exposure to these guarantees is mitigated through a hedging programme, as well as reinsurance. Further measures have been undertaken including re-pricing initiatives and the introduction of variable annuities without guarantees. Furthermore, it is our philosophy not to compete on price; rather, we seek to sell at a price sufficient to fund the cost incurred to hedge or reinsure the risks and to achieve an acceptable return.

The Jackson IFRS shareholders' equity and US statutory capital are sensitive to the effects of policyholder behaviour on the valuation of GMWB guarantees. Jackson hedges the guarantees on its variable annuity book on an economic basis and, thus, accepts variability in its accounting results in the short term in order to achieve the appropriate economic result. In particular, under Prudential's Group IFRS reporting, the measurement of the Jackson variable annuity guarantees is typically less sensitive to market movements than the corresponding hedging derivatives, which are held at market value. However, depending on the level of hedging conducted regarding a particular risk type, certain market movements can drive volatility in the economic result which may be either more or less significant under IFRS reporting.

(ii) Interest rate risk

(Audited)

Long-term rates have declined over recent periods in many markets, falling to historic lows. Products that we write are sensitive to movements in interest rates, and while we have already taken a number of actions to de-risk the in-force business as well as re-price and restructure new business offerings in response to historically low interest rates, persistently low rates may impact policyholders' savings patterns and behaviour.

Interest rate risk arises in our UK business from the need to match cashflows for annuity payments with those from investments; movements in interest rates may have an impact on profits where durations are not perfectly matched. As a result, we aim to match the duration of assets and liabilities as closely as possible and the position is monitored regularly. The with-profits business is exposed to interest rate risk as a result of underlying guarantees. Such risk is largely borne by the with-profits fund but shareholder support may be required in extremis.

Table of Contents

In Asia, exposure to interest rate risk arises from the guarantees of some non-unit-linked investment products. This exposure arises because it may not be possible to hold assets which will provide cashflows to match exactly those relating to policyholder liabilities. While this residual asset/liability mismatch risk can be managed, it cannot be eliminated.

Jackson is exposed to interest rate risk in its fixed, fixed index and variable annuity books. Movements in interest rates can influence the cost of guarantees in such products, in particular the cost of guarantees may increase when interest rates fall. Interest rate risk across the entire business is managed through the use of interest rate swaps and interest rate options.

(iii) Foreign exchange risk

(Audited)

We principally operate in Asia, the US and the UK. The geographical diversity of our businesses means that we are inevitably subject to the risk of exchange rate fluctuations. Our international operations in the US and Asia, which represent a significant proportion of our operating profit and shareholders funds, generally write policies and invest in assets denominated in local currency. Although this practice limits the effect of exchange rate fluctuations on local operating results, it can lead to significant fluctuations in our consolidated financial statements when results are expressed in UK sterling.

We retain revenues locally to support the growth of our business and capital is held in the local currency of the business to meet local regulatory and market requirements, accepting the balance sheet translation risks this can produce. However, in cases where a surplus arising in an overseas operation supports Group capital or where a significant cash remittance is due from an overseas subsidiary to the Group, this exposure is hedged where we believe it is economically optimal to do so. We do not have appetite for significant shareholder exposures to foreign exchange risks in currencies outside the local territory. Currency borrowings, swaps and other derivatives are used to manage exposures.

Credit risk

(Audited)

We invest in fixed income assets in order to match policyholder liabilities and enter into reinsurance and derivative contracts to mitigate various types of risk. As a result, we are exposed to credit and counterparty credit risk across our business. We employ a number of risk management tools to manage credit risk, including limits defined on an issuer/counterparty basis as well as on average credit quality, and collateral arrangements in derivative transactions. The Group Credit Risk Committee oversees credit and counterparty credit risk across the Group.

(i) Debt and loan portfolio

(Audited)

Our UK business is primarily exposed to credit risk in the shareholder-backed portfolio, where fixed income assets represent 37 per cent or £31.7 billion of our exposure. Credit risk arising from £46.6 billion of fixed income assets is largely borne by the with-profits fund, although shareholder support may be required should the with-profits fund become unable to meet its liabilities.

The debt portfolio of our Asia business totalled £23.6 billion at 31 December 2014. Of this, approximately 67 per cent was in unit-linked and with-profits funds with minimal shareholder risk. The remaining 33 per cent is shareholder exposure.

Credit risk arises in the general account of our US business, where £33.0 billion of fixed income assets back shareholder liabilities including those arising from fixed annuities, fixed index annuities and life insurance. Included in the portfolio are £2.3 billion of commercial mortgage-backed securities and £1.6 billion of residential mortgage-backed securities, of which £0.8 billion (52 per cent) are issued by US government sponsored agencies.

The shareholder-owned debt and loan portfolio of the Group's asset management operations of £2.3 billion as at 31 December 2014 is principally related to Prudential Capital operations. Prudential Capital generates revenue by providing bridging finance, managing investments and operating a securities lending and cash management business for the Prudential Group and our clients.

Table of Contents

The Group's credit exposure to the Oil and Gas sector represents circa 5 per cent or £3.4 billion of the shareholder portfolio. Some counterparties may experience stress from ongoing low oil prices but this is not currently expected to have a material adverse impact on the Group's exposure. The Oil and Gas sector is subject to ongoing monitoring and regular management information reporting to the Group's risk committees.

Further details of the composition and quality of our debt portfolio, and exposure to loans, can be found in the IFRS financial statements.

(ii) Group sovereign debt and bank debt exposure

(Audited)

Sovereign debt⁽¹³⁾ represented 15 per cent or £11.0 billion of the debt portfolio backing shareholder business at 31 December 2014 (31 December 2013: 15 per cent or £10.2 billion). 43 per cent of this was rated AAA and 95 per cent investment grade (31 December 2013: 44 per cent AAA, 92 per cent investment grade). At 31 December 2014, the Group's shareholder-backed business's holding in Eurozone sovereign debt was £476 million. 82 per cent of this was AAA rated (31 December 2013: 84 per cent AAA rated). Shareholder exposure to the Eurozone sovereigns of Italy and Spain is £63 million (31 December 2013: £54 million). We do not have any sovereign debt exposure to Greece, Cyprus, Portugal or Ireland.

Our bank exposure is a function of our core investment business, as well as of the hedging and other activities undertaken to manage our various financial risks. Given the importance of our relationship with our banks, exposure to the banking sector is a key focus of management information provided to the Group's risk committees and the Board.

The exposures held by the shareholder-backed business and with-profits funds in sovereign debt and bank debt securities at 31 December 2014 are given in Note C3.3(f) to the consolidated financial statements in Item 18.

(iii) Counterparty credit risk

(Audited)

We enter into a variety of exchange traded and over-the-counter derivative financial instruments, including futures, options, forward currency contracts and swaps such as interest rate swaps, inflation swaps, cross-currency swaps, swaptions and credit default swaps.

All over-the-counter derivative transactions, with the exception of some Asia transactions, are conducted under standardised International Swaps and Derivatives Association Inc master agreements and we have collateral agreements between the individual Group entities and relevant counterparties in place under each of these master agreements.

Our exposure to derivative counterparty and reinsurance counterparty credit risk is managed using an array of risk management tools, including a comprehensive system of limits. Where appropriate, we reduce our exposure, purchase credit protection or make use of additional collateral arrangements to control our levels of counterparty credit risk.

Insurance risk

(Audited)

The processes of determining the price of our products and reporting the results of our long-term business operations require us to make a number of assumptions. In common with other industry players, the profitability of our businesses depends on a mix of factors including mortality and morbidity levels and trends, persistency, investment performance, unit cost of administration and new business acquisition expenses.

We continue to conduct research into longevity risk using both industry data and experience from our substantial annuity portfolio. The assumptions that we make about future rates of mortality improvement within our UK annuity portfolio are key to our pricing and reserving. Recent changes to UK legislation, removing an individual's requirement to convert a pension fund into an annuity, are also demanding particular scrutiny. We continue to seek

⁽¹³⁾ Excludes Group's proportionate share in Joint Ventures and unit-linked assets and holdings of consolidated unit trusts and similar funds.

Table of Contents

opportunities to transfer longevity risk to reinsurers or to the capital markets and have transacted when terms are sufficiently attractive and aligned with our risk management framework.

Morbidity risk is mitigated by appropriate underwriting and use of reinsurance. Our morbidity assumptions reflect our recent experience and expectation of future trends for each relevant line of business. In Asia, a key assumption is the rate of medical inflation, typically in excess of general price inflation.

Our persistency assumptions reflect recent experience for each relevant line of business, and any expectations of future persistency. Persistency risk is mitigated by appropriate training and sales processes and managed locally post-sale through regular experience monitoring and the identification of common characteristics of poor persistency business. Where appropriate, allowance is also made for the relationship – either assumed or historically observed between persistency and investment returns, and for the resulting additional risk.

Liquidity risk

(Audited)

Our parent company has significant internal sources of liquidity which are sufficient to meet all of its expected requirements for the foreseeable future without having to make use of external funding. In aggregate the Group currently has £2.6 billion of undrawn committed facilities, expiring in 2018 and 2019. In addition, the Group has access to liquidity via the debt capital markets. We also have in place an unlimited commercial paper programme and have maintained a consistent presence as an issuer in this market for the last decade. Liquidity uses and sources have been assessed at the Group and at a business unit level under base case and stressed assumptions. The liquidity resources available and the subsequent Liquidity Coverage Ratio are regularly monitored and we have assessed these to be sufficient.

Operational risk

(Unaudited)

We are exposed to operational risk through the course of running our business. We are dependent on the successful processing of a large number of transactions, utilising various legacy and other IT systems and platforms, across numerous and diverse products. We also operate under the ever evolving requirements set out by different regulatory and legal regimes (including tax), as well as utilising a significant number of third parties to distribute products and to support business operations.

Our IT, compliance and other operational systems and processes incorporate controls that are designed to manage and mitigate the operational risks associated with our activities. Although we have not identified a material failure or breach in relation to our legacy and other IT systems and processes to date, we have been, and likely will continue to be, subject to computer viruses, attempts at unauthorised access and cyber security attacks.

We have an operational risk management framework in place that facilitates both the qualitative and quantitative analysis of operational risk exposures. The output of this framework, in particular management information on key operational risk and control assessments, scenario analysis, internal incidents and external incidents, is reported by the business units and presented to the Group Operational Risk Committee. This information also supports business decision-making and lessons-learned activities, the on-going improvement of the control environment, and determination of the adequacy of our corporate insurance programme.

Global regulatory risk

(Unaudited)

Global regulatory risk is considered a key risk.

The EU has developed a new prudential regulatory framework for insurance companies, referred to as Solvency II. The Solvency II Directive, which sets out the new framework, was formally approved by the Economic and Financial Affairs Council in November 2009 although its implementation was delayed pending agreement on a directive known as Omnibus II which, having been adopted by the Council of the European Union in April 2014, amended certain aspects of the Solvency II Directive. The new approach is based on the concept of three pillars – minimum capital requirements, supervisory review of firms’ assessments of risk, and enhanced disclosure requirements.

Table of Contents

Specifically, Pillar 1 covers the quantitative requirements around own funds, valuation rules for assets and liabilities and capital requirements. Pillar 2 provides the qualitative requirements for risk management, governance and controls, including the requirement for insurers to submit an Own Risk and Solvency Assessment which will be used by the regulator as part of the supervisory review process. Pillar 3 deals with the enhanced requirements for supervisory reporting and public disclosure.

A key aspect of Solvency II is that the assessment of risks and capital requirements are intended to be aligned more closely with economic capital methodologies and may allow us to make use of our internal capital models if approved by the Prudential Regulation Authority.

Following adoption of the Omnibus II Directive, Solvency II will be implemented on 1 January 2016, although the European Commission and the European Insurance and Occupational Pensions Authority (EIOPA) are continuing to develop the detailed rules and guidelines that will supplement the high-level rules and principles of the Solvency II and Omnibus II Directives, which are not currently expected to be finalised until mid-late 2015.

There is significant uncertainty regarding the final outcome from this process. In particular, certain detailed aspects of the Solvency II rules relating to the determination of the liability discount rate for UK annuity business remain to be clarified and our capital position is sensitive to these outcomes. Further, the effective application of a number of key measures incorporated in the Omnibus II Directive, including the provisions for third-country equivalence and whether restrictions are placed on the economic value of overseas surplus, are subject to supervisory judgement and approval. There is a risk that the effect of the measures finally adopted could be adverse for us, including potentially a significant increase in the capital required to support our business and that we may be placed at a competitive disadvantage to other European and non-European financial services groups. We are actively participating in shaping the outcome through our involvement in industry bodies and trade associations, including the Pan-European Insurance Forum, Chief Risk Officer Forum and Chief Financial Officer Forum, together with the Association of British Insurers and Insurance Europe.

Having assessed the requirements of Solvency II, an implementation programme was initiated with dedicated teams to manage the required work across the Group. The activity of the local Solvency II teams is coordinated centrally to achieve consistency in the understanding and application of the requirements. We are continuing our preparations to adopt the regime when it comes into force on 1 January 2016 and are undertaking in parallel an evaluation of the possible actions to mitigate its effects. We regularly review our range of options to maximise the strategic flexibility of the Group. This includes consideration of optimising our domicile as a possible response to an adverse outcome on Solvency II.

Over the coming months we will remain in regular contact with the Prudential Regulation Authority as we continue to engage in the approval process for the internal model. In addition, we are engaged in the Prudential Regulation Authority's Individual Capital Adequacy Standards Plus (ICAS+) regime, which is enabling our UK insurance entities to leverage the developments made in relation to the Solvency II internal model for the purpose of meeting the existing ICAS+ regime.

Currently there are also a number of other global regulatory developments which could impact the way in which we are supervised in our many jurisdictions. These include the Dodd-Frank Act in the US, the work of the Financial Stability Board on Global Systemically Important Insurers and the Common Framework for the Supervision of Internationally Active Insurance Groups (ComFrame) being developed by the International Association of Insurance Supervisors.

The Dodd-Frank Act represents a comprehensive overhaul of the financial services industry within the United States that, among other reforms to financial services entities, products and markets, may subject financial institutions designated as systemically important to heightened prudential and other requirements intended to prevent or mitigate the impact of future disruptions in the US financial system. The full impact of the Dodd-Frank Act on our businesses is not currently clear, as many of its provisions have a delayed effectiveness and/or require rulemaking or other actions by various US regulators over the coming years.

In July 2013 the Financial Stability Board announced the initial list of nine insurance groups that have been designated as Global Systemically Important Insurers. Following another assessment in 2014, the Financial Stability Board confirmed the same nine insurance groups as Global Systemically Important Insurers on

Table of Contents

6 November 2014. This list included Prudential as well as a number of its competitors. Designation as a Global Systemically Important Insurer has led to additional policy measures being applied to the designated group. Based on the policy framework released by the IAIS and subsequent guidance papers these additional policy measures include enhanced group-wide supervision, effective resolution measures of the group in the event of failure, loss absorption, and higher loss absorption capacity. This enhanced supervision commenced immediately and included the annual submission of a Systemic Risk Management Plan (SRMP), a group Recovery Plan (RCP) and Liquidity Risk Management Plan (LRMP). Prudential is monitoring the development and potential impact of the framework of policy measures and is continuing to engage with the Prudential Regulation Authority on the implications of the policy measures and Prudential's designation as a G-SII. The G-SII regime also introduces two types of capital requirements; the first, a Basic Capital Requirement (BCR), designed to act as a minimum group capital requirement and the second, a Higher Loss Absorption (HLA) requirement that should reflect the drivers of the assessment of G-SII designation. A consultation paper on BCR was released in July 2014 and the Group participated in field testing ahead of the BCR being agreed with the FSB and G20 in 2014. The IAIS has published a list of principles on HLA and a more detailed consultation paper is expected in June 2015 ahead of the IAIS finalizing HLA by the end of 2015. Implementation of the regime is likely to be phased in over a number of years with the BCR being introduced in 2015 on a confidential reporting basis to group-wide supervisors. The HLA requirement is expected to apply from January 2019 to the insurance groups identified as G-SIIs in November 2017.

ComFrame is also being developed by the IAIS to provide common global requirements for the supervision of insurance groups. The framework is designed to outline a set of common global principles and standards for group supervision and may increase the focus of regulators in some jurisdictions. One of the framework's key components is an Insurance Capital Standard (ICS) which would be expected to form the group solvency capital standard under ComFrame. In December 2014, the IAIS issued a comprehensive consultation paper on ICS and a quantitative field test is planned during 2015, which will be followed by another consultation in December 2015. Further field testing exercises are planned until 2018 to assess the impact of the quantitative and qualitative requirements proposed under ComFrame. ComFrame is expected to be implemented in 2019.

Risk factors**(Unaudited)**

Our disclosures covering risk factors can be found in Item 3, Key Information Risk Factors .

Risk mitigation and hedging**(Unaudited)**

We manage our actual risk profile against our tolerance of risk. To do this, we maintain risk registers that include details of the risks we have identified and of the controls and mitigating actions we employ in managing them. Any mitigation strategies involving large transactions, such as a material derivative transaction involving shareholder business, are subject to review at Group level before implementation.

We use a range of risk management and mitigation strategies. The most important of these include: adjusting asset portfolios to reduce investment risks (such as duration mismatches or overweight counterparty exposures); using derivatives to hedge market risks; implementing reinsurance programmes to manage insurance risk; implementing corporate insurance programmes to limit the impact of operational risks; and revising business plans where appropriate.

Capital management

We continue to operate with a strong solvency position, while maintaining high levels of liquidity and capital generation. This is testament to our capital discipline, the effectiveness of our hedging activities, our low direct Eurozone exposure, the minimal level of credit impairments and the natural offsets in our portfolio of businesses which dampen the effects of movements in interest rates.

Regulatory capital (IGD)

(Audited)

Prudential is subject to the capital adequacy requirements of the European Union Insurance Groups Directive (IGD) as implemented by the Prudential Regulation Authority in the UK. The IGD capital surplus represents the aggregated surplus capital (on a Prudential Regulation Authority consistent basis) of the Group's regulated subsidiaries less the Group's borrowings. No diversification benefit is recognised. We estimate that our IGD capital

Table of Contents

surplus is £4.7 billion at 31 December 2014 (before taking into account 2014 final dividend), with available capital covering our capital requirements 2.4 times. This compares to a capital surplus of £5.1 billion at the end of 2013 (before taking into account the 2013 final dividend).

The movements in 2014 mainly comprise:

Net capital generation (inclusive of market and foreign exchange movements) mainly through operating earnings (in-force releases less investment in new business, net of tax) of £2.5 billion.

Offset by:

The cost of new intangibles acquired in the year including renewal of the bancassurance partnership agreement with Standard Chartered Bank of £0.8 billion;

£0.4 billion of subordinated debt repayment;

£0.2 billion due to reduction in the shareholders' interest in future transfers from the UK's with-profits fund asset allowance (as discussed below) and other smaller one-off items;

Final 2013 dividend of £0.6 billion and interim 2014 dividend of £0.3 billion; and

External financing costs and other central costs, net of tax, of £0.6 billion

IGD surplus represents the accumulation of surpluses across all of our operations based on local regulatory minimum capital requirements with some adjustments, pursuant to the requirements of Solvency I. The calculation does not fully adjust capital requirements for risk nor does it capture the true economic value of assets.

There is broad agreement that ultimately it would be beneficial to replace the IGD regime with a regime that is appropriately risk-based.

(Unaudited)

We continue to have further options available to manage available and required capital. These could take the form of increasing available capital (for example, through financial reinsurance) or reducing required capital (for example, through the mix and level of new business) and the use of other risk mitigation measures such as hedging and reinsurance. A number of such options were utilised through the last financial crisis in 2008 and 2009 to enhance the Group's IGD surplus. One such arrangement allowed the Group to recognise a proportion of the shareholders' interest in future transfers (SHIFT) from the UK's with-profits business and this remained in place, contributing £0.2 billion to the IGD at 31 December 2013. As per guidance received from the PRA in January 2013, credit taken for the SHIFT asset was reduced to zero in January 2014.

Stress testing

(Unaudited)

As at 31 December 2014, stress testing of our IGD capital position to various events has the following results:

An instantaneous 20 per cent fall in equity markets from 31 December 2014 levels would have no impact on the IGD surplus;

A 40 per cent fall in equity markets (comprising an instantaneous 20 per cent fall followed by a further 20 per cent fall over a four-week period) would reduce the IGD surplus by £950 million;

A 100 basis points reduction (subject to a floor of zero) in interest rates would reduce the IGD surplus by £450 million; and

Credit defaults of 10 times the expected level would reduce IGD surplus by £700 million.

The impact of the 100 basis points reduction in interest rates is exacerbated by the current regulatory permitted practice used by Jackson, which values all interest rate swaps at book value rather than fair value for regulatory purposes. At 31 December 2014, removing the permitted practice would have increased reported IGD surplus to £5.1 billion. As at 31 December 2014, it is estimated that a 100 basis point reduction in interest rates (subject to a floor of zero) would have resulted in an IGD surplus of £4.9 billion, excluding the permitted practice.

Prudential believes that the results of these stress tests, together with the Group's strong underlying earnings capacity, our established hedging programmes and our additional areas of financial flexibility, demonstrate that we are in a position to withstand significant deterioration in market conditions.

Table of Contents**Other Capital Metrics****(Unaudited)**

We use an internal economic capital assessment calibrated on a multi-term basis to monitor our capital requirements across the Group. This approach considers, by risk drivers, the timeframe over which each risk can threaten the ability of the Group to meet claims as they fall due, allowing for realistic diversification benefits. This assessment provides valuable insights into our risk profile and for continuing to maintain a strong capital position.

All of our subsidiaries continue to hold strong capital positions on a local regulatory basis. Jackson's Risk-Based Capital ratio level as of 31 December 2014 was 456 per cent after remitting £415 million to the Group in 2014 while supporting its balance sheet growth and maintaining adequate capital. The value of the estate of our UK With-Profits fund as at 31 December 2014 is estimated at £7.2 billion after the effect of completing the domestication of the Hong Kong branch business of the PAC With-Profits fund which was effective on 1 January 2014 (1 January 2014: £6.8 billion, after the effect of the transfer). The value of the shareholders' interest in future transfers from the with-profits funds in the UK is estimated at £2.2 billion (1 January 2014: £2.3 billion, after the effect of the transfer).

Furthermore, on a statutory (Pillar 1) basis the total credit default reserve for the UK shareholder annuity funds also contributes to protecting our capital position in excess of the IGD surplus. Notwithstanding the absence of defaults in the year, at 31 December 2014 we maintained sizeable credit default reserves at £2.2 billion (31 December 2013: £1.9 billion), representing 41 per cent of the portfolio spread over swaps, compared with 47 per cent at 31 December 2013.

Economic capital position (based on our Solvency II internal model)**(Unaudited)**

Following ratification of the Solvency II Omnibus II Directive on 16 April 2014, Solvency II is scheduled to come into force on 1 January 2016. Our economic capital results are based on outputs from our Solvency II internal model. Although the Solvency II and Omnibus II Directives, together with the Level 2 Delegated Act published on 17 January 2015, provide a framework for the calculation of Solvency II results, there remain material areas of policy uncertainty and in many areas the Group's methodology and assumptions are subject to review and approval by the PRA, the Group's lead regulator. We remain on track to submit our Solvency II internal model to the PRA for approval in 2015 but given the degree of uncertainty remaining the economic capital position disclosed below should not be interpreted as output from an approved internal model.

At 31 December 2014 the Group had economic capital surplus⁽¹⁴⁾ of £9.7 billion (2013: £11.3 billion) and an economic capital ratio of 218 per cent (2013: 257 per cent) before taking into account the 2014 final dividend.

During 2014, the Group economic capital surplus reduced from £11.3 billion to £9.7 billion. The total movement in the Group economic capital surplus over the year was driven by:

Operating experience positive £1.8 billion: generated by in-force business, new business written in 2014, the impact of non-market assumption changes and non-market experience variances over the year;

Non-operating experience negative £0.9 billion: mainly arising from negative market experience during 2014, principally driven by the reduction in long-term interest rates in the UK;

Other capital movements negative £2.2 billion: representing a reduction in surplus from the repayment of subordinated debt (negative £0.4 billion), renewal of the bancassurance partnership agreement with Standard Chartered Bank (negative £0.8 billion), the negative capital effect of the domestication of the

Hong Kong branch (negative £0.3 billion), the sale of the PruHealth and PruProtect businesses (positive £0.1 billion), foreign currency translation effects (positive £0.1 billion) and dividend payments in 2014 (negative £0.9 billion); and

Model changes negative £0.3 billion: a negative impact to Group surplus, for the estimated impact of evolving the liability discount rate for UK shareholder-backed annuity business from one based on a liquidity premium to one based on the matching adjustment, and other internal model refinements.

The economic capital results are based on outputs from our Solvency II internal model with a number of key working assumptions. Further explanation of the underlying methodology and assumptions are set out in note II of Additional unaudited financial information. Certain aspects of the methodology and assumptions underpinning these results will differ from those which are applied in obtaining final internal model approval. The eventual Solvency II Pillar I ratio, therefore, remains uncertain and is expected to be lower than our economic capital ratio.

⁽¹⁴⁾ The methodology and assumptions used in calculating the economic capital result are set out in the Development of Economic Capital section within Other results based information .

Table of Contents

Stress testing

(Unaudited)

At 31 December 2014, stress testing the economic capital position gives the following results and demonstrates the Group's ability to withstand significant deteriorations in market conditions:

An instantaneous 20 per cent fall in equity markets would reduce surplus by £0.6 billion and reduce the economic solvency ratio to 214 per cent;

An instantaneous 40 per cent fall in equity markets would reduce surplus by £2.2 billion and reduce the economic solvency ratio to 195 per cent;

A 50 basis points reduction in interest rates (subject to a floor of zero) would reduce surplus by £1.4 billion and reduce the economic solvency ratio to 195 per cent;

A 100 basis points increase in interest rates would increase surplus by £1.8 billion and increase the economic solvency ratio to 254 per cent; and

A 100 basis points increase in credit spreads (with 15 per cent downgrades in the UK annuity portfolio and credit defaults of 10 times the expected level in Jackson) would reduce surplus by £2.1 billion and reduce the economic solvency ratio to 190 per cent.

Capital allocation

(Unaudited)

Our approach to capital allocation is to attain a balance between risk and return, investing in those businesses that create shareholder value. In order to efficiently allocate capital, we measure the use of, and the return on, capital.

We use a variety of metrics for measuring capital performance and profitability, including traditional accounting metrics and economic returns. Capital allocation decisions are supported by this quantitative analysis, as well as strategic considerations.

The economic framework measures risk-adjusted returns on economic capital, a methodology that ensures meaningful comparison across the Group. Capital utilisation, return on capital and new business value creation are measured at the product level as part of the business planning process.

Table of Contents**Investments****General**

The overall financial strength of Prudential and the results, both current and future, of the insurance business are in part dependent upon the quality and performance of the various investment portfolios in the United Kingdom, the United States and Asia.

Prudential's Total Investments

The following table shows Prudential's insurance and non-insurance investments, net of derivative liabilities, at 31 December 2014. In addition, at 31 December 2014 Prudential had £154.3 billion of external funds under management. Assets held to cover linked liabilities relate to unit-linked and variable annuity products. In this table, investments are valued as set out in note A3.1 to the consolidated financial statements in Item 18.

At 31 December 2014 £m

	UK Insurance	US Insurance	Asia Insurance	Total Insurance Management	Asset Management ^(a)	Other	Total	Less: assets to cover linked liabilities and external unit holders ^(b)	Group excluding assets to cover linked liabilities and external unit holders

(a)

Investments held by asset management operations are further split in note C2.4 to the consolidated financial statements in Item 18.

- (b) Prudential's Group statement of financial position includes the line by line investments of unit-linked and the consolidated unit-trusts and similar funds. In the table above, these amounts have been deducted in deriving the underlying investments in the right-hand column.

The disclosure below has been provided on a consistent basis as that included in previous Form 20-F submissions, with analysis focusing on the investments attributable to shareholders and consequently excluding those held to cover linked liabilities or attributable to unit holders of consolidated unit trusts and similar funds.

In addition to the detail provided below further analysis is included in the consolidated financial statements, in accordance with IFRS 7 Financial Instruments: Disclosures . The further analysis is included in notes C2 and C3 to Prudential's consolidated financial statements in Item 18.

Table of Contents**Prudential's Average Investment Return**

The following table shows the income from the investments of Prudential's operations, net of derivative liabilities, by asset category for the periods indicated. This table does not include investment income from assets held to cover linked liabilities and those attributable to external unit holders of consolidated unit trusts and similar funds. Average investment return has been calculated using the average of opening and closing balances for the appropriate asset.

Table of Contents**Prudential's Insurance Investment Strategy and Objectives**

Prudential's insurance investments support a range of businesses operating in many geographic areas. Each of the operations formulates a strategy based on the nature of its underlying liabilities, its level of capital and its local regulatory requirements.

Internal Funds Under Management

Prudential manages 70 per cent of its group funds principally through its fund management businesses, M&G in the UK, PPM America in the United States and Eastspring Investments in Asia. The remaining 30 per cent of the Group's funds mainly relate to assets held to back unit-linked, unit trust and variable annuity liabilities.

In each of the operations, local management analyses the liabilities and determines asset allocation, benchmarks and permitted deviations from these benchmarks appropriate for its operation. These benchmarks and permitted deviations are agreed with internal fund managers, who are responsible for implementing the specific investment strategy through their local fund management operations.

Investments Relating to UK Insurance Business***Strategy***

In the UK, Prudential tailors its investment strategy for long-term business, other than unit-linked business, to match the type of product a portfolio supports. The primary distinction is between with-profits portfolios and non-participating portfolios, which include the majority of annuity portfolios. Generally, the objective is to maximise returns while maintaining investment quality and asset security and adhering to the appropriate government regulations.

Consistent with the product nature, in particular regarding guarantees, the with-profits fund's investment strategy emphasises a well-diversified equity portfolio (containing some international equities), real estate (predominantly in the UK), UK and international fixed income securities and cash.

For Prudential's UK pension annuities business and other non-participating business the objective is to maximise profits while ensuring stability by closely matching the cash flows of assets and liabilities. To achieve this matching, the strategy is to invest in fixed income securities of appropriate maturity dates.

For Prudential's unit-linked business, the primary objective is to maximise investment returns subject to following an investment policy consistent with the representations Prudential has made to its unit-linked product policyholders.

Investments

The following table summarises the total investments, net of derivative liabilities, of the UK insurance business at 31 December 2014.

At 31 December 2014 £m

Table of Contents*Equity Securities*

Prudential's UK insurance operations, excluding assets to cover linked liabilities and those attributable to external unit holders of consolidated unit trusts and similar funds, had £30,691 million invested in equities at 31 December 2014. Most of these equities support Prudential Assurance's with-profits fund and the SAIF fund, both of which are managed using the same general investment strategy.

The following table shows the geographic spread of this equity portfolio by market value in accordance with the policies described in note A3.1 to the consolidated financial statements in Item 18.

	At 31 December 2014	
	Market Value £m	%
United Kingdom	13,670	44.5

Table of Contents*Debt Securities*

At 31 December 2014, of the debt securities held by the UK insurance operations, excluding assets to cover linked liabilities and those attributable to external unit holders of consolidated unit trusts and similar funds, 98.2 per cent were issued by corporations and overseas governments other than the US, 7.1 per cent were issued or guaranteed by the UK government and 1.8 per cent were issued or guaranteed by the US government. These guarantees relate only to payment and, accordingly, do not provide protection against fluctuations in market price that may occur during the term of the fixed income securities.

The following table shows the market value of the debt securities portfolio by maturity at 31 December 2014, in accordance with the policies described in note A3.1 to the consolidated financial statements in Item 18.

	At 31 December 2014	
	Market Value £m	%
Securities maturing:		
Within one year	1,431	1.9
Over one year and up to five years	14,133	18.5
Over five years and up to ten years	15,196	19.8
Over ten years and up to fifteen years	11,360	14.8
Over fifteen years	34,463	45.0
Total debt securities	76,583	100.0

The following table shows debt securities by rating:

	At 31 December 2014	
	Market Value £m	%
S&P AAA	8,073	10.5
S&P AA+ to AA	10,006	13.1
S&P A+ to A	19,577	25.6
S&P BBB+ to BBB	14,647	19.1
S&P Other	2,454	3.2
	54,757	71.5
Moody's Aaa	1,802	2.4
Moody's Aa1 to Aa3	5,928	7.7
Moody's A1 to A3	2,546	3.3
Moody's Baa1 to Baa3	1,042	1.4
Moody's Other	102	0.1
	11,420	14.9
Fitch	680	0.9
Other	9,726	12.7
Total debt securities	76,583	100.0

In the table above, Standard & Poor's (S&P) ratings have been used where available. For securities where S&P ratings are not immediately available, those produced by Moody's and then Fitch have been used as an alternative. Where no external ratings are available, internal ratings produced by the Group's asset management operation, which are prepared on the Company's assessment of a comparable basis to external ratings, are used where possible. Further

information is provided in note C3.3 to the consolidated financial statements in Item 18.

Table of Contents*Real Estate*

At 31 December 2014, Prudential's UK insurance operations, excluding assets to cover linked liabilities and those attributable to external unit holders of consolidated unit trusts and similar funds, had £9,824 million of investments in real estate. The following table shows the real estate portfolio by type of investment. The real estate investments are shown at market value in accordance with the policies described in note A3.1 to the consolidated financial statements in Item 18.

	At 31 December 2014	
	Market Value	
	£m	%
Office buildings	4,201	42.7

Development	181	1.8
Other	286	3.0
Total	9,824	100.0

Approximately 54.3 per cent of the UK held real estate investment is located in London and Southeast England with 40.9 per cent located throughout the rest of the UK and the remaining 4.8 per cent located overseas.

Investments Relating to Prudential's US Insurance Business*Strategy*

The investment strategy of the US insurance operations, for business other than the variable annuity business, is to maintain a diversified and largely investment grade debt securities portfolio that maintains a desired investment spread between the yield on the portfolio assets and the rate credited on policyholder liabilities. Interest rate scenario testing is continually used to monitor the effect of changes in interest yields on cash flows, the present value of future profits and interest rate spreads.

The investment portfolio of the US insurance operations consists primarily of debt securities, although the portfolio also contains investments in mortgage loans, policy loans, common and preferred stocks, derivative instruments, cash and short-term investments and miscellaneous other investments.

Under IFRS, for the insurance operations, debt securities are shown at fair value and loans are at amortised cost (with the exception of certain policy loans which are held to back liabilities for funds withheld under reinsurance arrangement, which are also accounted on a fair value basis). Equity securities and investment properties are shown at fair value. The fair value of unlisted securities is estimated by Jackson using independent pricing services or analytically determined values.

Table of Contents*Debt Securities**Corporate Securities*

At 31 December 2014, the US insurance operations had £24,490 million of corporate securities representing 58.7 per cent of the US insurance operations total investments excluding separate account investments. Of the £24,490 million, £20,745 million consisted of debt securities that are publicly traded or trade under Rule 144A under the Securities Act of 1933, as amended (Rule 144A) and £3,745 million consisted of investments in non-Rule 144A privately placed fixed income securities.

Rule 144A is a 1990 United States Securities and Exchange Commission (SEC) rule that facilitates the resale of privately placed securities that are without SEC registration to qualified institutional investors. The rule was designed to develop a more liquid and efficient institutional resale market for unregistered securities.

For statutory reporting in the US, debt securities are classified into six quality categories specified by the Securities Valuation Office of the National Association of Insurance Commissioners (NAIC). The categories range from Class 1 (the highest) to Class 6 (the lowest). Performing securities are designated as Classes 1 to 5. Securities in or near default are designated Class 6. Securities designated as Class 3, 4, 5 and 6 are non-investment grade securities. Generally, securities rated AAA to A by nationally recognised statistical ratings organisations are reflected in Class 1, BBB in Class 2, BB in Class 3 and B and below in Classes 4 to 6. If a designation is not currently available from the NAIC, Jackson's investment adviser, PPM America, provides the designation for the purposes of disclosure below.

The following table shows the quality of the publicly traded and SEC Rule 144A debt securities by NAIC classifications:

NAIC designation:	2014		2013	
	Carrying value £m	% of total	Carrying value £m	% of total
1	8,569	41	7,254	38
2	11,132	54	10,658	56
3	732	4	664	4

6	1	-	-	-
	3,745	100	3,395	100

Residential Mortgage-Backed Securities

At 31 December 2014, the US insurance operations had £1,567 million of residential mortgage-backed securities, representing 3.8 per cent of US insurance operations total investments, excluding separate account investments. At 31 December 2014, of the £1,567 million, of which £1,088 million were prime securities with 76 per cent of the balance rated AA.

Table of Contents

The primary investment risk associated with residential mortgage-backed securities is that a change in the interest rate environment or other economic conditions could cause payment of the underlying obligations to be made slower or quicker than was anticipated at the time of their purchase. If interest rates decline, then this risk is called pre-payment risk and the underlying obligations will generally be repaid quicker when the yields on reinvestment alternatives are lower. Alternatively, if interest rates rise, the risk is called extension risk and the underlying obligations will generally be repaid slower when reinvestment alternatives offer higher returns. Residential mortgage-backed securities offer additional yield to compensate for these risks. The US operations can manage pre-payment risk, in part, by reducing crediting rates on its products.

Commercial Mortgage-Backed Securities

At 31 December 2014, the US insurance operations had £2,343 million of commercial mortgage-backed securities, representing 5.6 per cent of US insurance operations total investments, excluding separate account investments. 50.1 per cent of this total were rated AAA (Standard & Poor's ratings have been used where available and for securities where S&P ratings are not immediately available, those produced by Moody's and then Fitch have been used as an alternative). Due to the structures of the underlying commercial mortgages, these securities do not present the same pre-payment or extension risk as residential mortgage-backed securities.

Other Debt Securities

At 31 December 2014, the US insurance operations had £608 million of other debt securities, representing 1.5 per cent of US insurance operations total investments, excluding separate account investments.

Loans

At 31 December 2014, loans totaled £6,719 million, representing 16.1 per cent of US insurance operations total investments, excluding separate account investments. Of the total, £3,847 million related to commercial mortgage loans and £2,872 million to policy loans. Of the £2,872 million policy loans, £2,025 million were held to back the liabilities for funds withheld under reinsurance arrangement attaching to the purchase of REALIC in 2012.

Commercial Mortgage Loans

At 31 December 2014, commercial mortgage loans represented 9.2 per cent of US insurance operations total investments excluding separate account investments. The average loan size is £7.2 million, collateralised by properties located in the United States.

Jackson has addressed the risk of these investments by building a portfolio that is diverse both in geographic distribution and property type.

The property types are mainly industrial, multi-family residential, suburban office, retail and hotel. The breakdown of the market value by property type is as follows:

	31 December 2014 %
Multi-family residential mortgage loans	30.5
Industrial mortgage loans	27.9
Retail mortgage loans	18.6

Suburban office mortgage loans	11.7
Hotel mortgage loans	9.1
Other loans	2.2
Total	100.0

The following table shows the geographic split of the collateral for these loans:

	31 December 2014 %
California	12.3
Florida	7.9
Texas	7.7
Illinois	6.9
Georgia	6.2
Other (sum of all states < 5% each)	59.0
Total	100.0

Table of Contents

Commercial mortgages generally involve more credit risk than residential mortgages due to several factors, including larger loan size, general and local economic conditions, local real estate conditions and the credit quality of the underlying tenants for the properties. Jackson's investment policy and strict underwriting standards are designed to reduce these risks while maintaining attractive yields. In contrast to residential mortgage loans, commercial mortgage loans have minimal or no pre-payment and extension risk.

Policy Loans

Policy loans represented 6.9 per cent of US insurance operations total investments, excluding separate account investments at 31 December 2014. Policy loans are fully secured by individual life insurance policies or annuity policies and are contractual arrangements made under the policy. As described above, £2,025 million out of the £2,872 million policy loans were held to back the liabilities for funds withheld under reinsurance arrangement attaching to the purchase of REALIC in 2012.

Equity Securities

Equity securities supporting US insurance operations, excluding separate account investments, totaled £340 million at 31 December 2014.

Other

Other financial investments of £1,670 million, representing 4.0 per cent of US insurance operations total investments, excluding separate account investments at 31 December 2014 were made up of £754 million of limited partnership interests and derivative assets of £916 million.

The largest investment in the limited partnerships category is a £104 million interest in the PPM America Private Equity Fund. The remainder of this category consists of diversified investments in 164 other partnerships managed by independent money managers that generally invest in various equity and fixed income loans and securities.

Investments Relating to Asian Insurance Business

Prudential's Asian insurance operations' investments, excluding assets to cover linked liabilities and those attributable to external unit holders of consolidated unit trusts and similar funds, largely support the business of Prudential's Singapore, Hong Kong and Malaysia operations.

The following table shows Asia's investments, net of derivative liabilities, at 31 December 2014. In this table, investments are valued in accordance with the policies described in note A3.1 to the consolidated financial statements in Item 18.

31 December 2014 £m

(a) Please refer to notes in the total Group investments table.

Table of Contents

Prudential manages interest rate risk in Asia by matching liabilities with fixed interest assets of the same duration to the extent possible. Asian fixed interest markets however generally have a relatively short bond issue term, which makes complete matching challenging. A large proportion of the Hong Kong liabilities are denominated in US dollars and Prudential holds US fixed interest securities to back these liabilities.

Debt Securities

The following table shows rating categorisation of the debt security investments of Prudential Corporation Asia's long-term insurance fund, excluding assets to cover linked liabilities and those attributable to external unit holders of consolidated unit trusts and similar funds, at 31 December 2014.

Description of Property	Corporate Property	

As at 31 December 2014, Prudential's UK headquartered businesses occupied 68 properties in the United Kingdom, Europe, India and Africa. These properties are primarily offices with some ancillary storage facilities. Prudential's global headquarters is located in London and is held on a freehold basis. Of the remainder, the most significant are offices in London and Reading in England, Stirling in Scotland and Mumbai in India. The property in Stirling is held on a freehold basis, and is leased by the business from PAC's long-term fund. The rest of the properties occupied by Prudential's UK based businesses, in the UK and India, are held leasehold. Elsewhere in Europe, 22 of the properties are occupied leasehold and the rest (twelve) are short-term serviced offices. Sixteen properties are leased in Ghana and Kenya, Africa. The leasehold properties range in size from 500 to 225,000 sq. ft. Overall, the UK, Europe, Africa and India occupied property portfolio totals approximately 892,000 sq. ft.

Table of Contents

Prudential's UK headquartered businesses also hold one surplus owned property and approximately 20 surplus leasehold properties in the United Kingdom, spread geographically throughout the country. This surplus accommodation (i.e. not occupied by the Group but including those sublet) totals approximately 272,000 sq. ft. There are also two surplus land holdings in the United Kingdom, totalling 57 acres. A high proportion of the surplus estate has been sublet to third party occupiers generating income for the Group to cover this overhead. As at 31 December 2014 vacancy within the surplus estate stood at 72,000 sq. ft.

In the United States, Prudential owns Jackson National Life's executive and principal administrative office located in Michigan. Prudential owns a total of seven facilities in Lansing, Michigan, which total approximately 639,054 sq. ft. Prudential also leases premises in Michigan, Colorado, Tennessee, California, Illinois, New York, New Jersey, Georgia, Florida, Wisconsin, Massachusetts, Connecticut, New Hampshire, Pennsylvania, Texas, Maryland and North Dakota for certain of its operations. Prudential holds 32 operating leases with respect to office space, throughout the United States. The leasehold properties range in size from 500 – 180,000 sq. ft. In the United States, Prudential owns and leases a total of approximately 1,240,000 sq. ft. of property. In addition to the owned and leased properties, Prudential also owns a total of 446 acres of surplus land, all located in Lansing, Michigan.

Prudential's United States headquartered business also sublets three surplus office properties in Lansing, Michigan, totalling approximately 22,500 sq. ft., located in one of its owned properties.

In Asia, Prudential owns or leases properties principally in Hong Kong, Singapore, Malaysia, Indonesia, Thailand, the Philippines, China (50 per cent joint venture), Taiwan, Japan, Vietnam, India (26 per cent joint venture), Korea, United Arab Emirates, Myanmar and Cambodia.

Within these countries, Prudential owns 34 property assets, ranging from office space to land holdings. The breakdown of these owned assets by country is as follows:

Malaysia: six owned assets – All office space totalling 12,315 sq. ft.

Philippines: two owned assets - All office space totalling 4,278 sq. ft.

Singapore: one owned asset – Office space totalling 11,883 sq. ft.

Taiwan: sixteen owned assets – All surplus land holdings totalling 30,137 sq. ft.

Thailand: nine owned assets – All surplus land holdings totalling 35,719 sq. ft.

Prudential has (excluding India but including the China joint venture), a total of 540 operating leases, (external and intercompany leases), totalling approximately 4.66 million square feet of property.

In India, Prudential holds a minority stake (26 per cent) with ICICI in a joint venture which holds the property interests. The property is occupied by the ICICIPru Life and ICICIPru AMC businesses. The holding comprises approximately 680 leased properties, totalling approximately 980,000 sq. ft. There is one owned and occupied asset comprising approximately 40,000 sq. ft. in Mumbai.

Prudential Corporation Asia's real estate strategy involves consolidation of its existing property portfolio to support its local business strategies throughout the region, to take advantage of opportunities in the regional markets in securing long term cost savings for the business while maintaining competitive advantage.

A UK headquartered business (M&G) has agreed a pre-let transaction with a developer to lease 323,000 sq ft of offices in Central London, commencing in 2018. The building is currently under construction. The United States headquartered business is constructing an additional 260,000 sq. ft. of owned office space adjoining its principal offices in Lansing, Michigan, which will be occupied from 2016 onwards.

There have been no other property transactions subsequent to 31 December 2014 which would have a material impact on the financial position of Prudential.

Table of Contents

Prudential believes that its facilities are suitable for the conduct of its businesses. We periodically review our space requirements and may acquire or lease new space as needed to accommodate any future needs of our businesses. Prudential's operating leases have no material commercial value.

In summary, Prudential owns 17 properties which it also occupies and which are accounted for as owner occupied. These properties are comprised of nine in Asia, one in the UK and seven in the US. ICICIPru also owns and occupies one property in India. The total value of Prudential's owner occupied properties at 31 December 2014 was £332 million. This represents less than 1 per cent of Prudential's total assets.

Prudential is the lessee under 626 operating leases used as office accommodation, comprising 540 leases held by the Asia business, 32 leases held by the US business and 54 leases held by the UK businesses. For the UK based businesses, Prudential holds 13 short-term serviced offices.

Investment Interests

Prudential also holds interests in properties within its investment portfolios accounted for as investment property. At 31 December 2014 the total value of investment properties was £12,764 million and comprised 517 properties held by the UK and 6 held by the US. In total they comprised 3.5 per cent of Prudential's total assets. The UK business holdings account for over 99 per cent by value of the total investment properties.

Competition

General

There are other significant participants in each of the financial services markets in which Prudential operates. Its competitors include both mutual and stock financial companies. In addition, regulatory and other developments in many of Prudential's markets have blurred traditional financial service industry lines and opened the market to new competitors and increased competition. In some of the Prudential's markets, other companies may have greater financial resources, allowing them to benefit from economies of scale, and may have stronger brands than Prudential does in that market.

The principal competitive factors affecting the sale of Prudential's products in its chosen markets are:

price and yields offered,

financial strength and ratings,

commission levels, charges and other expenses,

range of product lines and product quality,

brand strength, including reputation and quality of service,

distribution channels,

investment management performance and

historical bonus/contract enhancement and bonus interest levels.

An important competitive factor is the ratings Prudential receives in some of its target markets, most notably in the United States, from recognised rating organisations. The intermediaries with whom the Prudential works, including financial advisers, tied agents, brokers, wholesalers and financial institutions consider ratings as one factor in determining which provider to purchase financial products from.

Table of Contents

Prudential offers different products in its different markets in Asia, the United Kingdom and the United States and, accordingly, faces different competitors and different types of competition in these markets. In all of the markets in which Prudential operates, its products are not unique and, accordingly, it faces competition from market participants who manufacture a varying range of similar and identical products.

Asia

The competitive landscape across the Asia Pacific region differs widely by geographical market, reflecting differing levels of market maturity and regulation. Prudential's competitors include both the subsidiaries of global life insurers and local domestic (including state-owned) entities. Subsidiaries of global life insurance groups that operate in the Asia Pacific region tend to operate in multiple markets in the region, and some currently have top five market shares in a small number of markets. The majority of local domestic life insurers in the Asia Pacific region remain focused on their core home markets. The developed and liberalised markets of Hong Kong and Singapore are dominated by subsidiaries and branches of global life insurance groups. The developing markets in South East Asia such as Indonesia, Vietnam and the Philippines also see a high level of participation by global life insurance groups. The large and relatively mature markets of Korea and Taiwan are dominated by local domestic insurers. In certain countries with continued foreign ownership restrictions (such as China and India), the life insurance markets are dominated by local domestic insurers or by joint venture entities between global insurance groups and local companies.

The global life insurers that are Prudential's competitors in the Asia Pacific region include AIA, Allianz, Aviva, AXA, and Manulife. Other competitors relevant in some of Prudential's key markets include HSBC Life in Hong Kong, Hanwha Life (formerly Korea Life), Kyobo Life and Samsung Life in Korea, Thai Life in Thailand, Great Eastern in Singapore and Malaysia, and China Life, China Pacific and Ping An in China. Prudential's principal competitors in respect of its fund management operations across the region largely comprise multinational asset manager such as J.P. Morgan Asset Management, Schroders, HSBC Global Asset Management, Franklin Templeton, Fidelity Worldwide Investment and Aberdeen Asset Management.

United States

Prudential's insurance operations in the United States operate under the Jackson brand. Prudential is not affiliated with Prudential Financial, Inc. or its subsidiary, The Prudential Insurance Company of America.

Jackson's competitors in the United States include major stock and mutual insurance companies, mutual fund organisations, banks and other financial services companies. National banks, in particular, may become more significant competitors in the future for insurers who sell annuities, due to current legislation, court decisions and regulatory actions. Jackson's principal life insurance company competitors in the United States include AIG, Prudential Financial, MetLife, Lincoln National, AXA Financial, AEGON and Allianz.

Jackson does not have a career agency sales force to distribute its annuity products in the United States and, consequently, competes for distributors such as banks, broker-dealers and independent agents.

United Kingdom

Prudential's principal competitors include many of the major retail financial services and fund management companies operating in the United Kingdom. These companies include Aviva, Legal & General, Standard Life, Friends Life, Scottish Widows, Aegon, AXA, Just Retirement, Zurich Financial Services, Fidelity, Invesco Perpetual, Jupiter, Threadneedle, Schroders and BlackRock. Prudential competes with other providers of financial products to be included on financial advisors' panels of preferred providers.

Intellectual Property

Prudential conducts business under the Prudential , Jackson , M&G and Eastspring Investments brand names and logos. It is also the registered owner of over 100 domain names, including www.prudential.co.uk , www.prudentialcorporation-asia.com , www.jackson.com , www.mandg.co.uk , www.eastspringinvestments.com and www.pru.co.uk .

Table of Contents

Prudential does not operate in the United States under the Prudential name and there have been long-standing arrangements between it and Prudential Financial, Inc. and its subsidiary, the Prudential Insurance Company of America, relating to their respective uses of the Prudential name. Under these arrangements Prudential Financial Inc has the right to use the Prudential name in the Americas and certain parts of the Caribbean, Japan, Korea and Taiwan and Prudential has the right to use the name everywhere else in the world although third parties have rights to the name in certain countries.

Legal Proceedings

The Group is involved in a number of litigation and regulatory issues. These include civil proceedings involving Jackson, which appear to be substantially similar to other class action litigation brought against many life insurers in the US, alleging misconduct in the sale of insurance products. Whilst the outcome of such litigation and regulatory issues cannot be predicted with certainty, the Company believes that their ultimate outcome will not have a material adverse effect on the Group's financial condition, results of operations, or cash flows.

Sources

Throughout this annual report, Prudential describes the position and ranking of its overall business and individual business units in various industry and geographic markets. The sources for such descriptions come from a variety of conventional sources generally accepted as relevant business indicators by members of the financial services industry. These sources include information available from the Annuity Specs, Asia Asset Management Magazine, Asosiasi Asuransi Jiwa Indonesia, Association of British Insurers, Association of Vietnamese Insurers, Association of Unit Trusts and Investment Funds, Fitch, Hong Kong Federation of Insurers, Hong Kong Office of the Commissioner of Insurance, HSBC Global Research, Insurance Regulatory and Development Authority of India, Insurance Services Malaysia Berhad, Investment Management Association, Life Insurance Marketing and Research Association (LIMRA), Life Insurance Association of Malaysia, Life Insurance Association of Singapore, Life Insurance Association of Taiwan, Lipper Inc., Morningstar, Moody's, Nielsen Net Ratings, Propriety Research, Service Quality Management Group, SNL Financial, Standard & Poor's, Thai Life Assurance Association, The Asset Benchmark Research, The Advantage Group, The Asset, Townsend and Schupp and UBS.

Table of Contents**SUPERVISION AND REGULATION OF PRUDENTIAL****Supervision and Regulation**

Prudential's principal insurance and investment operations are in Asia, the United Kingdom (UK), and the United States (US). Accordingly, it is subject to applicable Asian, UK and US insurance and other financial services regulation which is discussed below.

Since April 2013, the Prudential Regulation Authority (the PRA) has been Prudential's lead supervisor for the purposes of the EU's Insurance Groups Directive (the IGD) and played a principal role in assessing and ensuring the adequacy of Prudential's solvency and financial stability on a Group-wide basis. The regulators supervising the Group do so on a cross-border basis through a regulatory college . The college meets at an annual event hosted by the PRA and includes a number of non-UK regulators who supervise Prudential's overseas operations, as well as representatives from the Financial Conduct Authority (FCA) and European Insurance and Occupational Pensions Authority (EIOPA). In 2014, other participants included representatives from regulators in Singapore, Taiwan, Hong Kong, Malaysia and Michigan (US). The annual PRA college process began in 2014 and EIOPA has full participation rights. The aim of the college is to enhance cooperation between the Group's key regulators.

As well as coordinating EU-level local regulators in the context of the IGD and hosting the college described above, since both Prudential's parent company and a significant proportion of its global insurance operations are in the UK, the PRA plays an important coordinating role in regulatory initiatives at a global level. This role is less formal than within the EU and depends principally on the various memoranda of understanding signed with non-EU regulators, including in the US and Asia. In consequence, although the PRA's role as a lead supervisor does not restrict the role of individual local regulators or override the local insurance and other financial services regimes described in the following sections, the PRA's rules and its regulatory agenda impact Prudential's operations globally.

Moreover, because the UK regulatory framework is considerably shaped and influenced by regulations, directives and subsidiary legislation and rules emanating from the EU, the significant Group-wide impact of such rules may, at times, result in legal and regulatory developments in the EU (including the evolving Solvency II framework discussed below) in turn having a significant impact on the business and operations of the Group as a whole.

Global Regulatory Developments and Trends

There are a number of ongoing policy initiatives and regulatory developments at a global level that are having, and will continue to have, an impact on the way Prudential is supervised. These include the work of the Financial Stability Board (FSB) (an international body established to coordinate, develop and promote effective regulatory, supervisory and other financial sector policies in the interests of financial stability) and the work of standard-setting institutions such as the International Association of Insurance Supervisors (IAIS).

The IAIS has various initiatives which are detailed in this section. On 18 July 2013, it published a methodology for identifying Global Systemically Important Insurers (G-SIIs), and a set of policy measures that will apply to them, which the FSB endorsed. Groups designated as a G-SII are subject to additional regulatory requirements, including enhanced supervision, development of a Systemic Risk Management Plan (SRMP) and Recovery & Resolution Plan (RRP) and capital requirements. The FSB reaffirmed Prudential's designation as a G-SII on 6 November 2014.

In December 2013, the IAIS issued a consultation document to solicit feedback regarding proposed options for the development of global basic capital requirements (BCR) for G-SIIs. Following a further consultation in July 2014, the IAIS published their final proposals for the BCR on 23 October 2014. See the Group Risk Framework section for

more on this.

Similar national and regional efforts to curb systemic risk and promote financial stability are also underway in certain of the jurisdictions in which Prudential operates, including the Dodd-Frank Wall Street Reform and Consumer Protection Act (the Dodd-Frank Act) in the US (further discussed in US Supervision and Regulation

Table of Contents

Financial services regulatory and legislative issues), and legislation in the European Union related to the financial services industry. The aggregate impact and possible interaction of these regulatory developments is difficult to determine at this stage.

The IAIS is developing a Common Framework for the Supervision of Internationally Active Insurance Groups (ComFrame). ComFrame is focused on the supervision of large and complex IAIGs, including by establishing a set of common principles and standards designed to assist regulators in addressing risks that arise from insurance groups with operations in multiple jurisdictions. See the Group Risk Framework section for more on this.

At the national level, regulation and supervisory practice is evolving rapidly as regulators seek to strengthen their regimes in light of the lessons of the financial crisis and the influence of international standards (eg IAIS). The following points are discussed in greater detail in the regional sections below, but are referenced here due to their significant impact.

Following the agreement of the Omnibus II Directive at the end of 2013 and its adoption by the European Parliament on 11 March 2014, regulatory attention is expected to refocus back on compliance with Solvency II, which is expected to be implemented in the UK on 1 January 2016.

The IAIS Insurance Core Principles (ICP), which provide a globally accepted framework for the supervision of the insurance sector and ComFrame evolution, are expected to create continued development in both prudential and conduct regulations over the next two to three years, particularly in the emerging markets of Asia.

Regulatory standards are generally being raised, and insurance companies operating in Asia are subject to increasing regulatory supervision and scrutiny. In general, the pace of regulatory developments has increased since 2008 in most markets, particularly in relation to risk capital, consumer protection and governance requirements. The regulatory environment continues to evolve in Asia, where economies in the region are in various phases of maturity. In general (though there are exceptions), regulators in developing economies continue to build the regulatory framework relevant to their level of economic development. This increased regulatory pressure will continue to affect Prudential's Asian businesses as Asian regulators begin to adopt the new IAIS standards, which is expected to cause sharper focus on risk management systems and a requirement to hold more capital to manage asset and liability positions.

A major focus of regulators and policymakers in recent years has been combating money laundering, terrorist financing, bribery and corruption, as well as enforcing compliance with economic sanctions. Such matters are not limited to certain jurisdictions, although the risks of non-compliance in developing markets are considered higher than in more established markets. In addition, laws in one country can affect how a firm operates in another country. For example, the UK Bribery Act 2010 and the U.S. Foreign Corrupt Practices Act (as amended in 1998) have a very broad jurisdictional reach, allowing for the prosecution of an individual or company with links to the UK or U.S., regardless of where the crime or potential crime occurred.

UK Supervision and Regulation

The Financial Services and Markets Act 2000

Prudential's insurance and investment businesses in the UK are regulated under the Financial Services and Markets Act 2000 (FSMA 2000). In addition, those businesses are subject to various UK laws (for example, the Data Protection Act 1998 in relation to the processing of customer data and various Pension Acts) some of which require the relevant Prudential entity to be licensed or registered. There have been extensive amendments to the FSMA 2000 regime as a result of the Financial Services Act 2012 (FS Act) and the transition to a new regulatory regime described

below. The FS Act also contains some standalone provisions.

Table of Contents

UK regulatory regime

Regulators in the UK have structured themselves around a 'twin peaks' model since 2013, which includes:

The PRA, which oversees macro-prudential regulation of deposit-takers, insurers and some systemically important investment firms; and

The FCA, which is responsible for conduct of business regulation of all authorised firms and the prudential regulation of firms not regulated by the PRA. The FCA has also inherited the majority of the market regulatory functions (excluding certain functions which are the responsibility of the Bank of England) previously held by the FSA.

In discharging their respective functions, the PRA and FCA have separate objectives as defined in FSMA 2000 and amended by the FS Act. The general objective of the PRA is to promote the safety and soundness of PRA-authorised persons. The PRA also has an insurance objective, which is to contribute to the securing of an appropriate degree of protection for those who are or may become policyholders. The strategic objective of the FCA is to ensure that the relevant markets that it regulates function properly. The FCA has three operational objectives: to secure an appropriate degree of protection for consumers; to protect and enhance the integrity of the UK financial system; and to promote effective competition in the interests of consumers.

The approach of the PRA and FCA

Close and regular contact between the PRA and FCA and senior management and those individuals in firms performing controlled functions remains a feature of the UK regulatory regime. Both regulators have continued to focus on risk, but with their approaches informed by separate statutory objectives and pursued through distinct supervisory programmes.

To meet its objectives, the FCA's supervision model is based on three pillars: a Firm Systemic Framework (FSF), involving preventative work through structured conduct assessment of firms; event-driven work covering issues which occur outside a firm's assessment cycle; and thematic reviews focused on particular sectors of the market aimed at product issues which the FCA identifies as driving poor outcomes for consumers or endangering market integrity. Under the FSF, Prudential is subject to, amongst other initiatives, a business model and strategy analysis to establish which assessment areas to prioritise over a two-year cycle.

The FCA divides the firms it supervises into one of four conduct classifications (C1 to C4) based on a combination of a measure of a firm's potential impact on FCA objectives and the number of retail customers a firm has, with C1 being the highest risk category. Prudential has been categorised as C2, the second-highest risk category. Additionally, as a group also regulated by the PRA with subsidiaries that are prudentially regulated by the FCA, Prudential has been assigned one of four prudential classifications (P1 to P4). Members of the Prudential Group that the PRA prudentially regulates have been categorised as P1, the highest risk category, as they are considered prudentially critical.

The PRA is weighting its supervision towards those issues and those insurers that, in its judgment, pose the greatest risk to its statutory objectives, conducting its assessment work on a continuous cycle.

Both the PRA and FCA have sought to adopt a more judgment-led approach to supervision while also being more forward-looking in relevant judgments by assessing firms against both current and future risks. The approach of both

the PRA and the FCA is also principles-based, placing less reliance on technical rules. This has resulted in a more intrusive and proactive approach to supervision. The PRA has indicated that, for significant firms such as Prudential, it will conduct detailed analysis of their business models including, in the case of an insurer, forming its own projection of the insurer's ability to generate returns and the associated risks. In line with a more interventionist approach, the PRA has indicated that it will require the insurer to change its business model if it believes that mitigating measures alone cannot adequately reduce material risks to safety and soundness and policyholder protection. Both the PRA and the FCA have placed a significant focus on assessing the governance frameworks and culture that exist within financial firms.

Table of Contents**Overview of FSMA 2000 regulatory regime*****Principles for Businesses***

An authorised firm is subject to a range of ongoing regulatory requirements supervised by the FCA and, for dual-regulated firms, the PRA. These include the requirement to meet at all times specified threshold conditions, which include possession of adequate resources for the carrying on of its business and being fit and proper. Key features of the regime are the 11 Principles for Businesses, by which all authorised firms were expected to abide. These cover key areas such as the firm's relationship with the FCA and PRA, the need to conduct business with integrity and the requirement to pay due regard to the interests of customers and treat them fairly.

Main features of regulation applicable to the Prudential's insurance and investment businesses***Supervision of management of authorised firms***

The PRA and FCA supervise the management of authorised firms through the approved persons regime, under which any appointment of persons who perform a controlled function, including functions that enable the exercise of significant influence over an authorised firm, must be pre-approved by the PRA or FCA, as applicable. Increasingly the regulators are looking to understand how senior managers discharge their responsibilities and are holding them to account for regulatory failings.

A number of senior managers in the Group Head Office are registered as approved persons for certain of the regulated subsidiaries with either just the PRA or both the PRA and FCA, even though in most cases they are not directors or senior managers of those entities. This is in recognition of the significant influence these managers exert over the regulated subsidiaries. There is a greater regulatory emphasis on individual accountability and more enforcement actions have been taken directly against approved persons in recent times.

In November 2014, the PRA published a consultation paper which proposed a new Senior Insurance Managers Regime (SIMR) broadly in line with that already proposed for the banking sector in the UK, following the Financial Services (Banking Reform) Act 2013. This SIMR would replace parts of the approved persons regime currently in place for insurance firms, and would bring extra emphasis on the conduct of senior managers and their individual responsibility for decisions, which could lead to firms facing regulatory censure. Senior managers will have core responsibilities prescribed to them, according to their role. Under the proposed SIMR, firms would have to prepare a governance map that describes their management and governance arrangements and to ensure there are no gaps in the allocation of responsibilities. There are also some changes to the fit and proper requirements under Solvency II, which will be implemented at the same time as the SIMR comes into force, during 2015. In addition to the new regime for senior managers, a new set of conduct standards will be introduced which will apply to senior managers as well as to a wider class of insurance firm employees to the extent that they perform a key function. A separate paper setting out the regulators' proposed approach to Non-executive Directors was released in February 2015.

Intervention and enforcement

The FCA and PRA have extensive powers to investigate and intervene in the affairs of an authorised firm as well as enforcement powers.

Both the FCA and the PRA can impose requirements on UK-incorporated unregulated parent undertakings that exert influence over authorised persons. The latter power is of particular potential relevance to the Group given that it is headed by a UK-incorporated unregulated parent undertaking but it remains to be seen how this new power will be

used.

Conduct of Business Rules

The FCA's Conduct of Business Rules regulate the day-to-day conduct of business standards to be observed by authorised persons in carrying on regulated activities.

Table of Contents

The scope and range of obligations imposed on an authorised firm under the Conduct of Business Rules varies according to its business and the range of its clients. Generally, however, the obligations imposed on an authorised firm include the need to categorise its clients according to their level of sophistication, provide them with information about the firm, meet certain standards of product disclosure, ensure that promotional materials which it produces are clear, fair and not misleading, assess suitability when advising on certain products, manage conflicts of interest, report appropriately to its clients and provide certain protections in relation to client assets. Additional details of relevance to the insurance and investment businesses are discussed below.

Authorised firms which advise and sell to retail customers packaged products such as life insurance policies are subject to detailed conduct of business obligations relating to product disclosure, assessment of suitability, the range and scope of the advice which the firm provides, and fee and remuneration arrangements.

The Retail Distribution Review (RDR) was launched with the specific aim of addressing shortcomings in the retail investment market. On 31 December 2012, the rules took effect which, *inter alia*:

required changes in how firms offering advice to retail customers present and describe the adviser services that they offer, including limiting the extent to which such firms can present themselves as independent advisers;

banned the payment of commission when a personal recommendation is made and required the adoption of adviser charging whereby a firm must set and clearly disclose its tariff of charges to a potential customer and that these product charges (i) are to be facilitated by the product provider, and (ii) their amounts must not be determined by the provider;

imposed higher qualification requirements as well as continuing professional development and professional standards on advisers; and

introduced increased reporting requirements on firms in respect of their retail investment advisers.

The FCA announced in 2014 that it will assess whether life insurance firms are operating historic (often termed legacy or heritage) products in a fair manner. This is known as the Life Insurance Review . For example, the project will assess:

whether firms strategies towards these business lines adequately consider the fair treatment of customers;
to what extent firms review legacy products to ascertain whether they remain fit for purpose;
whether customers receive appropriate information about policy benefits;
the causes of poor fund performance and whether apportionment of costs and expenses to these products is fair;
and
the nature and extent of discontinuance charges that potentially inhibit customers from switching to better performing products.

The FCA clarified that it would be looking at how customers in closed funds are being treated and will be reviewing a representative sample of firms to analyse whether they are treating their customers fairly. The review is underway and will not look at past sales practices.

The FCA conducted a review of the annuities market and found it was not working well for consumers. In March 2014, the FCA launched a Competition Market Study and published the findings in December 2014. This study confirmed that many consumers were missing out on a higher income by not shopping around. Firms are being asked to do further work, especially in relation to enhanced annuities.

Consumer protection, the Financial Ombudsman Service (FOS) and the Financial Services Compensation Scheme (FSCS)

The consumer protection agenda in the UK is within the remit of the FCA. The FCA's focus is on product scrutiny, sales practices and firms' cultures, including assessment of how remuneration structures affect consumer outcomes. In addition, the FCA has a specific remit to promote competition within the financial services industry.

Authorised firms must have appropriate complaints handling procedures, the standards for which are defined in the FCA Handbook. However, once these procedures have been exhausted, qualifying complainants may turn to the FOS. The Ombudsman is empowered to order firms to pay fair compensation for loss and damage and may order a firm to take such steps as the Ombudsman determines to be just and appropriate in order to remedy a complaint.

Table of Contents

The FSCS is intended to compensate individuals and other groups of eligible claimants, including certain trustees for claims against an authorised firm where the authorised firm is unable or unlikely to be able to meet those claims (generally, when it is insolvent or has gone out of business). Both the PRA and the FCA have rule-making powers for the FSCS, and the FSCS is accountable to both regulators.

Financial Crime

The prevention of financial crime is a key element of the FCA's statutory remit to protect the integrity of the UK financial system. The FCA has responsibility for preventing firms from being used as a channel for financial crime. This includes anti-money laundering, sanctions, and anti-bribery and corruption. As one of the lead supervisors of Prudential, the FCA has this responsibility for the whole Group. The FCA requires firms to put in place systems and controls to mitigate financial crime, and it examines these as part of its proactive supervision agenda on an ongoing basis. Firms are required to disclose suspicions of money-laundering to the FCA. The FCA can take enforcement action against firms that fail to effectively manage their financial crime risks.

Regulation of insurance business

Most of Prudential's subsidiaries that carry on insurance business in the UK, including The Prudential Assurance Company Limited (PAC), Prudential Retirement Income Limited, Prudential Pensions Limited and Prudential Holborn Life Limited are dual-regulated firms, meaning that they are regulated by the PRA for prudential purposes and by the FCA for conduct purposes. The exceptions are Prudential Distribution Limited, Prudential Financial Planning Limited and Scottish Amicable ISA Managers Limited, which are regulated by the FCA only due to their business model.

Capital requirements for insurers

As noted above, in order to maintain authorised status under the FSMA 2000, firms must continue to satisfy certain threshold conditions, which, *inter alia*, require firms to have adequate resources for the carrying on of their business. The rules which govern the prudential regulation of insurers are currently found in the General Prudential Sourcebook (GENPRU), Prudential Sourcebook for Insurers (INSPRU) and the Interim Prudential Sourcebook for Insurers (IPRU (INS)) in the PRA Handbook.

The PRA's Individual Capital Adequacy Standards (ICAS) require an insurer to prepare and submit to the PRA its own assessment of its capital requirements, known as an individual capital assessment (ICA), based on the risks it faces, and certain minimum requirements discussed below. Where the PRA disagrees with a firm's capital requirement assessment, it may issue the firm with individual capital guidance (ICG), including at times, imposing guidance as a requirement.

Insurance companies must maintain assets sufficient to meet at all times the relevant capital requirements in respect of both long-term insurance and general insurance business undertaken by the company. The calculation of such capital requirements is dependent on the type and amount of insurance business a company writes. Under the rules in GENPRU, an insurer must hold capital resources equal at least to the Minimum Capital Requirement (the MCR). Insurers with with-profits liabilities of £500 million or more must hold capital equal to the higher of MCR and the Enhanced Capital Requirement (the ECR). The ECR is intended to provide a more risk responsive and realistic measure of a with-profits insurer's capital requirements, whereas the MCR satisfies the current minimum EU standards. The applicability of either the MCR or ECR requirements is evaluated on an entity-by-entity basis.

The ECR is determined as the higher of two separate measurements of the firm's financial resources requirements, reflecting capital as determined by reference to two bases for calculating liabilities (regulatory and realistic), which is referred to as the "twin peaks" approach. The regulatory basis reflects strict contractual liabilities whereas the realistic basis includes more discretionary but expected benefits, including those required to treat customers fairly.

Table of Contents

Long-term business assets and liabilities those assets and liabilities relating to, broadly, life and health insurance policies must be segregated from the assets and liabilities attributable to non-life insurance business or to shareholders. Separate accounting and other records must be maintained and a separate fund must be established to hold all receipts of long-term business.

The extent to which long-term fund assets may be used for purposes other than long-term business is restricted by the rules in INSPRU. Only the established surplus the excess of assets over liabilities in the long-term fund, as determined by an actuarial investigation may be transferred so as to be available for other purposes. Restrictions also apply to the payment of dividends by the insurance company, as described below. The rules in INSPRU require, in addition to the capital requirements referred to above, the maintenance of sufficient assets in the separate long-term insurance fund to cover the actuarially determined value of the insurance liabilities.

The rules also require insurers to undertake reverse stress testing. Reverse stress testing requires firms to work backwards from an assumed point of business model failure, to identify the stress scenarios that could result in such adverse outcomes. Each firm must then consider whether the likelihood of these scenarios, taking into account likely management actions, is consistent with its risk appetite and, if not, must initiate actions to address any inconsistencies. Solvency II, an EU initiative to codify and harmonise EU insurance regulation, primarily in relation to the amount of capital a firm must hold to reduce the risk of insolvency, is described further below and will reform prudential regulation of insurers in the EU and will require a complete overhaul of the PRA prudential rulebook. In August 2014, the PRA issued a Consultation Paper that outlined its proposed rules to implement the Solvency II Directive as amended by the Omnibus II Directive. A follow-up to this consultation is still awaited at the time of writing.

Actuarial functions

The PRA's rules require every insurance company that carries on long-term business to appoint one or more actuaries to perform the actuarial function in respect of all classes of its long-term insurance business and the with-profits actuary function in respect of all classes of its with-profits business (if any). Alongside the with-profits actuary, and also forming part of the second line of defence from a compliance perspective, the PRA's rules require with-profits businesses to appoint a with-profits committee. This committee is composed of independent persons and acts in an advisory capacity to inform the decision-making of an insurer's governing body and to ensure that the interests of with-profits policyholders are adequately considered. The with-profits committee advises on the appointment of, and works closely with, the with-profits actuary.

The actuary performing the actuarial function must prepare at least annually, a report for the company's directors quantifying the company's long-term liabilities attributable to the insurance company's long-term insurance business, determining the value of any excess over those liabilities of the assets representing the long-term insurance fund and, where any rights of long-term policyholders to participate in profits relate to particular parts of such a fund, a valuation of any excess of assets over liabilities in respect of each of those parts.

The actuary performing the with-profits actuary function must, amongst other responsibilities, advise the firm's management on key aspects of the discretion to be exercised affecting these classes of the with-profits business of the firm, and, at least once a year report to the firm's governing body on key aspects (including those aspects of the firm's application of its Principles and Practices of Financial Management (PPFM)) on which the advice described above has been given) of the discretion exercised in respect of the period covered by his report. All firms that carry on with-profits business are required to publish the PPFM that are applied in the management of their with-profits funds.

Distribution of profits and with-profits business

Under IPRU (INS), once an allocation of surplus in a with-profits fund has been made to policyholders, no transfer of assets representing any part of a subsequent surplus can be made, to shareholders or otherwise, unless either a defined relevant minimum of the surplus has been allocated to policyholders or a statutory notification procedure has been followed.

Table of Contents***With-profits business***

The with-profits business was an area of focus for the FSA, including specifically: the costs charged to a with-profits fund by the firm managing the fund; penalties and charges levied on policyholders who surrender their policies early; the need for funds to be managed with the objective of ensuring that maturity payouts fall within a target range set for the fund; and the provision of information to with-profits policyholders or potential policyholders in a format that they can readily understand.

The PRA and FCA share responsibility for protecting policyholders' reasonable expectations in relation to with-profits business. The PRA consulted on its approach to with-profits business in October 2014. Changes in rules are proposed to align the UK's with-profits regulatory regime with Solvency II, when the Directive comes into effect. The PRA views the regulation of with-profits business as an important element of its approach to insurance supervision. The PRA and FCA will continue to liaise on the regulation and supervision of with-profits business according to the framework set out in the with-profits Memorandum of Understanding dated 1 April 2013. The PRA seeks to ensure that any discretionary benefit allocations or other changes with financial implications that the insurer has proposed are compatible with its continued safety and soundness, whereas the FCA has responsibility for monitoring whether the proposed changes are consistent with the insurer's previous communications, the FCA's conduct rules and the overriding obligation to treat customers fairly. The PRA has the power to prevent allocations being made if they would materially impair the firm's safety and soundness.

Pensions

Pensions schemes are regulated independently of the PRA and FCA. In April 2005, the Pensions Regulator was set up as the statutory regulator for all work-based pension schemes. A work-based pension scheme is any scheme that an employer makes available to employees. There is also a separate Ombudsman, the Pensions Ombudsman, who investigates and decides complaints and disputes over the manner in which pension schemes are run.

In March 2014, the UK government announced wide-ranging changes affecting pensions to allow people the freedom to choose how and when to access their pensions during retirement. There are impacts on the retirement market specifically for drawdown. Most individuals, up until the time of this announcement, opted for an annuity at retirement that would pay an income for life. From April 2015, it is proposed that, regardless of size of pension pot, people aged 55 and over will be able to access their pension funds at their discretion, subject to their applicable marginal rate of income tax that year. Customers are delaying action until the new rules take effect.

From April 2015, defined contribution workplace pensions will be subject to new regulatory measures, including charging constraints and additional requirements for scheme governance and disclosure. This will entail changes to the fund proposition and system enhancements. Active members of qualifying schemes for auto-enrolment who currently contribute to default funds that are not charge cap compliant, will only be able to continue to contribute to such funds where they specify to do so. The implementation costs are substantial and future business prospects uncertain. In particular, there are concerns regarding the impact on with-profits funds.

The direct financial impact will include an increase in ongoing operating costs and probable reductions in profit margins for all firms operating in this sector. This may be offset by an increase in market share, if the measures lead to further industry consolidation. It is too early to know the impact of these changes on Prudential UK in particular.

EU Directives on groups

Prudential is subject to the capital adequacy requirements of the Insurance Groups Directive (IGD), as implemented in the PRA rules. The IGD pertains to groups whose activities are primarily concentrated in the insurance sector.

The PRA, as lead supervisor of Prudential under the IGD, supervises Prudential on a group basis in addition to supervising the UK insurance companies within Prudential individually. This is referred to in the IGD as

Table of Contents

supplementary supervision and encompasses such matters as general supervision over intra-group transactions (including, *inter alia*, loans, guarantees and off-balance sheet transactions, investments, reinsurance, retrocession and cost sharing agreements), group risk management processes and internal control mechanisms, and reporting and accounting procedures. In accordance with the IGD, the PRA requires the calculation of group capital resources on a consolidated basis and requires that such group capital resources be equal to or in excess of Prudential's group capital resources requirement (each as calculated in accordance with INSPRU).

The PRA also plays a coordinating role amongst EU regulators under the IGD. Due to the geographically diverse nature of Prudential's operations, the application of these requirements to Prudential is complex. In particular, for the purposes of calculating the group capital requirement and actual group capital resources under INSPRU, for many of the Asian operations, the assets, liabilities and capital requirements have to be recalculated based on UK regulations as if the companies were directly subject to such regulation.

New EU solvency framework

The European Commission is continuing to develop a new prudential framework for insurance companies, Solvency II, which will repeal and replace the existing Life, Non-life, Re-insurance and IGD directives. The main aim of this framework is to ensure the financial stability of the insurance industry and protect policyholders through solvency requirements better matched to the true risks of the business. The Solvency II Directive, as amended by the Omnibus II Directive, is due to be transposed into national law in each member state by 31 March 2015 with implementation required from 1 January 2016.

Solvency II adopts a three-pillar approach to prudential regulation, which is similar to the Basel II approach that has already been adopted in the banking sector in Europe.

Although the Solvency II Directive has similarities to the current UK regime set out in GENPRU and INSPRU in terms of its risk-based approach to the calculation of capital requirements and use of capital tiering, there are also many differences both in terms of substance and terminology. For example, while both regimes share the principle of a market consistent valuation of assets and liabilities, there are differences in the detailed valuation methodologies.

A key aspect of Solvency II is the focus on a supervisory review at the level of the individual legal entity. Insurers will be encouraged to improve their risk management processes and will be allowed to make use of internal economic capital models to calculate capital requirements, subject to approval by the local regulator (the PRA in the UK). In addition, Solvency II requires firms to develop and embed an effective risk management system as a fundamental part of running the firm.

The new regime will require firms to disclose a considerably greater level of qualitative and quantitative information than under current rules, both to their own supervisor through Regular Supervisory Reporting (RSR) and to the market through the publication of a Solvency and Financial Condition Report (SFCR). This is intended to increase transparency, allowing easier comparison across the industry and enabling supervisors to identify sooner if firms are heading for financial difficulty. In turn, increased transparency is intended to drive market discipline, arising from the reaction of ratings agencies and the capital markets to firms' performance.

Solvency II is a framework directive and, therefore, much of the detail of the rules will be set out in Level 2 implementing measures. In October 2014, the European Commission adopted a legislative act containing these detailed Level 2 measures, which entered into force in January 2015. The EIOPA is also required to develop binding technical standards (which will require the approval of the European Commission) during 2015. These Implementing Technical Standards aim to ensure the uniform application of the Solvency II Directive and have been split into two

parts running to different timescales. Still being consulted on are the Guidelines which are necessary to guarantee convergence of the Solvency II implementation as of the first day of its entry into force.

Further details on Solvency II and its implications for the Group are set out in Item 4 Group Risk Framework, and in Risk Factors Risks related to Prudential's Business.

Table of Contents***ICAS+ and Internal Model Approval***

Given that Solvency II is not due to be implemented until January 2016, shorter term regulatory efforts have shifted to ensuring that the momentum built towards better risk management over the last few years is not lost during the interim period. Insurers are also seeking to leverage the improved governance, risk management, and capital models they have developed in preparing for Solvency II.

In the UK, the PRA has allowed firms, such as Prudential, which have been in the internal model approval process (IMAP) to use their Solvency II internal model to meet, as far as possible, current regulatory requirements under the ICA regime. This has been termed ICAS+ and the PRA has, as part of this, continued to evaluate a firm's IMAP progress for UK elements of its internal capital model. Prudential has participated fully in the ICAS+ regime in the UK. Prudential's formal internal model application is expected to be submitted in mid-2015 following transposition of the Solvency II Directive into UK law. In advance of this, Prudential expects to remain in regular contact with the PRA through the pre-application stage of the approval process for the internal model.

EIOPA Solvency II preparatory guidelines

The PRA issued a supervisory statement setting out its expectations of firms during the preparatory phase for Solvency II in December 2013, following an earlier consultation. On 1 April 2014, final guidelines issued by EIOPA on the preparation of Solvency II came into force. The guidelines cover four areas which EIOPA considers fundamental to ensure effective and convergent preparations for Solvency II. In the UK, these have been implemented by the PRA.

Regulation of investment business

Certain of Prudential's subsidiaries are authorised to carry on investment business and are subject to regulation and supervision under FSMA 2000. UK asset management can also be subject to additional regulation in other jurisdictions in which they operate. For example, certain M&G UK subsidiaries which operate outside of the UK are also subject to regulation by local regulatory authorities.

Markets in Financial Instruments Directive (MiFID)

MiFID sets out detailed authorisation and operating conditions for investment firms and regulated markets. In October 2011, the European Commission published proposals to amend MiFID, the MiFID2 Directive and introduce a new Markets in Financial Instruments Regulation (MiFIR). The detailed Level 2 rules are, however, still in consultation and are due to take effect in January 2017. MiFID and MiFIR will have a broad impact on the financial markets in Europe. The new regulations are wide ranging and the greatly increased pre- and post-trade transparency around fixed income trading and ban on all independent advisors and discretionary portfolio managers from retaining most inducements are likely to result in the main impacts on the M&G investment management business.

Capital requirements for investment business

Capital Requirements Directive (CRD) IV is the EU implementation of Basel III, which is a global agreement by the Basel Committee on Banking Supervision in response to the financial crisis. Basel III contains a package of proposals to increase the prudential soundness of banks, and its implementation in the EU is designed to also cover certain investment firms. CRD IV took effect on 1 January 2014. CRD IV has no material impact on Prudential's capital requirements.

Alternative Investment Fund Managers Directive (AIFMD)

The AIFMD, a directive designed to regulate the management and marketing of alternative investment funds, including private equity and hedge funds entered into force on 21 July 2011. EU Member States were required to have implemented the AIFMD by 22 July 2013, with a one-year grace period for firms to gain approval as Alternative Investment Fund Managers (AIFMs). The relevant Prudential entities have been approved as AIFMs and are complying with the Directive as required.

Table of Contents***Packaged Retail Insurance-Based and Investment Products Regulation (PRIIPR)***

In order to facilitate similar disclosure for all investment products sold to retail clients (including insurance contracts), the European Commission proposed adopting a modified version of the Key Investor Information Document (KIID) for all such products. The KIID will be a two-sided information sheet that will give investors all the key facts and figures about a fund. PRIIPR was agreed by the European Parliament and EU Council of Ministers in March 2014 and will take effect in December 2016. The relevant entities in the Prudential Group to whom PRIIPR will apply are currently reviewing the draft Level 2 rules.

Undertakings in Collective Investments and Transferable Securities Directive (UCITS V)

Following the publication of AIFMD, the European Commission proposed to incorporate some of its provisions on depositaries, remuneration and sanctions into the existing mutual funds directive, UCITS IV. UCITS V was agreed by the European Parliament and EU Council of Ministers in March 2014 and is expected to enter into effect in March 2016. The relevant Prudential Group entities to whom UCITS V will apply are currently reviewing the draft Level 2 rules.

European Market Infrastructure Regulation (EMIR)

The Regulation of the European Parliament and of the Council on OTC derivative transactions, central counterparties (CCPs) and trade repositories, widely known as European Market Infrastructure Regulation, or EMIR , came into force on 16 August 2012, with its key provisions taking effect on a phased basis. Full implementation is expected to be achieved by the end of 2019. EMIR s rules are intended to lessen risk and increase transparency within the OTC derivative markets by introducing for most counterparties: (i) a reporting obligation for all derivatives; (ii) a clearing obligation for eligible OTC derivatives; (iii) measures to reduce counterparty credit risk and operational risk for bilaterally cleared OTC derivatives, including through collateral requirements; (iv) common rules for CCPs and for trade repositories; and (v) rules on the establishment of interoperability between CCPs. The relevant Prudential Group entities have implemented the necessary changes to comply with EMIR requirements currently in effect, including the start of reporting obligations.

Market Abuse Directive / Regulation (MAD2 / MAR)

Following a review of the EU s Market Abuse Directive (MAD), the European Commission proposed a new Market Abuse Regulation (MAR) and a new Market Abuse Directive (MAD2) in October 2011. The proposals included extending the scope of MAD to new trading venues, determining that attempted manipulation and use of inside information constitute market abuse, and providing for a minimum EU-wide level of administrative sanctions and criminal liability for more serious market abuse.

MAD2 and MAR were adopted by the European Parliament in June 2014 and are expected to enter into effect in July 2016. The UK Government has announced that it will not exercise its right under the Lisbon Treaty to opt into MAD2, preferring instead to maintain a modified version of the existing UK current regime for market abuse. M&G will implement the revised rules once the Level 2 implementing legislation and standards have been agreed.

Financial Transaction Tax (FTT)

In February 2013, the European Commission proposed a Council Directive implementing a procedure of enhanced cooperation on a common FTT for a sub-group of eleven EU Member States. Although the UK is not one of the participating Member States, under the current proposal, the FTT could in certain circumstances apply to transactions

in the UK. If a FTT were to be agreed in its current proposed form, M&G may need to review its trading strategy and, from an operational perspective, make changes necessary to comply with any tax collection mechanism established. The FTT remains subject to negotiation amongst the participating Member States.

Table of Contents**Asian Supervision and Regulation****1. Regulation of insurance business**

Prudential's businesses in Asia are subject to all relevant local regulatory and supervisory schemes. These laws and regulations vary from country to country, but the regulators typically grant (or revoke) licenses and therefore control the ability to operate a business.

Industry regulations are usually widely drawn and include provisions governing both financial matters and the way business is conducted. In general, regulatory regimes will include features governing the registration of agents, regulation of product features, approval of products, asset allocation, minimum capital, the basis for calculating the company's solvency and reserves, the valuation of policyholder liabilities, conditions for outsourcing non-core functions, policyholder and investor protection, as well as anti-money laundering (AML) and know your client requirements and data protection requirements. Regulatory authorities may also regulate affiliations with other financial institutions, shareholder structures and the injection of capital and payment of dividends. Financial statements and other returns are filed with the regulators. The regulators may also conduct physical inspections of the operations from time to time. A number of jurisdictions across Asia require insurance companies to participate in policyholder protection schemes (ie contribute to a fund to support policyholders in the event of an insurance company failing).

The increasingly extraterritorial approach of certain regulators outside Asia, aimed among other things at protecting financial systems from systemic risks and curbing tax avoidance, could have wider consequences on financial groups in the Asia-Pacific region. For example, firms based outside the US are increasingly being required to comply with certain US originated rules like FATCA (see US Supervision and Regulation Implementation of US Foreign Account Tax Compliance Act (FATCA) provisions below), which will impact on the bancassurance business channel as banks will have to set up separate systems to deal with US customers. The effects of anti-bribery legislation in the UK, US and elsewhere have also become increasingly significant outside of such legislations' home jurisdictions. Further, Prudential Corporation Asia's (PCA's) business units will be required to adhere to Prudential's group-wide policy designed to comply with the EU Solvency II requirements (although they will not each be required to be compliant on a solo entity basis). Asian regulators are monitoring closely how Solvency II is developed and implemented but are not currently requiring regulated insurance entities to comply.

Certain additional details of the regulatory regimes to which PCA's insurance operations are subject are discussed below:

Hong Kong***Overview***

Prior to 2014, the Hong Kong insurance business operated as a branch of PAC. Accordingly, the branch was indirectly regulated by UK regulators, as a result of PAC's requirements to satisfy relevant UK capital requirements in addition to those of the local laws and regulations. Its insurance operations were directly regulated by the relevant Hong Kong regulators.

The Hong Kong branch of PAC was domesticated on 1 January, 2014, creating two subsidiaries, Prudential Hong Kong Limited (PHKL) and Prudential General Insurance Hong Kong Limited (PGHK), to separately manage the life and general businesses. Both entities are solely regulated by the relevant regulators in Hong Kong.

The Office of the Commissioner of Insurance (the OCI) is currently the regulatory body that administers the Insurance Companies Ordinance (the ICO). The OCI is headed by the Commissioner of Insurance who has been appointed as the Insurance Authority (the IA) for administering the ICO. The principal functions of the IA are to ensure that the interests of policyholders or potential policyholders are protected and to promote the general stability of the insurance industry, including by authorising insurers to carry on insurance business in Hong Kong, regulating insurers' conduct primarily through the examination of the annual audited financial statements and

Table of Contents

business returns insurers submit, and development of legislation and guidelines on insurance supervision. A key supervisory responsibility relates to solvency margin requirements contemplated by the ICO, as further discussed below.

The Financial Services and Treasury Bureau is in the process of drafting legislation to facilitate the transition to an Independent Insurance Authority (IIA) in Hong Kong. In October 2013, a working group was established to ensure a smooth transition to the statutory licensing regime under the IIA. Legislation is being enacted by way of the Insurance Companies (Amendment) Bill 2014 to facilitate the establishment of the IIA by mid-2015. Both subsidiaries are also subject to the codes and guidance developed by a self-regulatory body the Hong Kong Federation of Insurers (the HKFI). HKFI actively promotes its self-regulatory regime with respect to areas like conduct of insurers and insurance intermediaries, cooling off initiatives, policy replacement and initiative on needs analysis. The Insurance Agents Registration Board of the HKFI is responsible for administering the registration and approval of insurance intermediaries of insurance agents, their responsible officers and technical representatives; and handling complaints against them and providing enquiry services to and handling complaints from the public relating to insurance agents.

In addition, the sale of mandatory pension products by agents is regulated by the Mandatory Provident Fund Authority (the MPFA), which licenses and supervises the conduct of MPF intermediaries.

The Hong Kong Life business is also regulated by the Hong Kong Securities and Futures Commission (the SFC) for its offering of investment linked products.

Capital requirements

Under the ICO, an insurer is required to maintain at all times an excess of assets over liabilities of not less than a required solvency margin. The objective is to provide a reasonable safeguard against the risk that the insurer's assets may be inadequate to meet its liabilities arising from unpredictable events, such as adverse fluctuations in its operating results or the value of its assets and liabilities.

For long-term business insurers, the ICO stipulates an absolute minimum solvency margin of HK\$2 million. Above this minimum level, solvency margins are determined in accordance with the Insurance Companies (Margin of Solvency) Regulation (Chapter 41 F of the Laws of Hong Kong), which sets out a series of calculations to be used depending on the particular class of long-term business involved.

For general business insurers, the ICO stipulates an absolute minimum solvency margin of HK\$10 million. Above these minimum levels, solvency margins are calculated on the basis of the greater of an insurer's relevant premium income (defined as the greater of gross premium income after deduction of reinsurance premium payments or 50 per cent of gross premium income) or relevant outstanding claims (defined as the sum of unexpired risks plus the greater of 50 per cent of claims outstanding before deduction of sums recoverable from reinsurers or the amount of claims outstanding after deduction of sums recoverable from reinsurers).

There is also a consultation currently underway by the IA in considering moving towards a risk-based capital (RBC) regime. The consultation is in its very early stage and is seen as responsive to the RBC -related Insurance Core Principles issued by the IAIS in 2011.

Indonesia PT. Prudential Life Assurance*Overview*

PT. Prudential Life Assurance is authorised to carry on long-term (ie, for an indefinite period) insurance business in Indonesia. Prudential's operations in Indonesia are authorised to distribute life insurance products based on either conventional or Shariah principles, through agency and bancassurance (including direct marketing) channels. While the regulations for life products based on conventional principles are fully developed (in accordance with current market conditions), the government has promulgated new regulations in relation to life products with Shariah principles.

Table of Contents

The Otoritas Jasa Keuangan (OJK) is the regulator responsible for supervising the banking industry, capital markets and the insurance industry. Established as an independent regulator in 2013, the OJK has assumed supervisory responsibility of the non-bank financial institutions from the Ministry of Finance (MoF) and the banking sector from Bank Indonesia (BI). The financial regulatory regime in Indonesia now operates on a twin peaks model with the OJK responsible for microprudential supervision and BI retaining its macroprudential responsibilities. The Indonesia Life Insurance Association (AAJI) continues to act as a conduit between insurers and the MoF and OJK in terms of the development of new regulations and guidelines. Insurance sales forces are licensed by the AAJI. The Indonesia Sharia Insurance Association (AASI) acts in the similar capacity as AAJI in relation to the Shariah (known as Syariah in Indonesia) business. The implementation of AML controls in the insurance industry is monitored by the Indonesian Financial Transaction Reports and Analysis Center (or *Pusat Pelaporan dan Analisis Transaksi Keuangan* in Indonesian (the PPAATK)).

The OJK regulations on Consumer Protection (POJK1) came into force on 6 August 2014. Accordingly, the implementing circulars covering the five key areas of Financial Literacy, Complaints Handling and Settlement, Information on Products and Services, Standard Agreements, and Customer Confidentiality were issued between February and September 2014.

The new Insurance Law also came into effect on 23 September 2014, replacing the Insurance Law No. 2 1992. This legislation brings across wide fundamental changes, such as ownership and control, the establishment of an insurance guarantee program (further rules only expected from 2018 onwards), spinning off Shariah (Takaful) window operations from the conventional business within 10 years, and the imposition of stiffer penalties and sanctions for non-compliance.

Capital requirements

The minimum capital requirement for insurers who operate in Indonesia is Indonesian Rupiah (IDR) 100 billion. Further, the minimum regulatory requirement for solvency margin is 120 per cent, which is a percentage of net admitted assets, as defined by the regulation, to the minimum risk-based capital for regulatory solvency.

In March 2014, the OJK instituted an annual levy on insurance companies for general OJK supervision in accordance to Regulation 11 of 2014. The quantum of the levy imposed is 0.045 per cent of the value of the assets, with a minimum of IDR 10 million (US\$770).

Singapore Prudential Assurance Company Singapore (Pte.) Limited

Overview

Prudential Assurance Company Singapore (Pte.) Limited is registered by the Monetary Authority of Singapore (the MAS) to design and sell both life and general insurance business pursuant to the Singapore Insurance Act.

Under the Singapore Insurance Act, the MAS is responsible for insurance regulation and supervision of insurance companies. MAS regulation covers, among other things, the appointment and training of representatives, maximum tier structure, loans and advances, disciplinary action, product disclosure, sales processes and replacement (switching) of life policies. The MAS also has responsibility for supervising compliance with AML provisions, though suspicious transactions must also be notified to the Commercial Affairs Department, an enforcement agency of the Singapore Police Force.

Another relevant regulatory authority for the Singapore business is the Central Provident Fund (the CPF) Board, which acts as a trustee of social security savings schemes jointly supported by employees, employers and the government. The CPF Board regulates insurers in the operation of various CPF schemes including the CPF Investment Scheme where CPF monies are used by policyholders to purchase insurance policies such as annuities and investment linked policies.

The MAS and CPF Board have very detailed regulatory frameworks to govern insurance companies and the distribution of insurance products in Singapore.

Table of Contents*Capital requirements*

A registered insurer is required at all times to maintain a minimum level of paid-up ordinary share capital and to ensure that its financial resources are not less than the greater of (i) the sum of the aggregate total risk requirement of all insurance funds established and maintained by the insurer under the Singapore Insurance Act; (ii) where the insurer is incorporated in Singapore, the total risk requirement arising from the assets and liabilities of the insurer that are not attributable to any insurance fund established and maintained under the Singapore Insurance Act (including assets and liabilities of any of the insurer's branches located outside Singapore); or (iii) a minimum amount of 5 million Singapore Dollars (US\$3.6 million).

Registered insurers in Singapore are subject to an RBC framework. The framework sets out the valuation methodology for assets and liabilities, rules relating to the operations of life insurance funds, capital requirement rules, the role of actuaries, and a set of statutory reporting standards. An insurer must notify the MAS when it has failed or is likely to fail to comply with the mandated RBC indicators or when a financial resources warning event, defined as an event that results in the financial resources of the insurer being less than 20 per cent of the aggregate of (i) mentioned immediately above, or a minimum amount of 5 million Singapore Dollars, has occurred or is likely to occur.

The MAS also has the authority to direct that the insurer satisfy capital adequacy requirements in addition to those set forth under the Singapore Insurance Act if the MAS considers such additional requirements appropriate.

Malaysia Prudential Assurance Malaysia Berhad*Overview*

Prudential Assurance Malaysia Berhad has a composite licence to carry on both life and general insurance business in Malaysia.

The Bank Negara Malaysia (BNM) is the central bank of Malaysia and is the regulatory body responsible for supervising and regulating the financial services sector, including the conduct of insurance and Takaful business. BNM places considerable emphasis on fair market conduct by the insurance industry and protection of consumers interests. BNM is also responsible for administering legislation in relation to AML matters. Further, under the Financial Services Act, 2013 (the FSA), BNM may enforce sanctions on financial institutions.

In addition, Prudential Assurance Malaysia Berhad is a member of the Life Insurance Association of Malaysia and the General Insurance Association of Malaysia, which are both self-regulated bodies. Resolutions and circulars issued by these associations are binding on the member insurance companies.

The regulatory and supervisory framework of Malaysia entered a new stage of its development with the introduction of the IFSA on 30 June 2013. The FSA is now the principal legislation governing insurance business in Malaysia. Under this new statutory framework, insurers are required to restructure their lines of business. Composite insurers will be required to establish separate entities or divest one of their lines of business within a period of five years. The regulations also require additional resources to be allocated to address any weaknesses of internal controls within the business. The FSA also places greater accountability on the board of directors and senior management in their management and oversight of an insurer. During 2014, BNM issued a number of guidelines aimed at further enhancing the effectiveness of the control functions, governance framework and overall supervision of both conventional insurers and Takaful operators. These include Guidelines on Regulating and Supervising Financial Groups (issued in May 2014), Guidelines on Appointed Actuary (issued in April 2014 and effective from 1 January 2015), Guidelines on External Auditors (issued in August 2014 and effective from 1 January 2015) and Guidelines on

Operational Risk Reporting (issued in September 2014). In June 2014, BNM issued a concept paper on operational risk, setting out proposed standards and guidance in relation to the management of operational risks in all activities, products and services offered by financial institutions. In October 2014, BNM issued a concept paper to promote higher standards of compliance in financial institutions, highlighting the importance of a strong compliance culture underpinned by high ethical standards and integrity. This paper stressed the importance of setting the tone from the top and encouraged management not only to adhere to regulatory requirements, but also high standards of ethical conduct.

In November 2013, the BNM released a consultation paper on Life Insurance and Family Takaful Framework, setting out proposals to support the long-term sustainable growth and development of the life insurance and family Takaful industry. The proposals are expected to expand the distribution of life insurance and Takaful and also

Table of Contents

strengthen market practices by enhancing consumer protection requirements. The key proposals include partial removal of operating cost limits offset by caps on allocation rates for unit link products, diversification of distribution by increasing penetration of bancassurance and zero-commission direct marketing, encouraging the establishment of more independent financial advisers by lowering capital requirements, and remuneration of intermediaries based on a balanced scorecard system.

Capital requirements

Minimum paid up share capital for insurers is RM 100 million (US\$27 million).

BNM has introduced an RBC framework aimed at improving the risk management practices of insurers. Under the RBC framework, insurers are required to maintain a capital adequacy level that is commensurate with their risk profiles. Each insurer is required to determine the adequacy of the capital available in its insurance and shareholders fund to support the total capital it requires. This serves as a key indicator of the insurer's financial resilience and is used by BNM to determine the need for supervisory interventions.

Under the RBC framework guidelines, the Board of Directors and senior management of an insurer are also expected to identify, monitor and control risks which are not adequately addressed under the framework. An insurer is also expected to manage actively its capital adequacy by taking into account the potential impact of its business strategies on its risk profile and overall financial resilience. BNM has set a Supervisory Target Capital Adequacy Level of 130 per cent.

BNM implemented the internal capital adequacy assessment process (ICAAP) regime for the insurance sector in September 2012. This set out the framework for meeting risk-based capital requirements. The ICAAP is a comprehensive and forward-looking assessment which requires insurance companies to consider material risks and to demonstrate how these risks will be addressed by their capital management program.

Malaysia (Takaful business) Prudential BSN Takaful Berhad*Overview*

Prudential BSN Takaful Berhad (Prudential Takaful) (a Prudential joint venture with Bank Simpanan Nasional) was the first overseas insurer to be granted a domestic Takaful License in Malaysia.

The Takaful business in Malaysia is also regulated by BNM. In addition, Prudential Takaful is required to be a member of the Malaysian Takaful Association (MTA), an association for Takaful operators that seeks to improve industry self-regulation through uniformity in market practice and to promote a higher level of co-operation.

Takaful in Malaysia is considered to be part of mainstream mercantile law, and is subject to the civil court structure. It is not regulated by Shariah law in Shariah courts. However, the operations of a Takaful Operator (TO) must conform to the rules and requirements of Shariah as regulated in the Islamic Financial Services Act 2013 (IFSA), which came into effect from 30 June 2013, repealing the earlier Takaful Act 1984. The IFSA now provides a comprehensive legal framework that is fully consistent with Shariah in all aspects of regulation and supervision, from licensing to the winding-up of an institution. The IFSA is similar to the FSA issued for conventional insurers. As applicable for conventional insurers, composite TOs will also be required to establish separate entities or divest one of their lines of business. One key implication of the IFSA for joint venture TOs (such as Prudential Takaful) is the requirement to establish a financial holding company. This applies to any company which holds an aggregate interest in shares of more than 50% in a licensed person, or 50% or less in a licensed person but has control over the licensed person (if

Bank Negara considers it necessary).

The IFSA recognises the BNM's Shariah Advisory Council (SAC) as the sole authority on Shariah matters. As the reference body and advisor to BNM on Shariah matters, the SAC is also responsible for validating all Takaful products to ensure their compatibility with Shariah principles. A TO is also required to establish a Shariah Committee, approved by BNM, to which the SAC will give guidance and advice on operations and business activities. BNM has also issued a specific Shariah Governance Framework that prescribes governance arrangements for Islamic Financial Institutions, including TOs.

The BNM's consultation paper on Life Insurance and Family Takaful Framework referred to in the sub section above also impacts on the family Takaful industry.

Table of Contents*Capital requirements*

The Takaful Operational Framework, which came into force on 2 January 2012, strengthens the operational and valuation requirements of Shariah law such that the paid-up capital requirement is RM 100 million (US\$27 million). The regulator has also published a new RBC framework for Takaful which aims to facilitate sound management of capital, aligned to the TO's risk profile. Full implementation began in January 2014.

Thailand Prudential Life Assurance (Thailand) Public Company Limited*Overview*

Prudential Life Assurance (Thailand) Public Company Limited (PLT) holds a life insurance license and is authorised to offer life and general insurance products. This also includes an authorisation to offer products with an investment linked feature.

PLT is regulated and supervised by the Office of Insurance Commission (OIC), the independent regulatory organisation handling day-to-day insurance business affairs and reporting to the Ministry of Finance. The OIC has the power to manage and supervise insurance companies, protect insured persons and the general public, implement policies with respect to insurance funds, and regulate the professional conduct, qualifications and licensing of insurance brokers, agents and actuaries.

In respect of AML, all life insurance businesses are also regulated by the Anti-Money Laundering Office (AMLO). All suspicious transaction reporting is to be made to Thailand's Financial Intelligence Unit (FIU).

In the third quarter of 2014, the OIC released its third Insurance Development Plan (2015-2019) to further develop and strengthen the life insurance industry. This plan outlines three key strategies: (i) restructuring the industry and lifting operating standards; (ii) enhancing efficiency and building a competitive environment; and (iii) improving insurance awareness and further enhancing the knowledge of insurance personnel.

The 2013 draft regulations covering audit, internal controls and governance were implemented in June and August 2014. These regulations aim to strengthen the management and oversight of insurance companies. Key requirements include mandating more independent directors in the various governance fora and prescribing terms of conduct for audit committee members. These regulations also prescribe formal reporting procedures for companies to bring matters to their boards of directors or to their audit committees.

Capital requirements

Effective from September 2011, all insurance companies are required to comply with the RBC framework. Capital adequacy is measured based on the Capital Adequacy Ratio (CAR), which is determined as the Total Capital Available divided by the Total Capital Required, using the appraisal value of assets and liabilities as prescribed by OIC Notifications. The capital to be preserved should be not less than the sum of capital for all risks and assets as prescribed in the regulation, subject to a minimum requirement of 50 million Thai Baht (US\$1.5 million).

Insurers are required by law to maintain capital greater than the prescribed minimum CAR of not less than 100 per cent. However, in case the insurer has a CAR of less than 140 per cent, the OIC may intervene to oversee the insurer's financial status.

Taiwan PCA Life Assurance Company Limited

Overview

PCA Life Assurance Company Limited is licensed to conduct life insurance business in Taiwan.

Table of Contents

The Financial Supervisory Commission (FSC) is responsible for regulating the entire financial services industry, including the banking, securities and insurance sectors. The FSC's responsibilities include supervision, examination and investigation. The Insurance Bureau (IB) under the FSC acts as the executive supervisory authority for the FSC and is responsible for the insurance sector, while the Financial Examination Bureau (the FEB) principally carries out examinations and on-site visits of all financial institutions, including insurance companies, generally every two years. The Investigation Bureau under the Ministry of Justice is responsible for supervision of AML and counter financing of terrorism (CFT) efforts.

Capital requirements

The Insurance Act requires all insurance companies to maintain an RBC ratio of not less than 200 per cent. The ratio is determined as the adjusted net capital compared against the risk-based capital. This measurement takes into consideration asset, insurance, interest and other relevant risks as required in calculating the capital on a risk-adjusted basis. Any company failing the threshold may be subjected to measures ranging from restrictions in business operations to the withdrawal of business license.

The regulator may also introduce different ratio limits for the purpose of qualifying insurance companies to conduct certain business activities, such as imposing limitations on foreign investment by such companies.

South Korea PCA Life Insurance Company Limited*Overview*

PCA Life Insurance Company Limited is authorised to carry on life insurance business in South Korea including but not limited to casualty insurance, illness insurance, nursing insurance and incidental business and services related thereto.

South Korea's financial supervision structure is composed of the Financial Services Commission (the FSC) and the Financial Supervisory Service (the FSS). As South Korea's principal supervisory authority, the FSC is given a broad statutory mandate to carry out three key functions: financial policy formulation, financial institution and market oversight, and anti-money laundering. It also issues regulatory licenses to financial institutions. The FSS acts as the executive supervisory authority for the FSC and principally carries out examination of financial institutions along with enforcement and other oversight activities as directed or charged by the FSC.

In respect of a AML, the Korea Financial Intelligence Unit leads the government's AML and CFT efforts by formulating and implementing AML/CFT policies and regulations, supervising and overseeing financial institutions compliance to the AML/CFT obligations and collecting and analysing reports filed by financial institutions.

In recent years, the FSC has moved away from its interventionist approach in response to the evolving and liberalised landscape. The most prominent change has been a deregulation in asset management and product design activities. However, in connection with deregulation, the FSC has also sought to strengthen supervision.

Capital requirements

A risk-based supervision framework applies to insurers, encompassing an RBC solvency requirement, a risk assessment and application system (RAAS), which assesses insurers' various risks, relevant internal controls, and risk disclosure.

Under the RBC solvency requirement, the ratio of an insurer's available capital to required capital is calculated, and the analysis of equity capital used to determine capital adequacy must take into account market, credit, operational, insurance and interest rate risks, which are not taken into consideration under the solvency margin requirement. The scheme requires the RBC ratio be calculated based on integrated financial statements reflecting assets, liabilities and capital of affiliates and subsidiaries.

Table of Contents

In the event an insurer fails to satisfy the applicable capital adequacy requirement and this poses a threat to the financial soundness of that insurer in South Korea, the FSC may take corrective action, ranging from issuing a recommendation to an insurer to increase its capital reserves or to restrict its investments in high-risk securities and other assets to issuing an order to an insurer to suspend its business or transfer its business to a third party.

On 31 July 2014, FSS announced plans to improve their supervisory system on the insurers' financial solvency. New changes are expected in phases and would involve strengthening RBC capital requirement from various risk assessments, adopting the Own Risk & Solvency Assessment (ORSA) system & disclosure and introducing IFRS reporting. These actions are part of the regulator's efforts to improve financial consumer protection, achieving greater consistency with global regulatory standards and adopting a new accounting standard. Actual implementation is expected to be in 2018.

China CITIC-Prudential Life Insurance Company Limited

Overview

CITIC-Prudential Life Insurance Company Limited (Prudential's joint venture with CITIC in which Prudential has a 50 per cent share) is authorised to conduct life insurance business in China. To date, CITIC-Prudential Life had business across China including the key markets of Guangdong, Beijing, Shanghai, Shenzhen, Hubei, Shandong, Zhejiang, Jiangsu, Tianjin, Guangxi, Fujian and Hebei.

The body responsible for regulation of the insurance sector is the China Insurance Regulatory Commission (CIRC). CIRC reports directly to the State Council. CIRC is authorised to conduct the administration, supervision and regulation of the Chinese insurance market, and to ensure that the insurance industry operates in a stable manner in compliance with the law. CIRC also has local offices in all 31 provinces and selected direct administrative cities and regions across the country which set and administer implementation rules and guidelines in the application of the regulations introduced by CIRC.

CIRC has focused specific attention on the area of risk prevention, with five identified lines of defence against risks, namely internal management and control systems, supervision of solvency adequacy, on-site inspection, fund management regulation and insurance security fund. In response to the global financial crisis, more importance has been attached to the supervision of internal control systems, corporate governance, and market conduct and information disclosure by insurance companies.

Market conduct remains a key topic for CIRC with detailed guidelines and rules introduced in 2013 related to the areas of complaint handling and dealing with specific illegitimate sales activities.

The People's Bank of China (PBOC) is entrusted with responsibility and authority to regulate all anti-money laundering activities in China and has actively been developing rules and guidance, requiring insurance companies to abide by the PRC's main AML law and regulations in connection with capital investment, transfers and set-up of new branches, and specify senior management's responsibilities on AML.

Capital requirements

The minimum registered paid-up capital of a foreign invested insurance company is RMB200 million (US\$32.5 million). A similar requirement is imposed on a Chinese branch of a foreign insurance company. Both foreign invested insurance companies and Chinese branches of foreign insurance companies are required to maintain a solvency ratio that is not lower than 100 per cent. Under relevant PRC regulations, the solvency ratio is the ratio of

actual capital to the minimum capital requirement applicable to the insurer pursuant to relevant regulations. The actual capital is the difference between the admitted assets and admitted liabilities. The CIRC requires solvency reports to be submitted quarterly, annually or *ad hoc* as required by the CIRC. Where an insurer is not able to meet its solvency requirement, it is required to immediately report to the CIRC.

Table of Contents

Philippines Pru Life Insurance Corporation of UK

Overview

Pru Life Insurance Corporation of UK is licensed in the Philippines as a life insurance company and is also permitted to offer health, accident and disability insurance.

The Insurance Code of the Philippines, as amended (Insurance Code), gives the power to supervise and regulate the operations and business of insurance companies to the Insurance Commission (IC). The IC is a government agency under the Department of Finance, and is headed by the Insurance Commissioner. IC regulation and supervision seeks, amongst other things, to ensure that adequate insurance protection is available to the public at a fair and reasonable cost and to ensure the financial stability of the insurance industry so that all legitimate claims of the insured public are met promptly and equitably, and to safeguard the rights and interests of the insured.

Major revisions were made to the Insurance Code in 2013 with the two key objectives of allowing the insurance industry to better compete with the banks by removing the need for joint venture arrangement in conducting bancassurance business, and preparing insurance companies for the implementation of ASEAN Free Trade Area in 2015 by requiring staggered increases in capitalisation.

Capital requirements

The revised Insurance Code requires new insurance companies to have a paid-up capital of at least Php 1 billion (US\$22.6 million), whilst all existing insurance companies must comply with the staggered increase in net worth of Php 250 million from June 2013 to Php 1.3 bn by the end of 2022. According to the Insurance Code, net worth shall consist of (a) paid-up capital, (b) retained earnings, (c) unimpaired surplus, and (d) revaluation of assets as may be approved by the Insurance Commissioner.

The Insurance Code also provides the President of the Philippines with the authority to order a periodic review every two years of the capital structure set out above to determine the capital adequacy of the local insurance industry. For this purpose, a review committee consisting of representatives from Department of Finance, the Insurance Commission, the National Economic and Development Authority, the Securities and Exchange Commission (of the Philippines) and other agencies which the President may designate, shall conduct the review and may recommend to the President to adopt adjustments to the capital requirements of insurance companies.

India ICICI Prudential Life Insurance Company Limited

Overview

ICICI Prudential Life Insurance Company Limited (Prudential's joint venture with ICICI Bank Limited in which Prudential has a 26 per cent share) is authorised to carry on long-term life insurance business in India.

Insurance is subject to federal regulation in India. The Insurance Regulatory & Development Authority (IRDA) which was set-up under the IRDA Act, 1999, is the regulator for insurance business in India. The IRDA's duties include issuing certificates of registration to insurance companies, protecting the interests of policyholders, and regulating, promoting and ensuring the orderly growth of the insurance industry.

The principal legislation for insurance business is the Insurance Act, 1938. Regulations and guidelines on specific matters have also been notified to carry out the purposes of the Insurance Act and to provide rules and norms for

conduct of operations. In relation to AML & CFT requirements, insurers must also adhere to requirements of the Prevention of Money Laundering Act, 2002 and specific guidelines issued by IRDA in this regard. The Financial Intelligence Unit-India (FIU-IND) is entrusted with the responsibility of receiving cash/suspicious transaction reports, analysing them and, as appropriate, disseminating valuable financial information to intelligence/enforcement agencies and regulatory authorities.

The company is also a member of the Life Insurance Council, the industry association for life insurance companies.

Table of Contents

In October 2012, the cabinet approved an amendment to the Insurance Bill 2008 to raise the Foreign Direct Investment (FDI) from 26 per cent to 49 per cent. Besides raising the FDI ceiling, the Insurance Bill proposes about 100 amendments, which include key changes such as placing responsibility on insurers for the acts and omissions of its agents. The Insurance Bill was notified and made effective from 26 December 2014 with the issue of The Insurance Laws (Amendment) Ordinance, 2014. The Insurance Amendment Bill was passed by both the upper and lower houses by the Indian Parliament in March 2015 and the FDI percentage can be expected to change in a number of joint ventures.

Other significant regulatory developments expected in 2015 include a pilot of policy digitisation (the IRDA is expected to further revise its guidelines on digitising insurance policies) and the publication of guidelines to regulate policy churn/replacement. In addition, effective in 2015, insurers will be required to post details of unclaimed amounts (subject to a minimum claim amount) on their respective websites.

The IRDA has also established a working group to conduct a comprehensive review of the corporate governance rules for insurers with a view to harmonising it with the governance and disclosure requirements of the Companies Act 2013. The workgroup is expected to complete its work by early 2015. In addition, a joint taskforce has been established by the IRDA, the Pensions Funds Regulatory and Development Authority (PFRDA) and the Securities and Exchange Board of India (SEBI) to look into the varying commission structures across insurance, pensions and mutual funds.

In the space of investment, the IRDA is looking to allow insurers to deal in equity derivatives and exploring the viability to invest in Real Estate Investment Trusts.

Capital requirements

Every insurer must maintain an excess of assets over liabilities and the Required Solvency Margin (RSM) for an insurer is the higher of Rs.500 million (US\$8 million) or formulaic calculation of net premium or formulaic calculation of net claims. The Available Solvency Margin, which is the excess in the policyholder funds and shareholder funds, must be at least 150 per cent of the RSM.

Vietnam Prudential Vietnam Assurance Private Limited

Overview

Prudential Vietnam Assurance Private Limited is licensed and regulated by the Ministry of Finance of Vietnam (the MoF) as a life insurance company. An insurance company is not permitted to operate both life and non-life insurance at the same time, except in the case of a life insurance company that offers personal health and protection care insurance as a supplement to life insurance.

The Insurance Division of the MoF specifically undertakes the supervision of insurance companies. The fundamental principles of the operation of insurance companies are set out in the Insurance Business Law.

Generally, the Insurance Business Law and its guiding regulations focus on administrative supervision of insurance operations. In practice, the Insurance Business Law reserves most of its items for insurance contracts (ie, for the terms and conditions of policies) in order to protect policyholders' interests. Furthermore, the MoF has issued the new regulation on bankruptcy procedures for insurers, securities and financial institutions in late 2008, to allow it to take timely intervention to control the solvency of insurance companies.

AML controls in the insurance industry are monitored by the Anti-Money Laundering Department under the Banking Inspection, State Bank of Vietnam. In relation to AML, a new circular was published in February 2014 to establish electronic reporting of large cash transactions and enhanced due diligence, including ongoing diligence of high -risk customers. A circular on insurance business carried out by credit institutions and branches of foreign banks was also effected in September 2014, strengthening market conduct requirements on licensing and training, including monitoring of credit institutions and bank staff.

Table of Contents

Other significant regulatory developments include the draft amendment to Circulars 194 on 17 December 2014, amending Circulars 124 and 125 (issued previously). Circular 194 provides further guidance in relation to the implementation of the Insurance Business Law, and took effect on 1 February 2015. Significant changes include the requirement that insurance businesses use the same compensation scheme for new and current agents, removal of the requirements of training time and trainer's criteria, and agent licence examination to also be organised by the MoF.

Capital requirements

Insurers are required to have funds of at least Vietnamese Dong 600 billion in capital, throughout the course of their operations. Further, solvency capital requirement is determined as 4 per cent of reserves plus a specified percentage of 0.1 per cent of sums at risk for policies with original term less than or equal to five years or 0.3 per cent of sums at risk for policies with original term of more than five years. An additional capital requirement of Vietnamese Dong 200 billion is also required for companies transacting unit-linked business.

Cambodia Prudential (Cambodia) Life Assurance Plc

The company was granted in-principle approval in June 2012 to establish life insurance operations in Cambodia and received its full operating licence from the Ministry of Economy and Finance (MEF) on 31 December 2012 and started selling life insurance policies in January 2013.

The Insurance and Pension Department of the Financial Industry Department, a division of the MEF, is the insurance regulator.

Insurance activities are principally governed under the Insurance Law, which came into effect in 2000 (and was further amended in 2014) and the Sub-Decree on Insurance, which was adopted by the Government in September 2001. Specific guidelines on aspects of insurance operations and corporate governance have also been notified by the MEF.

Capital requirements

A life insurance company is required to have a minimum capital of International Monetary Fund special drawing rights (SDR) 5 million (SDR 10 million for a composite insurance company). Insurers must maintain a deposit with the National Treasury, equivalent to 10 per cent of registered capital, and also a solvency margin determined on the basis of years of operation and net premium income.

Japan PCA Life Insurance Company Limited (PCA Life Japan)*Overview*

The Financial Services Agency of Japan (the JFSA) regulates insurance companies and other financial institutions. In particular, the Insurance Business Division of the JFSA specifically undertakes the supervision of insurance companies. PCA Life Japan is licensed by the Prime Minister of Japan (who delegates most of the supervisory functions to the JFSA) as a life insurance company. PCA Life Japan ceased underwriting new policyholder contracts from 15 February 2010. On 16 July 2013, Prudential Holdings Limited reached an agreement with SBI Holdings, Inc to sell its closed book life insurance business in Japan, PCA Life Insurance Co. Ltd, for US\$85 million, with US\$68 million paid on completion and a further payment of up to US\$17 million contingent upon future performance of PCA Life Japan, subject to regulatory approval. The transaction was completed in February 2015.

2. Regulation of investment and funds businesses and other regulated operations

Prudential conducts investment and fund businesses through subsidiaries or joint ventures in the following countries in Asia through Eastspring Investments: Hong Kong, Japan, Korea, Taiwan, The People's Republic of China, India, Singapore, Malaysia, Dubai, Vietnam and Indonesia. Eastspring Investments also has entities in the US and Luxembourg. All operations are authorised and licensed by the relevant authorities, or exempted from licensing under the relevant regulations, where applicable.

Table of Contents

All of the relevant authorities generally have broad supervisory and disciplinary powers, including, among others, the power to set minimum capital requirements, to temporarily or permanently revoke the authorisation to carry on regulated business, to suspend registered employees/licensed representatives, and to invoke censures and fines for both the regulated business and its registered employees/licensed representatives. Although the detail of regulation varies, common features of the regulatory regimes in each jurisdiction tend to include investment restrictions, advertising codes, disclosure requirements in prospectuses and/or marketing materials, and requirements to seek unit holders' approvals in certain instances, provision of financial statements and other periodic disclosures to regulators, audits by regulators and so on.

Hong Kong

Products and services offered by Prudential in Hong Kong are regulated under separate statutory regimes by different regulatory bodies, including the Hong Kong Securities and Futures Commission (HKSFC), the Hong Kong Monetary Authority and the Mandatory Provident Fund Schemes Authority (MPFA).

The MPFA regulates the compulsory Mandatory Provident Fund (MPF). In addition, the selling of MPF products by agents is regulated by the MPFA. The MPFA is responsible for the licensing and supervision of trustees who wish to administer MPF schemes and MPF intermediaries.

The Securities and Futures Ordinance (SFO) and other subsidiary legislation govern the key regulatory requirements in Hong Kong relating to licensing requirements for persons carrying out regulated activities, including dealing in securities, advising on securities, fund management, market conduct, disclosure of interests, offering document requirements for securities and products including mutual funds and unit trusts, as well as investment-linked assurance products. The HKSFC is the statutory body responsible for the administration of the SFO and the related subsidiary legislations and rules.

Eastspring Investments (Hong Kong) Limited (Eastspring HK), incorporated in Hong Kong, is a wholly owned subsidiary of Prudential Plc. Eastspring HK is licensed with the HKSFC and authorised to deal in and advise on securities and undertake asset management activities in Hong Kong. It also holds a QFII (Qualified Foreign Institutional Investors) license issued by the China Securities Regulatory Commission (CSRC). The company is also registered with the Korea Financial Supervisory Service (KFFS) as an offshore investment advisor for investment advisory business and investment discretionary management business. The funds authorised for offering in Hong Kong by Eastspring HK are also registered in Macau with the Monetary Authority of Macau.

Some of the material developments in Hong Kong in 2014 include:

- Implementation of a resolution regime for financial institutions in accordance with the standards set by the FSB;
- The launch of the Shanghai-Hong Kong Stock Connect which allows eligible investors in Hong Kong and Mainland China, respectively, to invest in listed shares in the other jurisdiction; and
- Issuance of a concept paper by HKEx (operator of the Hong Kong Stock Exchange) to introduce a weight voting rights structure that is disproportionate to shareholdings (ie, a move from the current one-vote-one-share to many-votes-one-share for certain class of shareholders).

BOCI-Prudential Asset Management Limited (BOCIP), incorporated in Hong Kong, is a joint venture between Prudential Corporation Holdings Limited (36 per cent) and BOCI Asset Management Limited (64 per cent). BOCIP is licensed by the HKSFC and is authorised to deal in and advise on securities, advise on corporate finance, advise on futures contracts and undertake asset management activities. It is also registered with the MPFA as an MPF corporate intermediary. It also holds a QFII license issued by the CSRC. The investment funds registered in Hong Kong by BOCIP are also registered in Macau with the Monetary Authority of Macau.

BOCI-Prudential Trustee Limited is a joint venture between Prudential Corporation Holdings Limited (36 per cent) and BOC Group Trustee Company Limited (64 per cent). The company is incorporated in Hong Kong and is an approved trustee under the Mandatory Provident Fund Schemes Ordinance and an associated entity to the BOCIP under the SFO.

Table of Contents***Singapore***

Eastspring Investments (Singapore) Limited (Eastspring Singapore), an indirect wholly-owned subsidiary of Prudential plc, is regulated by the MAS. Eastspring Singapore holds a Capital Markets Services (CMS) license, to conduct the regulated activities of fund management and dealing in securities. Eastspring Singapore is also an exempt financial adviser under the Financial Advisers Act. In addition, Eastspring Singapore is admitted by the CPF as a Fund Management Company (FMC) under the CPF Investment Scheme (CPFIS) and may manage unit trusts included under the CPFIS. It also holds certain registrations in foreign jurisdictions including the US, South Korea, India, Japan, Australia and Canada.

Malaysia

Eastspring Investments Berhad was incorporated in November 2000 in Malaysia and holds a licence for dealing in securities and fund management. Eastspring Al-Wara Investments Berhad was incorporated in June 2009 in Malaysia and holds a licence for fund management.

Both companies are regulated by the Securities Commission Malaysia (SC), a statutory body formed under the Securities Commission Act 1993, which reports to the Minister of Finance.

Eastspring Investments Berhad is also an appointed Fund Management Institution for Unit Trust Fund under the Employees Provident Fund s (EPF) Members Investment Scheme. The EPF is a social security institution formed according to the Laws of Malaysia, Employees Provident Fund Act 1991 (Act 452) which provides retirement benefits for members through management of their savings in an efficient and reliable manner.

Following the Memorandum of Understanding for the ASEAN Collective Investment Schemes (CIS) Framework (Framework) by the SC, the MAS and the Securities and Exchange Commission Thailand in October 2013, the ASEAN Capital Markets Forum had on 25 August 2014 announced that the Framework for cross-border offering of CIS is now operational in Malaysia, Singapore and Thailand. Several guidelines have been revised and the Handbook for CIS Operators of ASEAN CIS was issued by the SC to streamline regulatory processes between Malaysia, Singapore and Thailand. With the implementation of the Framework, Eastspring Investments Berhad s funds may now be marketed in Singapore and Thailand, and qualified CIS operators from Singapore and Thailand may also market its funds directly to investors in Malaysia. The opening of these markets will increase competition for Eastspring Investments Berhad.

China

CITIC-Prudential Fund Management Company Limited, a joint venture between Prudential and CITIC Group (China International Trust and Investment Corporation), was incorporated in Shanghai in September 2005. It is regulated by the China Securities Regulatory Commission (CSRC) and holds the license of mutual funds, DAM products and advisory services. The CSRC supervises the establishment of fund management companies (FMCs) and the launch of securities investment funds. The legislative framework of China s fund industry comprises the China Securities Investment Funds Law (the Fund Law) and a set of ancillary regulations (the Fund Regulations). The Fund Law was revised, and supplemental measures thereto were enacted, on 1 June 2013. This revision to the Fund Law allows individual ownership of fund management companies and lifts personal trading and investment restrictions, granting more discretion to FMCs in their daily operation. While the Fund Law and Fund Regulations articulate the rules and requirements which must be adhered to by all FMCs, the supervisory approach of CSRC, to a certain extent, is also principles- based. The Chinese authorities aim to protect the legitimate rights and interests of investors and other relevant parties, and thereby to promote the healthy development of securities investment funds and securities

markets. The CSRC started a process of deregulation, including, a 2010 measure to lift the control over product approvals, which enables FMCs to launch more fund products.

The most important fund regulation issued by CSRC in 2014 is the Administrative Measures for the Operation of Publicly Offered Securities Investment Funds (Administrative Measures), which came into force on 8 August 2014. The Administrative Measures have revised certain rules applicable to publicly-offered securities investment

Table of Contents

funds. Firstly, Fund of Funds (or FOFs) is recognised as a new type of fund under this regulation. Furthermore, the minimum stock holding of a stock fund is increased from 60 per cent to 80 per cent of its net asset value. Moreover, a fund's leverage ratio may not exceed 140 per cent (however, exemptions may apply to capital guaranteed funds or closed-ended funds).

India

ICICI Prudential Asset Management Company Limited (*AMC*), a joint venture between Prudential plc and ICICI Bank Ltd., is approved by the Securities and Exchange Board of India (*SEBI*) to act as an Investment Manager of ICICI Prudential Mutual Fund (the *Fund*). The Fund was set up as a Trust sponsored by Prudential (through its wholly owned subsidiary Prudential Corporation Holdings Ltd) and ICICI Bank Ltd. ICICI Prudential Trust Limited (the *Trust Company*), is the Trustee to the Fund.

Mutual funds in India are comprehensively regulated by SEBI (Mutual Funds) Regulations, 1996, the Indian Trusts Act, 1882, relevant provisions of Companies Act, 2013, and other applicable laws. All mutual funds are required to be in the form of trusts. The trustee functions are carried out by separately established trust companies or boards of trustees. In all cases, the trust deed must be approved by the SEBI. AMC has obtained registration from the SEBI to act as a Portfolio Manager under SEBI (Portfolio Managers) Regulations 1993. AMC under its portfolio management license has also been appointed as the investment manager by the Trust for managing the scheme launched under the ICICI Prudential Venture Capital Fund.

In 2005, SEBI confirmed it had no objection to AMC undertaking Advisory Services to Offshore Funds. AMC has commenced the provision of Advisory Services. Additionally, the AMC has also received approval from SEBI to act as the investment manager to the funds launched under Securities and Exchange Board of India (Alternative Investments Funds) Regulations, 2012.

ICICI Prudential Venture Capital Fund (*VCF*) also has registration from SEBI under the SEBI (Venture Capital Funds) Regulations, 1996 (the *VCF Regulations*). Our joint venture in India now has three licences as a result of this, in mutual fund, portfolio management and venture capital, and is also permitted to act as the investment manager to funds launched under Securities and Exchange Board of India (Alternative Investment Funds) Regulations, 2012.

Japan

Eastspring Investment Limited is registered with the Kanto Local Finance Bureau under the JFSA to engage in (a) second financial instruments business, (b) investment management business, (c) investment advisory & agency business and (d) ancillary business under the Financial Instruments and Exchange Act (*FIEA*).

The company is also a member of the Investment Trusts Association, Japan and the Japan Investment Advisers Association. Both associations are self-regulatory bodies under FIEA. Eastspring Investment Limited is required to comply with the policies and regulations issued by these associations, which are authorised to conduct on and off-site inspection in addition to the inspection conducted by the Securities and Exchange Surveillance Commission which is an inspection arm of the JFSA.

Under its registration in respect of the second financial instruments business, the company is permitted to explain and solicit products but the actual sales of Eastspring Investments Limited's funds are made to investors through distributors. It does not therefore set up or maintain customer accounts for purposes of investment in Prudential's funds or their settlement, which may only be opened at relevant distributors such as registered financial institutions and type one financial instruments business operators like securities companies. Effective 1 December 2014, new regulations

were enacted to protect investors from excessive risks from derivatives transactions as well as excessive concentration of investment portfolio. The new regulations consist of two parts: (i) Derivative Risk Monitoring Guidelines and (ii) Diversification of Securities Issuers and Derivative Counterparties.

Table of Contents

South Korea

Prudential conducts a fund business in South Korea through an indirect, wholly-owned subsidiary, Eastspring Asset Management Korea Co. Ltd. The bodies responsible for the regulation of asset management companies, investment advisers and discretionary management companies are the FSC and its executive arm, the FSS.

Taiwan

The body responsible for regulation of securities investment trust enterprises (SITE), securities investment consulting enterprises (SICE) and discretionary investment businesses is the Securities and Futures Bureau (SFB) under the FSC. The SFB is responsible for promulgating laws, regulations and policies in relation to these business areas.

Eastspring Securities Investment Trust Co. Ltd is registered as a SITE with the FSC. It is compulsory that all SITEs are members of the Securities Investment Trust and Consulting Association (SITCA), a self-regulatory organisation (SRO). SITCA supports the regulatory and administrative operations entrusted to the SFB by adopting self-regulatory rules and overseeing self-regulation by its members, establishing a membership disciplinary framework and carrying out matters that the SFB has authorised it to handle, such as previewing product filing documents before submission for the SFB 's final review. SITCA also acts as liaison between the SFB and its members for matters of business development.

Dubai

Eastspring Investments Limited (Eastspring Investments Dubai) was incorporated in the Dubai International Financial Centre (DIFC) in September 2006. Eastspring Investments Dubai is an ultimately wholly-owned subsidiary of Prudential Plc. Eastspring Investments Dubai is regulated by the Dubai Financial Services Authority (DFSA), which is the independent regulator for DIFC. Eastspring Investments Dubai holds a license for arranging credit or deals in investments, advising on financial products or credit and has a retail endorsement on its license. The supervisory approach of DFSA, to a large extent, is risk-based.

Vietnam

Eastspring Investments Fund Management Limited Liability Company (Eastspring Investments Vietnam) was established in May 2005 and operates under a business registration for securities investment fund management and securities portfolio management and securities investment advisory services.

Eastspring Investments Vietnam is regulated by the State Securities Commission of Vietnam (SSC), which is overseen by the MoF. In keeping with its mandate to establish and develop the securities markets, the SSC supervises the organisation, and operation of securities investment funds and fund management companies.

Indonesia

PT Eastspring Investments Indonesia (Eastspring Investments Indonesia) is regulated and supervised by OJK (Indonesian Financial Service Authority). The OJK is responsible for establishing and coordinating an integrated regulatory and supervisory system towards the overall activities in the Indonesian financial sector. Eastspring Investments Indonesia has been licensed as an Investment Manager Company since 25 April 2012 and is therefore authorised to manage collective investment portfolios as well as discretionary portfolios. In addition, Eastspring Investments Indonesia may also act as an investment advisor for the sale or purchase of securities by its clients, but may not receive any financial compensation for this service (due to regulatory restriction).

United States

Eastspring Investments Incorporated (Eastspring Investments USA) was incorporated in the State of Delaware in April 2012 and the business was launched in August 2012. Eastspring Investments USA is an indirect wholly owned subsidiary of Prudential plc.

Table of Contents

Eastspring Investments USA is not engaged in providing investment management services directly to investors nor is it engaged in broker-dealer activities. On behalf of its affiliate, Eastspring Singapore, Eastspring Investments USA serves as a marketing office and a solicitor as defined under the provisions of the Investment Advisers Act of 1940, as amended (Investment Advisers Act) and the rules thereunder. While Eastspring Investments USA is not required to be separately registered with the U.S. Securities and Exchange Commission (SEC) in connection with its solicitation activity on behalf of Eastspring Singapore, the Eastspring Investments USA entity is registered as an investment adviser pursuant to the Investment Advisers Act.

Certain US states and local governmental bodies may also require that individuals engaged in solicitation activity be either registered or otherwise qualify for an exemption to solicit investors in that jurisdiction. Based on its solicitation activity on behalf of Eastspring Singapore, Eastspring Investments USA is subject to the solicitation restrictions and filings of those individual states, as applicable.

Luxembourg

Eastspring Investments (Luxembourg) S.A. is fully licensed by the Luxembourg supervisory authority (ie, CSSF) to operate as a management company of undertaking for collective investments in transferable securities (eg UCITS and other type of investment products) since 1 April 2013.

Eastspring Investments (Luxembourg) S.A. meets the organisation and substance requirements of a UCITS management company, insofar as it benefits from a passport and may freely market its activities across Europe. It is authorised to provide asset management services to investment funds, including administration (eg, daily valuation and accounting) and distribution and marketing of such products.

Eastspring Investments (Luxembourg) S.A. was appointed in particular to act as management company of Eastspring Investments, a UCITS open-ended investment company organised under the laws of the Grand Duchy of Luxembourg, regulated by the CSSF and passported for sale in many countries, including European and Asian jurisdictions.

Eastspring Investments (Luxembourg) S.A. has been operating a branch based in the UK since September 2013, concentrating sales and marketing activities across Europe. The UK branch of Eastspring Investments (Luxembourg) S.A. falls under the supervision of both FCA and CSSF.

US Supervision and Regulation

Overview

Prudential conducts its US insurance activities through Jackson, a life insurance company licensed to transact its insurance business in, and which is subject to regulation by and supervision of, the District of Columbia, and 49 of the 50 states. Jackson operates a subsidiary, Jackson National Life Insurance Company of New York, in the state of New York. The extent of any such regulation varies, but most jurisdictions have laws and regulations governing the financial aspects of insurance companies, including standards of solvency, reserves, reinsurance and capital adequacy and the business conduct of insurance companies. In addition, statutes and regulations usually require the licensing of insurers and their agents and the approval of policy forms and related materials. These statutes and regulations in a US insurance company's state of domicile (Michigan, in the case of Jackson) also regulate the investment activities of insurers.

Insurance regulatory authorities in all the jurisdictions in which Jackson does business require it to file detailed quarterly and annual financial statements, and these authorities have the right to examine its operations and accounts. In addition, Jackson is generally subject to US federal and state laws and regulations that affect the conduct of its business as well as similar laws and regulations in Canada and the Cayman Islands. New York and Michigan require their state insurance authorities to conduct an examination of an insurer under their jurisdiction at least once every five years. Jackson has historic small books of business in places such as the Cayman Islands, Puerto Rico, Guam and Argentina and the business is being managed in run off. In addition, Jackson acquired some policies in Canada from its acquisition of Reassure America Life Insurance Company (REALIC) in 2012. Jackson is seeking the transfer of the REALIC licence in Canada.

Table of Contents

Jackson's ability to pay shareholder dividends is limited under Michigan insurance law. The Director of the Michigan Department of Insurance & Financial Services (the Michigan Director of Insurance) may limit, or not permit, the payment of shareholder dividends if the Michigan Director of Insurance determines that an insurer's surplus, with regards to policyholders, is not reasonable in relation to its outstanding liabilities and is not adequate to meet its financial needs as required by Michigan insurance law. Jackson must report any shareholder dividends to the Michigan Director of Insurance before they can be paid. In the case of an extraordinary shareholder dividend or distribution, an insurer may not pay the dividend or distribution until 30 days after the Michigan Director of Insurance has received notice of the declaration and has not disapproved, or has approved, the payment within that period. For this purpose, an extraordinary dividend or distribution means any dividend or distribution of cash or other property where the fair market value, together with that of other dividends or distributions that an insurer made within the preceding twelve months, exceeds the greater of 10 per cent of the insurer's surplus, as regards policyholders as of 31 December of the immediately preceding year, or the net gain from operations of the insurer, not including realised capital gains, for the prior year. In 2012, 2013 and 2014, Jackson paid shareholder dividends to Prudential plc of US\$400.0 million, US\$470.0 million, and US\$680.0 million, respectively.

State regulators also require prior notice or regulatory approval of changes in control of an insurer or its holding company and of certain material transactions with affiliates. Under New York and Michigan insurance laws and regulations, no person, corporation or other entity may acquire control of an insurance company or a controlling interest in any parent company of an insurance company, unless that person, corporation or entity has obtained the prior approval of the regulator. For the purpose of each of New York and Michigan law, any person acquiring, directly or indirectly, 10 per cent or more of the voting securities of an insurance company is presumed to have acquired control of the company. To obtain approval of any change in control, the proposed acquirer must file an application with the New York Superintendent of Financial Services or the Michigan Director of Insurance, as appropriate. This application requires the proposed acquirer to disclose, among other information, its background, financial condition, the financial condition of its affiliates, the source and amount of funds by which it will affect the acquisition, the criteria used in determining the nature and amount of consideration to be paid for the acquisition, proposed changes in the management and operations of the insurance company and other related matters. The Michigan Director of Insurance can grant an exemption from filing an application if an acquisition does not have the effect of changing or influencing control.

Guaranty associations and similar arrangements

Each of the 50 states of the United States, the District of Columbia and the Commonwealth of Puerto Rico have laws requiring insurance companies doing business within their jurisdictions to participate in various types of guaranty associations or other similar arrangements. These associations and arrangements provide certain levels of protection to policyholders from losses under insurance policies issued by insurance companies that become impaired or insolvent. Typically, these associations levy assessments, up to prescribed limits, on member insurers on a basis that is related to the member insurer's proportionate share of the business in the relevant jurisdiction of all member insurers in the lines of business in which the impaired or insolvent insurer is engaged. Some jurisdictions permit member insurers to recover assessments that they paid through full or partial premium tax offsets, usually over a period of years. Prudential estimated its reserve for future guarantee fund assessments for Jackson to be US\$5.4 million at 31 December 2014. Prudential believes this reserve to be adequate for all anticipated payments for known insolvencies.

Asset valuation reserve

State regulators generally require that insurers establish an asset valuation reserve that consists of two components: a default component to provide for future credit-related losses on fixed income investments and an equity component to

provide for losses on all types of equity investments. The asset valuation reserve establishes statutory reserves for fixed maturity securities, equity securities, mortgage loans, real estate, derivative instruments and other invested assets. The reserve is designed to provide for a normalised level of future losses based on the credit rating of each individual investment. The level of reserves is based on both the type of investment and its rating. Contributions to the reserve may result in a reduction in Jackson's unassigned surplus, which, in turn, may reduce funds available for shareholder distributions. The extent of the impact of the asset valuation reserve on Jackson's statutory surplus depends in part on the future composition of the investment portfolio.

Table of Contents***Interest maintenance reserve***

State regulators generally require that insurers establish an interest maintenance reserve to defer non-credit-related realised capital gains and losses, net of taxes, on fixed income investments (primarily bonds, derivative instruments and mortgage loans) which are amortised into net income over the estimated remaining periods to maturity of the investments sold and to defer material gains or losses, net of taxes, resulting from market value adjustments on policies and contracts backed by assets carried at book value. The extent of the impact of the interest maintenance reserve on earnings and surplus depends on the amount of future interest rate-related realised capital gains and losses on fixed maturity investments, derivatives and mortgage loans and deferred gains or losses resulting from market value adjustments on policies and contracts backed by assets that are valued at book value.

The National Association of Insurance Commissioners ratios

On the basis of statutory financial statements that insurers file with state insurance regulators, the National Association of Insurance Commissioners (NAIC), in connection with the Insurance Regulatory Information System, annually calculates 12 financial ratios to assist state regulators in monitoring the financial condition of insurance companies. A usual range of results for each ratio is used as a benchmark and departure from the usual range on four or more of the ratios can lead to inquiries from individual state insurance departments. The usual range of results is established by the NAIC for each ratio from studies of the ratios for companies that have become insolvent or have experienced financial difficulties in recent years. As at 31 December 2014, none of Jackson's ratios fell outside the usual range.

Policy and contract reserve sufficiency analysis

State insurance laws require life insurance companies to conduct annually an analysis of the sufficiency of its life and annuity reserves. A qualified actuary must submit an opinion that states that the reserves, when considered in the light of the assets that an insurance company holds with respect to such reserves, make good and sufficient provision for the associated contractual obligations and related expenses of the insurance company. If a qualified actuary cannot provide such an opinion, then the insurance company must set up additional reserves by moving funds from surplus. The 2014 opinion has been submitted to the Michigan Department of Insurance & Finance Services without any qualifications.

Jackson's capital and surplus

Michigan insurance law requires Jackson, as a domestic life insurance company, to maintain at least US\$7,500,000 in unimpaired capital and surplus. In addition, insurance companies are required to have sufficient capital and surplus to be safe, reliable and entitled to public confidence.

As a licensed insurer in the District of Columbia and every state but New York, where it operates through a subsidiary, Jackson is subject to the supervision of the regulators of each jurisdiction. In connection with the continual licensing of Jackson, regulators have discretionary authority to limit or prohibit the new issuance of business to policyholders when, in their judgment, the regulators determine that such insurer is not maintaining minimum surplus or capital or if the further transaction of business will be hazardous to policyholders.

As a Michigan domiciled insurer, Jackson is subject to a prescribed accounting practice that, under certain circumstances, allows an insurer to include the value of business acquired as an admitted asset in excess of the amount allowed under NAIC guidance. At 31 December 2014, principally as a result of the acquisition of REALIC, Jackson admitted US\$376.6 million of value of business acquired in excess of the amount allowed under NAIC guidance.

Jackson has received approval from the Michigan Department of Insurance & Financial Services regarding the use of a permitted accounting practice. This permitted practice allows Jackson to carry certain interest rate swaps at book value as if statutory hedge accounting were in place instead of at fair value as would have been otherwise required. The permitted practice is effective 31 December 2014 and expires 1 October 2015 unless extended by

Table of Contents

the Michigan Director of Insurance. The effects of this permitted practice may not be considered by the company when determining the surplus available for dividends, nor the nature of dividends as ordinary or extraordinary.

Risk-based capital

The NAIC has developed risk-based capital standards for life insurance companies as well as a model act for state legislatures to enact. The model act requires that life insurance companies report on a risk-based capital formula standard that they calculate by applying factors to various asset, premium and reserve items and separate model based calculations of risk associated primarily with variable annuity products. The risk-based capital formula takes into account the risk characteristics of a company, including asset risk, insurance risk, interest rate risk, market risk and business risk. The NAIC designed the formula as an early warning tool to identify potentially inadequately capitalised companies for purposes of initiating regulatory action.

Any state adopting the model act gives the state insurance commissioner explicit regulatory authority to require various actions by, or take various actions against, insurance companies whose adjusted capital does not meet minimum risk-based capital standards. The Michigan Department of Insurance & Financial Services takes into account the NAICs risk-based capital standards to determine compliance with Michigan insurance law.

At 31 December 2014 Jackson's total adjusted capital under the NAIC's definition substantially exceeded Michigan standards.

Regulation of investments

Jackson is subject to state laws and regulations that require diversification of its investment portfolio, limit the amount of investments in certain investment categories such as below investment grade fixed income securities, common stock, real estate and foreign securities and forbid certain other types of investments altogether. Jackson's failure to comply with these laws and regulations would cause investments exceeding regulatory limitations to be treated by the Michigan Director of Insurance as non-admitted assets for purposes of measuring surplus and, in some instances, the Michigan Director of Insurance could require divestiture of non-qualifying investments.

Implementation of US Foreign Account Tax Compliance Act (FATCA) provisions

Although the insurance business is regulated on a State level, US federal tax legislation and rules, including those relating to the insurance industry or insurance products, can have a significant impact on Prudential's business. Tax legislation and rules, and their interpretation, may change, possibly with retrospective effect, and proposals that would affect such changes are debated periodically by the US Congress.

Legislation incorporating provisions referred to as FATCA was passed in the US on 18 March 2010. The legislation and subsequent final regulations released in January 2013 (with an update in March 2014), requires Foreign Financial Institutions (FFI s) (such as Prudential plc and many of its subsidiaries) to enter into an FFI agreement, which requires the FFI to undertake due diligence procedures to identify and provide information on accounts held by US persons and US-owned foreign entities, or otherwise face a 30 per cent withholding tax on certain payments made to the FFI. The start date for implementation of the FATCA regime, including withholding on certain US source payments and the implementation of certain account diligence procedures, was 1 July 2014. In addition, FFIs that have entered into an FFI agreement may be required under future FATCA guidance to withhold on certain payments made to FFIs that have not entered into an FFI Agreement, to account holders who fail to provide sufficient information to classify an account as a US or non-US account, and to US account holders who do not agree to the FFI reporting certain account related information to the US Internal Revenue Service (IRS).

Since 2012, the US Treasury has been negotiating intergovernmental agreements (IGAs) with several countries which result in those countries embedding the FATCA provisions into their domestic law. This development has the added benefit of significantly reducing or removing any withholding obligations on payments by US companies or FFIs to other companies or customers in these IGA countries. On 12 September 2012, the United Kingdom and the United States entered into an IGA which was implemented into UK law as part of the Finance Act 2013, with

Table of Contents

related regulations and guidance published in August 2013. The regulations have since been reissued in June 2014. Prudential plc will be subject to the information collection and sharing required under this IGA, although non-UK branches of Prudential plc and non-UK subsidiaries of Prudential plc that are FFIs will not be subject to the UK-US IGA. These non-UK branches and subsidiaries are instead required to either comply with an IGA in their home jurisdiction, or comply with the FATCA provisions and final regulations. To date, the US has agreed IGAs with all but five Prudential subsidiary jurisdictions.

FATCA affects many of Prudential's non-US businesses and the review and enhancement of existing practices to ensure FATCA compliance has been implemented across the Group. A Group-wide project was set up by Prudential to manage the implementation of the new practices. Prudential's businesses established formal project structures to deliver the requirements within the timeframes and, now that FATCA has been implemented, FATCA has become a part of standard operating practices.

USA Patriot Act

The USA Patriot Act, enacted in 2001, includes numerous provisions designed to fight international money laundering and to block terrorist access to the US financial system. The US Treasury Department has issued a number of regulations implementing the Patriot Act that apply certain of its requirements to financial institutions including broker dealers and insurance companies. Among other things, the regulations impose obligations on financial institutions to maintain appropriate policies, procedures and controls to detect, prevent and report money laundering and terrorist financing. Jackson and, to the extent applicable, certain of its affiliates, have established policies and procedures to ensure compliance with the Patriot Act's provisions and the Treasury Department regulations.

Securities laws

Jackson, certain of its affiliates and certain policies and contracts that Jackson issues are subject to regulation under the federal securities laws administered by the SEC. The primary intent of these laws and regulations is to protect investors in the securities markets and generally grant supervisory agencies broad administrative powers, including the power to limit or restrict the conduct of business for failure to comply with such laws and regulations and (in the case of broker dealers) to impose capital and related requirements. Jackson may also be subject to similar laws and regulations in the states in which it provides investment advisory services, offers the products described above or conducts other securities-related activities.

Jackson National Asset Management, LLC (JNAM) is registered with the SEC as an investment adviser pursuant to the Investment Advisers Act. JNAM is registered as a transfer agent pursuant to the Securities Exchange Act of 1934, as amended (the Securities Exchange Act). The investment companies (mutual funds) for which JNAM serves as an investment adviser are subject to SEC registration and regulation pursuant to the Securities Act of 1933, as amended (the Securities Act), and the Investment Company Act of 1940, as amended (the Investment Company Act). Certain of the mutual funds advised by JNAM underlie variable products offered by Jackson. In addition, each variable annuity and variable life product sponsored by Jackson is subject to SEC registration and regulation pursuant to the Securities Act and the Investment Company Act, and applicable state insurance and securities laws. Each variable annuity and variable life product is funded under a separate account that is registered with the SEC as a unit investment trust.

Effective 31 December 2012, the U.S. Commodity Futures Trading Commission (CFTC) eliminated an exclusion previously available to the mutual funds advised by JNAM from the definition of a commodity pool under the Commodity Exchange Act (CEA). Consequently, certain of the mutual funds became commodity pools and became subject to the requirements of the CEA and the rules of the CFTC promulgated thereunder. JNAM is registered as a commodity pool operator with the National Futures Association (NFA) pursuant to CFTC regulations and is acting as

a commodity pool operator with respect to the operation of certain of the mutual funds. JNAM and the mutual funds have incurred additional regulatory compliance and reporting expenses as a result. The effects of these regulatory changes could reduce investment returns or harm the mutual fund's ability to implement its investment strategy.

Table of Contents

Curian Capital, LLC (Curian Capital) is registered with the SEC pursuant to the Investment Advisers Act and is also registered or has filed notice in all applicable states. Curian Capital serves as an investment adviser to certain investment companies. The investment companies (mutual funds) for which Curian Capital serves as an investment adviser are subject to SEC registration and regulation pursuant to the Securities Act and Investment Company Act. Certain of the mutual funds advised by Curian Capital underlie variable products offered by Jackson. In addition, each variable annuity and variable life product sponsored by Jackson is subject to SEC registration and regulation pursuant to the Securities Act and the Investment Company Act, and applicable state insurance and securities laws. Each variable annuity and variable life product is funded under a separate account that is registered with the SEC as a unit investment trust.

Curian Capital is registered with the NFA as a commodity pool operator pursuant to CFTC regulations and is acting as a commodity pool operator with respect to the operation of certain of the mutual funds. The requirements have resulted in Curian Capital and the mutual funds incurring additional regulatory compliance and reporting expenses. The effects of these regulatory changes could reduce investment returns or harm the mutual fund's ability to implement its investment strategy.

Curian Clearing, LLC is registered as a broker-dealer with the SEC pursuant to the Securities Exchange Act, and is registered as a broker-dealer in all applicable states. In addition, Curian Clearing, LLC is a member firm of the Financial Industry Regulatory Authority (the FINRA), subject to its oversight and regulatory requirements.

Jackson National Life Distributors LLC is registered as a broker-dealer with the SEC pursuant to the Securities Exchange Act, and is registered as a broker-dealer in all applicable states. In addition, Jackson National Life Distributors LLC is a member firm of the FINRA, subject to its oversight and regulatory requirements.

National Planning Holdings, Inc. (NPH) owns four retail broker dealers, being IFC Holdings, Inc. (doing business as INVEST Financial Corporation), (IFC), Investment Centers of America, Inc (ICA), National Planning Corporation (NPC) and SII Investments, Inc. (SII). These entities conduct business as securities broker-dealers, investment advisers, and insurance agencies (or affiliated with insurance agencies), and are licensed and qualified to transact business pursuant to their respective registration or licensure with the SEC, state securities and insurance authorities, and membership with FINRA and the Municipal Securities Rulemaking Board. NPC, SII, and ICA are also registered with the CFTC, and are members of the NFA for purposes of commodities and futures trading.

Prudential also conducts certain of its US institutional investment management activities through PPM America, Inc., which is registered with the SEC as an investment adviser under the Investment Advisers Act. PPM America serves as the investment adviser to Jackson and as the primary institutional investment adviser for certain Prudential subsidiaries, including The Prudential Assurance Company Limited. PPM America also acts as sub-adviser to certain US and foreign advisers affiliated with Prudential with respect to certain US portfolios of accounts or products sponsored or managed by such affiliates, including US mutual funds, UK-based pooled investment vehicles, a Luxembourg-based SICAV, Japanese investment trusts, and other similar vehicles. PPM America also serves as an investment adviser to other affiliated and unaffiliated institutional clients such as a CLO, a CDO or similar structured vehicles and private investment funds (in which PPM America affiliates such as Prudential UK entities and Jackson are generally investors), and a limited number of other unaffiliated accounts. The US mutual funds for which PPM America serves as sub-adviser are subject to regulation under the Securities Act and the Investment Company Act, and other similar vehicles organised outside of the US may also be subject to regulation under applicable local law.

PPM America and certain of its subsidiaries are subject to various levels of regulation under the federal securities laws that the SEC administers as well as state securities laws. In connection with providing investment advisory services to certain of its clients, PPM America may also be subject to regulation under applicable foreign laws.

To the extent that Curian, PPM America or the NPH broker-dealers manage accounts with assets of employee benefit plans subject to the Employee Retirement Income Security Act of 1974 (ERISA), or the Internal Revenue Code, they may be subject to certain restrictions imposed by ERISA or the Internal Revenue Code. Such restrictions are summarised in Employee Benefit Plan Compliance in the Section below. The US Department of Labor (DOL) and the IRS have interpretive and enforcement authority over the applicable provisions of ERISA and the Internal Revenue Code.

Table of Contents***Disclosure obligations under the US Securities Exchange Act and in particular under Section 219 of the Iran Threat Reduction and Syria Human Rights Act of 2012***

Under Section 219 of the Iran Threat Reduction and Syria Human Rights Act of 2012, which added Section 13(r) of the Securities Exchange Act of 1934, we are required to disclose certain of our activities and those of our affiliates related to Iran and to persons sanctioned by the US under programs relating to terrorism and proliferation of weapons of mass destruction that occurred in the twelve-month period covered by this report.

Two of our non-US affiliates have engaged in transactions with persons sanctioned by the US under Executive Order 13224, relating to terrorism. These transactions were entered into in compliance with laws and regulations applicable to the relevant affiliates. The first individual took out a one-off takaful certificate (a Shariah compliant life policy) with our Malaysian insurance subsidiary in October 2011. It was discovered in March 2012 through automated checking that his name matched various sanctions lists. The policy was for RM600 per month and RM 7,200 was paid for the year in 2014 (equivalent to around US\$169 and US\$2,029, respectively). The matter was reported to the Malaysian governmental sanctions authority, the Bank Negara Malaysia Financial Intelligence Unit, in March 2012. Currently, the said policy has been frozen with no top-up, withdrawal or claims permitted, although regular premium payment is still allowed. The policy is in force, with no claims submitted or any payment made to date.

The second individual is a beneficiary to three life insurance policies in his wife's name, the first taken out in December 2010 and two others taken out in November 2011 with our Indonesian insurance subsidiary. The first policy has a monthly premium of Rp 500,000 (around US\$40) with premiums paid of Rp 6,000,000 paid for the year in 2014 (approximately US\$475). Premiums for the second and third policies were initially for Rp 500,000 per month each with Rp 6,000,000 paid into each policy in 2012. Starting from February 2013, premiums for each policy were changed to Rp 1,000,000 per month (approximately US\$79), equalling Rp 12,000,000 paid into each policy in 2014 (approximately US\$949). The person was identified as a sanctioned individual in July 2012, and the matter was notified to the Indonesian governmental sanctions authority, the PPATK, in August 2012. All three policies remain in force, but payments out will only be made in accordance with applicable law.

As the provisioning of insurance liabilities is undertaken on a portfolio basis, it is not practical to estimate the 2014 net profits on the contracts referred to above. We do not intend to engage in further new business dealings with these individuals.

In the UK, the Prudential Assurance Company Ltd operates a pension scheme for employees of the UK branch of a government-owned Iranian bank. A total of 64 scheme members are receiving benefits, with 39 deferred members. All members are inactive in that no member contributions are being made. The scheme is closed to new members. Due to the long term nature of a pension scheme it is not practical to advise the net profit, but the fund value at 31 December 2014 stood at £7,010,734.00. In return for administering the scheme there are standard Prudential scheme charges: an annual fee of £723, plus £11 per member, £59 per quote and a Trustee Accounts charge (£1,878.55). The annual invoice paid on 2 October 2014 was for £4,283.55 (£2,405 scheme fee and £1,878.55 Trustee Accounts). In addition to this an Annual Management Charge of 1.25 per cent is reflected in the fund value. The UK governmental sanctions authority, HM Treasury, has been informed of this arrangement and in 2008 advised us that following an analysis of the deeds, the fund is not owned, held or controlled by the Iranian bank. Payments out of the fund have been approved by HM Treasury through a license. There are no plans to discontinue with this contract in light of this license.

Employee benefit plan compliance

Jackson issues certain types of general account stable value products, such as GICs and funding agreements, to employee benefit plans and to investment vehicles that pool the investments of such plans. Many of these plans are

retirement plans that are subject to the fiduciary standards of ERISA and that are tax-qualified under the Internal Revenue Code. As such, Jackson may be subject to certain restrictions imposed by ERISA and taxes imposed by the Internal Revenue Code. These restrictions include:

the requirement under ERISA that fiduciaries must perform their duties solely in the interests of ERISA plan participants and beneficiaries,

Table of Contents

the requirements under ERISA that fiduciaries may not engage in conflict of interest transactions, and

the requirements under ERISA that a fiduciary may not cause a covered plan to engage in certain prohibited transactions with certain persons who provide services to the plan or are affiliated with the plan sponsor or a plan service provider.

In general, the Internal Revenue Code imposes taxes on persons involved in certain of the transactions described above.

The DOL and the IRS have interpretive and enforcement authority over the applicable provisions of ERISA and the Internal Revenue Code.

In the instance where an insurer issues a guaranteed benefit policy to a plan, ERISA provides that the insurer need not become a fiduciary with respect to the plan solely as a result of the issuance of the policy. Under Section 401 of ERISA, a guaranteed benefit policy means an insurance policy to the extent such policy provides for benefits the amount of which the insurer guarantees.

In 1993, in *John Hancock Mutual Life Insurance Company v. Harris Trust & Savings Bank*, the US Supreme Court held that a portion of the funds held under a certain type of general account annuity contract did not constitute a guaranteed benefit policy within the meaning of ERISA, a holding which potentially exposes insurers with similar types of contracts to the application of ERISA's fiduciary and prohibited transaction provisions in connection with the management of assets in their general accounts.

Although no assurances can be given, Jackson believes that none of its contracts are of the type to which the holding in *Harris Trust* would be applicable. Moreover, the Department of Labor has issued PTE 95-60, which generally exempts external, unaffiliated investment transactions from ERISA's prohibited transaction provisions. If the *Harris Trust* holding is applied to its contracts, Jackson would be subject to ERISA's fiduciary and prohibited transaction provisions described above.

Products offered by Jackson may be owned in accounts subject to regulation by the DOL or the IRS when held in employee benefit plans governed by the ERISA, or in individual retirement accounts (IRAs). Rules governing dealing with ERISA or IRA accounts may impact sales of products by Jackson, and the DOL continues to consider the process of re-proposing a rule that would change the circumstances under which one who works with IRAs would be considered a fiduciary. Severe penalties may be imposed for breach of duties under ERISA and rules governing IRAs and Jackson cannot at this time predict the impact that the DOL's re-proposed rule may have on its operations.

Financial services regulatory and legislative issues

In the US, the Dodd-Frank Act, which represents a comprehensive overhaul of the financial services industry within the US, was enacted in July 2010. The full impact of the Dodd-Frank Act on Prudential's businesses is not currently clear, however, as many of its provisions have a delayed effectiveness and/or require rulemaking or other actions by various US regulators over the coming years.

The Dodd-Frank Act vests the Financial Stability Oversight Council (the Council) with the power to designate domestic systemically important nonbank institutions which will be subject to special regulatory supervision and other provisions intended to prevent or mitigate the impact of future disruptions in the US financial system. If Jackson is designated in the US as a systemically important nonbank institution, it may be subject to heightened prudential standards to be administered by the US Federal Reserve Board, including heightened capital, leverage and liquidity

standards, risk management requirements, single counterparty credit concentration limits, resolution plans and stress tests, and potential discretionary requirements relating to contingent capital, enhanced public disclosure and short term debt limits. As discussed under the Global Regulatory Developments and trends section, Prudential Group was designated as a G-SII in July 2013, but that is separate from the Dodd-Frank designation.

Table of Contents

Dodd-Frank Rules and guidance outlining the manner in which the Council will determine which companies should be so designated in the US were adopted in April 2012. The rules set forth a three-stage process of increasingly in-depth evaluation and analysis, drawing on both qualitative and quantitative information (but preserving significant Council discretion). The rules do not, however, permit a definitive view as to whether Jackson would or would not be designated as systemically important in the US context.

Changes to US law in the Dodd-Frank Act include the creation of a new Federal Insurance Office (FIO) within the Treasury Department that will, amongst other things, monitor (but not regulate) the insurance industry, and discretionary authority for the SEC to impose a harmonised standard of care for investment advisers and broker dealers which provide personalised advice about securities to retail customers.

In addition, Title VII of the Dodd-Frank Act creates a new regulatory regime for certain derivatives called swaps and security-based swaps. Prudential and Jackson have determined that they are not required to register as swap dealers, security-based swap dealers, major swap participants, or major security-based swap participants under Title VII of the Dodd-Frank Act. However, CFTC regulations requiring that swaps be reported to trade repositories and, in some cases, cleared through registered central counterparties and traded on registered exchanges , may apply to certain derivatives entered into by Jackson and, in some circumstances, may apply to Prudential. Similar rules for security-based swaps, as well as requirements to post margin for uncleared derivatives, have been proposed but not yet implemented.

Under Title VII of the Dodd-Frank Act, certain derivatives instruments, including standardised interest rate swaps and index credit default swaps, are required to be cleared and traded on an exchange. While the transition to exchange-traded derivative instruments may limit counterparty risk, it could increase costs associated with such investments, including transaction and exchange fees. The standardisation of exchange-traded derivative instruments may also limit the ability of Jackson and the mutual funds to customise certain derivative instruments with their counterparties. Exchange-traded derivative instruments may also require Jackson and the mutual funds to post additional collateral or limit the types of collateral that may be used for such transactions, and this may limit the ability of Jackson and the mutual funds that its subsidiaries advise to effectively deploy assets in a timely manner.

The timing and the ultimate impact on the management and operations of Prudential and the regulations promulgated, or to be promulgated, pursuant to these statutory provisions, cannot yet be definitively determined.

Proposals to change the laws and regulations governing the financial services industry are frequently introduced in the US Congress, in the state legislatures and before the various regulatory agencies. The likelihood and timing of any proposals or legislation, and the impact they might have on Jackson, its subsidiaries, or other Prudential subsidiaries doing business in the US, cannot be determined at this time.

State legislatures and/or state insurance regulatory authorities frequently enact laws and/or regulations that significantly affect insurers supervised by such authorities. Although the US federal government does not directly regulate the insurance business, federal initiatives may also have an impact on the insurance industry. On 12 December 2013, a report published by the United States Treasury s FIO entitled *How to Modernise and Improve the System of Insurance Regulation in the United States*, outlined a series of recommendations for modernising insurance prudential and conduct regulation in the U.S. This included identifying areas for greater federal legislation (eg mortgage insurance), enhanced consistency on Risk Based Capital (RBC) requirements and more emphasis on group supervision. Prudential cannot predict whether any federal (or state) legislative initiative to change the nature or scope of the regulation of the insurance industry will be enacted into law.

Federal and state regulators have focused on the mutual fund and variable annuity and insurance product industries including the broker-dealer system. As a result of publicity relating to widespread perceptions of industry abuses, including fraudulent and anti-competitive practices among insurance brokers and mutual funds, there have been numerous regulatory inquiries and proposals for legislative and regulatory actions that could affect the operations and management of market participants. It is difficult to predict at this time whether changes resulting from industry investigations and/or new laws and regulations will affect the Group's insurance or investment management businesses, and, if so, to what degree.

Table of Contents

Additional Jurisdictions

The Group has recently invested in businesses located in various new markets.

A new sales operation was launched in Poland during 2013 under the auspices of Prudential UK with an agency network rolled out in the country during 2014. The business is currently offering two simple life and protection products.

The Myanmar business unit is not yet fully operational as a business, although Prudential has been awarded a licence to establish a representative office in Yangon, Myanmar in late 2013.

In December 2013, Prudential announced the purchase of Ghana's Express Life Co, marking the entry of the firm into the African life insurance market. The purchase was completed in April 2014. A further move was made in September 2014 with the purchase of Kenya's Shield Assurance Company Limited.

These developments and such incremental regulation remain immaterial at present in terms of the overall business of the Group.

Item 5. Operating and Financial Review and Prospects

The following discussion and analysis should be read in conjunction with Prudential's consolidated financial statements and the related notes to Prudential's consolidated financial statements included in this document.

A summary of the critical accounting policies which have been applied to these statements is set forth in the section below entitled IFRS Critical Accounting Policies .

The results discussed below are not necessarily indicative of the results to be expected in any future periods. This discussion contains forward-looking statements based on current expectations, which involve risks and uncertainties. Actual results and the timing of certain events may differ significantly from those projected in these forward-looking statements due to a number of factors, including those set forth in the section below entitled Principal Factors Affecting Results of Operations and in Item 3, Key Information Risk Factors and elsewhere in this document.

Introduction and Overview

Prudential plc is an international financial services group serving around 24 million insurance customers and with £496 billion of assets under management. We are listed on stock exchanges in London, Hong Kong, Singapore and New York.

Prudential is a leading international life insurer in Asia, with operations in 14 markets and serving the emerging middle class families of the region's powerhouse economies. We have built a high performing platform with effective multichannel distribution, a product portfolio centred on regular savings and protection, award winning customer services and a well-respected brand.

Table of Contents

Jackson is one of the largest life insurance companies in the US, providing retirement savings and income solutions aimed at the 77 million baby-boomers. Founded 50 years ago, Jackson has a long and successful record of providing advisors with the products, tools and support to design effective retirement solutions for their clients.

Prudential UK is a long established leading provider of life and pensions, with a relentless focus on the needs of the age cohorts where wealth is most heavily concentrated. Our core strengths in with-profits and retirement are underpinned by our expertise in areas such as longevity, risk management and multi-asset investment, together with our financial strength and highly respected brand.

M&G has been investing money for individual and institutional clients for over 80 years. M&G has grown to be one of Europe's largest retail and institutional fund managers by developing its enduring expertise in active investment. M&G has a conviction-led and long-term approach to investment, developing a deep understanding of the companies and organisations in whose equities, bonds or property M&G invests.

Summary of Performance

Prudential delivered a strong, broad-based performance in 2014.

Our core strategy of focusing on the three main opportunities available to us in Asia, the US and the UK – serving the protection and investment needs of the growing middle class in Asia, providing income in retirement to American baby boomers and meeting the financial needs of an ageing British population – is unchanged. It continues to serve us well. The execution of this strategy, driven by the operating principles set out in 2009, is central to the Group's continued success and reflects the dedication and quality of our people and their focus on meeting the distinct needs of our customers across the business. This has been one of the key factors enabling Prudential to outperform in the markets in which it competes, delivering value for our customers and sustainable returns for our shareholders.

Currency volatility

For the purpose of reporting our performance in sterling terms, we adopt the normal convention of translating the results of our overseas businesses using average exchange rates for the period. However, the currency translation effect is so pronounced for some parts of the business that for comparing the results from 2013 to 2014, it masks the underlying operational trends, rendering it difficult to meaningfully assess performance. In that context, it is important to note that the actual flows that we collect from our customers in Asia and the US are received in local currency. We believe that in periods of currency volatility, the most appropriate way to assess the actual performance of these businesses is to look at what they have achieved on a local currency basis, in other words in terms of the actual flows they have collected, rather than the translation of those flows into sterling.

The last two years have seen significant fluctuations in the value of sterling against the local currencies in the US and in some of our key markets in Asia. This has been driven by ongoing speculation about the relative growth trajectories in the world's major economies, together with often divergent views on the timing, extent and effectiveness of government and central bank intervention. While sterling strengthened significantly in the second half of 2013, driven by expectations that a stronger recovery of the UK economy would lead to an earlier shift in UK monetary policy, the latter part of 2014 has seen a partial reversal of this movement as the relative outlook improved in other areas of the global economy, particularly in the US. However, the negative impact of sterling strength in late 2013 and early 2014 on the financial performance of our overseas businesses is recognised mainly in 2014, as we use average actual exchange rates to report our results in sterling.

The table below presents a summary of the Group's profit before tax on an IFRS basis. For memorandum disclosure purposes, the table presents the full year 2013 results on both an actual exchange rate and constant exchange rate basis so as to eliminate the impact of exchange translation. Actual Exchange Rates (AER) are actual historical exchange rates for the specific accounting period, being the average rates over the period for the income statement and the closing rates for the balance sheet at the balance sheet date. Constant Exchange Rates

Table of Contents

(CER) results are calculated by translating prior period results using the current period foreign exchange rate ie current period average rates for the income statement and current period closing rates for the balance sheet.

In the remainder of this Introduction and Overview, every time we comment on the performance of our businesses, (except with respect to cash remittances), we focus on their performance measured in local currency (presented here by reference to percentage growth expressed at constant exchange rates) unless otherwise stated.

Group performance

The Group delivered double-digit growth across our key metrics of IFRS operating profit, new business profit and cash with all four of our business units delivering good performance in challenging operating conditions.

Table of Contents

Our Group IFRS operating profit based on longer-term investment returns increased by 14 per cent during the year to £3,186 million.

Asia life and asset management operating profit was up 17 per cent to £1,140 million. Our ability to proactively manage our diverse portfolio of businesses at the regional level has enabled us to partially offset the short-term headwinds experienced in a few of our key Asian markets. Strong external net inflows of £5.4 billion and positive market movements have driven operating profit and total funds under management to record levels at Eastspring, our Asia-based asset management business.

US life IFRS operating profit increased 21 per cent to £1,431 million. The strong variable annuity inflows we have been able to capture at attractive margins generate higher levels of fee income. This combined with favourable market movements increased the value of separate account assets, a key driver of our profits in the US.

UK life IFRS operating profit grew by 7 per cent to £752 million, benefiting from higher contributions from bulk annuities, which outweighed the impact of significantly lower sales of individual annuities following UK market reforms.

M&G delivered operating profit of £488 million (including Prudential Capital), an increase of 11 per cent, reflecting continued strong third-party net inflows combined with favourable market movements in the period, which together have increased M&G's external funds under management by £11.0 billion to a record £137.0 billion.

Net cash remittances from our businesses increased by 11 per cent to £1,482 million in 2014 as compared to 2013, driven by strong organic cash generation and supported by robust local capital positions. Cash remittances of £400 million from Asia were consistent with 2013, the US was up 41 per cent to a record of £415 million, the UK remitted cash of £325 million, as we have been increasing our level of investment in the business in response to the UK market reforms, while M&G (including Prudential Capital) delivered an increase of 17 per cent to a new high of £342 million. Such levels of cash generation are the bedrock of our financial strength. We deliberately run the Group to seek to generate organically significant amounts of cash in each of our businesses. The successful implementation of this approach gives us added strategic and financial flexibility, as illustrated by our ability to agree a new deal with Standard Chartered Bank in 2014. The ability of the Group to generate both growth and cash remains a distinctive feature of Prudential in our industry.

Our balance sheet continues to be defensively positioned and at the end of the period our IGD surplus⁽¹⁵⁾ was estimated at £4.7 billion, equating to coverage of 2.4 times.

2017 Objectives

The objectives discussed below assume exchange rates at December 2013 and economic assumptions made by Prudential in calculating the EEV basis supplementary information for the half year ended 30 June 2013, and are based on regulatory and solvency regimes applicable across the Group at the time the objectives were set. The objectives assume that the existing EEV, IFRS and free surplus methodology at December 2013 will be applicable over the period.

(15) Before allowing for final dividend

115

Table of Contents

We announced new objectives for 2017 at our investor conference in December 2013 in London. These objectives are:

- (i) Asia Underlying Free Surplus Generation^{(16),(17)} of £0.9 billion to £1.1 billion in 2017 (2012: £484 million on an actual exchange rate basis)
- (ii) Asia life and asset management pre-tax IFRS operating profit to grow at a compound annual rate of at least 15 per cent over the period 2012 – 2017 to reach at least £1,858 million in 2017 (2012: £924 million⁽¹⁸⁾ on an actual exchange rate basis)
- (iii) Group Underlying Free Surplus Generation⁽¹⁷⁾ of at least £10 billion cumulatively over the four-year period from 2014 to end- 2017.

We are continuing to make solid progress towards our 2017 objectives announced in December 2013 as for the Asia objectives, we have now passed four half-year reporting periods out of the ten half-year reporting periods of this programme.

Our operating performance by business unit

Asia

Asia delivered excellent results across all metrics during 2014. IFRS operating profit of £1,140 million was up 17 per cent over 2013 (6 per cent on actual exchange rate basis) and net cash remittances were £400 million, in line with 2013.

Our consistent delivery in Asia is underpinned by our focus on regular premium, protection-orientated solutions that genuinely address the long term financial needs of Asia's growing middle classes in the sweet spot markets⁽¹⁹⁾ of South-East Asia and Hong Kong. Our strategy is to be strongly diversified in terms of geography, products and distribution in a world economy that is increasingly hard to predict. That diversification is at the heart of our ability to continue to perform well across a broad range of metrics as the breadth of our portfolio provides considerable resilience against the impacts of short-term market disturbances in individual countries, such as the elections and natural disasters experienced during 2014.

Our multi-channel distribution platform continues to play a key role in our strategy:

- (i) In the agency channel we continued to add to the existing scale of our platform during 2014 through recruitment. In parallel we also improved individual productivity, thanks to our investments in agency management technology and analytics.
- (ii) Regarding our bank partnerships, we announced in the first quarter that we extended and expanded our long-established and market-leading partnership with Standard Chartered Bank for another 15 years to 2029, effective since July 2014. Encouragingly second-half sales via Standard Chartered Bank grew strongly compared to the same period in 2013, including a record month in December. The distribution channel mix remained in line with 2013 with agency generating most sales, bancassurance a significant minority and mainly direct and telemarketing making up the remainder.

In our product portfolio, the proportion of protection business has remained consistent with prior years. Within the savings products, we have seen an increase in participating business, driven mainly by strong demand for our

established with-profits products in Hong Kong. We continue to innovate with new benefits and features, with more than a quarter of sales in 2014 from products that were launched in the past two years.

(16) Underlying free surplus generated comprises underlying free surplus generated from long-term business (net of investment in new business) and that generated from asset management operations. The 2012 comparative is based on the retrospective application of new and amended accounting standards and excludes the one-off gain of £51 million from the sale of the Group's holding in China Life Insurance Company of Taiwan.

(17) Underlying free surplus generation is defined in the section **EEV Basis, New Business Results and Free Surplus Generation**.

(18) Asia 2012 IFRS operating profit of £924 million is based on the retrospective application of new and amended accounting standards, and excludes the one-off gain of £51 million from the sale of the Group's holding in China Life Insurance Company of Taiwan.

(19) Sweet spot markets are Indonesia, Singapore, Hong Kong, Malaysia, Philippines, Vietnam and Thailand.

Table of Contents

While product innovations are important we are increasingly finding that customer service is a key differentiator in the marketplace, an evolution we welcome given the emphasis we have always placed on service and customer satisfaction. For example our pioneering PRUhospital Friend concierge service in Indonesia is now four years old and has been extended to 49 hospitals covering 15 cities. It handles over 50 per cent of all protection claims. In Singapore, PRUhealthcare assist is the first-to-market dedicated hotline, staffed by experts who help customers to decide what treatments to pursue and which hospitals to use. Across the region, our success in looking after our customers and anticipating their needs is demonstrated by our repeat sales to our existing customers: A large proportion of sales were generated by existing customers and our customer retention rate was over 90 per cent, a very important indicator of quality for us. The incentives of our staff in Asia are well aligned with this philosophy of emphasising quality growth and customer satisfaction.

In Hong Kong, sales grew strongly, driven mainly by increases in agency headcount as well as increases in productivity. Hong Kong also directly benefited from significantly improved second-half sales following the renewal of the Standard Chartered Bank partnership. We have been working for a few years on increasing the proportion of protection sales in Hong Kong and this has paid off in 2014 with a strong contribution to profit. The Hong Kong branch of the Prudential Assurance Company was successfully domesticated with effect from 1 January 2014.

In Singapore, we continue to lead the market with our popular regular premium and PRUshield products. Agency sales grew as a result of increases in manpower and productivity. Bancassurance sales volumes were impacted by the cessation of the Maybank partnership during 2014, although volumes increased from our successful partnerships with Standard Chartered Bank and United Overseas Bank.

Indonesia had a challenging year, with exceptional flooding disrupting sales in the first quarter, and the transition to a new president impacting sentiment during the year. Although sales were down slightly on prior year, the resilience of our business is demonstrated by our significant market outperformance, which has seen our market share increase as other providers were more severely affected by these factors than we were. We remain very optimistic about the outlook for the Indonesian economy and we experienced an encouraging rebound in activity during December 2014, with sales substantially higher than November, reaching record levels.

In Malaysia, our decision to refocus our agency business on health and protection and to grow distribution by Bumiputra agents (Bumi), delivered an encouraging increase in agency activity. The increase in sales during 2014 reflects structurally lower average case sizes in the Bumi channel, where we are determined to grow in the next phase of development of our strategy in the country. We deliberately de-emphasised sales of some top-up products that negatively impacted top line growth. Finally, fuel reforms and the prospect of the introduction of a new Goods and Services tax generated market uncertainty, which weighed on the economy and on our sector.

Thailand includes the first full year of operation of our exclusive bancassurance agreement with Thanachart Bank, which together with our other bancassurance partners, UOB and Standard Chartered Bank has driven a large increase in sales. The transformation of our business in the Philippines is continuing, with a significant increase in agency activity. Vietnam also had a good year, experiencing growing sales with higher levels of agency activity.

Our joint venture with CITIC in China continues to perform well with growing sales reflecting progress in both the agency and bank channels. In India our joint venture with ICICI Bank remains the leader in the private sector and post elections in May we have seen a significant increase in new business.

In Taiwan and Korea we remain selective in our participation and as a result we are content to experience fluctuations in new business volumes. Both businesses have generated higher IFRS operating profit in 2014.

In addition to running these established businesses, we continue to keep an eye on the future and are setting foundations for growth in new markets. Following the successful launch of our life business in Cambodia in 2013, we are now the market leader. We also opened a representative office in Myanmar during 2014 and recently received a licence for a representative office in Laos.

US

Our US business delivered a strong performance in 2014, with total IFRS operating profit of £1,443 million, up 17 per cent (11 per cent on an actual exchange rate basis). Jackson's life IFRS operating profit grew 21 per cent

Table of Contents

(15 per cent on an actual exchange rate basis) to £1,431 million, driven primarily by increased fee income from higher levels of separate account assets. The growth in operating profit underpinned significant levels of capital generation in the period, enabling Jackson to remit a record £415 million of cash to the Group (2013: £294 million), while maintaining a healthy balance sheet. Jackson's Risk-Based Capital ratio at the end of 2014 was 456 per cent, compared to 450 per cent at the end of 2013.

Total variable annuity sales increased in 2014, including an increase in sales of Elite Access over prior year. The economics of our variable annuity business continue to be very attractive. With the success of Elite Access, we continue to improve the diversification of our product mix, contributing to an increase in the share of non-living benefit variable annuity sales to a new high for 2014.

Jackson remains focused on proactively managing sales volumes of variable annuities with living benefits to match our annual risk appetite. Jackson's statutory separate account assets increased by 17 per cent, from £69.8 billion in 2013 to £81.7 billion in 2014 (up 24 per cent on an actual exchange rate basis), reflecting both positive net flows and the growth in the underlying market value of the separate account assets.

Fixed annuity sales remained relatively flat compared to 2013, while fixed index annuity sales decreased sharply, primarily as a result of product changes implemented in late 2013 to ensure appropriate returns on shareholder capital.

IFRS operating profit from non-life operations in the US decreased to £12 million (2013: £56 million), due to a Curian loss of £18 million that included a £38 million charge related primarily to the refund of certain fees by Curian.

Jackson's strategy is unchanged, serving the 77 million baby boomers as they enter retirement, while delivering operating earnings and cash. We continue to price new business on a conservative basis, targeting value over volume. Our hedging remains focused on optimising the economics of our exposures, therefore accepting a degree of volatility in our accounting results where they are not aligned with the underlying economics. Thanks to this approach, Jackson has been able to deliver significant profitable growth across the cycle, while maintaining a strong balance sheet. Since 1 January 2008, Jackson has remitted nearly US\$2.6 billion of cash to the Group. Jackson's approach has successfully translated into value for customers and into profits and cash for shareholders, the metrics through which we ultimately measure the success of our strategy.

UK, Europe and Africa

Our UK business continues to focus on its core strengths of investment (with the with-profits offering as a core proposition) and retirement solutions. In 2014, Prudential UK delivered life IFRS operating profit of £752 million, up 7 per cent year-on-year, primarily as a result of higher sales of bulk annuities, partially offset by the impact of the contraction of the individual annuities market following market reforms. Cash remitted to the Group was £325 million, compared to £355 million in 2013 as we increased our investment in new business and upgraded our UK pre and post-retirement customer proposition.

Retail sales growth across our range of investment products reflected the strength of our distribution capability, particularly our intermediary channel, as we responded to the challenges and opportunities created by the pension reforms. We will continue to develop our with-profits proposition, enhancing the range of investment choices available to policyholders and have recently made PruFund available in the Individual Savings Account market. The growth in our investment products was offset by a reduction in sales of individual annuities, reflecting the market contraction since the UK Budget announcement. Despite this market disruption, overall retail sales were only slightly lower than 2013 and increased marginally in the second half of the year compared with the same period in 2013.

Onshore bonds sales increased, reflecting the strength of our investment proposition. Sales from with-profits bonds were higher, due to continuing demand for our non-guaranteed bond. We expect significant ongoing demand for our with-profits bond, with customers attracted by the benefit of a smoothed return to help manage market volatility and a strong track record of investment growth.

Table of Contents

Sales from other retail products, including individual pensions, income drawdown and offshore bonds, increased significantly. Offshore bond sales were higher, reflecting the growing popularity of our with-profits fund. Income drawdown and individual pensions sales increased strongly, both driven by the strength of our with-profits PruFund offering, and by customers selecting more flexible retirement income solutions in anticipation of the pension reforms.

In total, PruFund assets under management increased 27 per cent to £11.6 billion in 2014.

Corporate pensions sales were lower, mainly due to changes to public sector pension schemes. We remain the largest provider of Additional Voluntary Contribution plans within the public sector, where we provide schemes for 72 of the 99 public sector authorities in the UK (2013: 69 of the 99).

Prudential's continuing focus on the delivery of excellent customer service was recognised at the 2014 Financial Adviser Service Award where we received an outstanding achievement award for retaining our two Five Star ratings in the Life & Pensions and Investment categories for the fourth year running.

On 10 November 2014, Prudential Assurance Company Limited announced the sale of its 25 per cent equity stake in the PruHealth and PruProtect businesses to Discovery Group Europe Limited for £155 million in cash, generating an IFRS profit on disposal of £86 million. This transaction enabled Prudential UK to realise its investment at attractive terms and creates strategic flexibility for future participation in the UK protection market.

During 2014, we completed the acquisition of Express Life in Ghana and Shield Assurance Company in Kenya, marking the Group's entry into the nascent African life insurance industry. We are positive about the long-term opportunities in Africa, where we see many of the favourable structural characteristics of our preferred Asian markets, although most sub-Saharan life insurance markets are in the very early stages of development and therefore are not likely to be material in the short term.

M&G

M&G is an investment-led business which has managed money on behalf of individual and institutional investors for more than 80 years. Its focus on producing superior long-term investment returns, coupled with well-established distribution in the UK and across Europe, has underpinned another strong set of financial results, with funds under management and profits both reaching new highs.

IFRS operating profit increased 13 per cent to £446 million in 2014, marking the fifth consecutive year of record profits. Over this period operating profit has grown by a compound annual growth rate of 16 per cent. While higher equity markets and buoyant bond markets have both contributed to improving profitability, strong net inflows of client assets since 2009, particularly in the retail market, have been a key driver of the increase in profit achieved by M&G. Reflecting this continued strong operating performance, M&G remitted £285 million of cash to Group in 2014, 21 per cent more than in 2013.

During 2014, the combination of continued net fund inflows and generally positive market movements increased M&G's total funds under management by 8 per cent to £264 billion at the end of the year. Within this, external funds under management grew by 9 per cent to £137 billion and now account for 52 per cent of M&G's total funds under management, compared with 40 per cent five years ago.

Within our retail business, we continue to make strong progress, with expansion of distribution in Continental Europe in recent years transforming the scale of funds under management and helping to diversify the business. Today, international clients account for 43 per cent of retail funds under management, compared with just 16 per cent five

years ago, and M&G's retail funds are now registered in 22 jurisdictions. Net inflows across Continental Europe were at a record level of £8.1 billion in 2014, compared to £7.6 billion in 2013. This more than offset a net outflow of £1.7 billion in the UK (2013: net outflow of £0.7 billion). In the UK M&G achieved record net inflows into the M&G Property Portfolio fund, which directly invests across different property sectors such as retail, offices and industrial on behalf of its UK retail client base. The Property Portfolio fund finished 2014 with external funds under management of £3.0 billion, placing it as the largest retail property fund in the UK market.

Table of Contents

M&G also continues to pursue business diversification by fund, with seven of its retail funds, representing all the major asset classes, achieving net inflows of at least £250 million during the year. One of these, the M&G Optimal Income Fund became the top⁽²⁰⁾ selling European cross-border fund in 2014, based on annual net flows as of 31 December 2014.

At the end of 2014 retail funds under management were £74.3 billion, up 11 per cent from 2013 levels, driven by positive net inflows, which totalled £6.7 billion (2013: net inflows of £7.3 billion), including the contribution from our associate entity in South Africa.

A track record of innovation in the institutional market has enabled M&G to be at the forefront of a number of specialist fixed income markets, including leveraged finance and infrastructure investment. The consistency of institutional investment performance and its reputation for innovation earned M&G the prestigious 2014 Financial News Institutional Asset Management Awards for both fixed income and real estate for the second consecutive year.

Net institutional inflows were £401 million, compared with £2.1 billion in 2013. As expected, a number of segregated clients withdrew money from public debt funds as they reallocated scheme assets. There were also further planned redemptions from a large low-margin mandate. In general, outgoing assets have been replaced by flows into higher-margin products, helping to improve the profitability of the institutional business. M&G has in place a multi-billion pound pipeline of institutional commitments at the end of 2014 across a diverse range of investment strategies that has yet to be invested.

External institutional funds under management increased 7 per cent in 2014 to £62.7 billion.

The recent increase in headcount and investment in operational infrastructure required to preserve service quality as the scale of the business grows, has been more than matched by revenue growth in 2014. As a result the cost income ratio⁽²¹⁾ of 58 per cent in 2014 has improved slightly over the prior year (2013: 59 per cent).

M&G remains focused on producing superior long-term investment returns for clients, while continuing to diversify its business by geography and asset class and providing capital efficient profits and cash generation for the Group.

Eastspring Investments, our Asia asset management business, generated record third-party net inflows of £5.4 billion, 3.8 times higher than in 2013, with success in securing new equity flows, particularly from institutional clients, mitigating lower net inflows in fixed income. Including internal funds, total funds under management as at 31 December 2014 were a record £77.3 billion, up 28 per cent on the prior year as a result of net inflows and positive market movements. IFRS operating profit increased 32 per cent to £90 million, driven by the positive impact on revenue from higher levels of average assets under management.

Capital and risk management

We continue to take a disciplined approach to capital management and have implemented a number of measures over the last few years to enable us to make our capital work both more efficiently and more effectively for the Group. Using the regulatory measures of the Insurance Groups Directive (IGD), our Group capital surplus position⁽²²⁾ at 31 December 2014 was estimated at £4.7 billion (2013: £5.1 billion), after funding the fees payable for the new 15 year exclusive distribution agreement with Standard Chartered Bank. The IGD surplus is stated before allowing for the final dividend and is equivalent to a cover of 2.4 times.

In July 2013, Prudential plc was listed by the Financial Stability Board as one of nine companies to be designated as a Global Systemically Important Insurer (GSII). In July 2014 the International Association of Insurance Supervisors

released a consultation paper on the Basic Capital Requirement, one of the two types of capital requirement proposed under the GSII framework. Prudential is monitoring the development and potential impact of the framework of policy measures and engaging closely with the Prudential Regulation Authority on the implication of this designation.

⁽²²⁾ Before allowing for final dividend.

Table of Contents

Solvency II is scheduled to come into effect on 1 January 2016 and our preparations are well advanced. While the Omnibus II Directive is now in place, there are still many areas which require further interpretation. We continue to work with the Prudential Regulation Authority on shaping the outcome to ensure that the practical details of Solvency II, including the final implementing measures, are both workable and effective.

On an economic capital basis⁽²³⁾ our surplus at 31 December 2014 of £9.7 billion (2013: £11.3 billion) is equivalent to an economic capital ratio of 218 per cent (2013: 257 per cent). These results are based on outputs from our Solvency II internal model, which has not yet been approved by the Prudential Regulation Authority. The results assume US equivalence, place no restrictions on the economic value of overseas surplus, and incorporate a number of other working assumptions. Certain aspects of the methodology and assumptions underpinning these results will differ from those which are applied in obtaining final Solvency II Pillar I internal model approval. The eventual Solvency II Pillar I ratio, therefore, remains uncertain and is expected to be lower than our economic capital ratio.

Dividend

The Board has decided to rebase the full year dividend upwards by 10 per cent, reflecting the 2014 financial performance of the Group. In line with this, the directors recommend a final dividend of 25.74 pence per share (2013: 23.84 pence), which brings the total dividend for the year to 36.93 pence (2013: 33.57 pence). This rebase has been made possible by the continued exceptionally strong performance of the Group.

Although the Board has been able to recommend such a rebase in 2014, the Group's dividend policy remains unchanged. The Board will maintain its focus on delivering a growing dividend from this new higher base, which will continue to be determined after taking into account the Group's financial flexibility and our assessment of opportunities to generate attractive returns by investing in specific areas of the business. The Board believes that in the medium term a dividend cover of around two times is appropriate.

Outlook

2014 was a successful year for the Group, where the strength and focus of our teams and of our businesses enabled us to deliver good financial and operational progress and maintain a robust capital position, despite a number of challenges both globally and locally.

It is clear that we are operating in a period of considerable change. 2015 has already seen a continuation of macroeconomic volatility, political upheaval and unexpected shifts in central bank positioning, with the uncertainty of election outcomes in many countries in Europe, including in the UK, still to come before the end of the year. As a result, investment markets generally remain cautious on the global outlook, reflected in further declines in long-term interest rates in most of the major economies in early 2015. The persistently low level of interest rates is a challenge for insurance companies, however in recent years we have positioned the Group through proactive actions on product mix, pricing and our balance sheet to mitigate the negative effects of the low interest rate environment and continue to grow our earnings. We have had the same strategy since 2009 and it has served us well. We continue to execute with discipline and purpose and we believe our strategy and operating principles enable us to deliver relative outperformance across the cycle, as evidenced during the financial crisis.

Asia, with its strong economic growth, young and growing population with savings and protection needs, and low levels of insurance penetration, continues to represent the most attractive opportunity in our industry today and therefore remains the primary focus of our profitable growth ambitions. Our established, growing multi-distribution platform puts us in a strong position to continue to capture profitably the opportunities available to us in Asia, while the breadth of our franchise, by geography, product and channel, provides us with the resilience that has allowed us to

achieve relative outperformance through the cycle, even when individual countries presented short-term challenges. We will continue to invest in enhancing our agency and bancassurance distribution capabilities, to ensure our customers have effective advice-led access to our products. This was most recently evidenced by the

⁽²³⁾ The methodology and assumptions used in calculating the economic capital results are set out in the Development of Economic Capital section within Other results based information . The economic capital ratio is based on the Group's Solvency II internal model which will be subject to Prudential Regulation Authority review and approval before its formal adoption in 2016. We remain on track to submit our Solvency II internal model to the Prudential Regulation Authority for approval in 2015 but given the degree of uncertainty remaining these economic capital disclosures should not be interpreted as outputs from an approved internal model.

Table of Contents

renewal in 2014 of our pan regional relationship with Standard Chartered Bank for another 15 years. The strong underlying fundamentals of economic growth and increasing affluence in Asia, and the quality of our products, people and distribution, remain powerful drivers of our ability to generate profitable growth while delivering value for our customers.

In the US and the UK, we continue to utilise our established market position, distribution strength and distinctive products to ensure the delivery of earnings and cash, with strict allocation of capital to segments of the market that offer higher, capital efficient margins. The UK life insurance market has been subject to significant reform, the ramifications of which are still playing out, but which we believe will ultimately lead to greater customer demand for savings and retirement solutions and create new opportunities for Prudential UK and M&G to leverage their existing expertise.

We remain confident in our ability to produce profitable growth over the long term and to continue to create value for our customers and shareholders.

Principal factors affecting Prudential's results of operations

Prudential's results of operations are affected, to a greater or lesser degree, by a variety of factors, including demographics, general economic and market conditions, government policy and regulation and exchange rate fluctuations, as discussed in greater detail below. In addition, changes in interest rates and returns from equity, real estate and other investments as well as volatility in these items may affect Prudential's profitability.

Please refer to Introduction and Overview, Item 3 Key Information Risk Factors and Item 4 Information on the Company Business of Prudential for additional discussion of factors that may affect Prudential's results of operations.

General economic and market conditions

Prudential's results of operations are impacted by general economic and market conditions and are sensitive to the pace of and extent of changes in equity markets and interest rates, as well as the changes in behaviour of individuals and institutions that these changes in economic and market conditions may cause. Particular features of relevance to the Prudential's geographic areas of operations are shown below:

Asia

Asia (excluding Japan) is leading the world in terms of Gross Domestic Product growth. In the period 2014 to 2018, it is expected to generate US\$5.5 trillion⁽²⁴⁾ of new Gross Domestic Product, more than the US and the other advanced economies combined.

Economic growth is translating into the rapid increase of the Asian middle class. Between 2009 and 2020 it is estimated that there will be over 1.2 billion people who will have been elevated from rural subsistence to urban lifestyles. Within our preferred sweet spot markets of South East Asia and Hong Kong, the middle class will be represented by over 400 million people. Families are getting smaller, life expectancies are lengthening and the incidence of chronic diseases is increasing significantly.

As people move into the middle class, their increased wealth and higher income provide the incentive to make financial plans. Typically the first stage is to provide protection for the family and establish a regular savings plan through a life insurance policy.

Social welfare provisions vary by market but generally fall well below the levels people need to sustain their families lifestyle in the event of a personal tragedy such as the diagnosis of a critical illness. Also, while basic medical services may be provided by the state, there can be a high level of out of pocket expenses, creating demand for financial solutions to significantly improve an individual's experience through access to private medical services. Therefore, critical illness and medical riders are popular additions to life insurance policies.

⁽²⁴⁾Prudential estimates based on IMF data October 2013

Table of Contents

Traditionally Asians would have relied on their children to provide for them in their retirement, but increasingly people are making their own financial provisions and life insurance policies are a popular part of a retirement plan.

Once the savings and protection solutions are in place there is the opportunity to invest. Single premium insurance policies are also important in more developed markets and it is likely that customers will increasingly seek access to different asset classes through mutual funds as their wealth grows and financial needs become more sophisticated.

United States

The United States is the world's largest retirement savings market with total assets in the annuity sector of over \$2.6 trillion⁽²⁵⁾. Each year, many of the 77 million baby-boomers reach retirement age, which is triggering a shift from savings accumulation to retirement income generation of more than US\$10 trillion⁽²⁶⁾ of accumulated wealth over the next decade. This demographic transition constitutes a significant opportunity for those companies that are able to provide the baby-boomers with long-term retirement solutions.

In 2014, the US economy continued to show signs of improvements, with stronger GDP growth, declining unemployment rates, and evidence of a recovery in the housing market. The S&P 500 Index rose 11 per cent, following a 30 per cent jump in 2013. In late October, the Federal Reserve announced an end to its Quantitative Easing program due to an improved U.S. economy. As part of Quantitative Easing, the Federal Reserve purchased trillions of dollars of bonds in order to add more money to the U.S. economy. Despite these signs of strength domestically, longer-dated Treasury yields pulled back in 2014, but remained above the lows experienced in 2012.

The market share shift in the US annuity market has slowed down, and Jackson continues to hold the leading position in the industry while generating healthy margins. Variable annuity providers continue to modify their product offerings through reductions in fund availability and increased fees. Several insurers with challenging legacy blocks of variable annuity business continue to implement policy changes to help mitigate the risk of their back book of business, including fee increases on older benefits, changes to the availability of investment options, subsequent premium restrictions on in-force contracts and buyback offers to their existing policyholders. Despite positive demographic trends, these activities have the potential to lead to overall contraction in the industry, and likely further market share adjustments, as customers and distributors seek insurers that offer consistency, stability and financial strength.

Spread-based products written by Jackson are principally for fixed interest rate annuities. Sales of life business, including interest sensitive life products, were discontinued in the second half of 2012. Jackson also writes fixed index annuities and institutional business that are spread-based products. The spread is the difference between the rate of return Jackson is able to earn on the assets backing the contract holder liabilities and the amounts that are credited to contract holders in the form of benefit increases, subject to minimum crediting rates.

In general, Jackson's results are significantly affected by fluctuations in economic and market conditions, especially interest rates, credit conditions and equity markets. The profitability of Jackson's spread based business depends in large part on its ability to manage interest rate exposure, as well as the credit and other risks inherent in its investment portfolio. Jackson designs its US products and manages the investments and liabilities to reduce overall interest rate sensitivity. This has the effect of moderating the impact on Prudential's results of changes in prevailing interest rates.

Jackson's exposure to interest rate risk relates primarily to the market price and cash flow variability associated with changes in interest rates. Changes in interest rates, either upward or downward, including changes in the difference between the levels of prevailing short-term and long-term rates, can expose Jackson to the risk of not earning anticipated spreads. For example, if interest rates increase and/or competitors offer higher crediting rates, withdrawals

on annuity contracts may increase as contract holders seek higher investment returns elsewhere. In response, Jackson could (i) raise its crediting rates to stem withdrawals, decreasing its spread; (ii) sell assets

⁽²⁵⁾ According to LIMRA Annuity Sales Participants Report as of 30 September 2014.

⁽²⁶⁾ Source: US Census Bureau.

Table of Contents

which may have depressed values in a high interest rate environment to fund policyholder payments, creating realised investment losses; or (iii) pay out from existing cash which would otherwise have been invested and earned interest at the higher interest rates.

Conversely, if interest rates decrease, withdrawals from annuity contracts may decrease relative to original expectations, creating more cash than expected to be invested at lower rates. Jackson may have the ability to lower the rates it credits to contract holders as a result, but may be forced to maintain crediting rates for competitive reasons or because there are minimum interest rate guarantees in certain contracts. In either case, the spread earned by Jackson would be compressed.

The majority of assets backing the spread-based business are invested in fixed income securities. Jackson actively manages its investment and derivative portfolio, considering a variety of factors, including the relationship between the expected duration of its assets and its liabilities.

Recent periods have been characterised by low interest rates. The current low interest rate environment is likely to be prolonged. A prolonged low interest rate environment may result in a lengthening of maturities of the contract holder liabilities from initial estimates, primarily due to lower policy lapses. As interest rates remain at low levels, Jackson may also have to reinvest the cash it receives as interest or proceeds from investments that have matured or that have been sold at lower yields, reducing its investment margins. Moreover, borrowers may prepay or redeem the securities in its investment portfolio with greater frequency in order to borrow at lower market rates, which exacerbates this risk.

The majority of Jackson's fixed interest rate annuities and life products were designed with contractual provisions that allow crediting rates to be re-set annually subject to minimum crediting rate guarantees. Therefore, on new business written, as well as on in-force business above minimum guarantees, Jackson has adjusted, and will continue to adjust, crediting rates in order to maintain targeted interest rate spreads.

Lowering crediting rates helps to mitigate the effect of spread compression but the spreads could still decline as Jackson is typically only entitled to reset the crediting rates at limited pre-established intervals and the re-setting is subject to the guaranteed minimum rates. As at 31 December 2014, approximately 87 per cent of Jackson's fixed interest rate annuities and interest-sensitive life business account values correspond to crediting rates that are at the minimum guaranteed interest rates (2013: 87 per cent). Tabular disclosures are provided in note C4.2(b) to the consolidated financial statements in Item 18 on the distribution of the account values of these businesses within the range of their contractual minimum guaranteed interest rates. The tables demonstrate that approximately 71 per cent (2013: 71 per cent) of Jackson's combined fixed interest rate annuities and interest sensitive life business account values of £21 billion (2013: £20 billion) have contractual minimum rates of 3 per cent or less.

Jackson's expectation for future spreads is also an important component in the amortisation of deferred acquisition costs. Significantly lower spreads may cause it to accelerate amortisation, thereby reducing total IFRS profit in the affected reporting period. Low market interest rates could also reduce Jackson's return on investments that are held to support the company's capital. In addition, changes in interest rates will affect the net unrealised gain or loss position of Jackson's available-for-sale fixed income securities which is reported as a component of other comprehensive income. Further information on the factors affecting the pricing of products and asset liability management of Jackson is provided in Item 4. Information on the Company's Business of Prudential US Business .

In addition to the impact on Jackson's spread product profitability, a prolonged period during which interest rates remain at levels lower than those anticipated in its pricing may result in greater costs associated with certain of Jackson's product features which guarantee benefits, and also result in higher costs for derivative instruments used to hedge certain of its product risks. Reflecting these impacts in recoverability and loss recognition testing under U.S.

GAAP as grandfathered under IFRS may require Jackson to accelerate the amortisation of DAC as noted above, as well as to increase required reserves for future contract holder benefits. In addition, certain statutory capital and reserve requirements are based on formulas or models that consider interest rates, and a prolonged period of low interest rates may increase the statutory reserves and capital Jackson is required to hold.

Table of Contents

Accordingly, without active management, a prolonged low interest rate environment may materially affect Jackson's financial position, results of operations and cash flows. However, Jackson has and continues to proactively adapt its asset-liability management, hedging programme, product design and pricing and crediting rate strategies to mitigate the downward pressures created by the prolonged low interest rate environment.

The sensitivity of Jackson's IFRS basis profit or loss and shareholders' equity to changes in interest rates is provided in note C7.3 to the consolidated financial statements in Item 18.

The profitability of Jackson's fee-based business depends in large part on its ability to manage equity market risk. As the investment return on the separate account assets is attributed directly to the contract holders, Jackson's profit arises from the fees charged on the contracts, less the expenses incurred, which include the costs of guarantees. In addition to being a profitable book of business in its own right, the variable annuity book also provides an opportunity to utilise the offsetting equity risk among various lines of business to manage Jackson's equity exposure in a cost-effective fashion. Jackson believes that the internal management of equity risk coupled with the utilisation of external derivative instruments where necessary, continues to provide a cost-effective method of managing equity exposure. Profits in the variable annuity book of business will continue to be subject to the impact of market movements both on sales and allocations to the variable accounts and the effects of the economic hedging program. While Jackson hedges its risk on an economic basis, the nature and duration of the hedging instruments, which are recorded at fair value through the income statement, will fluctuate and produce some accounting volatility.

Jackson continues to believe that, on a long-term economic basis, its equity exposure remains well managed.

United Kingdom

The configuration of the UK market is unchanged, characterised by an ageing population with wealth concentrated in the 50+ age group and a younger generation of savers who are typically less well-funded. While the announcement of pensions freedoms in the 2014 Budget has significantly reduced restrictions on how these individuals will access their savings to help fund an income in retirement, the need to accumulate savings remains. It constitutes a significant opportunity for companies with a strong brand and a solid track record in the long-term savings market.

In the UK we focus on those areas of the market where we are able to bring superior value to our customers and where we enjoy a competitive advantage, primarily in with-profits and retirement income provision.

Prudential UK's longevity experience, multi-asset investment capabilities, long-standing trusted brand and financial strength mean that we are favourably positioned to help consumers translate their accumulated wealth into dependable retirement income through our range of market leading with-profits and annuity products.

In the UK, where Prudential's with-profits fund invests in debt and other fixed income securities, equity securities and real estate, shareholders' profits under IFRS are strongly related to the bonuses it declares. The most important influences on the bonus rates are the overall rate of return earned on investments and Prudential's expectation of future investment returns. Further information on with-profits products is provided in Item 5 *Basis of Profits*, *With-Profits Products* and *Bonus Rates* below. In addition, shareholders' profits under IFRS are significantly influenced by the contribution from the shareholder backed annuity business. The key factors affecting the profitability of this business are described in note C4.2 to the consolidated financial statements in Item 18.

Government policy and regulation

Changes in government policy or regulation applying to companies in the financial services and insurance industries in any of the jurisdictions in which Prudential operates, particularly in Asia, the United Kingdom and the United States, may adversely affect the result of its operations. These include possible changes in the tax treatment of financial products and services, government pension arrangements and policies, the regulation of selling practices and solvency standards.

These changes may affect Prudential's existing and future business by, for example, causing customers to cancel existing policies, requiring Prudential to change its range of products and services, redesign its technology or other systems, retrain staff, pay increased tax or incur other costs.

Table of Contents

In Asia, each market has evolved its own regulatory regime depending on the heritage of the industry, experiences and developmental priorities. Regulators across the region are generally keen to promote the growth of the life insurance industry as they appreciate the social utility of providing financial security to individuals and the way insurers channel unproductive cash savings into long term investments in the economy. However, they are imposing higher standards on the industry and monitoring compliance more actively, with increasing focus on the quality of advice distributors provide and the suitability of the products offered. Although assessments of solvency can vary considerably market by market, there is increasing convergence on risk based calculations.

In the US, the financial services industry continues to deal with a multitude of emerging regulatory initiatives in response to the financial crisis. Many of these broader financial services initiatives specifically impact the insurance industry. Within the insurance industry, we are seeing evolving supervisory structures, new global group supervision standards, focus on the reduction of systemic risk, amplified focus on enterprise risk management as well as initiatives in the area of financial reporting. While discussions continue across many initiatives, they are resulting in significant resources being expended across the industry. Finding the appropriate path through all of the regulatory changes clearly remains a challenge.

The UK life and pensions industry continues to undergo significant change. The announcement by the UK Chancellor in the 2014 Budget to remove compulsory annuitisation and introduce new pension freedoms from April 2015 has been described as a once in a 100-year change. We are supportive of this change and more generally of policy initiatives that will help encourage people to save in greater numbers, and more often, particularly in an environment where there is a significant savings gap. Simultaneously, we are witnessing a shift in how customers view retirement. The distinction between accumulating funds and then using them to provide an income in retirement is no longer clear-cut. We expect to see further opportunities created in the saving and investment market with demand for financial advice increasing and customers engaging more frequently with their providers.

These new developments represent major changes to the way business is conducted in a number of areas of the markets in which we operate in the UK, and impact not only insurance and investments providers, but also distributors and consumers.

Further details on the regulatory supervision which Prudential is subject to in the UK and internationally are provided in Item 4 Information on the Company Supervision and Regulation .

Exchange rates

Due to the geographical diversity of Prudential's businesses, it is subject to the risk of exchange rate fluctuations. Prudential's international operations in Asia, the United States and Europe, which represent a significant proportion of total group income and expenses, generally write policies and invest in the same local currency, which although limiting the effect of exchange rate fluctuations on local operating results, can lead to fluctuations in Prudential's consolidated financial information upon translation of results into pounds sterling. Please refer to Item 4 Information on the Company Business of Prudential Group Risk Framework Financial Risks Foreign Exchange Risk , Item 5 Other results based information Foreign currency source of IFRS key metrics and Notes C7.2, C7.3 and C7.4 to the consolidated financial statements in Item 18 for additional information on the impact of foreign currency fluctuations on the Group.

IFRS Critical Accounting Policies

Prudential's discussion and analysis of its financial condition and results of operations are based upon Prudential's consolidated financial statements, which have been prepared in accordance with IFRS as issued by the IASB and as

endorsed by the EU. EU-endorsed IFRS may differ from IFRS as issued by the IASB if, at any point in time, new or amended IFRSs have not been endorsed by the EU. As at 31 December 2014, there were no unendorsed standards effective for the three years ended 31 December 2014 affecting the consolidated financial information of Prudential and there were no differences between IFRSs endorsed by the EU and IFRSs issued by the IASB in terms of their application to Prudential. Accordingly, Prudential's financial information for the three years ended 31 December 2014 is prepared in accordance with IFRS as issued by the IASB. Prudential adopts mandatory requirements of new or altered EU-adopted IFRS standards when required, and may consider earlier adoption where permitted and appropriate in the circumstances.

Table of Contents

The preparation of these financial statements requires Prudential to make estimates and judgements that affect the reported amounts of assets, liabilities, and revenues and expenses, and related disclosure of contingent assets and liabilities. On an ongoing basis, Prudential evaluates its estimates, including those related to long-term business provisioning and the fair value of assets.

Critical accounting policies are defined as those that are reflective of significant judgements and uncertainties, and potentially give rise to different results under different assumptions and conditions. Prudential believes that its critical accounting policies are limited to the policies referenced below which are described further in the notes to the consolidated financial statements in Item 18.

Critical accounting policies	Reference to the disclosure notes in Item 18
Classification of insurance and investment contracts	A3.1(c)
Measurement of policyholder liabilities and unallocated surplus of with-profits fund	A3.1(d)
Measurement and presentation of derivatives and debt securities of US insurance operations	A3.1(j)(v)
Presentation of results before tax	A3.1(k)
Segmental analysis of results and earnings distributable to shareholders	A3.1(m)
The critical accounting policies referenced above are critical for those that relate to the Group's shareholder financed business. In particular this applies for Jackson which is the largest shareholder backed business in the Group. The policies are not critical in respect of the Group's with-profits business. This distinction reflects the basis of recognition of profit and accounting treatment of unallocated surplus of with-profits funds as a liability, as described elsewhere in these financial statements.	

In determining the measurement of the Group's assets and liabilities and in preparing financial statements, more generally, estimates and judgements are required. The critical aspects are set out below by reference to and discussed in the following accounting policies and other notes to the consolidated financial statements in Item 18.

Critical accounting estimates and assumptions	Reference to the disclosure notes in Item 18
Classification of insurance and investment contracts	A3.1(c)
Measurement of policyholder liabilities	A3.1(d); C4.2 and C7
Measurement of deferred acquisition costs	A3.1(f); and C4.2
Determination of fair value of financial investments	A3.1(j)(ii)
Determining impairment related to financial assets	A3.1(j)(iii)
Additional quantitative information on the impairment and realised gains/losses recognised on the available-for-sale debt securities of US insurance operations	
	C3.5(d)
Additional quantitative information on the movement in the statement of financial position value of the available-for-sale debt securities of US insurance operations and those which are in a gross unrealised loss position.	
	C3.3(b)(ii)

Table of Contents**Summary Consolidated Results and Basis of Preparation of Analysis**

The following table shows Prudential's consolidated total profit for the years indicated.

	Actual Exchange Rate		
	Year Ended 31 December £m		
	2014	2013	2012
Total revenue, net of reinsurance	60,126	52,375	54,438
Total charges, net of reinsurance	(57,275)	(50,440)	(51,456)
Share of profits from joint ventures and associates, net of related tax	303	147	135
Profit before tax (<i>being tax attributable to shareholders and policyholders returns</i>)*	3,154	2,082	3,117
Tax attributable to policyholders' returns	(540)	(447)	(370)
Profit before tax attributable to shareholders	2,614	1,635	2,747
Tax charge	(938)	(736)	(954)
Less: tax attributable to policyholders' returns	540	447	370
Tax charge attributable to shareholders' returns	(398)	(289)	(584)
Profit for the year	2,216	1,346	2,163

* This measure is the formal profit before tax measure under IFRS but it is not the result attributable to shareholders. This is principally because the corporate taxes of the Group include those on the income of consolidated with-profits and unit-linked funds that, through adjustments to benefits, are borne by policyholders. These amounts are required to be included in the tax charge of the Company under IAS 12. Consequently, the profit before all taxes measure (which is determined after deducting the cost of policyholder benefits and movements in the liability for unallocated surplus of the PAC with-profits fund after adjusting for taxes borne by policyholders) is not representative of pre-tax profits attributable to shareholders. See Presentation of results before tax under IFRS Critical Accounting Policies section above for further explanation.

Under IFRS, the pre-tax GAAP measure of profits is profit before policyholder and shareholder taxes. This measure is not relevant for reflecting pre-tax results attributable to shareholders for two reasons. Firstly, this profit measure represents the aggregate of pre-tax results attributable to shareholders and a pre-tax amount attributable to policyholders. Secondly, the amount is determined after charging the transfer to the liability for unallocated surplus, which in turn is determined in part by policyholder taxes borne by the ring-fenced with-profits funds. It is noted that this circular feature is specific to with-profits funds in the UK, and other similarly structured overseas funds, and should be distinguished from other products, which are referred to as with-profits and the general accounting treatment of premium or other policy taxes.

Accordingly, Prudential has chosen to explain its consolidated results by reference to profits for the year, reflecting profit after tax. In explaining movements in profit for the year, reference is made to trends in profit before shareholder tax and the shareholder tax charge. The explanations of movement in profit before shareholder tax are shown below by reference to the profit analysis applied for segmental disclosure as shown in note B1 to the consolidated financial statements in Item 18. This basis is used by management and reported externally to the holders of shares listed on the UK, Hong Kong and Singapore exchanges and to the financial markets in those countries. Separately, in this section, analysis of movements in profits before shareholder tax is provided by nature of revenue and charges.

Explanation of Movements in Profits After Tax and Profits before Shareholder Tax by Reference to the Basis Applied for Segmental Disclosure

(a) Group overview

Profit for the year after tax for 2014 was £2,216 million compared to £1,346 million for 2013. The increase primarily reflects the movement in profit before tax attributable to shareholders, which increased from a profit of £1,635 million in 2013 to a profit of £2,614 million in 2014, which was partially offset by an increase in the tax charge attributable to shareholders from £289 million in 2013 to £398 million in 2014.

The increase in the total profit before tax attributable to shareholders from £1,635 million in 2013 to £2,614 million in 2014 reflects an improvement in operating profit based on longer-term investment returns from £2,954 million in 2013 to £3,186 million in 2014 and a favourable change in non-operating items of £747 million from negative £1,319 million to negative £572 million. The increase of £232 million or 8 per cent in operating profit based on longer-term investments includes a negative exchange translation impact of £167 million. Excluding the currency volatility, on a constant exchange rate basis, the Group operating profit based on longer term investment returns increased by £399 million or 14 per cent to £3,186 million, driven by the broad-based improvement in profitability in all four of our business operations in Asia, the US, UK life and M&G.

Table of Contents

The improvement in non-operating items of £747 million is primarily due to the favourable change in short-term fluctuations in investment returns from negative £1,110 million in 2013 to negative £574 million in 2014 and no loss attaching to the held for sale Japan Life business in 2014 compared to a loss of £102 million in 2013. In addition, in 2014, the Group sold its 25 per cent equity stake in the PruHealth and PruProtect businesses resulting in a profit on disposal of £86 million recorded as a non-operating item. This improvement of £747 million in non-operating items also includes a positive exchange translation impact of £64 million.

During 2014 the performance of the equity markets in the countries that we operate in has been broadly positive, with the US S&P 500 index up 11 per cent, while the UK FTSE 100 index and the MSCI Asia ex-Japan index were flat. Continued speculation on global growth prospects and the timing of key interest rate decisions has led to some volatility in long-term yields, with most markets experiencing a significant decline in 10-year bond yields during 2014, largely reversing the increases seen in 2013. As significant long-term holders of investment securities, insurance company results reflect the negative and positive fluctuations in the value of these assets. We include the impact of these short-term market movements outside the operating result, which is based on longer-term investment assumptions. In addition, we continue to take steps to protect ourselves from the downside risks to the Group's financial position associated with the guarantees that we offer to our customers and this also gives rise to short-term investment fluctuations, particularly where the corresponding movement in the economic effects associated with these fluctuations is not recognised under IFRS.

The effective rate of tax at the total profit level was 15 per cent in 2014, compared to 18 per cent in 2013. The reduced rate is principally due the negative impact of the sale of Japan Life on the full year Asia 2013 tax rate, the combination of a favourable deduction in respect of portfolio dividends received in Variable Annuity business and the impact of tax relief on negative net unrealised value movement on derivatives held to manage the Group's exposure to market movements following rises in equity values in the US and the absence of the restatement of deferred tax balances in 2013 to reflect the reduction in the main rate of UK corporate tax. Further details are provided in note B5 to the consolidated financial statements in Item 18.

Profit for the year after tax was £1,346 million in 2013 compared to £2,163 million for 2012. The decrease primarily reflected the movement in results before tax attributable to shareholders, which decreased from a profit of £2,747 million in 2012 to a profit of £1,635 million in 2013, which was partially offset by a decrease in the tax charge attributable to shareholders from £584 million in 2012 to £289 million in 2013.

The decrease in the total profit before tax attributable to shareholders from £2,747 million in 2012 to £1,635 million in 2013 reflected an improvement in operating profit based on longer-term investment returns from £2,520 in 2012 to £2,954 in 2013 which was more than offset by a decrease in non-operating items from positive £227 million to negative £1,319 million. The decrease in non-operating items was predominantly due to the adverse change in short-term fluctuations in investment returns from a positive £187 million in 2012 to a negative £1,110 million in 2013. Further, in 2013, a loss of £102 million (2012: profit of £17 million) was recognised as result of the classification of the Japan Life business as held for sale and included within non-operating items, comprising the 2013 reduction on re-measuring the carrying value of the business and its trading results.

During 2013, global equity markets have performed well overall, and the gradually improving outlook in most of the major economies had also led to a long-awaited uplift in long-term interest rates. These were positive developments for our business performance, and we were well positioned to benefit from the recovery in investment markets, having proactively defended the economics of our business when markets fell. The favourable impact of appreciating equity markets and rising yields, in combination with our strong execution and risk management, benefited all of our key operating profit and underlying capital generation metrics in 2013.

As mentioned above, to protect ourselves from the downside risks to the Group's financial position associated with these guarantees, we hold derivatives and other instruments to mitigate these exposures. In times of rising equity markets these will generally generate negative investment variances. In addition, while higher interest rates are beneficial to the long-term performance of our business, they do give rise to negative value movements on our holdings of fixed income securities as was the case in 2013. The impact of these collective short-term movements in investment values, reported outside the operating result, gave rise to a lower profit before tax attributable to shareholders of £1,635 million in 2013 (2012: £2,747 million).

Table of Contents

Another feature of 2013 was the volatility in the world's currency markets. Following the US Federal Reserve's statements in 2013 implying its intention to taper asset purchases, currencies in some of our key Asian markets, such as Indonesia in particular, saw significant depreciation in the second half of 2013. The US dollar also depreciated against UK sterling as the strength of the economic recovery in the UK brought forward expectations of a UK interest rate increase. As the assets and liabilities of our overseas businesses are translated at year-end exchange rates, the effect of these currency movements has been incorporated within the year end reported shareholders' equity. However, the results of our overseas businesses are translated using average exchange rates for the year, as this is a reasonable approximation of the rates prevailing at the dates that our normal trading transactions have taken place in these markets. Accordingly, the full impact of the currency movements on the operating results of 2013 was more muted.

The effective rate of tax at the total profit level was 18 per cent in 2013, compared to 21 per cent in 2012. The reduced rate is primarily due to a favourable deduction in respect of portfolio dividends received in Variable Annuity business. In addition, Prudential has benefitted from reductions in the main UK tax rate in 2013. Offsetting this Prudential sold Japan Life during the period which gave rise to a loss for which there was no tax relief. Further details are provided in note B5 to the consolidated financial statements in Item 18.

(b) Summary by business segment and geographical region

The Group's operating segments as determined under IFRS 8 are insurance operations split by territories in which the Group conducts business, which are Asia, the United States and the United Kingdom, and asset management operations split into M&G, which is the Group's UK and European asset management business, Eastspring Investments, which is the Asian asset management business and the US broker-dealer and asset management business (including Curian).

The following table shows Prudential's IFRS consolidated total profit/(loss) for the years indicated presented by summary business segment and geographic region. The accounting policies applied to the segments below are the same as those used in the Group's consolidated accounts.

	Year ended 31 December 2014 £m				Total
	Asia	US	UK	Unallocated	
Insurance operations	1,048	249	1,050	-	2,347

Table of Contents***Profit from insurance operations***

Total profit from insurance operations in 2014 was £2,347 million compared to £1,366 million in 2013 and £2,160 million in 2012. All of the profits from insurance operations in 2014, 2013 and 2012 were from continuing operations. The movement in profits for insurance operations can be summarised as follows:

	Year Ended 31 December £m		
	2014	2013	2012
Profit before shareholder tax	2,798	1,687	2,704
Shareholder tax	(451)	(321)	(544)
Profit after tax	2,347	1,366	2,160

The increase of £1,111 million in profit before tax attributable to shareholders in 2013 of £1,687 million to a profit of £2,798 million in 2014 primarily is driven by an increase in operating profit based on longer-term investment returns of £278 million and an improvement in non-operating items of £833 million reducing the non-operating loss from £1,292 million in 2013 to a loss of £459 million in 2014. The increase of £278 million in operating profit based on longer-term investments includes a negative exchange translation impact of £158 million. The increase in operating profit based on longer-term investment returns reflects the growth in the scale of the insurance operations, driven primarily by positive business inflows.

The effective shareholder tax rate on profits from insurance operations decreased from 19 per cent in 2013 to 16 per cent in 2014. The reduced rate is principally due the negative impact of the sale of Japan Life on the full year 2013 tax rate, the combination of a favourable deduction in respect of portfolio dividends received in Variable Annuity business and the impact of tax relief on negative net unrealised value movement on derivatives held to manage the Group's exposure to market movements following rises in equity values and the absence of the restatement of deferred tax balances in 2013 to reflect the reduction in the main rate of UK corporate tax. Further details are included in Note B5 to the financial statements at item 18.

The decrease of £1,017 million in profit before tax attributable to shareholders in 2013 compared to 2012 primarily reflects an increase in operating profit based on longer-term investment returns of the insurance operations of £373 million to £2,979 million being more than offset by an adverse change in short-term fluctuations in investment returns for shareholder-backed business of £1,183 million, the loss attaching to the held for sale Japan Life business as described above which was £102 million in 2013 (2012: profit of £17 million) and other non-operating items of £107 million.

The effective shareholder tax rate on profits from insurance operations decreased from 20 per cent in 2012 to 19 per cent in 2013. The reduced rate is primarily due to a favourable deduction in respect of portfolio dividends received in Variable Annuity business. In addition, Prudential benefitted from reductions in the main UK corporate tax rate in 2013. Offsetting this effect Prudential sold Japan Life during the period which gave rise to a loss for which there was no tax relief. Further details are provided in note B5 to the consolidated financial statements in Item 18.

In order to understand how Prudential's results are derived it is necessary to understand how profit emerges from its business. This varies from region to region, primarily due to differences in the nature of the products and regulatory environments in which Prudential operates.

Asia

Basis of profits

The assets and liabilities of contracts classified as insurance under IFRS 4 are determined in accordance with methods prescribed by local GAAP and adjusted to comply, where necessary, with UK GAAP. Under IFRS 4, subject to the conditions of that standard, the continued application of UK GAAP in this respect is permitted.

For Asia operations in countries where local GAAP is not well established and in which the business is primarily non-participating and linked business, the measurement of the insurance assets and liabilities is determined substantially by reference to US GAAP principles. This basis is applied in India, Japan, Taiwan and until 2012 Vietnam. For with-profits business in Hong Kong, Singapore and Malaysia, the basis of profit recognition is bonus driven as described under United Kingdom Basis of Profits below.

Table of Contents***Comparison of total profit arising from Asia insurance operations***

The following table shows the movement in profit arising from Asia insurance operations for 2014, 2013 and 2012:

	Year Ended 31 December £m		
	2014	2013	2012
Profit before shareholder tax	1,220	688	977
Shareholder tax	(172)	(148)	(146)
Profit after tax	1,048	540	831

The increase of £532 million from the profit before tax attributable to shareholders in 2013 of £688 million to a profit of £1,220 million in 2014 primarily reflects an increase of £49 million in operating profit based on longer-term investment and a positive change in non-operating items of £483 million. The increase of £49 million in operating profit based on longer-term investments includes a negative exchange translation impact of £96 million. Excluding the currency volatility, Asia insurance operations operating profit based on longer-term investment returns was up 16 per cent on a constant exchange basis driven by the increasing scale of the in-force book and our regular premium health and protection oriented product focus.

The change of £483 million from a non-operating loss of £313 million in 2013 to a non-operating profit of £170 million in 2014 arises from an improvement in the short-term fluctuations in investment returns of £382 million, no loss attaching to the held for sale Japan Life business in 2014 (2013: £102 million) and an adverse change of £1 million in other non-operating items. The positive change of £483 million in 2014 in non-operating items includes a positive exchange translation impact of £28 million. The positive short-term fluctuation in investment returns primarily reflect net unrealised movement in bond holdings following falls in bond yields across the region during the year.

The effective shareholder tax rate changed from 22 per cent in 2013 to 14 per cent in 2014, with the movement principally due to the negative impact of the sale of Japan Life on the full year 2013 tax rate.

The decrease of £289 million from the profit before tax attributable to shareholders in 2012 of £977 million to a profit of £688 million in 2013 primarily reflects an increase of £95 million in operating profit based on longer-term investment returns to £1,001 million driven by the increasing scale of the in-force book, being more than offset by an adverse change in the short-term fluctuations in investment returns for shareholder-backed business of £258 million and a loss of £102 million attaching to the Japan Life business classified as held for sale as described above. The year on year adverse change in the short-term fluctuations in investment returns of £204 million was primarily due to the negative net unrealised movements on bond holdings in 2013 following a rise in bond yields.

The effective shareholder tax rate changed from 15 per cent in 2012 to 22 per cent in 2013, with the movement principally due to the sale of Japan Life during the period which gave rise to a loss for which there was no tax relief. Excluding the impact of the held for sale Japan Life business the tax rate is 19 per cent.

United States***Basis of profits***

The underlying profit on Jackson's business predominantly arises from spread income from interest-sensitive products, such as fixed annuities, institutional products and fee income on variable annuity business with the insurance assets

and liabilities of the business measured on a US GAAP basis. In addition, the results in any period include the incidence of gains and losses on assets classified as available-for-sale, and fair value movements on derivatives and securities classified as fair valued through profit and loss.

Comparison of total profit arising from US insurance operations

The following table shows the movement in profit arising from US insurance operations for 2014, 2013 and 2012:

	Year Ended 31 December £m		
	2014	2013	2012
Profit before shareholder tax	257	553	855
Shareholder tax	(8)	(101)	(234)
Profit after tax	249	452	621

Table of Contents

The £296 million decrease in profit before tax attributable to shareholders in 2014 against 2013, was primarily due to an increase of £188 million in operating profit based on longer-term investment returns to £1,431 million, which was more than offset by an adverse change in non-operating loss of £484 million.

The increase of £188 million in operating profit based on longer-term investment returns includes a negative translation impact of £62 million. Excluding the currency volatility, the increase in operating profit based on longer-term investment return in 2014 on a constant exchange rate basis compared to 2013 was £250 million or 21 per cent primarily driven by increased fee income reflecting the growth in average separate account assets.

The increase in non-operating loss was mainly driven by an adverse change in short-term fluctuation in investment returns of £478 million, increasing the loss from £625 million in 2013 to a loss of £1,103 million in 2014. The negative movement in short-term fluctuations in investment returns mainly reflect the net value movement on the guarantees offered by Jackson and the associated derivatives held to manage market exposures, as described further in the *Charges for short-term fluctuations in investment returns* section below.

The effective tax rate on profits from US operations decreased from 18 per cent in 2013 to 3 per cent in 2014 principally due to a combination of a favourable deduction in respect of portfolio dividends received in Variable Annuity business and the impact of tax relief on negative net unrealised value movement on derivatives held to manage the Group's exposure to market movements following rises in equity values.

The £302 million decrease in profit before tax attributable to shareholders in 2013 against 2012, was primarily due to an increase of £279 million in operating profit based on longer-term investment returns to £1,243 million which was more than offset by an adverse change of £535 million in the short-term fluctuations in investment returns reflected in the income statement. The increase in operating profit based on longer-term investment returns in 2013 compared to 2012 reflects strong underlying growth in fee income which was partially offset by higher expenses.

The adverse movement in short-term fluctuation in investment returns was mainly due to the negative net unrealised value movement on derivatives held to manage the Group's exposure to market movements following rises in equity values.

The effective tax rate on profits from US operations decreased from 27 per cent in 2012 to 18 per cent in 2013 due a favourable deduction in respect of portfolio dividends received in Variable Annuity business.

United Kingdom

Basis of profits

Prudential's results comprise an annual profit distribution to shareholders from its UK long-term with-profits fund as well as profits from its annuity and other businesses.

For Prudential's UK insurance operations, the primary annual contribution to shareholders' profit comes from its with-profits products. With-profits products are designed to provide policyholders with smoothed investment returns through a mix of regular and final bonuses.

For with-profits business (including non-participating business owned by the PAC with-profits fund), adjustments to liabilities and any related tax effects are recognised in the income statement. However, except for any impact on the annual declaration of bonuses, shareholder profit for with-profits business is unaffected. This is because IFRS basis profits for the with-profits business, which are determined on the same basis as on preceding UK GAAP, solely reflect

one-ninth of the cost of bonuses declared for the year. Further details on the determination of the bonuses (regular and final) are provided in note C4.2(c)(i) to the consolidated financial statements in Item 18.

The results of the UK shareholder-backed annuity business reflect the inclusion of investment return including realised and unrealised gains and losses. The charge for benefits reflects the valuation rate of interest applied to discount future anticipated payments to policyholders. This rate in turn reflects current market yields adjusted for factors including default risks on the assets backing the liabilities. The level of allowance for default risk is a key assumption. Details are included in note B4 to the consolidated financial statements in Item 18.

Table of Contents**Comparison of total profit arising from UK insurance operations**

The following table shows the movement in profit arising from UK insurance operations for 2014, 2013 and 2012:

	Year Ended 31 December £m		
	2014	2013	2012
Profit before shareholder tax	1,321	446	872
Shareholder tax	(271)	(72)	(164)
Profit after tax	1,050	374	708

Profit after tax from UK insurance operations of £1,050 million in 2014 is £676 million higher than the £374 million in 2013.

The increase in profit before tax attributable to shareholders of £875 million to £1,321 million in 2014 was driven by an increase of £41 million in operating profit based on longer-term investments return, combined with an improvement in the short-term fluctuations in investment returns for shareholder-backed business of £718 million and a favorable change in other non-operating items of £116 million. The favourable change in the UK insurance non-operating items in 2014 includes a one-off gain of £86 million arising from the sale of UK insurance operations 25 per cent equity stake in PruHealth and PruProtect business.

The £41 million, or 6 per cent increase in operating profit based on longer-term investment returns was principally driven by a £105 million profit contribution from bulk annuity transactions (2013: £25 million), partially offset by a £53 million decline in profit from new retail annuity sales which was affected by the UK market reforms announced in March 2014. Operating profit based on longer-term investment returns included general insurance commissions of £24 million in 2014 compared with £29 million for 2013. The positive short-term fluctuations in investment returns of £718 million includes net unrealised movements on fixed income assets supporting the capital of the shareholder-backed annuity business.

The effective shareholder tax rate on profits from UK insurance operations for 2014 of 21 per cent compares with the effective tax rate of 16 per cent in 2013, principally due to the absence of the restatement of deferred tax balances in 2013 to reflect the reduction in the main rate of UK corporate tax.

Profit after tax from UK insurance operations of £374 million in 2013 is £334 million lower than the £708 million in 2012.

The decrease in profit before tax attributable to shareholders of £426 million to £446 million in 2013 was primarily due to an adverse change in the value of short-term fluctuations in investment returns of £390 million which included the net unrealised movements on fixed income assets supporting the capital of the shareholder backed annuity business. Operating profit based on longer-term investments returns of £735 million in 2013 was comparable to the £736 million in 2012. Operating profit based on longer-term investment returns included general insurance commissions of £29 million in 2013 compared with £33 million for 2012.

The effective shareholder tax rate on profits from UK insurance operations for 2013 of 16 per cent compares with the effective tax rate of 19 per cent in 2012, with the movement principally due to reductions in the main UK corporate tax rate in 2013.

Profit from asset management

The following table shows the movement in profits from asset management for 2014, 2013 and 2012:

	Year Ended 31 December £m		
	2014	2013	2012
Profit before shareholder tax	573	596	619
Shareholder tax	(117)	(130)	(139)
Profit after tax	456	466	480

Table of Contents

Total profit from asset management decreased from £466 million in 2013 to £456 million in 2014. The decrease of £23 million in profit before shareholder tax in 2014 compared to 2013 resulted mainly from a decrease for US broker dealer and asset management operations of £47 million from £59 million in 2013 to £12 million in 2014. This decrease was partially offset by an increase in profit before shareholder tax for Eastspring Investments of £16 million from £74 million to £90 million and an increase in profit before shareholder tax for M&G of £8 million from £463 million to £471 million in 2014.

The £8 million increase in the profit before shareholder tax of M&G primarily reflects an increase of £47 million in operating profit based on longer-term investment returns to £488 million offset by an adverse change in short-term fluctuations in investment returns for shareholder-backed business of £39 million.

The £16 million increase in profit before tax attributable to shareholders for Eastspring Investments includes a negative exchange translation impact of £6 million. Excluding the currency volatility, the increase in £22 million, or 32 per cent is reflects the benefit of higher average funds under management. The decrease in US broker dealer and asset management operations of £47 million followed a provision related primarily to the potential refund of certain fees by Curian.

The effective tax rate on profits from asset management operations decreased from 22 per cent in 2013 to 20 per cent in 2014, principally due to a reduction in the main rate of UK corporation tax.

Total profit from asset management decreased from £480 million in 2012 to £466 million in 2013. The decrease of £23 million in profit before shareholder tax in 2013 compared to 2012 resulted mainly from a decrease for M&G by £48 million from £511 million in 2012 to £463 million in 2013. The profit before shareholder tax for Eastspring Investments increased by £5 million from £69 million in 2012 to £74 million in 2013. US broker dealer and asset management operations profit before shareholder tax increased by £20 million from £39 million in 2012 to £59 million in 2013.

The £48 million decrease in the profit before shareholder tax of M&G primarily reflects an increase of £70 million in operating profit based on longer-term investment returns to £441 million offset by an adverse change in short-term fluctuations in investment returns for shareholder-backed business of £76 million. In addition, the M&G results in 2012 included a one-off gain of £42 million arising on the dilution of M&G's investment holding in PPM South Africa.

The effective tax rate on profits from asset management operations remained at 22 per cent in 2012 and in 2013.

Unallocated corporate result

The following table shows the movement in the unallocated corporate result for 2014, 2013 and 2012.

	Year Ended 31 December £m		
	2014	2013	2012
Loss before shareholder tax	(757)	(648)	(576)
Shareholder tax	170	162	99
Loss after tax	(587)	(486)	(477)

Total net charges for unallocated corporate activity increased by £101 million from £486 million in 2013 to £587 million in 2014 and increased by £9 million from £477 million in 2012 to £486 million in 2013.

The loss before shareholder tax increased by £109 million from £648 million in 2013 to £757 million at 2014. Net other expenditure (including restructuring and Solvency II implementation costs) increased by £62 million from £599 million in 2013 to £661 million in 2014. This was combined with an adverse change of £47 million in short-term fluctuations in investment returns from a loss of £49 million in 2013 to a loss of £96 million in 2014.

The effective tax credit on unallocated corporate result changed from 25 per cent at 2013 to 22 per cent at 2014, reflecting the release of provisions no longer required.

Table of Contents

Total net charges for unallocated corporate activity increased by £9 million from £477 million in 2012 to £486 million in 2013 and increased by £117 million to £477 million in 2012.

The loss before shareholder tax increased by £72 million from £576 million in 2012 to £648 million at 2013. Net other expenditure (including restructuring and Solvency II implementation costs) increased by £34 million from £565 million in 2012 to £599 million in 2013. This was combined with an adverse change of £38 million in short-term fluctuations in investment returns from a loss of £11 million in 2012 to a loss of £49 million in 2013.

The effective tax rate on unallocated corporate result changed from 17 per cent at 2012 to 25 per cent at 2013, reflecting the settlement of prior year balances in the UK and Asia following agreement with taxation authorities.

(c) Additional explanation of performance measures and analysis of consolidated results by business segment and geographical region

Prudential uses a performance measure of operating profit based on longer-term investment returns. The directors believe that this performance measure better reflects underlying performance. It is the basis used by management for the reasons outlined below. It is also the basis on which analysis of the Group's results has been provided to UK shareholders and the UK financial market for some years under long standing conventions for reporting by proprietary UK life assurers.

Prudential determines and presents operating segments based on the information that is internally provided to the Group Executive Committee (GEC), which is Prudential's chief operating decision maker.

An operating segment is a component of Prudential that engages in business activities from which it may earn revenues and incur expenses, including revenues and expenses that relate to transactions with any of Prudential's other components. An operating segment's operating results are reviewed regularly by the GEC to make decisions about resources to be allocated to the segment and assess its performance, and for which discrete financial information is available.

The operating segments identified by Prudential reflect its organisational structure, which is by both geography (Asia, US and UK) and by product line (insurance operations and asset management).

The Group's operating segments, determined in accordance with IFRS 8, Operating Segments, are as follows:

Insurance operations:

Asia
US (Jackson)

UK

Asset management operations:

Eastspring Investments
US broker-dealer and asset management (including Curian)

M&G (including Prudential Capital)

The Group's operating segments are also its reportable segments for the purposes of internal management reporting with the exception of Prudential Capital (PruCap) which has been incorporated into the M&G operating segment for the purposes of segment reporting.

The performance measure of operating segments utilised by the Company is IFRS operating profit attributable to shareholders based on longer-term investment returns, as described below. This measurement basis distinguishes

operating profit based on long-term investment returns from other constituents of the total profit as follows:

Short-term fluctuations in investment returns;

Gain on the sale the Group's interest of PruHealth and PruProtect in 2014 as explained in note D1 to the consolidated financial statements in Item 18;

Amortisation of acquisition accounting adjustments arising on the purchase of business. This comprises principally the charge for the adjustments arising on the purchase of REALIC in 2012;

(Loss) profit attaching to the held for sale Japan Life business. See note D1 for further details;

The costs associated with the domestication of the Hong Kong branch which became effective on 1 January 2014 ; and

For 2012, gain on dilution of the Group's holdings in PPM South Africa.

Table of Contents

Segment results that are reported to the Group Executive Committee include items directly attributable to a segment as well as those that can be allocated on a reasonable basis. Unallocated items are mainly in relation to the Group Head Office and the Asia Regional Head Office.

Determination of operating profit based on longer-term investment return for investment and liability movements:

(a) *General principles*

(i) UK style with-profits business

The operating profit based on longer-term returns reflects the statutory transfer gross of attributable tax. Value movements in the underlying assets of the with-profits funds do not affect directly the determination of operating profit.

(ii) Unit linked business

The policyholder unit liabilities are directly reflective of the asset value movements. Accordingly, the operating results based on longer-term investment returns reflect the current period value movements in both the unit liabilities and the backing assets.

(iii) US Variable Annuity and Fixed Index Annuity business

This business has guarantee liabilities which are measured on a combination of fair value and other, US GAAP derived, principles. These liabilities are subject to an extensive derivative programme to manage equity and, with those of the general account, interest rate exposures. The principles for determination of the operating profit and short-term fluctuations are necessarily bespoke, as discussed in section (c) below.

(iv) Business where policyholder liabilities are sensitive to market conditions

Under IFRS, the degree to which the carrying values of liabilities to policyholders are sensitive to current market conditions varies between territories depending upon the nature of the grandfathered measurement basis. In general, in those instances where the liabilities are particularly sensitive to routine changes in market conditions, the accounting basis is such that the impact of market movements on the assets and liabilities is broadly equivalent in the income statement, and operating profit based on longer-term investments returns is not distorted. In these circumstances, there is no need for the movement in the liability to be bifurcated between the elements that relate to longer-term market conditions and short-term effects.

However, some types of business movements in liabilities do require bifurcation to ensure that at the net level (i.e. after allocated investment return and change for policyholder benefits) the operating result reflects longer-term market returns.

Examples of where such bifurcation is necessary are in Hong Kong and for UK shareholder-backed annuity business, as explained in notes (b)(i) and (d)(i), respectively:

(v) Other shareholder-financed business

The measurement of operating profit based on longer-term investment returns reflects the particular features of long-term insurance business where assets and liabilities are held for the long-term and for which the accounting basis for insurance liabilities under current IFRS is not generally conducive to demonstrating trends in underlying performance of life businesses exclusive of the effects of short-term fluctuations in market conditions. In determining the profit on this basis, the following key elements are applied to the results of the Group's shareholder-financed operations.

Except in the case of assets backing liabilities which are directly matched (such as linked business) or closely correlated with value movements (as discussed below) operating profit based on longer-term investment returns for shareholder-financed business is determined on the basis of expected longer-term investment returns.

Debt, equity-type securities and loans

Longer-term investment returns comprise actual income receivable for the period (interest/dividend income) and for both debt and equity-type securities longer-term capital returns.

Table of Contents

In principle, for debt securities and loans, the longer-term capital returns comprise two elements:

Risk margin reserve based charge for the expected level of defaults for the period, which is determined by reference to the credit quality of the portfolio. The difference between impairment losses in the reporting period and the risk margin reserve charge to the operating result is reflected in short-term fluctuations in investment returns; and

The amortisation of interest-related realised gains and losses to operating results based on longer-term investment returns to the date when sold bonds would have otherwise matured.

At 31 December 2014, the level of unamortised interest-related realised gains and losses related to previously sold bonds for the Group was a net gain of £467 million (2013: £461 million; 2012: £495 million).

Equity type securities

For equity-type securities, the longer-term rates of return are estimates of the long-term trend investment returns for income and capital having regard to past performance, current trends and future expectations. Equity-type securities held for shareholder-financed operations other than the UK annuity business, unit-linked and US variable annuity are of significance for the US and Asia insurance operations. Different rates apply to different categories of equity-type securities.

Derivative value movements

Generally, derivative value movements are excluded from operating results based on longer-term investment returns (unless those derivative value movements broadly offset changes in the accounting value of other assets and liabilities included in operating profit). The principal example of non-equity based derivatives (for example interest rate swaps and swaptions) whose value movements are excluded from operating profit arises in Jackson, as discussed below in note (c).

(b) Asia insurance operations

(i) Business where policyholder liabilities are sensitive to market conditions

For certain Asia non-participating business, for example in Hong Kong, the economic features are more akin to asset management products with policyholder liabilities reflecting asset shares over the contract term. For these products, the charge for policyholder benefits in the operating results should reflect the asset share feature rather than volatile movements that would otherwise be reflected if the local regulatory basis (also applied for IFRS basis) was used.

For certain other types of non-participating business, longer-term interest rates are used to determine the movement in policyholder liabilities for determining operating results.

(ii) Other Asia shareholder-financed business

Debt securities

For this business the realised gains and losses are principally interest related. Accordingly, all realised gains and losses to date for these operations are being amortised over the period to the date those securities would otherwise have matured, with no explicit risk margin reserve charge.

Equity-type securities

For Asia insurance operations, excluding assets of the Japan Life held for sale business, investments in equity securities held for non-linked shareholder-financed operations amounted to £932 million as at 31 December 2014 (2013: £571 million; 2012: £474 million). The rates of return applied in the years 2014, 2013 and 2012 ranged from 2.73 per cent to 13.75 per cent with the rates applied varying by territory. These rates are determined after consideration by the Group's in-house economists of long-term expected real government bond returns, equity risk premium and long-term inflation. These rates are broadly stable from period to period but may be different between countries reflecting, for example, differing expectations of inflation in each territory. The assumptions are for returns expected to apply in equilibrium conditions. The assumed rates of return do not reflect any cyclical variability in economic performance and are not set by reference to prevailing asset valuations.

Table of Contents

The longer-term investment returns for the Asia insurance joint ventures accounted for on the equity method are determined on a similar basis as the other Asia insurance operations described above.

(c) US Insurance operations***(i) Separate account business***

For such business the policyholder unit liabilities are directly reflective of the asset value movements. Accordingly, the operating results based on longer-term investment returns reflect the current period value movements in unit liabilities and the backing assets.

(ii) US variable and fixed index annuity business

The following value movements for Jackson's variable and fixed index annuity business are excluded from operating profit based on longer-term investment returns. See note B1.2 note (ii) to the consolidated financial statements in Item 18:

Fair value movements for equity-based derivatives;

Fair value movements for embedded derivatives for Guaranteed Minimum Withdrawal Benefit not for life and fixed index annuity business, and Guaranteed Minimum Income Benefit reinsurance (see below);

Movements in accounts carrying value of Guaranteed Minimum Death Benefit and Guaranteed Minimum Withdrawal Benefit for life and Guaranteed Minimum Income Benefit liabilities, for which, under the

grandfathered US GAAP applied under IFRS for Jackson's insurance assets and liabilities, the measurement basis gives rise to a muted impact of current period market movements;

Fee assessments and claim payments, in respect of guarantee liabilities; and

Related amortisation of deferred acquisition costs for each of the above items.

Embedded derivatives for variable annuity guarantee features

The Guaranteed Minimum Income Benefit liability, which is essentially fully reinsured, subject to a deductible and annual claim limits, is accounted for in accordance with Financial Accounting Standards Board (FASB) Accounting Standards Codification (ASC) Subtopic 944-80 Financial Services Insurance Separate Accounts (formerly SOP 03-1) under IFRS using grandfathered US GAAP. As the corresponding reinsurance asset is net settled, it is considered to be a derivative under IAS 39, Financial Instruments: Recognition and Measurement, and the asset is therefore recognised at fair value. As the Guaranteed Minimum Income Benefit is economically reinsured the mark to market element of the reinsurance asset is included as a component of short-term fluctuations in investment returns.

(iii) Other derivative value movements

The principal example of non-equity based derivatives (for example interest rate swaps and swaptions) whose value movements are excluded from operating profit arises in Jackson. Non-equity based derivatives are primarily held by Jackson as part of a broadly-based hedging programme for features of Jackson's bond portfolio (for which value movements are booked in the statement of comprehensive income rather than the income statement), product

liabilities (for which US GAAP accounting as grandfathered under IFRS 4 does not fully reflect the economic features being hedged), and the interest rate exposure attaching to equity-based embedded derivatives.

(iv) Other US shareholder-financed business

Debt securities

Jackson is the shareholder-backed operation for which the distinction between impairment losses and interest-related realised gains and losses is in practice relevant to a significant extent. Jackson has used the ratings by Nationally Recognised Statistical Ratings Organisations (NRSRO) or ratings resulting from the regulatory ratings detail issued by the National Association of Insurance Commissioners (NAIC) developed by external third parties such as PIMCO or BlackRock Solutions to determine the average annual risk margin reserve to apply to debt securities held to back general account business. Debt securities held to back separate account and reinsurance funds withheld are not subject to risk margin reserve charge. Further details of the risk margin reserve charge, as well as the amortisation of interest-related realised gains and losses, for Jackson are shown in note B1.2 to the consolidated financial statements in Item 18.

Table of Contents*Equity-type securities*

As at 31 December 2014, the equity-type securities for US insurance non-separate account operations amounted to £1,094 million (2013: £1,118 million; 2012: £1,004 million). For these operations, the longer-term rates of return for income and capital applied in 2014 and 2013, which reflect the combination of the average risk free rates over the period and appropriate risk premiums are as follows:

	2014	2013	2012
Equity-type securities such as common and preferred stock and portfolio holdings in mutual funds	6.2% to 6.7%	5.7% to 6.8%	5.5% to 6.2%
Other equity-type securities such as investments in limited partnerships and private equity funds	8.2% to 8.7%	7.7% to 9.0%	7.5% to 8.2%

(d) UK Insurance operations**(i) Shareholder-backed annuity business**

For this business, policyholder liabilities are determined by reference to current interest rates. The value movements of the assets covering liabilities are closely correlated with the related change in liabilities. Accordingly, asset value movements are recorded within the operating results based on longer-term investment returns. Policyholder liabilities include a margin for credit risk. Variations between actual and best estimate expected impairments are recorded as a component of short-term fluctuations in investment returns.

The operating result based on longer-term investment returns reflects the impact of value movements on policyholder liabilities for annuity business in PRIL and the PAC non-profit sub-fund after adjustments to allocate the following elements of the movement to the category of short-term fluctuations in investment returns :

The impact on credit risk provisioning of actual upgrades and downgrades during the period;

Credit experience compared to assumptions; and

Short-term value movements on assets backing the capital of the business.

Credit experience reflects the impact of defaults and other similar experience, such as asset exchanges arising from debt restructuring by issuers that include effectively an element of permanent impairment of the security held. Positive or negative experience compared to assumptions is included within short-term fluctuations in investment returns without further adjustment. The effects of other changes to credit risk provisioning are included in the operating result, as is the net effect of changes to the valuation rate of interest due to portfolio rebalancing to align more closely with management benchmark.

(ii) Non-linked shareholder-financed business

For debt securities backing non-linked shareholder-financed business of the UK insurance operations (other than the annuity business) the realised gains and losses are principally interest related. Accordingly, all realised gains and losses to date for these operations are being amortised over the period to the date those securities would otherwise

have matured, with no explicit risk margin reserve charge.

(e) *Fund management and other non-insurance businesses*

For these businesses, the particular features applicable for life assurance noted above do not apply. For these businesses it is inappropriate to include returns in the operating result on the basis described above. Instead, it is appropriate to generally include realised gains and losses in the operating result with temporary unrealised gains and losses being included in short-term fluctuations. In some instances it may also be appropriate to amortise realised gains and losses on derivatives and other financial instruments to operating results over a time period that reflects the underlying economic substance of the arrangements.

(i) **Operating profit based on longer-term investment returns**

The Group provides supplementary analysis of IFRS profit before tax attributable to shareholders so as to distinguish operating profit based on longer-term investment returns from other elements of total profit. Operating profit based on longer-term investment returns is the basis on which management regularly reviews the performance of Prudential's segments as defined by IFRS 8. Further discussion on the determination of operating profit based on longer-term investment returns is provided in B1.3 to the consolidated financial statements in Item 18 and section c Additional explanation of performance measures and analysis of consolidated results by business segment and geographical region above.

(ii) **Effect of changes to assumptions, estimates and bases of determining life assurance liabilities**

The results of the Group's long-term business operations are affected by changes to assumptions, estimates and bases of preparation.

Where applicable, these are described in note B4 to the consolidated financial statements in Item 18.

(iii) UK operations transferred its general insurance business to Churchill in 2002, with general insurance commission representing the commission received net of expenses for Prudential-branded general insurance products as part of this arrangement. Restructuring costs are incurred in the UK and represent one-off expenses incurred in securing expense savings.

(iv) Short-term fluctuations in investment returns on shareholder-backed business comprise:

IFRS operating profit based on longer-term investment returns

Total IFRS operating profit based on longer-term investment returns increased by 14 per cent in 2014 to £3,186 million (2013: £2,954 million), driven by higher contributions from both life insurance and asset management.

Consistent with the explanations made in the currency volatility section above comparison of the 2014 and 2013 performance is partially affected by the movements in average exchange rates used to translate into sterling the results of our overseas operations. Therefore, to facilitate explanations of changes in underlying performance, in the commentary on 2014 compared to 2013 discussions below, every time we comment on the performance of our businesses, we focus on their performance measured on the constant exchange rates basis unless otherwise stated. Growth rates based on actual exchange rates are also shown in the tables presented above. The 2013 commentary on compared to 2012 discussions are on an actual exchange rate rather than constant exchange rate basis as the movements in average exchange rates between the two years were not sufficiently material to mask reporting of underlying performance.

Table of Contents***Insurance Operations*****2014 compared to 2013 (CER)**

Operating profit based on longer-term investment returns from our insurance operations in Asia, the US and the UK increased 15 per cent to £3,257 million (9 per cent on an actual exchange rate basis). This increase reflects the growth in the scale of these operations, driven primarily by positive business inflows. We track the progress that we make in growing our life business by reference to the scale of our obligations to our customers, which are referred to in the financial statements as policyholder liabilities. Each year these liabilities increase as we collect premiums and decrease as we pay claims and policies mature. The overall scale of these policyholder liabilities is relevant in evaluating our profit potential, in that it reflects our ability to earn fees on the unit-linked element and it sizes the risk that we carry on the insurance element, for which Prudential needs to be rewarded.

IFRS operating profit from Asia life insurance was up 16 per cent (5 per cent on an actual exchange rate) to £1,050 million, driven by the increasing scale of the in-force portfolio and our emphasis on growing the proportion of our income that is sourced from regular premium health and protection business. Indonesia IFRS operating profit, our largest market on this measure, was up by 27 per cent (6 per cent on an actual exchange rate basis) to £309 million, reflecting growth in insurance and fee income following the high level of protection and savings product sales in recent years. We also see further progress among our smaller, fast-growing businesses in South-east Asia, with Thailand, the Philippines and Vietnam now accounting for 15 per cent of Asia's life operating profit compared to just 5 per cent only 2 years ago.

In the US, life IFRS operating profit increased by 21 per cent (15 per cent on an actual exchange rate basis) to £1,431 million, primarily as a result of a 26 per cent increase in fee income, which is now Jackson's main source of income. The uplift in fee income reflects the growth in average separate account assets from £57.1 billion in 2013 to £72.5 billion in 2014, equating to an increase of 27 per cent on a constant exchange rate basis, driven by variable annuity net premium inflows and appreciation in US equity markets. The contribution from insurance margin has also increased by 20 per cent, as we continue to realise the benefits of the REALIC acquisition. We remain focused on improving the balance of Jackson's profits and diversifying its sources of earnings and we are pleased with the growing contribution to sales of Elite Access, our variable annuity product without living benefits.

UK life IFRS operating profit was 7 per cent higher than 2013 at £752 million (2013: £706 million), principally due to a £105 million profit contribution from bulk annuity transactions (2013: £25 million), reflecting our selective approach of only writing this business on attractive returns. The UK market reforms announced in March 2014 had a dramatic effect on the overall individual annuity market. Our business was equally impacted, experiencing a sharp decline in profits from new retail annuity sales of £53 million (from £110 million in 2013 to £57 million in 2014). Operating profit includes a contribution of £23 million which relates to earnings from our 25 per cent equity stake in the PruHealth and PruProtect businesses.

2013 (AER) compared to 2012 (AER)

Operating profit based on longer-term investment returns from our insurance operations in Asia, the US and the UK increased 14 per cent to £2,979 million (2012: £2,606 million). The increase in the profitability of our life operations reflects the growth in the scale of our life business, driven primarily by positive business flows. We track the progress that we make in growing our life book of business by reference to the scale of our obligations to our customers, which are referred to in the financial statements as the policyholder liabilities. Each year these liabilities increase as we collect premiums and decrease as we pay claims. The overall scale of these policyholder liabilities is relevant in evaluating our profit potential, in that it is reflective of our ability to earn fees on the unit-linked element and it sizes

the risk that we carry on the insurance element, for which Prudential needs to be rewarded.

Our Asia life insurance business continues to benefit from the growth of the in-force portfolio and our focus on building the proportion of our business that comprises health and protection, with operating profit based on longer-term investment returns of £1,001 million (2012: £906 million) up 10 per cent. Adjusting for the 2012 one-off gain on the sale of our holding in China Life Insurance Company in Taiwan and currency movements, underlying growth was 20 per cent. The principal driver of our profitability in the region is our health and protection business which delivered 68 per cent or £679 million (2012: £589 million) of total life profits. Indonesia IFRS operating profit,

Table of Contents

our largest market on this measure, was up by 23 per cent at constant exchange rates, reflecting increased insurance and fee income from the high level of regular premium health and protection and unit-linked sales in recent years. Our other large established markets of Hong Kong, Malaysia and Singapore, also showed collective double digit growth in IFRS operating profit, driven by higher insurance margin and in the case of Hong Kong, higher bonus rates on with-profits business. There was encouraging progress in our smaller, fast-growing South-east Asia businesses in Thailand, the Philippines and Vietnam. Their combined operating profit based on longer-term investment returns of £125 million has increased by 166 per cent during 2013, and now accounts for 12 per cent of the Asia life total compared to 5 per cent in 2012. In Thailand, the inclusion of profits since May 2013 from the acquired Thanachart in-force portfolio together with profits on new business written through our exclusive partnership with Thanachart Bank contributed operating profit based on longer-term investment returns of £30 million.

In the US, long-term business operating profit based on longer-term investment returns was up 29 per cent in 2013 to £1,243 million (2012: £964 million), which includes a contribution of £128 million from REALIC (2012: £67 million). Jackson's total income increased by 24 per cent to £2,514 million (2012: £2,031 million) outpacing the 19 per cent growth in total expenses net of deferred acquisition cost adjustments totalling £1,271 million (2012: £1,067 million). Fee income has become Jackson's main source of earnings and has grown by 34 per cent to £1,172 million (2012: £875 million). The uplift in fee income is in line with the 33 per cent growth in separate account assets in the period to £65.7 billion (2012: £49.3 billion) reflecting the benefit of variable annuity premium inflows and the rise in US equity markets since December 2012. Insurance margin at £588 million (2012: £399 million) is now a more significant contributor to Jackson's earnings following the acquisition of REALIC's seasoned book of term insurance business. Spread income has increased 4 per cent to £730 million (2012: £702 million). We continue to focus on improving the balance of Jackson's profits and diversifying its sources of earnings and we are pleased that the earnings from REALIC have been consistent with expectations at the time of the acquisition.

UK long-term business operating profit based on longer-term investment returns was in line with 2012 at £735 million (2012: £736 million). The comparative result included a £31 million profit from writing wholesale contracts, compared with £25 million for 2013. Excluding these contracts, UK Retail operating profit based on longer-term investment returns increased 1 per cent, and included the £34 million positive impact of a longevity swap entered into this year to further optimise the capital position of the business. Consistent with our focused product strategy in the UK, the operating result is driven by profits from shareholder-backed individual annuities and with-profits business, which accounted for 92 per cent of the retail operating profit based on longer-term investment returns.

Asset management business**2014 compared to 2013 (CER)**

Our asset management businesses in the UK and Asia collectively contributed IFRS operating profit of £578 million, up 14 per cent on 2013 (12 per cent on an actual exchange rate basis). Similar to our life operations, growth in asset management operating profit primarily reflects the increased scale of this business, as measured by funds managed on behalf of external institutional and retail customers and our internal life insurance operations. Net flows from external parties into these funds, excluding Money Market Funds (MMF), were £12.5 billion in 2014 (2013: £11.1 billion on an actual exchange rate basis) and helped drive external retail and institutional funds under management (excluding MMF) to £162.4 billion at 31 December 2014 compared to £143.9 billion at 31 December 2013.

M&G's IFRS operating profit increased 13 per cent to £446 million (2013: £395 million), reflecting a 12 per cent rise in underlying profit to £400 million (2013: £358 million), contributions of £33 million from performance-related payments and £13 million from earnings from associates were also higher in 2014 (2013: £25 million and £12 million, respectively). The increase in underlying profit was principally driven by higher average levels of funds under

management, following a period of strong net inflows and positive market movements. The increasing proportion of higher-margin external retail business has improved M&G's average fee income to 38 basis points (2013: 37 basis points), with higher income helping to absorb the current phase of increased headcount and infrastructure investment. Reflecting this, the underlying cost income ratio, which excludes revenue from performance-related payments and earnings from associates, improved to 58 per cent (2013: 59 per cent).

Table of Contents

Our Asia asset management business, Eastspring Investments, has also seen the benefit of higher average funds under management, with IFRS operating profit of £90 million up 32 per cent (22 per cent on an actual exchange rate basis). In the US, our asset management businesses, PPM America and Curian, and our broker-dealer network, National Planning Holdings, collectively generated an IFRS operating profit of £12 million (2013: profit of £56 million on a constant exchange rate basis: profit of £59 million on actual exchange rate basis) after a £38 million charge related primarily to the refund of certain fees by Curian.

2013 (AER) compared to 2012 (AER)

Total operating profit based on longer-term investment return for 2013 from M&G and Prudential Capital increased by 19 per cent, from £371 million in 2012 to £441 million in 2013, primarily reflecting positive net inflows into M&G during 2012 and 2013.

M&G's operating profit based on longer-term investment returns increased 23 per cent to a new record level of £395 million (2012: £320 million). Underlying profits, excluding performance-related payments and earnings from associates, increased 20 per cent to £358 million (2012: £298 million), reflecting both a 13 per cent uplift in external funds under management following a period of strong net inflows and positive market movements, and also the positive mix effect from the growing proportion of higher margin retail business. M&G's average fee income across all the external and internal funds it manages was up slightly at 37 basis points (2012: 36 basis points), with higher income helping to absorb the current phase of increased headcount and infrastructure investment, maintaining a cost income ratio at 59 per cent (2012: 59 per cent).

Our Asia asset management business, Eastspring Investments, has also seen the combination of net inflows and more favourable equity market conditions, partially offset by adverse currency movement, contribute to a 7 per cent increase in operating profit based on longer-term investment returns to £74 million (2012: £69 million). Higher funds under management resulted in a 10 per cent uplift in revenue, outstripping a 5 per cent increase in expenses which included ongoing investment to expand the Eastspring Investments platform into new markets.

In the US, our asset management businesses, PPM America and Curian, and our broker-dealer network, National Planning Holdings, collectively generated operating profits based on longer-term investment returns of £59 million (2012: £39 million). Curian's profit increased from £15 million in 2012 to £29 million in 2013 due to higher average assets under management, particularly reflecting the addition of assets managed for Jackson's Elite Access product.

Unallocated corporate result

Operating loss based on longer-term investment returns for 2014 of £661 million (2013: £599 million; 2012: £565 million) comprises the following items:

	2014 £m	2013 £m	2012 £m
Investment return and other income	15	10	13
Interest payable on core structural borrowings	(341)	(305)	(280)
Corporate expenditure for Group Head Office and Asia Regional Head Office	(293)	(263)	(231)
Total	(619)	(558)	(498)

Table of Contents**Analysis of long-term insurance business pre-tax IFRS operating profit based on longer-term investment returns by driver**

This schedule classifies the Group's pre-tax operating earnings from long-term insurance operations into the underlying drivers of those profits, using the following categories:

Spread income represents the difference between net investment income (or premium income in the case of the UK annuities new business) and amounts credited to certain policyholder accounts. It excludes the operating investment return on shareholder net assets, which has been separately disclosed as **expected return on shareholder assets**.

Fee income represents profits driven by net investment performance, being asset management fees that vary with the size of the underlying policyholder funds net of investment management expenses.

With-profits business represents the gross of tax shareholders' transfer from the with-profits fund for the year.

Insurance margin primarily represents profits derived from the insurance risks of mortality and morbidity.

Margin on revenues primarily represents amounts deducted from premiums to cover acquisition costs and administration expenses.

Acquisition costs and administration expenses represent expenses incurred in the year attributable to shareholders. It excludes items such as restructuring costs and Solvency II costs which are not included in the segment profit for insurance as well as items that are more appropriately included in other source of earnings lines (eg investment expenses are netted against investment income as part of spread income or fee income as appropriate).

DAC adjustments comprises DAC amortisation for the year, excluding amounts related to short-term fluctuations in investment returns, net of costs deferred in respect of new business.

Analysis of pre-tax IFRS operating profit by source and Margin analysis of Group long-term insurance business

The following analysis expresses certain of the Group's sources of operating profit as a margin of policyholder liabilities or other suitable driver. Details on the calculation of the Group's average policyholder liability balances are given in note (iii).

Analysis of Asia operating profit drivers**2014 Compared to 2013 (CER unless otherwise stated)**

Spread income has increased by 17 per cent at constant exchange rate (AER 9 per cent) to £125 million in 2014, predominantly reflecting the growth of the Asia non-linked policyholder liabilities.

Fee income has increased by 11 per cent at constant exchange rates (AER 1 per cent) from £140 million in full year 2013 to £155 million in 2014, broadly in line with the increase in movement in average unit-linked liabilities. Insurance margin has increased by £59 million at constant exchange rates to £675 million in 2014 (and decreased by £4 million on AER basis) predominantly reflecting the continued growth of the in-force book, which contains a relatively high proportion of risk-based products. 2014 insurance margin includes non-recurring items of £27 million (2013: £52 million at AER; £48 million on CER).

Excluding the adverse impact of currency fluctuations, margin on revenues has increased by £132 million from £1,413 million in 2013 to £1,545 million in 2014 primarily reflecting higher premium income recognised in the period.

Acquisition costs have increased by 12 per cent at constant exchange rates (AER 2 per cent) to £1,031 million in 2014, compared to the 15 per cent increase in sales (AER 5 per cent increase), resulting in a modest decrease in the acquisition costs ratio. The analysis above uses shareholder acquisition costs as a proportion of total APE. If with-profits sales were excluded from the denominator the acquisition cost ratio would become 66 per cent (2013:

65 per cent at CER), broadly consistent with the prior year.

Administration expenses have increased by 7 per cent at constant exchange rates (AER 3 per cent decrease) to £618 million in 2014 as the business continues to expand. On constant exchange rates, the administration expense ratio has reduced from 279 basis points in 2013 (and from 300 basis points on AER basis) to 256 basis points in 2014.

Expected return on shareholder assets have increased from £52 million in 2013 (and by £58 million on AER basis) to £64 million in 2014 primarily due to higher income from increased shareholder assets.

Table of Contents**2013 (AER) compared to 2012 (AER)**

Spread income has increased by £22 million from £93 million in 2012 to £115 million in 2013, an increase of 24 per cent, predominantly reflecting the growth of the Asian non-linked policyholder liabilities.

Fee income has increased from £141 million in 2012 to £154 million in 2013, broadly in line with the increase in movement in average unit-linked liabilities.

Insurance margin has increased by £90 million from £589 million in 2012 to £679 million in 2013 predominantly reflecting the continued growth of the in-force book, which contains a relatively high proportion of risk-based products and management action on claims controls and pricing. Insurance margin includes non-recurring items of £52 million (2012: £48 million), reflecting items that are not expected to reoccur in the future.

Margin on revenues has increased by £123 million from £1,439 million in 2012 to £1,562 million in 2013 primarily reflecting the higher premium income recognised in the period.

Acquisition costs have increased from £903 million in 2012 to £1,015 million in 2013, broadly in line with the 12 per cent increase in sales, resulting in a stable acquisition cost ratio. The analysis above uses shareholder acquisition costs as a proportion of total APE. If with-profits sales were excluded from the denominator the acquisition cost ratio would become 65 per cent (2012: 63 per cent) reflecting changes to product and country mix.

Administration expenses have increased from £570 million in 2012 to £635 million in 2013 as the business continues to expand. The administration expense ratio remains broadly in line with prior periods at 300 basis points (2012: 306 basis points).

Analysis of US operating profit drivers:

2014 Compared to 2013 (CER unless otherwise stated)

Spread income has increased by 6 per cent at constant exchange rates (AER increased by 1 per cent) to £734 million during 2014. The reported spread margin increased to 256 basis points from 246 basis points in 2013 (2013 AER: 246 basis points). Spread income benefited from swap transactions previously entered into to more closely match the asset and liability duration. Excluding this effect, the spread margin would have been 182 basis points (2013 CER: 183 basis points)

Fee income has increased by 26 per cent at constant exchange rates (AER 20 per cent) to £1,402 million during 2014, primarily due to higher average separate account balances resulting from positive net cash flows from variable annuity business and overall market appreciation. Fee income margin has remained broadly consistent with the prior year at 193 basis points (2013 CER: 195 basis points and AER: 196 basis points), with the decrease primarily attributable to a change in the mix of business.

Table of Contents

Insurance margin represents operating profits from insurance risks, including variable annuity guarantees and other sundry items. Positive net flows from variable annuity business with life contingent and other guarantee fees, coupled with a benefit from re-pricing actions and an increased contribution from REALIC, have increased the insurance margin by 20 per cent at constant exchange rates (AER 14 per cent) to £670 million during 2014.

Acquisition costs, which are commissions and expenses incurred to acquire new business, including those that are not deferrable, have decreased slightly in absolute terms and as a percentage of APE compared to 2013. As a percentage of APE, acquisition costs have remained relatively flat in comparison to 2013.

Administration expenses increased to £693 million during 2014 compared to £636 million for 2013 at a constant exchange rate (AER £670 million), primarily as a result of higher asset based commissions paid on the larger 2014 separate account balance subject to these trail commissions. These are paid upon policy anniversary dates and are treated as an administration expense in this analysis. Excluding these trail commissions, the resulting administration expense ratio would be lower at 36 basis points (2013: CER 44 basis points and AER 44 basis points), reflecting the benefits of operational leverage.

DAC adjustments decreased to £191 million during 2014 compared to £297 million at a constant exchange rate (AER £313 million) during 2013, with 2013 benefitting from a £78m (AER £82 million) deceleration in DAC amortisation due to strong equity market returns in that year. This was not repeated in 2014, which experienced an accelerated DAC amortisation charge of £13 million.

2013 (AER) compared to 2012 (AER)

Spread income has increased by 4 percent to £730 million in 2013 from £702 million in 2012. The reported spread margin increased to 246 basis points from 239 basis points in 2012 primarily as a result of lower crediting rates. In addition, spread income benefited from swap transactions previously entered into to more closely match the overall asset and liability duration. Excluding this effect, the spread margin would have been 182 basis points (2012: 186 basis points).

Fee income has increased by 34 per cent to £1,172 million in 2013, compared to £875 million in 2012, primarily due to higher average separate account balances due to positive net cash flows from variable annuity business and market appreciation. Fee income margin has remained broadly consistent with the prior year at 196 bps (2012: 199 bps), with the decrease primarily attributable to the change in the mix of business.

Insurance margin represents operating profits from insurance risks, including variable annuity guarantees and other sundry items. Positive net flows into variable annuity business with life contingent and other guarantee fees, coupled with benefit in the period of re-pricing actions, have increased the insurance margin from £399 million in 2012 to £588 million in 2013. This includes a benefit due to the inclusion of the full year of operations for REALIC, which contributed £188 million in 2013, compared to £87 million in 2012.

Acquisition costs, which are commissions and expenses incurred to acquire new business, including those that are not deferrable, have decreased by £58 million compared to 2012 due largely to the discontinuation of certain policy enhancement options on annuity business. As a percentage of APE, acquisition costs have decreased to 58 per cent for 2013, compared to 66 per cent in 2012. This is due to the discontinuation of contract enhancements mentioned above and the continued increase in producers selecting asset-based commissions which are treated as an administrative expense in this analysis, rather than front end commissions.

Administration expenses increased to £670 million during 2013 compared to £537 million in 2012, primarily as a result of higher asset based commissions paid on the larger 2013 separate account balance. Asset-based commissions are paid upon policy anniversary dates and are treated as an administration expense in this analysis as opposed to a cost of acquisition and are offset by higher fee income. Excluding the trail commissions previously mentioned, the resulting administration expense ratio would be lower at 44 basis points (2012: 48 basis points), reflecting the benefits of operational leverage.

DAC adjustments decreased to £313 million in 2013 compared to £442 million in 2012 due to lower levels of current period acquisition costs being deferred and higher DAC amortisation being incurred following higher gross profits. Certain acquisition costs are not fully deferrable, resulting in new business strain of £198 million for 2013

(2012: £174 million) mainly reflecting the increase in sales in the period.

Analysis of UK operating profit drivers:**2014 compared to 2013**

Spread income has increased from £228 million in 2013 to £272 million in 2014 following an increase in bulk annuity sales which contributed £105 million (2013: £25 million) in the year partially offset by lower individual annuity sales.

Fee income has reduced from £65 million in 2013 to £61 million in 2014 due to a change in product mix towards those with lower asset management charges, partly offset by an increase in funds under management. Insurance margin has increased from £89 million for 2013 to £96 million for 2014 primarily due to improved profits from protection business.

Margin on revenues represents premiums charges for expenses and other sundry net income received by the UK. 2014 income was £176 million, £11 million lower than in 2013.

Acquisition costs as a percentage of new business sales for 2014 decreased to 11 per cent from 2013 at 15 per cent, principally driven by the effect on this percentage ratio of business mix. The ratio above expresses the percentage of shareholder acquisition costs as a percentage of total APE sales. It is therefore impacted by the level of with-profit sales in the year. Acquisition costs as a percentage of shareholder-backed new business sales, excluding the bulk annuity transactions, were 36 per cent in 2014 (2013: 35 per cent).

Table of Contents

Administration expenses have increased from £124 million in 2013 to £143 million in 2014 largely due to increased investment spend to realign our business following the pension reforms announced in the UK Budget.

2013 compared to 2012

Spread income has reduced from £266 million in 2012 to £228 million in 2013 principally due to lower annuity sales in the year.

Fee income has increased in line with the increase in unit-linked liabilities. Expressed as an asset management charge it is equivalent to 28 basis points (2012: 28bps).

With-profits income has decreased by £21 million from £272 million in 2012 to £251 million in 2013 principally due to a 50 basis point reduction in annual bonus rates. This has contributed to the reduction in the with-profits margin from 33 basis points in 2012 to 30 basis points in 2013

Insurance margin has increased from £39 million in 2012 to £89 million in 2013. This increase arises from our improved profits from our protection business, favourable mortality experience on our annuity book and £34 million positive impact of undertaking a longevity swap on certain aspects of the UK's annuity back-book liabilities in the first half of 2013.

Margin on revenues represents premiums charges for expenses and other sundry net income received by the UK. 2013 income was £187 million, £29 million lower than in 2012 reflecting lower premium volumes in the period. Acquisition costs as a percentage of new business sales are in line with 2012 at 15 per cent. Lower commission payments from the implementation of the recommendations of the Retail Distribution Review have more than offset by the effect of lower bulk annuity sales in the year, which traditionally are less capital intensive.

The ratio above expresses the percentage of shareholder acquisition costs as a percentage of total APE sales. It is therefore impacted by the level of with-profit sales in the year. Acquisition costs as a percentage of shareholder backed new business sales were 32 per cent in 2013 (2012: 32 per cent).

Administration expenses at £124 million are £4 million lower than for 2012 due to lower project spend in the first half of the year.

Expected return on shareholder assets has increased from £107 million in 2012 to £134 million in 2013 principally due to improved investment returns in the period and higher surplus assets.

Notes

- (i) The ratio for acquisition costs is calculated as a percentage of APE sales including with-profits sales. Acquisition costs include only those relating to shareholder-backed business. APE is defined under the section EEV Basis and New Business Results in Item 3 of this annual report.
- (ii) Margin represents the operating return earned in the year as a proportion of the relevant class of policyholder liabilities excluding unallocated surplus.
- (iii) The 2013 comparative information has been presented at Actual Exchange Rate (AER) and Constant Exchange Rates (CER) so as to eliminate the impact of exchange translation. CER results are calculated by translating prior year results using the current year foreign exchange rates. All CER profit figures have been translated at current year average rates. For Asia CER average liability calculations the policyholder liabilities have been translated using current year opening and closing exchange rates. For the US CER average liability calculations the policyholder liabilities have been translated at the current year month end closing exchange rates.
- (iv) For UK and Asia, opening and closing policyholder liabilities have been used to derive an average balance for the year, as a proxy for average balances throughout the year. The calculation of average liabilities for Jackson is derived from month end balances throughout the year as opposed to opening and closing balances only. Average liabilities for spread income are based on the general account liabilities to which spread income attaches. Average liabilities used to calculate the administrative expense margin exclude the REALIC liabilities reinsured to third parties prior to the acquisition by Jackson. Average liabilities are adjusted for business acquisitions and disposals in the period.
- (v)

The 2014, 2013 and 2012 analyses exclude the results of the held for sale life insurance business of Japan in both the individual profit and average liability amounts shown in the table above.

(vi) The DAC adjustment contains £11 million in respect of joint ventures in 2014 (2013: AER £1 million; 2012: nil).

Table of Contents**Asia operations analysis of operating profit by territory**

Operating profit based on longer-term investment returns for Asia operations are analysed as follows:

	AER	CER	2013 AER	2013 CER	AER	
	2014 £m	2013 £m	2013 £m	vs 2014	vs 2014	2012 £m

Notes*(i) Analysis of operating profit between new and in-force business*

The result for insurance operations comprises amounts in respect of new business and business in-force as follows:

	2014 £m	2013 £m		2012 £m
		AER	CER	AER
New business strain*	(18)	(15)	(18)	(46)
Business in force	1,021	974	884	860
Non-recurrent items: ^{note (ii)}				
Other non-recurrent items	49	44	41	48
Gain on sale of stake in China Life of Taiwan	-	-	-	51
Total	1,052	1,003	907	913

*The IFRS new business strain corresponds to approximately 1 per cent of new business APE premiums for 2014 (2013: approximately 1 per cent of new business APE).

The strain reflects the aggregate of the pre-tax regulatory basis strain to net worth after IFRS adjustments for deferral of acquisition costs and deferred income where appropriate.

(ii) Other non-recurrent items of £49 million in 2014 (2013: £44 million; 2012: £48 million) represent a number of items none of which are individually significant that are not anticipated to re-occur in future. During 2012, the Group sold its 7.74 per cent stake in China Life (Taiwan) for £97 million crystallising a gain of £51 million.

2013	550	89	313	18	863	37	2013	127	60	88	22	215	35
2012	438	91	297	19	734	36	2012	118	64	83	24	201	37

* Margin represents operating income before performance related fees as a proportion of the related funds under management (FUM). Monthly closing internal and external funds managed by the respective entity have been used to derive the average. Any funds held by the Group's insurance operations which are managed by third parties outside of the Prudential Group are excluded from these amounts.

** Cost/income ratio represents cost as a percentage of operating income before performance related fees. Institutional includes internal funds.

Charge for short-term fluctuations in investment returns

IFRS operating profit is based on longer-term investment return assumptions. The difference between actual investment returns recorded in the income statement and these longer-term returns is reported within short-term fluctuations in investment returns. In 2014 the total short-term investment fluctuations relating to the life operations were negative £461 million, comprising positive £178 million for Asia, negative £1,103 million in the US and positive £464 million in the UK.

In Asia, the positive short-term fluctuations of £178 million primarily reflect net unrealised gains on fixed income securities following falls in bond yields across the region during the year.

Negative short-term fluctuations of £1,103 million in the US mainly reflect the net value movement on the guarantees offered by Jackson and the associated derivatives held to manage market exposures. Under IFRS accounting the movement in the valuation of derivatives, which are fair valued, is asymmetrical to the movement in the guarantee liabilities, which are not fair valued in all cases. The rise in equity markets in 2014 has generated negative value movements on the equity derivatives that are held to mitigate against the downside risk of a decline in equity markets. Due to IFRS accounting practice, the corresponding offset in the valuation of obligations to customers is not fully recognised leading to a negative movement overall within IFRS profits. Declining interest rates and unfavourable movements in implied volatility also led to net negative value movements, due to similar accounting asymmetries. Jackson designs its hedge programme to protect the economics of the business from large movements in investment markets and therefore accepts a degree of accounting volatility. Viewed through the regulatory surplus lens, the hedge programme was essentially breakeven on this basis, as movements in hedge assets and guarantee reserves broadly offset. Jackson's regulatory risk-based capital ratio was broadly unchanged at 456 per cent at the end of 2014 (31 December 2013: 450 per cent).

The positive short-term fluctuations of £464 million in the UK include net unrealised gains on fixed income assets supporting the capital of the shareholder-backed annuity business.

In 2013 for our insurance operations these total negative £1,083 million comprising negative £204 million for Asia, negative £625 million in the US and negative £254 million in the UK.

In Asia, the negative short-term fluctuations of £204 million primarily reflect net unrealised movements on bond holdings following rises in bond yields across the region during the year.

Negative short-term fluctuations of £625 million in the US mainly represent the net unrealised value movement on derivatives held to manage the Group's exposure to market movements following rises in equity values. Jackson hedges the guarantees offered under its variable annuity proposition on an economic basis and, thus, accepts a degree of variability in its IFRS results in the short term in order to achieve the appropriate economic result.

Table of Contents

The negative fluctuations of £254 million in the UK include net unrealised movements on fixed income assets supporting the capital of the shareholder-backed annuity business.

Short-term fluctuations in investment returns of other operations, were negative £27 million representing principally unrealised value movements on investments and foreign exchange items.

In 2012 short-term fluctuations in investment returns for our insurance operations of positive £100 million comprised of positive £54 million for Asia, negative £90 million in the US and positive £136 million in the UK.

The positive short-term fluctuations of £54 million for our Asia operations in 2012 relates to unrealised gains on bond assets held across the region following the fall in long-term yields in the period.

The combination of higher equity markets and lower market volatility in the US has reduced the technical reserves held for the variable annuity guarantees. This favourable effect was more than offset by the net unrealised value movement on derivative instruments held to manage the Group's exposure to these guarantees, producing a net £90 million negative fluctuation in our US operation.

The positive short-term fluctuations of £136 million for our UK operations primarily reflect net valuation gains on fixed income assets supporting the capital of the shareholder-backed annuity business.

Short-term fluctuations for other operations were positive £87 million. This primarily represents appreciation on Prudential Capital's bond portfolio partially offset by net realised and unrealised losses in the year on derivatives held centrally to manage market risks.

Amortisation of acquisition accounting adjustments

This comprises principally the charge for the adjustments arising on the purchase of REALIC in 2012.

Gain on sale of PruProtect and PruHealth

In November 2014, PAC sold its 25 per cent equity stake in the PruHealth and PruProtect business to Discovery Group Europe Limited for £155 million, giving rise to a gain on disposal of £86 million.

Costs associated with the domestication of the Hong Kong branch

On 1 January 2014, following consultation with policyholders of PAC and regulators and court approval, the Hong Kong branch of PAC was transferred to separate subsidiaries established in Hong Kong. The costs of enabling the domestication in 2013 were £35 million. Within the Group's supplementary analysis of profit, these costs have been presented as a separate category of items excluded from operating profit based on longer-term investment returns.

(Loss)/Profit attaching to held for sale Japan Life business

To facilitate comparisons of operating profit based on longer-term investment returns that reflect the Group's retained operations, the results attributable to the held for sale Japan Life business are included separately within the supplementary analysis of profit. See note D1 (c) to the consolidated financial statements in Item 18.

Gain on dilution of Group's holdings

On 22 February 2012, M&G completed transactions to reduce its majority holding in PPM South Africa from 75 per cent to 49.99 per cent. Under IFRS the transactions give rise to a gain on dilution of £42 million in 2012, which has been excluded from the Group's IFRS operating profit.

Earnings per share

	Actual Exchange Rate			Constant Exchange Rate		Actual Exchange Rate
	2014 pence	2013 pence	Change %	2013 pence	Change %	Rate 2012
Basic earnings per share based on operating profit after tax	96.6	90.9	6	85.9	12	76.9
Basic earnings per share based on total profit after tax	86.9	52.8	65	49.8	74	85.1

Table of Contents**IFRS effective tax rates**

In 2014, the effective tax rate on IFRS operating profit based on longer-term investment returns was 23 per cent, in line with the 22 per cent equivalent rate in 2013 and the 23 per cent equivalent rate in 2012.

The 2014 effective tax rate on the total IFRS profit was 15 per cent (2013: 18 per cent; 2012: 21 per cent), reflecting corporate tax rate reductions in certain jurisdictions and a change in the overall geographic mix of profit which is subject to different tax rates.

Total tax contribution

The Group continues to make significant tax contributions in the countries in which it operates, with £2,237 million remitted to tax authorities in 2014. This was higher than the equivalent amount of £1,797 million in 2013, reflecting increased profits and the non-recurrence of the 2013 tax refunds for previous overpaid taxes.

	2014 £m			Total	2013 £m			Total
	Corporation taxes	Other taxes	Taxes collected		Corporation taxes	Other taxes	Taxes collected	
Taxes paid in:								
Asia	199	52	87	338	148	48	123	319
US	205	35	375	615	(58)	35	315	292
UK	314	202	759	1,275	327	152	702	1,181
Other	3	4	2	9	1	1	3	5
Total tax paid	721	293	1,223	2,237	418	236	1,143	1,797

Corporation taxes include amounts paid on taxable profits which, in certain countries such as the UK, include policyholder investment returns on certain life insurance products. Other taxes include property taxes, withholding taxes, employer payroll taxes and irrecoverable indirect taxes. Taxes collected are other taxes that Prudential remits to tax authorities which it is obliged to collect from employees, customers and third parties which include sales taxes, employee and annuitant payroll taxes.

Table of Contents**Explanation of Movements in Profits Before Shareholder Tax by Nature of Revenue and Charges**

The following table shows Prudential's consolidated total revenue and consolidated total charges for the periods presented:

	Actual Exchange Rate		
	2014 £m	2013 £m	2012 £m
Gross premiums earned ^(a)	32,832	30,502	29,113
Outward reinsurance premiums	(799)	(658)	(491)
Earned premiums, net of reinsurance	32,033	29,844	28,622
Investment return ^(b)	25,787	20,347	23,931
Other income	2,306	2,184	1,885
Total revenue, net of reinsurance	60,126	52,375	54,438
Benefits and claims	(50,736)	(42,227)	(44,116)
Outward reinsurers' share of benefit and claims	631	622	259
Movement in unallocated surplus of with-profits funds	(64)	(1,549)	(1,287)
Benefits and claims and movement in unallocated surplus of with-profits funds,			
net of reinsurance ^(c)	(50,169)	(43,154)	(45,144)
Acquisition costs and other expenditure ^(d)	(6,752)	(6,861)	(6,032)
Finance costs: interest on core structural borrowings of shareholder-financed operations	(341)	(305)	(280)
Remeasurement of carrying value of Japan life business classified as held for sale	(13)	(120)	-
Total charges, net of reinsurance	(57,275)	(50,440)	(51,456)
Share of profits from joint ventures and associates, net of related tax	303	147	135
Profit before tax (<i>being tax attributable to shareholders' and policyholders' returns</i>) [*]	3,154	2,082	3,117
Less tax charge attributable to policyholders' returns	(540)	(447)	(370)
Profit before tax attributable to shareholders	2,614	1,635	2,747
Total tax charge attributable to policyholders and shareholders	(938)	(736)	(954)
Adjustment to remove tax charge attributable to policyholders' returns	540	447	370
Tax charge attributable to shareholders' returns	(398)	(289)	(584)
Profit for the year attributable to equity holders of the Company	2,216	1,346	2,163

* This measure is the formal profit before tax measure under IFRS but it is not the result attributable to shareholders. This is principally because the corporate taxes of the Group include those on the income of consolidated with-profits and unit-linked funds that, through adjustments to benefits, are borne by policyholders. These amounts are required to be included in the tax charge of the Company under IAS 12. Consequently, the profit before all taxes measure (which is determined after deducting the cost of policyholder benefits and movements in the liability for unallocated surplus of the PAC with-profits fund after adjusting for taxes borne by policyholders) is not representative of pre-tax profits attributable to shareholders.

Table of Contents**(a) Gross earned premiums**

	Year ended 31 December £m		
	2014	2013	2012
Asian operations	9,820	9,061	7,433
US operations	15,654	15,661	14,660
UK operations	7,358	5,780	7,020
Total	32,832	30,502	29,113

Gross earned premiums for insurance operations totalled £32,832 million in 2014, up 8 per cent from £30,502 million in 2013. The increase of £2,330 million was driven by growth of £1,578 million in the UK operations; £759 million in the Asian operations offset by a reduction of £7 million in the US operations.

Gross earned premiums for insurance operations totalled £30,502 million in 2013, up 5 per cent from £29,113 million in 2012. The increase of £1,389 million was driven by growth of £1,628 million in the Asian operations; £1,001 million in the US operations offset by a reduction of £1,240 million in the UK operations.

Asia

Gross earned premiums increased by 8 per cent from £9,061 million in 2013 to £9,820 million in 2014 and by 22 per cent from £7,433 million in 2012 to £9,061 million in 2013 on an actual exchange rate basis. The premiums reflect the aggregate of single and recurrent premiums of new business sold in the year and premiums on annual business sold in previous years. The growth in earned premiums reflects increases for both factors.

Excluding the impact of exchange translation, gross earned premiums in Asia increased by 17 per cent from 2013 to 2014, from £8,380 million on a constant exchange rate in 2013 to £9,820 million in 2014.

Our consistent delivery in Asia is underpinned by our focus on regular premium, protection-orientated solutions that genuinely address the long term financial needs of Asia's growing middle classes in the sweet spot markets of South-East Asia and Hong Kong. Our strategy is to be strongly diversified in terms of geography, products and distribution in a world economy that is increasingly hard to predict. That diversification is at the heart of our ability to continue to perform well across a broad range of metrics as the breadth of our portfolio provides considerable resilience against the impacts of short-term market disturbances in individual countries, such as the elections and natural disasters experienced during 2014.

Our multi-channel distribution platform continues to play a key role in our strategy:

1. In the agency channel we have continued to add to the existing scale of our platform during 2014 through recruitment. In parallel we have also improved individual productivity, thanks to our investments in agency management technology and analytics.
2. Regarding our bank partnerships, we announced in the first quarter that we extended and expanded our long-established and market-leading partnership with Standard Chartered Bank for another 15 years to 2029, effective since July 2014. Encouragingly second-half sales via Standard Chartered Bank grew strongly compared to the same period in 2013, including a record month in December. The distribution channel mix remained in line with prior year with agency generating the majority of the sales followed by bancassurance.

In our product portfolio, the proportion of protection business has remained consistent with prior years. Within the savings products, we have seen an increase in participating business, driven mainly by strong demand for our established with-profits products in Hong Kong. We continue to innovate with new benefits and features, with a

significant proportion of sales in 2014 coming from products that were launched in the past two years.

⁽²⁷⁾ Sweet spot markets are Indonesia, Singapore, Hong Kong, Malaysia, Philippines, Vietnam and Thailand.

Table of Contents***United States***

Gross premiums in 2014 of £15,654 million are in line with the 2013 amount of £15,661 million on an actual exchange rate basis. Excluding the impact of exchange translation, gross premiums in the US increased by 5 per cent from 2013 to 2014, from £14,872 million on a constant exchange rate in 2013 to £15,654 million in 2014.

Total variable annuity sales increased in 2014 largely driven by a continuing increase in sales of Elite Access. The economics of our variable annuity business continue to be very attractive. With the success of Elite Access, we continue to improve the diversification of our product mix, contributing to an increase in the share of non-living benefit variable annuity sales to a new high.

Fixed annuity sales remained relatively flat compared to 2013, while fixed index annuity sales decreased significantly, primarily as a result of product changes implemented in late 2013 to ensure appropriate returns on shareholder capital.

Gross earned premiums increased by 7 per cent from £14,660 million in 2012 to £15,661 million in 2013, driven principally by the rapid progress of Elite Access, our variable annuity (VA) without guarantees launched in 2012. Excluding Elite Access, variable annuity sales were lower than 2012, which is the direct result of Jackson's disciplined approach to the management of the economic cycle in the annuity market.

Jackson remains focused on proactively managing sales volumes of variable annuities with living benefits to match our annual risk appetite.

United Kingdom

Gross premiums for UK operations increased from £5,780 million in 2013 to £7,358 million in 2014, mainly due to seven new bulk annuity deals in 2014 (2013: three) with premiums of £1,710 million (2013: £276 million) and increased sales of onshore bonds and other retail products, partially offset by the decline in the sales of individual annuities. The UK market continues to be heavily influenced by a high level of regulatory and legislative change. The decline in the sale of individual annuities reflects the market contraction since the 2014 UK Budget announcement. Our approach to bulk transactions in the UK will continue to be one of selective participation, where we can bring both significant value to our customers and meet our shareholder return requirements.

Gross earned premiums for UK operations decreased from £7,020 million in 2012 to £5,780 million in 2013 driven principally by declines in sales of onshore bonds and individual annuities. The onset of the Retail Distribution Review significantly impacted the timing of sales volumes in the UK retail investments markets over 2013 and 2012. For Prudential, this resulted in very strong sales of onshore bonds in 2012, due to heightened activity prior to the implementation of the Retail Distribution Review, while in 2013 volumes returned to levels consistent with 2011, the last undisturbed year. In individual annuities, market volumes declined during the year against a strong 2012 comparative, due to increased activity in 2012 prior to the introduction of Gender Neutral Pricing and the Retail Distribution Review. Further, our annuity sales sourced from internal vesting decreased as more customers are opting to defer their retirement date, the effect of which was partly offset by higher average fund values.

(b) Investment return**Year ended 31 December £m**

	2014	2013	2012
Asia operations	3,891	894	2,971
US operations	5,436	10,014	6,199
UK operations	16,551	9,515	14,775
Unallocated corporate and intra-group elimination	(91)	(76)	(14)
Total	25,787	20,347	23,931

Investment return principally comprises interest income, dividends, investment appreciation/depreciation (realised and unrealised gains and losses) on investments designated as fair value through profit and loss and realised gains and losses, including impairment losses, on Jackson's debt securities designated as available-for-sale. Movements in unrealised appreciation/depreciation of Jackson's debt securities designated as available for-sale are not reflected in investment return but are recorded in other comprehensive income.

Table of Contents*Allocation of investment return between policyholders and shareholders*

Investment return is attributable to policyholders and shareholders. A key feature of the accounting policies under IFRS is that the investment return included in the income statement relates to all investment assets of the Group, irrespective of whether the return is attributable to shareholders, or to policyholders or the unallocated surplus of with-profits funds, the latter two of which have no direct impact on shareholders' profit. The table below provides a breakdown of the investment return for each regional operation attributable to each type of business.

	2014 £m	2013 £m	2012 £m

<i>Policyholder returns</i>			

The returns shown in the table above are delineated between those returns allocated to policyholders and those allocated to shareholders. In making this distinction, returns allocated to policyholders are those from investments in which shareholders have no direct economic interest, namely:

unit-linked business in the UK and Asia and SAIF in the UK, for which the investment return is wholly attributable to policyholders;
separate account business of US operations, the investment return of which is also wholly attributable to policyholders; and
with-profits business (excluding SAIF) in the UK and Asia (in which the shareholders' economic interest, and the basis of recognising IFRS basis profits, is restricted to a share of the actuarially determined surplus for distribution (in the UK 10 per cent)). Except for this surplus the investment return of the with-profits funds is attributable to policyholders (through the asset-share liabilities) or the unallocated surplus, which is accounted for as a liability under IFRS 4.

Table of Contents

The investment return related to the types of business above does not impact shareholders' profits directly. However, there is an indirect impact, for example, investment-related fees and the effect of investment return on the shareholders' share of the cost of bonuses of with-profits funds.

Investment returns for unit-linked and similar products have reciprocal impact on benefits and claims, with a decrease in market returns on the attached pool of assets affecting policyholder benefits on these products. Similarly for with-profits funds there is a close correlation between increases or decreases in investment returns and the level of combined charge for policyholder benefits and movement on unallocated surplus that arises from such returns.

Shareholder returns

Changes in shareholder investment returns for US operations reflect primarily movements in the investment income, movements in the value of derivative instruments, and realised gains and losses. The derivatives are held to manage general account assets and liabilities, and variable annuity guarantees under a dynamic hedging programme.

The majority of the investments held to back the US general account business are debt securities for which the available-for-sale designation is applied for IFRS basis reporting. Under this designation the return included in the income statement reflects the aggregate of investment income and realised gains and losses (including impairment losses). However, movements in unrealised appreciation or depreciation are recognised in other comprehensive income. The return on these assets is attributable to shareholders.

For shareholder-backed non-participating business of the UK (comprising PRIL and other non-linked non-participating business) and of the Asian operations, the investment return is not directly attributable to policyholders and therefore does not impact shareholders' profit directly. However, it should be noted that for UK shareholder-backed annuity business, principally PRIL, where the durations of asset and liability cash flows are closely matched, the discount rate applied to measure liabilities to policyholders (under grandfathered UK GAAP and under IFRS 4) reflects movements in asset yields (after allowances for the future defaults) of the backing portfolios. Therefore, the net impact on the shareholders' profits of the investment return of the assets backing liabilities of the UK shareholder-backed annuity business is after taking into account the consequential effect on the movement in policyholder liabilities.

Reasons for year-on-year changes in investment returns

With two exceptions, all Prudential investments are carried at fair value in the statement of financial position with fair value movements, which are volatile from year to year, recorded in the income statement. The exceptions are for:

- (i) debt securities in the general account of US operations, the return on which is attributable to shareholders and which are accounted for on an IAS 39 available-for-sale basis. In this respect realised gains and losses (including impairment losses) are recorded in the income statement, while movements in unrealised appreciation (depreciation) are booked as other comprehensive income. As a result, the changes in unrealised fair value of these debt securities are not reflected in Prudential's investment return in the income statement. The unrealised gains and losses in the income statement of US operations primarily arise on the assets of the US separate account business; and
- (ii) loans and receivables, which are carried at amortised cost.

Subject to the effect of these two exceptions, the year-on-year changes in investment return primarily reflect the generality of overall market movements for equities, debt securities and, in the UK, for investment property. In addition, for Asian and US separate account business, foreign exchange rates affect the sterling value of the translated income. Consistent with the treatment applied for other items of income and expenditure, investment returns for overseas operations are translated at average exchange rates.

Table of Contents*Asia*

The table below provides an analysis of investment return attributable to Asia operations for the years presented:

	Year ended 31 December £m		
	2014	2013	2012
Interest/dividend income (including foreign exchange gains and losses)	1,030	772	593
Investment appreciation (depreciation)	2,861	122	2,378
Total	3,891	894	2,971

In Prudential's Asia operations, debt securities accounted for 52 per cent, 53 per cent and 56 per cent of the total investment portfolio as at 31 December 2014, 2013 and 2012, respectively, with equities comprising 43 per cent; 41 per cent and 35 per cent respectively. The remaining 5 per cent, 6 per cent and 9 per cent of the total investment portfolio, respectively, primarily comprised loans and deposits with credit institutions. Investment return increased from £894 million in 2013 to £3,891 million in 2014. This increase was due to an increase of £258 million in interest and dividend income (including foreign exchange gains and losses) and an increase of £2,739 million in investment appreciation. The increase of £2,739 million in investment appreciation was driven primarily by favourable movements on debt securities values following falls in bond yields across the region during the year and more favourable equity market movements compared to 2013.

Investment return decreased from £2,971 million in 2012 to £894 million in 2013. This decrease was due to an increase of £179 million in interest and dividend income (including foreign exchange gains and losses) and a decrease of £2,256 million in investment appreciation. The decrease of £2,256 million in investment appreciation was driven primarily by adverse movements on debt securities values following rises in bond yields across the region during the year and less favourable equity market movements compared to 2012.

United States

The table below provides an analysis of investment return attributable to US operations for the periods presented:

	Year ended 31 December £m		
	2014	2013	2012
Investment return of investments backing US separate account liabilities	3,793	10,254	5,217
Other investment return	1,643	(240)	982
Total	5,436	10,014	6,199

In the US, investment return decreased from £10,014 million in 2013 to £5,436 million in 2014. This £4,578 million adverse change arose from a decrease of £6,461 million in the investment return on investments backing variable separate account liabilities from a gain of £10,254 million in 2013 to £3,793 million in 2014 and an increase in other investment return from negative £(240) million to £1,643 million. The primary driver for the decrease in investment return on investments backing variable annuity separate account liabilities as compared to 2013 was relatively less favourable movements in the US equity markets in 2014 on a larger separate account asset balance. The increase of £1,883 million in other investment return reflects the value movements in derivatives held to manage interest rate and equity risk exposures as discussed in note B1.2 to the consolidated financial statements in Item 18.

In the US, investment return increased from £6,199 million in 2012 to £10,014 million in 2013. This £3,815 million favourable change arose from an increase of £5,037 million in the investment return on investments backing variable separate account liabilities from a gain of £5,217 million in 2012 to £10,254 million in 2013 and a reduction in other investment return from £982 million to negative £240 million. The primary driver for the increase in investment return on investments backing variable annuity separate account liabilities as compared to 2012 was favourable movements in the US equity markets in 2013 on a larger separate account asset balance. The decrease of £1,222 million in other investment return reflects the value movements in derivatives held to manage interest rate and equity risk exposures as discussed in note B1.2 to the consolidated financial statements in Item 18.

Table of Contents*United Kingdom*

The table below provides an analysis of investment return attributable to UK operations for the periods presented:

	Year ended 31 December £m		
	2014	2013*	2012*
Interest/dividend income	6,056	6,385	6,351
Investment appreciation and other investment return	10,495	3,130	8,424
Total	16,551	9,515	14,775

In Prudential's UK operations, equities accounted for 26 per cent, 25 per cent and 24 per cent of the total investment portfolio as at 31 December 2014, 2013 and 2012, respectively. Debt securities comprised 53 per cent, 54 per cent and 56 per cent, respectively, with investment properties accounting for 8 per cent, 7 per cent and 7 per cent of the total investment portfolio in each respective year. The remaining 13 per cent, 14 per cent and 13 per cent of the total investment portfolio as at 31 December 2014, 2013 and 2012, respectively, related to loans, deposits with credit institutions, investments in partnerships in investment pools and derivative assets. Within debt securities of £89 billion (2013: £84 billion; 2012: £86 billion) as at 31 December 2014, 70 per cent (2013: 71 per cent; 2012: 73 per cent) was comprised of corporate debt securities

Interest and dividend income decreased, by £329 million from £6,385 in 2013 to £6,056 million in 2014, and by £34 million from £6,351 million in 2012 to £6,385 million in 2013.

The increase in investment appreciation and other investment return of £7,365 million from £3,130 million in 2013 to £10,495 million in 2014 principally reflects value movement on debt securities due to falling bond yields partially offset by less favourable equity market movements.

The decrease in investment appreciation and other investment return of £5,294 million from £8,424 million in 2012 to £3,130 million in 2013 principally reflects value movement on debt securities due to rising bond yields.

Unallocated corporate and intragroup elimination

Investment return for unallocated corporate and intragroup elimination was negative £91 million in 2014 compared to the negative £76 million in 2013 and negative £14 million in 2012.

(c) Benefits and claims and movement in unallocated surplus of with-profits funds, net of reinsurance

	Year ended 31 December £m		
	2014	2013	2012
Asia operations	(9,794)	(6,930)	(7,570)
US operations	(19,761)	(23,706)	(18,711)
UK operations	(20,614)	(12,518)	(18,863)
Total	(50,169)	(43,154)	(45,144)

Benefits and claims represent payments, including final bonuses, to policyholders in respect of maturities, surrenders and deaths plus changes in technical provisions (which primarily represent the movement in amounts owed to

policyholders). Benefits and claims are amounts attributable to policyholders. The movement in unallocated surplus of with-profits funds represents the transfer to (from) the unallocated surplus each year through a charge (credit) to the income statement of the annual excess (shortfall) of income over expenditure of the with-profits funds, after declaration and attribution of the cost of bonuses to policyholders and shareholders.

The underlying reasons for the year-on-year changes in benefits and claims and movement in unallocated surplus in each of Prudential's regional operations are changes in the incidence of claims incurred, increases or decreases in policyholders' liabilities, and movements in unallocated surplus of with-profits funds.

Total benefit and claims and movements in unallocated surplus of with-profits funds increased by £7,015 million in 2014 to a charge of £50,169 million compared to a charge of £43,154 million in 2013 and a charge of £45,144 in 2012. The amounts of this year on year charge attributable to each of the underlying reasons as stated above are shown below.

Table of Contents

Benefits and claims and movements in unallocated surplus of with-profits funds net of reinsurance can be further analysed as follows.

	Year ended 31 December £m		
	2014	2013	2012
Claims incurred	(22,331)	(21,881)	(19,230)
Increase in policyholder liabilities	(27,701)	(19,724)	(24,627)
Movement in unallocated surplus of with-profits funds	(137)	(1,549)	(1,287)
Benefits and claims and movement in unallocated surplus	(50,169)	(43,154)	(45,144)

The charge for benefits and claims and movements in unallocated surplus, net of reinsurance of £50,169 million (2013: £43,154 million; 2012: £45,144 million) shown in the table above includes the effect of accounting for investment contracts without discretionary participation features (as defined by IFRS 4) in accordance with IAS 39 to reflect the deposit nature of the arrangement.

Additionally the movement in policyholder liabilities and unallocated surplus of with-profits funds represents the amount recognised in the income statement and therefore excludes the effect of foreign exchange translation differences on the policyholder liabilities of foreign subsidiaries and the movement in liabilities arising on acquisition and disposals of subsidiaries in the year.

The principal driver for variations in amounts allocated to policyholders is changes to investment return reflected in the statement of financial position measurement of liabilities for Prudential's with-profits, SAIF and unit-linked policies (including US separate account business). In addition, for those liabilities under IFRS, in particular, liabilities relating to the UK annuity business (principally PRIL), where the measurement reflects the yields on assets backing the liabilities, the year to year changes in investment yields also contribute significantly to variations in the measurement of policyholder liabilities. The principal driver for variations in the change in unallocated surplus of with-profits funds is the value movements on the investment assets of the with-profits funds to the extent not reflected in policyholder liabilities.

The principal variations are for the increases or decreases in policyholder liabilities and movements in unallocated surplus of with-profits funds for each regional operation are discussed below.

Asia

In 2014, benefits and claims and movements in unallocated surplus of with-profits funds totalled £9,794 million, representing an increase of £2,864 million compared to the charge of £6,930 million in 2013. In 2013, benefits and claims and movements in unallocated surplus of with-profits funds totalled £6,930 million, representing a decrease of £640 million compared to the charge of £7,570 million in 2012.

The amounts of the year-on-year change attributable to each of the underlying reasons are shown below:

	Year ended 31 December £m		
	2014	2013	2012
Claims incurred	(4,351)	(3,976)	(3,130)
Increase in policyholder liabilities	(5,390)	(2,699)	(3,922)

Movement in unallocated surplus of with-profits funds	(53)	(255)	(518)
Benefits and claims and movement in unallocated surplus	(9,794)	(6,930)	(7,570)

The growth in the policyholder liabilities in Asia over the three-year period partially reflected the increase due to the strong growth in new business in the region. The variations in the increases or decreases in policyholder liabilities in individual years were, however, primarily due to movement in investment returns. This was as a result of asset value movements that are reflected in the unit value of the unit-linked policies, which represent a significant proportion of the Asian operations' business. In addition, the policyholder liabilities of the Asia operations' with-profits policies also fluctuated with the investment performance of the funds.

The variations in the increases or decreases in policyholder liabilities in individual periods were however, primarily due to movements in investment returns. This was as a result of asset value movements, which are reflected in the unit value of the unit-linked policies that represent a significant proportion of Asian business. In addition, the policyholder liabilities of the Asian operations' with-profits policies also fluctuated with the investment performance of the funds.

Table of Contents*United States*

Except for institutional products and certain term annuities which are classified as investment products under IAS 39 for the purposes of IFRS reporting, deposits into the US operations products are recorded as premiums, withdrawals and surrenders and are included in benefits and claims, and the resulting net movement is recorded under other reserve movements within benefits and claims. Benefits and claims also include interest credited to policyholders in respect of deposit products less fees charged on these policies.

In 2014, the accounting charge for benefits and claims decreased by £3,945 million to £19,761 million compared to £23,706 million in 2013. In 2013, the accounting charge for benefits and claims increased by £4,995 million to £23,706 million compared to £18,711 million in 2012.

The amounts of the year-on-year change attributable to each of the underlying reasons are shown below:

	Year ended 31 December £m		
	2014	2013	2012
Claims incurred	(8,506)	(7,560)	(5,843)
Increase in policyholder liabilities	(11,255)	(16,146)	(12,868)
Benefits and claims	(19,761)	(23,706)	(18,711)

The movements year-on-year in the claims incurred for the US operations as shown in the table above also included the effects of translating the US dollar results into pounds sterling at the average exchange rates for the relevant years.

The charges in each year comprise amounts in respect of variable annuity and other business. For variable annuity business, there are two principal factors that contribute to the variations in the charge, and for which the fluctuations in the years presented broadly offset each other. First, the investment return on the assets backing the variable annuity separate account liabilities changed to a £3,793 million credit in 2014 from a £10,254 million credit in 2013 and a £5,217 million credit in 2012 as shown in the section Investment return (b) United States above. The second principal effect is the growth of the variable annuity business in force. This can be illustrated by the net cash flows of the US insurance operations variable annuity separate account liabilities in note C4.1(c) Reconciliation of movement in policyholder liabilities to the consolidated financial statements in Item 18 of this annual report. The net flows of the variable annuity separate account liabilities shown in that note for 2014 were £7,974 million as compared with £7,986 million for 2013 and £7,808 million for 2012.

United Kingdom

Overall, benefits and claims and the movement in unallocated surplus recorded in the income statement was a charge of £20,614 million in 2014 compared to a £12,518 million charge in 2013 and a £18,863 million charge in 2012. The year-on-year changes attributable to each of the underlying reasons are shown below, together with a further analysis of the amounts included in respect of the movements in policyholder liabilities by type of business:

	Year ended 31 December £m		
	2014	2013	2012
Claims incurred	(9,474)	(10,346)	(10,642)
Decrease/(increase) in policyholder liabilities			

SAIF	366	780	665
PRIL	(2,157)	155	(1,867)
Unit-linked and other non-participating business	(3,536)	(1,616)	(2,261)
With-profits (excluding SAIF)	(5,729)	(197)	(3,989)
	(11,056)	(878)	(7,452)
Movement in unallocated surplus of with-profits funds	(84)	(1,294)	(769)
Benefits and claims and movement in unallocated surplus	(20,614)	(12,518)	(18,863)

Claims incurred in the UK operations in 2014 were £9,474 million, compared to £10,346 million in 2013 and £10,642 million in 2012.

As has been explained above, the principal driver for variations in amounts allocated to the policyholders is changes to investment returns.

Table of Contents

In aggregate, as a result of the more positive market returns in 2014 compared to 2013 there has been a corresponding impact on benefits and claims and movements in unallocated surplus of with-profits funds in the period, moving from a net charge of £12,518 million in 2013 to a net charge of £20,614 million in 2014. Conversely, the market returns in 2013 were less positive compared to 2012, resulting in a movement from a net charge of £18,863 million in 2012 to a net charge of £12,518 million in 2013.

SAIF is a ring-fenced fund with no new business written. The decrease in policyholder liabilities in SAIF reflects the underlying decreasing policyholder liabilities as the liabilities run off. The variations from year to year are, however, affected by the market valuation movement of the investments held by SAIF, which are wholly attributable to policyholders.

For PRIL, the increases in policyholder liabilities reflect the effect of altered investment yield reflected in the discount rate applied in the measurement of the liabilities, together with other factors such as changes in premium income for new business and altered assumptions.

For unit-linked business, the variations in the increases in the policyholder liabilities were primarily due to the movement in the market value of the unit-linked assets as reflected in the unit value of the unit-linked policies.

The part of Prudential where variations in amounts attributed to policyholder liabilities and unallocated surplus are most significant is the UK with-profits business (excluding SAIF). As explained in note C4.2 to the consolidated financial statements in Item 18, the liabilities for UK with-profits policyholders are determined on an asset-share basis that incorporates the accumulation of investment returns and all other items of income and outgoings that are relevant to each policy type. Accordingly, the movement in policyholder liabilities in the income statement will fluctuate with the investment return of the fund. Separately, the excess of assets over liabilities of the fund represents the unallocated surplus. This surplus will also fluctuate on a similar basis to the market value movement on the investment assets of the fund with the movement reflected in the income statement. In addition, other items of income and expenditure affect the level of movement in policyholder liabilities (to the extent reflected in assets shares) and unallocated surplus.

The correlation between total net income (loss) before benefits and claims and movement in unallocated surplus, on the one hand, and the (charge) credit for benefits and claims and movement in unallocated surplus, on the other, for the UK component of the PAC with-profits fund (excluding SAIF) is illustrated numerically by the table below for each of the years presented. In summary, the correlation principally arises due to the following factors:

- (a) Investment return is included in full in the income statement and is attributable either to contracts or unallocated surplus.
- (b) Investment return, to the extent attributable to contracts, directly affects asset-share liabilities, which are reflected in the income statement through changes in policyholder liabilities.
- (c) Investment return, to the extent attributable to unallocated surplus, forms the majority part of the movement in such surplus in the income statement.

	Year ended 31 December £m		
	2014	2013	2012

Shareholders profit after tax	200	193	206

Table of Contents**Note**

(i) For the purposes of presentation in Prudential's consolidated financial information, references to the UK with-profits fund also include, for convenience, the amounts attaching to Prudential's UK Defined Charge Participating Sub-fund which includes the with-profits annuity business transferred to Prudential from the Equitable Life Assurance Society on 31 December 2007. Profits to shareholders emerge on a charges less expenses basis and policyholders are entitled to 100 per cent of the investment earnings.

Separately, the cost of current year bonuses which is attributable to policyholders is booked within the movement in policyholder liabilities. One-ninth of the declared cost of policyholders' bonus is attributable to shareholders and represents the shareholders' profit. Both of these amounts, by comparison with the investment return, movement in other constituent elements of the change in policyholder liabilities and the change in unallocated surplus, are relatively stable from period to period.

In 2014, the income statement of the UK component of the PAC with-profits funds was charged with a transfer of £84 million from the unallocated surplus. This transfer, together with a corresponding transfer in the unallocated surplus of the Asia with-profits funds and the effect of exchange rate movements, resulted in an increase in Prudential's unallocated surplus from £12.1 billion in 2013 to £12.5 billion in 2014. This movement reflected the net effect of changes in the value of assets, liabilities (incorporating policyholder bonuses and other elements of asset shares attributable to policyholders), and the shareholders' share of the cost of bonuses for 2014.

The surplus for distribution in future years will reflect the aggregate of policyholder bonuses and the cost of bonuses attributable to shareholders, which is currently set at 10 per cent. The policyholder bonuses comprise the aggregate of regular and final bonuses. When determining policy payouts, including final bonuses, Prudential considers asset shares of specimen policies.

Prudential does not take into account the surplus assets of the long-term fund, or the investment return, in calculating asset shares. Asset-shares are used in the determination of final bonuses, together with treating customers fairly, the need to smooth claim values and payments from year to year and competitive considerations.

In the unlikely circumstance that the depletion of excess assets within the long-term fund was such that Prudential's ability to treat its customers fairly was adversely affected, it might become necessary to restrict the annual distribution to shareholders or to contribute shareholders' funds to the long-term funds to provide financial support.

The factors that the PAC Board considers in setting bonus rates are described in more detail in the section headed 'With-profits products' in Item 4, in the section headed 'United Kingdom Basis of profits Bonus Rates' and are summarised in note C4.1(d)(ii) to the consolidated financial statements in Item 18.

(d) Acquisition costs and other expenditure

	Year ended 31 December £m		
	2014	2013	2012
Asia operations	(2,616)	(2,208)	(1,938)
US operations	(1,589)	(1,919)	(1,771)
UK operations	(2,580)	(2,790)	(2,326)
Unallocated corporate and intra-group elimination	33	56	3

Total	(6,752)	(6,861)	(6,032)
-------	---------	---------	---------

Total acquisition costs and other expenditure of £6,752 million in 2014 were 2 per cent lower than the £6,861 million incurred in 2013. Total acquisition costs and other expenditure of £6,861 million in 2013 were 14 per cent higher than the £6,032 million incurred in 2012.

Asia

Total acquisition costs and other expenditure for Asia in 2014 were £2,616 million compared to £2,208 million in 2013 and £1,938 million in 2012. The increase of £408 million from 2013 to 2014 and £270 million from 2012 to 2013 were due to increased acquisition costs, net of change in deferred acquisition costs and increases in other operating expenses and in the charge for investment gains attributable to external unit-holders relating to investment funds managed on behalf of third parties which are consolidated but have no recourse to Prudential.

Table of Contents*United States*

Total acquisition costs and other expenditure for the US of £1,589 million in 2014 represented a decrease of £330 million over the amount of £1,919 million in 2013. The £1,919 million in 2013 in turn represented an increase of £148 million from the £1,771 million in 2012.

The decrease of £330 million from 2013 to 2014 reflects decreases in the charge for acquisition costs in the income statement, net of change in deferred acquisition costs partially offset by an increase in operating expenses. In turn, the increase of £148 million from 2012 to 2013 reflected increases in the charge for acquisition costs in the income statement, net of change in deferred acquisition costs and in operating expenses. Other operating expenses have increased year on year from 2012 to 2014 primarily due to higher asset based commissions paid on the growing separate account balance.

United Kingdom

Total acquisition costs and other expenditure for the UK decreased by 8 per cent from £2,790 million in 2013 to £2,580 million in 2014. This decrease arose primarily from decrease in the charge for investment gains relating to funds managed on behalf of third parties which are consolidated but have no recourse to the Group by £331 million from £739 million in 2013 to £408 million in 2014 which was partially offset by the increases in the underlying operating expenses of M&G.

Total acquisition costs and other expenditure for the UK increased by 20 per cent from £2,326 million in 2012 to £2,790 million in 2013. This increase arose primarily from the increases in the charge for investment gains relating to funds managed on behalf of third parties which are consolidated but have no recourse to the Group by £560 million from £179 million in 2012 to £739 million in 2013 and increases in the underlying operating expenses of M&G. These increases are partially offset by a decrease in acquisition costs, net of change in deferred acquisition costs from £479 million in 2012 to £351 million in 2013. The decrease in acquisition costs partly reflects lower commission payments from the implementation of the recommendations of the UK Retail Distribution Review.

Unallocated corporate and intra-group elimination

Other net expenditure of a credit of £33 million in 2014, a credit of £56 million in 2013 and a credit of £3 million in 2012.

IFRS Shareholders Funds and Policyholder Liabilities**Movement on Shareholders Funds**

The following table sets forth a summary of the movement in Prudential's IFRS shareholders funds for 2014 and 2013:

Shareholders Funds	2014 £m	2013 £m
Profit after tax for the year	2,216	1,346
Exchange movements, net of related tax	220	(255)
Unrealised gains and losses on Jackson fixed income securities classified as available for sale, net of related changes to deferred acquisition costs and tax*	565	(1,034)
Dividends	(895)	(781)

Other	55	15
Net increase (decrease) in shareholders funds	2,161	(709)
Shareholders funds at beginning of the year	9,650	10,359
Shareholders funds at end of the year	11,811	9,650
Shareholders value per share	460p	377p
Return on Shareholders funds*	26%	23%

* Net of related changes to deferred acquisition costs and tax.

** Operating profit after tax and non-controlling interests as percentage of opening shareholders funds.

Table of Contents

In the second half of 2014 the US dollar appreciated strongly relative to sterling reflecting market expectations of a sustained recovery in the US. With approximately 36 per cent of the Group's IFRS net assets denominated in US dollars (or currencies that are either pegged or managed by reference to US dollars), this generated a positive foreign exchange movement on net assets in the year. In addition, the reduction in US 10-year treasury rates, produced unrealised gains on fixed income securities held by Jackson that are accounted on an amortised cost basis under IFRS.

Taking these non-operating movements into account, the Group's IFRS shareholders' funds at 31 December 2014 increased by 22 per cent to £11.8 billion (31 December 2013: £9.6 billion on an actual exchange rate basis).

Shareholder-backed policyholder liabilities and net liability flows**

	2014 £m				2013 £m

Total Group	180,121	9,590	18,454	208,165	162,979	10,946	6,196	180,121

* Including reduction of £1,026 million following reclassification of Japan as held for sale

** Includes Group's proportionate share of the liabilities and associated flows of the insurance joint ventures in Asia.

*** Defined as movements in shareholder-backed policyholder liabilities arising from premiums (net of charges), surrenders/withdrawals, maturities and deaths.

Focusing on the business supported by shareholder capital, which generates the majority of the life profits, in the course of 2014 policyholder liabilities increased from £180.1 billion at the start of the year to £208.2 billion at 31 December 2014. The consistent addition of high-quality profitable new business and proactive management of the existing in-force portfolio underpins this increase, resulting in positive net flows⁵ into policyholder liabilities of £9.6 billion in 2014 driven by our US and Asia businesses. Net flows into our Jackson business in the US were £8.3 billion in 2014, reflecting continued success in attracting new variable annuity business. Net flows into Asia continue to be positive at £1.9 billion, representing the increased levels of new regular premium business added this year, offset by higher levels of maturities of products reaching their term. Positive foreign currency translation effects together with favourable investment market and other movements have contributed a further £18.5 billion to the increase in policyholder liabilities since the start of the year.

Notes:

¹US\$ linked comprising the Hong Kong and Vietnam operations where the currencies are pegged to the US dollar and the Malaysia and Singapore operations where the currencies are managed against a basket of currencies including the US dollar.

²Includes long-term, asset management business and other businesses.

³For operating profit and shareholders funds UK sterling includes amounts in respect of central operations as well as UK insurance operations and M&G.

⁴ For shareholders funds, the US\$ grouping includes US\$ denominated core structural borrowings. Sterling operating profits include all interest payable as sterling denominated, reflecting interest rate currency swaps in place.

Development of Economic Capital**Overview**

Over the last decade regulatory bodies across the European Union have been working on the development of a more risk sensitive solvency framework. Solvency II was developed with this objective in mind and following ratification of the Omnibus II Directive on 16 April 2014, it is expected to come into force on 1 January 2016. It will apply to all European based insurers including Prudential.

Solvency II adopts the concept of market consistency as a valuation framework for both assets and liabilities as well as a one year value at risk methodology (with certain modifications) for evaluating solvency. While the majority of assets held by insurers can be fair valued based on market observable prices (albeit such market based valuations can be distorted at times of market stress), the same is not true of insurance liabilities which are not traded in liquid markets. Solvency II seeks to create a proxy market value for insurance liabilities, by valuing best-estimate cash flows at market levels of risk-free interest rates and allowing for an additional risk margin to ensure these liabilities are

sufficient to cover the amount another insurance company would be prepared to pay for these liabilities.

There are significant limitations with both (i) the notion that this market consistent approach to valuing assets and liabilities represents at all times the underlying economic reality, and (ii) the emphasis that Solvency II places on the fluctuation of these proxy market values over a one year timeframe. The business typically undertaken by life insurers is long-term in nature, with liability profiles that are matched by maturity with similarly termed assets. This is why appropriately risk managed insurers can tolerate and withstand significant investment market volatility. What is critical in the assessment of the viability of insurers is their ability to meet claims when they fall due, over many years, rather than whether they can meet a one-year test based on theoretical proxy market values.

Notwithstanding these limitations, Prudential has been working to implement the requirements of Solvency II in time for its adoption in 2016. The section that follows provides an update on our progress towards implementation of Solvency II, highlights ongoing areas of uncertainty and draws attention to aspects where our current approach may differ to the one that will be ultimately agreed with the Prudential Regulation Authority.

Table of Contents

From our work to date and subject to these limitations, our estimated economic capital surplus, based on outputs from our Solvency II internal model, is £9.7 billion, equivalent to an economic capital ratio of 218 per cent. Further explanation of the underlying economic capital methodology and assumptions which underpin these results is set out in the sections below.

	31 December 2014 £bn	31 December 2013 £bn
Economic capital position¹		
Available capital	17.9	18.5
Economic capital requirement	8.2	7.2
Surplus	9.7	11.3
Economic capital ratio	218%	257%

¹ Based on outputs from the Group's Solvency II internal model which has not been reviewed or approved by the Prudential Regulation Authority.

In a number of areas Prudential's Solvency II methodology and assumptions will need to evolve in response to policy development and regulatory interpretations. A number of working assumptions have been adopted at this stage, which remain subject to policy clarifications and continuing feedback from the Prudential Regulation Authority. The calibration of the matching adjustment for UK annuity liabilities is one such example, as are a range of other calibration issues which will remain unclear until our internal model is approved by the Prudential Regulation Authority. Other areas where supervisory judgement and approval will be required include the proportion of Jackson's excess capital that will be included in the total surplus (under the deduction and aggregation approach) and the extent to which the economic capital surplus of our Asia operations will be recognised under the Solvency II fungibility tests. Against this backdrop of uncertainty it is expected that the Solvency II outcome will result in a lower ratio than the economic capital ratio above.

As an indication of the range of uncertainty, we have produced the following sensitivities to reflect various possible Solvency II outcomes. For example, relative to the £9.7 billion of economic capital surplus at 31 December 2014:

A 20 per cent haircut in the contribution recognised for Asia in the Group available capital, reflecting Solvency II fungibility tests, would reduce Group surplus by £1.9 billion (-23 percentage points of cover ratio); Transitional relief may be applied in relation to the UK business, which subject to regulatory approval is expected to bring overall UK surplus in line with current Solvency I (Pillar II) levels. Applying this transitional relief for UK annuities is estimated to increase Group surplus by £1.3 billion (+16 percentage points of cover ratio); and A 10 per cent increase in UK annuity credit and longevity capital requirements (reflecting adverse matching adjustment outcomes or calibration strengthening) is estimated to reduce Group surplus by £0.6 billion (-12 percentage points of cover ratio). However, in this case the impact of transitional relief would be expected to increase as an offset to these changes.

These sensitivities are intended to provide examples and should not be considered indicative of the adjustments that the Prudential Regulation Authority may ultimately require.

Alongside developing the above economic capital based on outputs from our Solvency II internal model, we have developed an alternative multi-term economic capital model, which seeks to evaluate our ability to meet obligations to customers as these fall due and which in our view is the best way to assess our economic solvency. This multi-term approach is designed to both overcome the artificial one year timeframe of the Solvency II methodology and to remove areas of known excessive prudence that for us do not reflect economic reality, such as the imposition of an

additional risk margin that a theoretical buyer may demand to take over the liabilities in one year's time. Removing this risk margin alone would increase the estimated surplus referred to above to £13.6 billion, equivalent to an economic capital ratio of 265 per cent. This confirms the strong capital position of the Group and its ability to withstand severe market shocks, when assessed through appropriately risk-sensitive measures.

Detail relating to the economic capital position based on outputs from our Solvency II internal model

Our economic capital results are based on outputs from our Solvency II internal model. Although the Solvency II and Omnibus II Directives, together with the Level 2 Delegated Act published on 17 January 2015, provide a framework for the calculation of Solvency II results, there remain material areas of policy uncertainty and the methodology and assumptions are subject to review and approval by the Prudential Regulation Authority, the Group's lead supervisor.

Table of Contents

We remain on track to submit our internal model to the Prudential Regulation Authority for approval in 2015. However, given the degree of uncertainty, these economic capital results should not be interpreted as representing the Pillar I output from an approved Solvency II internal model and are not intended to provide a forecast of the eventual position.

At 31 December 2014, the Group had an economic capital surplus of £9.7 billion (2013: £11.3 billion) and an economic capital ratio of 218 per cent before taking into account the 2014 final dividend. A summary of the capital position on this basis is shown in the table below:

Economic capital position¹	31 December 2014 £bn	31 December 2013 £bn
Available capital	17.9	18.5
Economic capital requirement	8.2	7.2
Surplus	9.7	11.3
Economic capital ratio	218%	257%

¹ Based on outputs from the Group's Solvency II internal model which has not been reviewed or approved by the Prudential Regulation Authority.

The economic capital results are based on outputs from our current Solvency II internal model with a number of working assumptions. Further explanation of the underlying methodology and assumptions are set out in the sections below. Certain aspects of this methodology and assumptions will differ from those which are applied in obtaining final internal model approval. Consequently, the position is expected to evolve to reflect policy clarifications and feedback from the Prudential Regulation Authority on Prudential's approach to applying this new regime. Against this background of uncertainty, it is expected that the Solvency II ratio based on an approved model will be lower than the position shown above.

Methodology

In line with Solvency II, for the Group's European and Asia life business, and holding companies, the available capital is the value of assets in excess of liabilities. The key components of available capital are the market value of assets, insurance technical provisions (calculated as the sum of best estimate liabilities plus a risk margin) and other liabilities. Subordinated-debt forms part of available capital, rather than being treated as a liability, since this debt is subordinated to policyholder claims.

As a general principle, both assets and liabilities are recognised at the value at which they could theoretically be transferred to a third party in an arm's length transaction. On the asset side of the balance sheet, assets are mostly held at IFRS fair value. However, adjustments are required to IFRS values to eliminate intangible items such as goodwill and deferred acquisition costs and to take account of economic assets which are excluded from the current IFRS balance sheet such as the present value of future with-profits shareholder transfers.

The best estimate liability is calculated by taking the average of future risk-adjusted best estimate cashflows, taking into account the time value of money. An economic definition of contract boundaries has been applied in determining the cashflows to include in the best estimate liability. The best estimate liability also allows for the value of options and guarantees embedded in existing contracts as well as the value of future discretionary benefits payable to policyholders. Realistic management actions and policyholder behaviour are allowed for where relevant. In addition, since capital requirements are only derived to cover risks over a one year horizon, a risk margin is added to the best estimate liability to cover the cost of ceding liabilities to a third party after one year, assuming a 6 per cent per annum cost of capital and with no diversification between legal entities, in line with Solvency II requirements.

The Economic Capital Requirement measures the potential reduction in the value of available capital over a one year time horizon, in an adverse 1-in-200 probability event, consistently with Solvency II. This allows for diversification effects between different risk-types and between entities. No restrictions on the economic value of overseas surplus have been allowed for in assessing the capital position at Group level, reflecting our view that in an economic capital assessment, haircuts for transferability restrictions are artificial.

Prudential's US insurance entities are included in the economic capital position on a local RBC basis under the assumption of US equivalence and the assumed permitted use of the deduction and aggregation method. This is in line with our view of the most likely outcome of Solvency II given the agreement reached in the Omnibus II

Table of Contents

Directive. The contribution of US insurance entities to the Group surplus is that in excess of 250 per cent of the US RBC Company Action Level, which is in line with the level at which we measure both the Group's IGD surplus and the Group's reported free surplus amount. In line with Solvency II requirements under the deduction and aggregation method, no diversification benefit is allowed for between US insurance entities and other parts of the Group.

The Group calculation also includes all non-insurance entities, including asset management companies, Prudential Capital and holding companies, as follows:

Asset managers are included in line with existing sectoral capital rules, and Prudential Capital is included on a Basel basis, which follows the expected Solvency II treatment;

Defined benefit pension schemes are included using international accounting standards and, in addition, a capital requirement is derived from stressing the accounting position; and

Holding companies are measured on a Solvency II basis, as if they were insurance companies, in line with Solvency II rules.

In addition to the assumption of US equivalence, no transferability restrictions have been applied to the economic value of overseas surplus. Other key elements of Prudential's methodology relating to areas that are presently unclear for Solvency II Pillar I calculations, relate to:

- (i) *The liability discount rate for UK annuities*, which includes an initial estimate of the Solvency II matching adjustment in addition to the risk-free rate, but where there remains a range of possible outcomes pending further policy clarity;
- (ii) *The impact of transitional arrangements on technical provisions*, for which no allowance has been made in the economic capital position, but which may apply under Solvency II (although the use of this transitional is subject to regulatory approval and the extent to which it is permitted is likely to depend on the final Solvency II capital position); and
- (iii) *Capital requirements for currency translation impacts*, arising from overseas capital (supporting non-UK subsidiaries) being measured in sterling at potentially stressed exchange rates. This impact is not currently allowed for, reflecting our view that an economic capital exposure only arises where funds need to be transferred between entities in order to cover a negative surplus position.

Further, Solvency II outcomes remain unclear in relation to the tiering of hybrid capital instruments, although tiering limits are not currently expected to result in any restrictions.

The 2013 results were prepared using a liquidity premium methodology, before the matching adjustment had been included in our internal model. Under this previous basis, credit reserves were set as a proportion of credit spreads. The 2013 results have not been restated for the effect of adopting the matching adjustment methodology, with the difference between the two approaches being recorded within the 2014 model changes.

Assumptions

The key assumptions required for the economic capital calibration are:

- (i)

Assumptions used to derive non-market related best estimate liability cash flows, which are based on EEV best estimate assumptions;

- (ii) Assumptions used to derive market related best estimate liability cash flows, which are based on market data at the valuation date where this data is reliable and comes from a deep and liquid market, or on appropriate extrapolation methodologies where markets are not sufficiently liquid to be reliable;
- (iii) Assumptions underlying the calculation of the best estimate liability in respect of dynamic management actions and policyholder behaviour;
- (iv) Assumptions underlying the risk models used to calculate the 1-in-200 level capital requirements for the Economic Capital Requirement which are set using a combination of historic market, demographic and operating experience data and expert judgement; and
- (v) Assumptions on the dependencies between risks, which are calibrated using a combination of historic data and expert judgement.

Table of Contents

The risk-free curve at which best estimate liability cash flows are discounted is based on market swap rates (with the exception of Vietnam, India and Poland where no liquid swap market exists and government bond yields are therefore used), with a deduction of between 10 and 35 basis points (depending on country) to allow for a credit risk adjustment to swap rates. This treatment reflects the likely outcome under Solvency II. In addition, an estimated matching adjustment is added to the liability discount rate for UK annuities, in both the base balance sheet and in the stressed conditions underlying the Economic Capital Requirement.

The matching adjustment is set equal to the yield on the backing-assets in each portfolio, less deductions for credit risk, cashflow mismatch allowances and haircuts for assets assumed to be ineligible for the matching adjustment (currently around 10 per cent of shareholder-backed annuity assets). Full allowance has been made for diversification benefits between the matching adjustment portfolio and other funds, reflecting an economic treatment. These assumed deductions from the portfolio yield are summarised in the table below. However, the final Solvency II matching adjustment outcome remains subject to considerable uncertainties and may vary significantly from these assumptions.

	Base	200 stress	undiversified bps
Credit allowances deducted from asset yields			
UK shareholder-backed annuities	71		172

Aside from UK annuities, no matching adjustment allowance or any other form of liquidity premium has been assumed for any other lines of business.

Other business developments

On 5 February 2015 Prudential announced the completion of the sale of its closed book business in Japan. The contribution of Japan to the Group surplus has been set equal to the held for sale accounting value of £49 million. On 10 November 2014, Prudential announced an agreement to sell its 25 per cent equity stake in the PruHealth and PruProtect businesses for £155 million, which is allowed for in these results. On 1 July 2014 Prudential renewed its distribution agreement with Standard Chartered Bank to 2029. The amount of these distribution fees is allowed for in these economic capital results and has had a negative impact on the Group solvency ratio of -10 percentage points. The impact of the domestication of the Hong Kong branch, which became effective on 1 January 2014, is also allowed for and is estimated to have had a negative impact on the Group solvency ratio of -4 percentage points, mainly due to a loss of diversification in the risk margin following separation of the Hong Kong business into a subsidiary.

Analysis of movement in the economic capital surplus

The table below shows the movement during the financial year in the Group's economic capital surplus.

Analysis of movement in economic capital surplus¹ from 1 January to 31 December

(£ billion)	2014	2013
Economic capital surplus as at 1 January	11.3	8.8
Operating experience	1.8	2.1
Non-operating experience (including market movements)	(0.9)	0.9
Other capital movements		
Disposals	0.1	(0.1)

Corporate restructuring	(0.3)	-
Distribution deals	(0.8)	(0.4)
Subordinated debt issuance / (redemption)	(0.4)	1.1
Foreign currency translation impacts	0.1	(0.4)
Dividends	(0.9)	(0.8)
Model changes	(0.3)	0.1
Economic capital surplus as at 31 December	9.7	11.3

¹ Based on outputs from the Group's Solvency II internal model which has not been reviewed or approved by the Prudential Regulation Authority.

Table of Contents

During 2014 the movement in the Group economic surplus is driven by:

Operating experience: generated by in-force business, new business written in 2014, the impact of non-market assumption changes and non-market experience variances over the year. The 2013 operating experience result additionally benefited from specific de-risking actions which were not repeated given the Group's overall economic capital strength;

Non-operating experience: mainly arising from negative market experience during 2014, principally caused by the reduction in long-term interest rates in the UK;

Other capital movements: a reduction in surplus from the repayment of subordinated debt, renewal of the bancassurance partnership agreement with Standard Chartered Bank, the negative capital effect of the domestication of the Hong Kong branch, an increase in surplus from the sale of the PruHealth and PruProtect businesses, positive foreign currency translation effects, and a reduction in surplus due to dividend payments in 2014; and

Model changes: a negative impact to Group surplus for the estimated impact of evolving the liability discount rate for UK shareholder-backed annuity business from one based on a liquidity premium to one based on the matching adjustment, and other internal model refinements.

Analysis of Group Economic Capital Requirements

The table below shows the split of the Group Economic Capital Requirement by risk type¹.

	31 December 2014		31 December 2013	
	% of undiversified Economic Capital Requirement ²	% of diversified Economic Capital Requirement ²	% of undiversified Economic Capital Requirement ²	% of diversified Economic Capital Requirement ²
Market	57%	66%	53%	64%
Equity	15%	21%	15%	24%
Credit	26%	39%	20%	37%
Yields (interest rates)	12%	4%	13%	0%
Other	4%	2%	5%	3%
Insurance	33%	27%	36%	28%
Mortality/morbidity	6%	3%	8%	4%
Lapse	16%	19%	19%	21%
Longevity	11%	5%	9%	3%
Operational/expense	10%	7%	11%	8%

¹ The Group Economic Capital Requirement by risk type includes capital requirements in respect of Jackson's risk exposures, based on 250 per cent of the US RBC Company Action Level.

² Based on outputs from the Group's Solvency II internal model which has not been reviewed or approved by the Prudential Regulation Authority.

The Group's most material risk exposures are to financial markets, in particular to equities and credit, which we hold to generate a higher return on capital and a higher return for our policyholders over the long-term. The Group also has material insurance risk exposures including longevity risk from UK annuities, lapse risk across a wide range of products, and mortality and morbidity risk mainly arising from protection products written in Asia. These risks diversify strongly with market risks, even after allowing for market-related policyholder behaviour, thereby increasing

the return on capital which can be earned from the balanced mix of risks. A brief description of the most material risks is set out below:

The Group's exposure to equities mainly arises from UK shareholder transfers linked to policyholder funds (partially offset by economic equity hedges) and from future fund management charges on unit linked funds in Asia. The equity exposure arising from Jackson's variable annuity business is mostly hedged;

The Group also has significant exposure to credit risk, mainly from the UK annuity portfolio and from Jackson's fixed annuity credit portfolio. Credit exposures across the Group are carefully monitored and managed as part of the Group's risk management framework;

The Group is exposed to movements in yields (interest rates); while falling interest rates increase the risks arising from policyholder guarantees in with-profits funds and variable annuities, falling interest rates also increase the value of future insurance profits;

The most material insurance risk exposures arise from UK longevity risk, and lapse, mortality and morbidity risk in Asia; and

The Group is also exposed to expense and operational risk, which is closely monitored and managed through internal control processes.

Table of Contents**Reconciliation of IFRS equity to economic available capital**

To aid understanding, the amount representing the Group's available capital under the economic capital basis is reconciled to the Group's IFRS shareholders' equity in the table below:

Reconciliation of IFRS equity to economic available capital

£ billion¹	2014	2013
IFRS shareholders' equity at 31 December	11.8	9.7
Adjustment to restate US insurance entities onto a US Risk Based Capital basis	(1.1)	(0.6)
Remove DAC, goodwill & intangibles	(3.5)	(2.7)
Add subordinated-debt treated as economic available capital	3.7	3.8
Impact of risk margin	(4.7)	(3.5)
Add value of shareholder-transfers	4.0	4.1
Other liability valuation differences	9.0	9.3
Increase in value of net deferred tax liabilities (resulting from valuation differences above)	(0.9)	(1.3)
Other	(0.4)	(0.3)
Economic available capital at 31 December	17.9	18.5

¹ Based on outputs from the Group's Solvency II internal model which has not been reviewed or approved by the Prudential Regulation Authority.

The key items of reconciliation are:

£1.1 billion (2013: £0.6 billion) represents the adjustment required to the Group's shareholders' funds in order to convert Jackson's contribution from an IFRS basis to the local statutory valuation basis which underpins the US Risk Based Capital regime;

£3.5 billion (2013: £2.7 billion) due to the removal of DAC, goodwill and intangibles from the IFRS balance sheet;

£3.7 billion (2013: £3.8 billion) due to the addition of subordinated debt which is treated as available capital on an economic basis but as a liability under IFRS;

£4.7 billion (2013: £3.5 billion) due to the inclusion of a risk margin which is not required under IFRS;

£4.0 billion (2013: £4.1 billion) due to the inclusion of the value of future shareholder transfers from with-profits business on the economic balance sheet in the UK and Asia, which is excluded from the determination of the Group's IFRS shareholders' funds;

£9.0 billion (2013: £9.3 billion) due to differences in insurance valuation requirements between economic capital and IFRS, with available capital partially capturing the economic value of in-force business which is excluded from IFRS; and

£0.9 billion (2013: £1.3 billion) due to the impact on the valuation of deferred tax assets and liabilities resulting from the other valuation differences noted above.

Sensitivity analysis

Stress testing this economic capital position gives the following results as at 31 December 2014:

An instantaneous 20 per cent fall in equity markets would reduce surplus by £0.6 billion and reduce the economic solvency ratio to 214 per cent;

An instantaneous 40 per cent fall in equity markets would reduce surplus by £2.2 billion and reduce the economic solvency ratio to 195 per cent;

A 50 basis points reduction in interest rates (subject to a floor of zero) would reduce surplus by £1.4 billion and reduce the economic solvency ratio to 195 per cent;

A 100 basis points increase in interest rates would increase surplus by £1.8 billion and increase the economic solvency ratio to 254 per cent; and

A 100 basis points increase in credit spreads with 15 per cent downgrades in the UK annuity portfolio⁽²⁸⁾ would reduce surplus by £2.1 billion and reduce the economic solvency ratio to 190 per cent.

⁽²⁸⁾ For UK annuity business, the matching adjustment is intended to significantly reduce the sensitivity of surplus to credit spreads. The UK annuity credit sensitivity is therefore applied as 15 per cent of the portfolio downgrading, combined with a credit spread stress of 88 basis points (which in total is commensurate with a 100 basis point credit spread stress). For Jackson, a 10x increase in expected defaults is applied in line with IGD sensitivities since credit spreads do not directly affect the US RBC result.

Table of Contents

These sensitivity results are shown before the impact of potential management actions to de-risk the exposures of shareholder funds. Even before such management actions are allowed for, the results demonstrate the resilience of the economic capital position following large falls in equity markets, sizeable reductions in yields (relative to very low starting yields) and a severe credit event.

The adverse impact of falling equity markets mainly results from a reduction in the value of with-profits shareholder transfers and future fund management charges in the UK and Asia. Equity hedging reduces the impact of these exposures and a dynamic equity hedging programme is also in place to manage the equity risk arising in Jackson's variable annuities business.

The adverse impact of a fall in yields largely arises from a decrease in the value of future with-profits shareholder transfers and an increase in the size of risk margins. Falling yields also increases the value of the Group's external debt, reducing the Group surplus. However, these impacts are partially offset by an increase in the value of future insurance profits and changes in the value of hedging assets.

An increase in defaults and downgrades adversely impacts on the UK annuity credit book although the business is much less sensitive to credit spreads under the matching adjustment framework. Jackson is not exposed to credit spread widening on a US RBC basis but an increase in defaults in the Jackson credit book would have a negative impact on the Group capital position and is reflected in the credit stress test above.

Liquidity and Capital Resources

Prudential Capital operates a central treasury function for Prudential, which has overall responsibility for managing Prudential's capital funding program as well as its central cash and liquidity positions. Prudential arranges the financing of each of its subsidiaries primarily by raising external finance either at the parent company level (including through finance subsidiaries whose obligations the parent company guarantees) or at the operating company level.

After making enquiries the directors of Prudential have a reasonable expectation that the Company and the Group have adequate resources to continue their operations for the foreseeable future.

Overview

We continue to operate with a strong solvency position, while maintaining high levels of liquidity and capital generation. At 31 December 2014 our Insurance Groups Directive surplus is estimated at £4.7 billion before deducting the 2014 final dividend, equivalent to a solvency cover of 2.4 times.

All of our subsidiaries continue to hold strong capital positions on a local regulatory basis. Jackson's Risk-Based Capital ratio at the end of 2014 was 456 per cent, having remitted £415 million to Group earlier in the year, which underlines our disciplined approach to managing the balance between volume, value, risk and cash in this business. We experienced no default losses and reported modest levels of impairments across our fixed income securities portfolios. Notwithstanding, we have retained our cautious stance on credit risk and have maintained our £2.2 billion credit default reserves in our UK annuity operations. Further information on our capital and solvency position is provided in the Group Chief Risk Officer's report.

Solvency II is scheduled to come into effect on 1 January 2016. Along with the full year 2013 results, we published for the first time the Group's end-2013 economic capital position. At 31 December 2014, our economic capital⁽⁴⁹⁾

surplus was £9.7 billion (2013: £11.3 billion), which is equivalent to an economic capital ratio of 218 per cent (2013: ratio of 257 per cent).

(29) The methodology and assumptions used in calculating the economic capital results are set out in the Other results based information Development of Economic Capital section above. The economic capital ratio is based on outputs from the Group's Solvency II internal model which will be subject to Prudential Regulation Authority review and approval before its formal adoption in 2016. We remain on track to submit our Solvency II internal model to the Prudential Regulation Authority for approval in 2015 but given the degree of uncertainty remaining these economic capital disclosures should not be interpreted as outputs from an approved internal model.

Table of Contents

The methodology underpinning this measure is highly sensitive to market movements. Economic capital generated from new and in-force business of £1.8 billion, was offset by the negative market effects of £0.9 billion, reflecting the sharp decline in UK interest rates and by the payment of £0.9 billion of dividends to shareholders. Corporate actions during 2014 comprising new distribution agreements, debt repayment, domestication of the Hong Kong branch, impact of disposals and foreign exchange utilised a combined £1.3 billion of economic capital. Model refinements accounted for the remaining year-on-year movement.

These results are based on outputs from our Solvency II internal model, which has not yet been approved by the Prudential Regulation Authority. The results assume US equivalence, place no restrictions on the economic value of overseas surplus, and incorporate a number of other working assumptions. Certain aspects of the methodology and assumptions underpinning these results will differ from those which are applied in obtaining final Solvency II internal model approval. The eventual Solvency II Pillar I ratio therefore, remains uncertain and is expected to be lower than our economic capital ratio.

In 2013, Prudential plc was designated by the Financial Stability Board (FSB) as a global systematically important insurer (G-SII). At the same time, the International Association of Insurance Supervisors (IAIS) announced details of its assessment methodology and proposed policy measures for G-SIIs, covering enhanced supervision, effective resolution and higher loss absorption capacity. We continue to monitor these developments.

Group and holding company cash flow

Prudential's consolidated cash flow includes the movement in cash included within both policyholders' and shareholders' funds, such as cash in the with-profits fund. Prudential therefore believes that it is more relevant to consider individual components of the movement in holding company cash flow which relate solely to the shareholders.

Prudential continues to manage cash flows across the Group with a view to achieving a balance between ensuring sufficient net remittances from the businesses to cover the progressive dividend (after corporate costs) and maximising value for shareholders through the retention of the free surplus generated at business unit level, so that it can be reinvested in the profitable opportunities available to the Group. On this basis, the holding company cash flow statement at an operating level should ordinarily balance close to zero before exceptional cash flows, but from time to time additional remittances from business operations will be made to provide the Group with greater financial flexibility at the corporate centre.

Operating holding company cash flow for 2014 before the shareholder dividend was £1,129 million, £103 million higher than 2013. After deducting the shareholder dividend the operating holding company cash flow was £234 million (2013: £245 million).

Cash remittances to the Group from business units

Cash remitted by the business units to the corporate centre in 2014 increased by 11 per cent to £1,482 million with significant contributions from each of our four major business units. The higher overall total in 2014 has been driven by growth in the remittance from the US to a record £415 million (2013: £294 million), reflecting both the strong capital generation of Jackson's life business in the period and its effective approach to risk management. Notwithstanding the depreciation of many Asian currencies against sterling, net remittances from these operations proved resilient at £400 million. As announced earlier in the year, regulatory developments in the UK require us to

increase the level of investment in new business and upgrading our UK pre and post-retirement customer proposition, and this will temper remittances in the short term from our UK life business. M&G increased its remittance to £285 million, reflecting underlying earnings growth.

Net central outflows and other movements

Net central outflows increased to £353 million in 2014 (2013: £315 million), with higher corporate costs and higher net interest payments offset by lower Solvency II costs and higher tax receipts.

After central costs, there was a net cash inflow before dividend of £1,129 million in 2014, compared to £1,026 million in 2013. Dividend payments in 2014 were £895 million, up 15 per cent from £781 million in 2013 following the decision to rebase the full year dividend upwards by 4 pence in 2012.

Table of Contents

Cash remitted to the Group in 2014 was used to meet central costs of £353 million (2013: £315 million), pay dividends of £895 million (2013: £781 million) and repay £445 million (US\$750 million) of 11.75 per cent perpetual subordinated debt. In addition, £503 million (US\$850 million) of central cash was used to finance the initial upfront payment for the renewal of the distribution agreement with Standard Chartered Bank. Reflecting these movements in the year, total holding company cash at the end of 2014 was £1,480 million compared to £2,230 million at the end of 2013.

Dividend payments

The total cost of dividends settled by Prudential were £895 million and £781 million for the years ended 31 December 2014 and 2013, respectively.

The Board has decided to rebase the full year dividend upwards by 10 per cent, reflecting the 2014 financial performance of the Group. In line with this, the directors recommend a final dividend of 25.74 pence per share (2013: 23.84 pence), which brings the total dividend for the year to 36.93 pence (2013: 33.57 pence). This rebase has been made possible by the continued exceptionally strong performance of the Group.

Although the Board has been able to recommend such a rebase in 2014, the Group's dividend policy remains unchanged. The Board will maintain its focus on delivering a growing dividend from this new higher base, which will continue to be determined after taking into account the Group's financial flexibility and our assessment of opportunities to generate attractive returns by investing in specific areas of the business. The Board believes that in the medium term a dividend cover of around two times is appropriate.

Debt service costs

Debt service costs charged to profit in respect of core borrowings paid by Prudential in 2014 were £341 million compared with £305 million in 2013. Of total consolidated borrowings of £4,304 million as at 31 December 2014, the parent company had core borrowings of £3,869 million outstanding, all of which have contractual maturity dates of more than five years.

Liquidity sources

The parent company held cash and short-term investments of £1,480 million, £2,230 million and £1,380 million as at 31 December 2014, 2013 and 2012, respectively. The sources of cash in 2014 included dividends, loans and interest received from operating subsidiaries. Prudential received £1,595 million in cash remittances from business units in 2014, compared to £1,451 million received in 2013 and £1,414 million received in 2012. These remittances primarily comprise dividends from business units and the shareholders' statutory transfer from the PAC long-term with-profits fund (UK Life Fund) relating to earlier bonus declarations. Offset against these cash remittances were £113 million, £110 million and £214 million of capital invested in 2014, 2013 and 2012 respectively. Overall net remittances from business units had increased from £1,341 million in 2013 to £1,482 million in 2014.

Shareholders' statutory transfer

In 2014, PAC declared a total surplus of £2,012 million from PAC's primary with-profits sub-fund, of which £1,812 million was added to with-profits policies and £200 million was distributed to shareholders. In 2013, PAC declared a total surplus of £2,134 million from PAC's primary with-profits sub-fund, of which £1,922 million was added to with-profits policies and £212 million was distributed to shareholders. In 2012, PAC declared a total surplus of £2,210 million from PAC's primary with-profits sub-fund, of which £1,990 million was added to with-profits

policies and £220 million was distributed to shareholders.

Dividends, loans and interest received from subsidiaries

Under UK company law, dividends can only be paid if a company has distributable reserves sufficient to cover the dividend. In PAC, Prudential's largest operating subsidiary, distributable reserves are created mainly by the statutory long-term business profit transfer to shareholders that occurs upon the declaration of bonuses to policyholders of with-profit products. See Shareholders' statutory transfer above. Prudential's insurance and fund management subsidiaries' ability to pay dividends and loans to the parent company is restricted by various laws and regulations. Jackson is subject to state laws that limit the dividends payable to its parent company. Dividends

Table of Contents

in excess of these limitations generally require approval of the state insurance commissioner. The table below shows the dividends, loans and other amounts received by Prudential from the principal operating subsidiaries for 2014 and 2013:

	Dividends, loan and	
	interest received in:	
	2014 £m	2013 £m
Asia operations	513	510
US operations	415	294
UK Insurance operations (mainly PAC)	325	355
M&G (including Prudential Capital)	342	292
Total	1,595	1,451

Each of Prudential's main operations generates sufficient profits to pay dividends to the parent. The amount of dividends paid by the operations is determined after considering the development, growth and investment requirements of the operating businesses. Prudential does not believe that the legal and regulatory restrictions constitute a material limitation on the ability of businesses to meet their obligations or pay dividends to Prudential.

Corporate Transactions**Bancassurance partnership with Standard Chartered PLC**

On 12 March 2014 the Group announced that it had entered into an agreement expanding the term and geographic scope of its strategic pan-Asian bancassurance partnership with Standard Chartered PLC. Under the new 15-year agreement, which commenced on 1 July 2014, a wide range of Prudential life insurance products are exclusively distributed through Standard Chartered branches in nine markets – Hong Kong, Singapore, Indonesia, Thailand, Malaysia, the Philippines, Vietnam, India and Taiwan – subject to applicable regulations in each country. In China and South Korea, Standard Chartered Bank will distribute Prudential's life insurance products on a preferred basis. Prudential and Standard Chartered Bank have also agreed to explore additional opportunities to collaborate in due course elsewhere in Asia and in Africa, subject to existing exclusivity arrangements and regulatory restrictions.

As part of this transaction Prudential agreed to pay Standard Chartered Bank an initial fee of US\$1.25 billion which is not dependent on future sales volumes. Of this total, US\$850 million was settled in the first half of 2014. The remainder will be paid in two equal instalments of US\$200 million each in April 2015 and April 2016.

Sale of PruHealth and PruProtect

On 10 November 2014, Prudential Assurance Company Limited completed the sale of its 25 per cent equity stake in the PruHealth and PruProtect businesses to Discovery Group Europe Limited for £155 million in cash. This resulted in an IFRS profit of £86 million, which has been included in non-operating items.

Domestication of Hong Kong Branch

On 1 January 2014, the Group completed the process of domestication of the Hong Kong branch of The Prudential Assurance Company Limited. The branch was transferred on 1 January 2014 to two new Hong Kong incorporated Prudential companies, one providing life insurance and the other providing general insurance – Prudential Hong Kong

Limited and Prudential General Insurance Hong Kong Limited. On the Prudential Regulation Authority's pillar 1 peak 2 basis £12.1 billion of assets, £12.0 billion of liabilities, net of reinsurers' share (including policyholder asset share liabilities and £1.2 billion of inherited estate) and £0.1 billion of shareholders' funds (for the excess assets of the transferred non-participating business) were transferred.

Disposal of Japan life business

In February 2015 the Group completed the disposal of its closed book life insurance business in Japan, PCA Life Insurance Company Limited (PCA Life Japan) to SBI Holding for US\$85 million cash consideration, of which US\$17 million is deferred and is dependent upon the future performance of PCA Life Japan.

Entrance into Ghana and Kenya Life insurance markets

In April 2014 we completed the acquisition of Express Life of Ghana, and in September 2014 we entered the Kenyan life insurance market via our acquisition of Shield Assurance Company Limited.

Table of Contents**Shareholders' net borrowings**

	31 December	
	2014 £m	2013 £m
Shareholders' borrowings in holding company	3,869	4,211
Prudential Capital	275	275
Jackson surplus notes	160	150
Total	4,304	4,636
Less: Holding company cash and short-term investments	(1,480)	(2,230)
Net core structural borrowings of shareholder-financed operations	2,824	2,406

Our financing and liquidity position remained strong throughout the period. Our central cash resources amounted to £1.5 billion at 31 December 2014, compared with £2.2 billion at the end of 2013, and we currently retain a further £2.6 billion of untapped committed liquidity facilities.

On an IFRS basis the Group's core structural borrowings at 31 December 2014 were £4,304 million (31 December 2013: £4,636 million on an actual exchange rate basis) and comprised £3,869 million (31 December 2013: £4,211 million on an actual exchange rate basis) of debt held by the holding company, and £435 million (31 December 2013: £425 million on an actual exchange rate basis) of debt held by the Group's subsidiaries, Prudential Capital and Jackson. The Group redeemed US\$750 million of 11.75 per cent perpetual subordinated capital securities during the year.

In addition to its net core structural borrowings of shareholder-financed operations set out above, the Group also has access to funding via the money markets and has in place an unlimited global commercial paper programme. As at 31 December 2014, we had issued commercial paper under this programme totalling £236 million, US\$2,305 million, 75 million and AU\$10 million to finance non-core borrowings.

Prudential's holding company currently has access to £2.6 billion of syndicated and bilateral committed revolving credit facilities, provided by 19 major international banks, expiring in 2018 and 2019. Apart from small drawdowns to test the process, these facilities have never been drawn, and there were no amounts outstanding at 31 December 2014. The medium-term note programme, the SEC registered US shelf programme, the commercial paper programme and the committed revolving credit facilities are all available for general corporate purposes and to support the liquidity needs of Prudential's holding company and are intended to maintain a strong and flexible funding capacity.

Prudential manages the Group's core debt within a target level consistent with its current debt ratings. At 31 December 2014, the gearing ratio (debt, net of cash and short-term investments, as a proportion of IFRS shareholders' funds plus net debt) was 19 per cent, compared to 20 per cent at 31 December 2013. Prudential plc has strong debt ratings from Standard & Poor's, Moody's and Fitch. Prudential plc's long-term senior debt is rated A+, A2 and A from Standard & Poor's, Moody's and Fitch, while short-term ratings are A-1, P-1 and F1 respectively.

The financial strength of PAC is rated AA by Standard & Poor's, Aa2 by Moody's and AA by Fitch.

Jackson National Life Insurance Company's financial strength is rated AA by Standard & Poor's, A1 by Moody's and AA by Fitch.

Prudential Assurance Co. Singapore (Pte) Ltd.'s (Prudential Singapore) financial strength is rated AA by Standard & Poor's.

All ratings on Prudential and its subsidiaries are on stable outlook except for the Aa2 rating of the financial strength of PAC by Moody's which is on negative outlook.

Liquidity resources and requirements by operating business

UK life insurance

The liquidity sources for Prudential's UK life insurance businesses comprise premiums, deposits and charges on policies, investment income, proceeds from the sale and maturity of investments, external borrowings and capital contributions from the parent company. The liquidity requirements comprise benefits and claims, operating expenses, interest on debt, purchases of investments and dividends to the parent company.

Table of Contents

The liquidity requirements of Prudential's UK life insurance businesses are regularly monitored to match anticipated cash inflows with cash requirements. Cash needs are forecast and projected sources and uses of funds, as well as the asset, liability, investment and cash flow assumptions underlying these projections are reviewed periodically. Adjustments are made periodically to the investment policies with respect to, among other things, the maturity and risk characteristics of the investment assets to reflect changes in the business' cash needs and also to reflect the changing competitive and economic environment.

The liquidity of Prudential's UK insurance operations is affected by the payment of guaranteed benefits and terminal bonuses on maturing and surrendering policies by the UK insurance operations. In addition, the non-cash bonus declaration to policyholders results in a cash transfer to shareholders' funds. A large proportion of Prudential's liabilities contains discretionary surrender values or surrender charges. In addition, pension annuity policies cannot be surrendered by the policyholder.

As at 31 December 2014, 2013 and 2012, PAC's long-term fund assets in excess of its minimum capital requirements were £21,564 million, £20,956 million and £17,936 million, respectively. The with-profits insurance capital component of the enhanced capital requirement, as at 31 December 2014, 2013 and 2012 amounted to £10,998 million, £9,674 million and £9,249 million respectively.

M&G

The principal liquidity source for M&G is fee income for managing retail, institutional and the internal investment funds of Prudential's UK operations. The principal liquidity requirements are for operating expenses. Amounts are distributed to the parent company after considering capital requirements. Capital requirements are driven by fixed operating expenses, funds under management and various risks faced by the company. As at 31 December 2014, M&G met the relevant regulatory requirements.

US life insurance

The liquidity sources for Jackson are its cash, short-term investments and publicly traded bonds, premium income deposits received on certain annuity and institutional products, investment income, repurchase agreements, utilisation of a short-term borrowing facility with the Federal Home Loan Bank of Indianapolis and capital contributions from the parent company.

Liquidity requirements are principally for purchases of new investments and businesses, repayment of principal and interest on debt, payments of interest on surplus notes, funding of insurance product liabilities including payments for policy benefits, surrenders, maturities and new policy loans, and funding of expenses including payment of commissions operating expenses and taxes. As at 31 December 2014, Jackson's outstanding notes and bank debt included:

US\$29 million of collateralised loans maturing through 2016,

US\$50 million of bank loans collateralised by mortgage-related securities and mortgage loans from the Federal Home Loan Bank of Indianapolis,

US\$249 million of surplus notes maturing in 2027.

Significant increases in interest rates and disintermediation can create sudden increases in surrender and withdrawal requests by policyholders and contract holders. Other factors that are not directly related to interest rates can also give rise to disintermediation risk, including but not limited to changes in ratings from rating agencies, general policyholder concerns relating to the life insurance industry (eg the unexpected default of a large, unrelated life insurer) and competition from other products, including non-insurance products such as mutual funds, certificates of deposit and newly developed investment products. Most of the life insurance, annuity and institutional products Jackson offers permit the policyholder or contract holder to withdraw or borrow funds or surrender cash values. At 31 December 2014, a majority of Jackson's fixed annuity reserves include policy restrictions such as surrender charges and market value adjustments to discourage early withdrawal of policy and contract funds.

Table of Contents

Jackson uses a variety of asset-liability management techniques to provide for the orderly provision of cash flow from investments and other sources as policies and contracts mature in accordance with their normal terms. Jackson's principal sources of liquidity to meet unexpected cash outflows associated with sudden and severe increases in surrenders and withdrawals are its portfolio of liquid assets and its net operating cash flows. As at 31 December 2014, the portfolio of cash, short-term investments and publicly traded bonds and equities amounted to US\$45.9 billion. Operating net cash inflows for Jackson in 2014 were US\$3.2 billion.

As at 31 December 2014, the statutory capital and surplus of Jackson was US\$4.5 billion, which was in excess of the requirements set out under Michigan insurance law. Jackson is also subject to risk-based capital guidelines that provide a method to measure the adjusted capital that a life insurance company should have for regulatory purposes, taking into account the risk characteristics of Jackson's investments and products. As at 31 December 2014, Jackson's total risk based capital ratio under the National Association of Insurance Commissioners' definition exceeded the Michigan standards.

Asia life insurance

The liquidity sources for Prudential's Asia life insurance businesses comprise premiums, deposits and charges on policies, investment income, proceeds from the sale and maturity of investments, external borrowings and capital contributions from the parent company. The liquidity requirements comprise benefits and claims, operating expenses, interest on debt, purchases of investments and dividends to the parent company.

The liquidity requirements of Prudential's Asia life insurance businesses are regularly monitored to match anticipated cash inflows with cash requirements. Cash needs are forecast and projected sources and uses of funds, as well as the asset, liability, investment and cash flow assumptions underlying these projections are reviewed periodically. Adjustments are made periodically to the investment policies with respect to, among other things, the maturity and risk characteristics of the investment assets to reflect changes in the business cash needs and also to reflect the changing competitive and economic environment.

Derivative financial instruments and commitments

Derivatives

The Group enters into a variety of exchange traded and over-the-counter derivative financial instruments, including futures, options, forward currency contracts and swaps such as interest rate swaps, cross-currency swaps, swaptions and credit default swaps.

All over-the-counter derivative transactions, with the exception of some Asia transactions, are conducted under standardised ISDA (International Swaps and Derivatives Association Inc) master agreements and the Group has collateral agreements between the individual Group entities and relevant counterparties in place under each of these market master agreements.

The derivatives are used for efficient portfolio management to obtain cost effective and efficient management of exposure to various markets in accordance with the Group's investment strategies and to manage exposure to interest rate, currency, credit and other business risks. The Group also uses interest rate derivatives to reduce exposure to interest rate volatility. In particular:

UK with-profits funds use derivatives for efficient portfolio management or reduction in investment risks. For UK annuity business derivatives are used to assist with asset and liability cash flow matching.

US operations and some of the UK operations hold large amounts of interest-rate sensitive investments that contain credit risks on which a certain level of defaults is expected. These businesses have purchased some swaptions to manage the default risk on certain underlying assets and hence reduce the amount of regulatory capital held to support the assets.

Some products, especially in the US, have guarantee features linked to equity indexes. A mismatch between guaranteed product liabilities and the performance of the underlying assets, exposes the Group to equity index risk.

In order to mitigate this risk, the relevant business units purchase swaptions, equity options and futures to better match asset performance with liabilities under equity-indexed products.

Table of Contents

The US operations and some of the UK operations hold large amounts of interest-rate sensitive investments that contain credit risks on which a certain level of defaults is expected. These entities have purchased swaptions in order to manage the default risk on certain underlying assets and hence reduce the amount of regulatory capital held to support the assets.

The principal types of derivatives used by Jackson and their purpose are as follows:

Derivative	Purpose
Interest rate swaps	These generally involve the exchange of fixed and floating payments over the period for which Jackson holds the instrument without an exchange of the underlying principal amount. These agreements are used for hedging purposes.
Put-swaption contracts	These contracts provide the purchaser with the right, but not the obligation, to require the writer to pay the present value of a long-duration interest rate swap at future exercise dates. Jackson purchases and writes put-swaptions with maturities up to 5 years. Put-swaptions hedge against significant movements in interest rates.
Equity index futures contracts and equity index options	These derivatives (including various call and put options and interest rate contingent options) are used to hedge Jackson's obligations associated with its issuance of fixed index deferred annuities and certain VA guarantees. Some of these annuities and guarantees contain embedded options which are fair valued for financial reporting purposes.
Total return swaps	Total return swaps in which Jackson receives equity returns or returns based on reference pools of assets in exchange for short-term floating rate payments based on notional amounts, are held for both hedging and investment purposes.
Cross-currency swaps	Cross-currency swaps, which embody spot and forward currency swaps and additionally, in some cases, interest rate swaps and equity index swaps, are entered into for the purpose of hedging Jackson's foreign currency denominated funding agreements supporting trust instrument obligations.
Credit default swaps	These swaps, represent agreements under which Jackson has purchased default protection on certain underlying corporate bonds held in its portfolio. These contracts allow Jackson to sell the protected bonds at par value to the counterparty if a default event occurs in exchange for periodic payments made by Jackson for the life of the agreement. Jackson does not write default protection using credit derivatives.

The Group has provided, from time to time, certain guarantees and commitments to third-parties including funding the purchase or development of land and buildings and other related matters. The contractual obligations to purchase or develop investment properties at 31 December 2014 were £232 million.

At 31 December 2014, Jackson has unfunded commitments of £332 million related to its investments in limited partnerships and £73 million related to commercial mortgage loans. These commitments were entered into in the normal course of business and the Company does not expect a material adverse impact on the operations to arise from them.

Contractual obligations

Contractual obligations with specified payment dates as at 31 December 2014 were as follows:

	Total	Less than 1 year	1-3 years £m	3-5 years	More than 5 years
Policyholder liabilities ⁽ⁱ⁾	485,555	29,451	56,639	55,322	344,143
Long-term debt ⁽ⁱⁱ⁾	4,304		275		4,029
Other borrowings ⁽ⁱⁱ⁾	3,256	2,272	125	170	689

Derivative liabilities	2,323	
Other liabilities	4,105	15,371
Other items		994
Total liabilities per consolidated statement of financial position		357,392

Notes

- (i) Amounts shown in respect of policyholder liabilities represent estimated undiscounted cash flows for Prudential's life assurance contracts. In determining the projected payments, account has been taken of the contract features, in particular that the amount and timing of policyholder benefit payments reflect either surrender, death, or contract maturity. In addition, the undiscounted amounts shown include the expected payments based on assumed future investment returns on assets backing policyholder liabilities. The projected cash flows exclude the unallocated surplus of with-profits funds. As at 31 December 2014, on the IFRS basis of reporting, the unallocated surplus was £12,450 million. The unallocated surplus represents the excess of assets over liabilities, including policyholder asset share liabilities, which reflect the amount payable under the realistic Peak 2 reporting regime of the PRA. Although accounted for as a liability, as permitted by IFRS 4, there is currently no expected payment date for the unallocated surplus.
- (ii) The amounts represent the contractual maturity of amounts of borrowings included in the consolidated statement of financial position (i.e. excludes future interest payments) as shown in note C6.2 to Prudential's consolidated financial statements in Item 18. Long-term debt comprises the core structural borrowings of shareholder-financed operations and the £100 million 8.5 per cent undated subordinated guaranteed bonds of Scottish Amicable Finance plc. Other borrowings comprise operational borrowings attributable to shareholder-financed operations and borrowings attributable to with-profits operations but excluding the £100 million 8.5 per cent undated subordinated guaranteed bonds of Scottish Amicable Finance plc.
- (iii) Comprising unfunded commitments for investments in limited partnerships of £332 million (2013: £298 million) and unfunded commitments related to mortgage loans of £73 million (2013: £132 million) and commitments to purchase or develop investment properties of £232 million (2013: £92 million).

(iv)

Amounts due in less than one year include amounts attributable to unit holders of consolidated unit trusts and similar funds of £7,357 million.

Group Consolidated Cash Flows

The discussion that follows is based on the consolidated statement of cash flows prepared under IFRS and presented in Item 18 of this Form 20-F.

Net cash outflows in 2014 were £383 million. This amount comprised inflows of £1,828 million from operating activities less outflows of £545 million from investing activities less outflows of £1,666 million from financing activities.

Net cash inflows in 2013 were £789 million. This amount comprised inflows of £1,324 million from operating activities less outflows of £584 million from investing activities plus inflows of £49 million from financing activities.

Net cash outflows in 2012 were £513 million. This amount comprised inflows of £705 million from operating activities less outflows of £326 million from investing activities less outflows of £892 million from financing activities.

The Group held cash and cash equivalents of £6,409 million at 31 December 2014 compared with £6,785 million and £6,126 million at 31 December 2013 and 2012, respectively.

Table of Contents**Item 6. Directors, Senior Management and Employees**

The Prudential Board consists of 16 directors as at 31 March 2015.

On 1 April 2014, Pierre-Olivier Bouée, Group Chief Risk Officer, was appointed as a Director. He replaced John Foley as Group Chief Risk Officer in August 2013 when the latter was appointed to the new role of Group Investment Director. John stepped down from the Board on 1 April 2014 and continues in his role as Group Investment Director. In October 2014, the Company announced that Lord Turnbull would not be standing for re-election at the 2015 AGM in May and that he would be succeeded as Chairman of the Remuneration Committee by Anthony Nightingale. On 10 March 2015, Prudential announced that Tidjane Thiam had informed the Board of his intention to step down from his role as Group Chief Executive and from the Board. Tidjane has agreed to join Credit Suisse as CEO. He will continue in his current role to present the first quarter Interim Management Statement and to attend his last Annual General Meeting as Group Chief Executive in May 2015.

Set forth below are the names, ages, positions, business experience and principal business activities performed by the current directors, as well as the dates of their initial appointment to the Prudential Board. This includes those directors joining the Board up until the date of filing. Ages are given as at 31 March 2015.

Board of Directors**Paul Manduca, 63**

Chairman

Paul was the Senior Independent Director prior to his appointment as Chairman. He was also a member of the Audit and Remuneration Committees from October 2010 to June 2012 and joined the Nomination Committee in January 2011.

Appointment: October 2010

Relevant Skills and Experience

Chairman: July 2012

Committees: Nomination
(Chair)

Paul retired as Chairman of JPM European Smaller Companies Investment Trust Plc in December 2012 and was the Chairman of Aon UK Limited until September 2012. He was also a non-executive director and Chairman of the Audit Committee of KazMunaiGas Exploration & Production until the end of September 2012. From September 2005 until March 2011, Paul was a non-executive director of Wm Morrison Supermarkets Plc. During his tenure, he was the Senior Independent Director, the first Audit Committee Chairman and Chair of the Remuneration Committee. Paul was the Senior Independent Director and Chairman of the Audit Committee of Development Securities plc until March 2010, Chairman of Bridgwell Group plc until 2007 and a director of Henderson Smaller Companies Investment Trust plc until 2006. Prior to that, he was European CEO of Deutsche Asset Management from 2002 to 2005, global CEO of Rothschild Asset Management from 1999 to 2002 and founding CEO of Threadneedle Asset Management Limited from 1994 to 1999 when he was also a director of Eagle Star and Allied Dunbar. Paul has also served as Chairman of the Association of Investment Companies from 1991 to 1993 and is a former member of the Takeover

Panel.

Current External Appointments

Paul is a member of the Securities Institute and Chairman of Henderson Diversified Income Limited.

Table of Contents

Tidjane Thiam, 52

Group Chief Executive

Tidjane was the Chief Financial Officer from March 2008 until his appointment as Group Chief Executive.

Relevant Skills and Experience

Appointment: March 2008

Group Chief Executive:
October 2009

Tidjane spent the first part of his professional career with McKinsey & Company in Paris and New York, serving insurance companies and banks. He then spent a number of years in Africa where he was Chief Executive and later Chairman of the National Bureau for Technical Studies and Development in Côte d'Ivoire and a cabinet member as Secretary of Planning and Development. Tidjane returned to France to become a partner with McKinsey & Company and one of the leaders of their Financial Institutions practice before joining Aviva in 2002. He worked at Aviva until 2008, holding successively the positions of Group Strategy and Development Director, Managing Director of Aviva International, Group Executive Director and Chief Executive Officer, Europe.

Current External Appointments

Tidjane is a member of the Board of the Association of British Insurers (ABI) and was Chairman from July 2012 to October 2014. He is a member of the Council of the Overseas Development Institute (ODI) in London, a member of the Africa Progress Panel chaired by Kofi Annan and a sponsor of Opportunity International. Tidjane is a member of the UK-ASEAN Business Council and of the Strategic Advisory Group on UK Trade and Investment. In January 2012, Tidjane was appointed to the Prime Minister's Business Advisory Group and has been a member of the European Financial Services Round Table (EFR) since January 2013. He was elected to the Board of Directors of 21st Century Fox, Inc. on 12 November 2014 where he serves as a non-executive director. Tidjane was awarded the Légion d'Honneur by the French President in July 2011 and the 2013 Grand Prix de l'Économie by the French newspaper Les Echos. In January 2014, Tidjane was appointed as a British Business Ambassador by invitation from the Prime Minister.

Executive directors

Nicolaos Nicandrou ACA, 49

Chief Financial Officer

Other Executive Officers

The heads of Prudential's business units, Prudential UK and Europe, M&G, Jackson National Life Insurance Company and Prudential Corporation Asia, are also directors of Prudential as set forth above. For information relating to the compensation paid or accrued to all Prudential directors see Item 6, Compensation.

Table of Contents**Compensation****Summary of Directors remuneration policy**

The Company's Directors Remuneration Policy was approved by shareholders at the 2014 AGM. This Policy came into effect following the AGM on 15 May 2014 and will apply for a period of three years unless shareholders approve a revised Policy within that time.

The pages that follow present a summary of the Remuneration Policy.

Remuneration for Executive Directors

Element	Operation	Opportunity
Fixed Pay Salary	<p>The Committee reviews salaries annually, considering factors such as:</p> <ul style="list-style-type: none"> Salary increases for all employees; The performance and experience of the executive; Group or business unit financial performance; Internal relativities; and Economic factors such as inflation 	<p>Annual salary increases for executive directors will normally be in line with the increases for other employees across our business units. However, there is no prescribed maximum annual increase.</p>
Benefits	<p>Market data is also reviewed so that salaries remain a competitive range relative to each executive director's local market.</p> <p>Executive directors are offered benefits which reflect their individual circumstances and are competitive within their local market, including:</p> <ul style="list-style-type: none"> Health and wellness benefits; Protection and security benefits; Transport benefits; Family and education benefits; All employee share plans and savings plans; and Relocation and expatriate benefits. 	<p>The maximum paid will be the cost to the Company of providing benefits. The cost of benefits may vary from year to year but the Committee is mindful of achieving the best value from providers.</p>
Provision for an income in retirement	<p>Current executives have the option to:</p> <ul style="list-style-type: none"> Receive payments into a defined contribution scheme, and/ or 	<p>Executive directors are entitled to receive pension contributions</p>

Take a cash supplement in lieu of contributions.

Jackson's Defined Contribution Retirement Plan has a guaranteed element (6 per cent of pensionable salary) and additional contributions (up to a further 6 per cent of pensionable salary) based on the profitability of JNL.

or a cash supplement (or combination of the two) up to a total of 25 per cent of base salary.

In addition, the Chief Executive, PCA receives statutory contributions into the Mandatory Provident Fund.

Variable pay

Annual bonus

Currently all executive directors participate in the Annual Incentive Plan (AIP).

AIP awards for all executive directors are subject to the achievement of financial and personal objectives. Business unit chief executives either have measures of their business unit's financial performance in the AIP or they may participate in a business unit specific bonus plan. For example, the President and CEO, JNL currently participates in the Jackson Senior Management Bonus Pool as well as in the AIP.

The financial measures used for the annual bonus will typically include profit, cash and capital adequacy. Jackson's profitability and other key financial measures determine the value of the Jackson Senior Management Bonus Pool.

In specific circumstances, the Committee also has the power to recover all (or part of) bonuses and share awards for a period after they are awarded to executives. These clawback powers apply to the cash and deferred elements of 2015 and subsequent bonuses and to long-term incentive awards made on or after 1 January 2015.

The Chief Executive, M&G has a bonus opportunity of the lower of six times salary or 0.75 per cent of M&G's IFRS profit. For other executive directors the maximum AIP opportunity is up to 200 per cent of salary. Annual awards are disclosed in the relevant Annual Report on Remuneration.

In addition to the AIP, the President & CEO, JNL receives a ten per cent share of the Jackson Senior Management Bonus Pool.

Table of Contents

Deferred bonus shares	<p>Executive directors are required to defer a percentage (currently 40 per cent) of their total annual bonus into Prudential shares for three years. The release of awards is not subject to any further performance conditions. The Committee has the authority to apply a malus adjustment to all, or a portion of, an outstanding deferred award in specific circumstances. From 2015 and future awards, the Committee also has the power to recover all, or a portion of, amounts already paid in specific circumstances and within a defined timeframe (clawback).</p>	<p>The maximum vesting under this arrangement is 100 per cent of the original deferral plus accrued dividend shares.</p>
Prudential Long Term Incentive Plan (PLTIP)	<p>Currently all executive directors participate in the Prudential Long Term Incentive Plan (PLTIP). The PLTIP has a three-year performance period. Vesting of outstanding awards is dependent on:</p> <p style="margin-left: 40px;">Relative TSR (50 per cent of award); and</p> <p style="margin-left: 40px;">Group IFRS profit (50 per cent of award); or</p> <p style="margin-left: 40px;">Business unit IFRS profit (50 per cent of award).</p> <p>The performance measures attached to each award are dependent on the role of the executive and will be disclosed in the relevant Annual Report on Remuneration. The Chief Executive, M&G's PLTIP awards are subject only to the TSR performance condition as the IFRS profit of M&G is a performance condition under the M&G Executive LTIP.</p> <p>The Committee has the authority to apply a malus adjustment to all, or a portion of, an outstanding award in specific circumstances. From 2015 and future awards, the Committee also has the power to recover all, or a portion of, amounts already paid in specific circumstances and within a defined timeframe (clawback).</p>	<p>The value of shares awarded under the PLTIP (in any given financial year) may not exceed 550 per cent of the executive's annual basic salary.</p> <p>Awards made in a particular year are usually significantly below this limit and are disclosed in the relevant Annual Report on Remuneration. The Committee would consult with major shareholders before increasing award levels during the life of this Policy.</p> <p>The maximum vesting under the PLTIP is 100 per cent of the original share award plus accrued dividend shares.</p>
M&G Executive LTIP	<p>The Chief Executive, M&G currently receives awards under this plan. He receives an annual award of phantom shares each with a notional starting share price of £1. The phantom share price at vesting is currently determined by M&G's profitability with profit and investment performance over the three year performance period. Awards are settled in cash.</p> <p>The Committee has the authority to apply a malus adjustment to all, or a portion of, an outstanding award in specific</p>	<p>The Chief Executive, M&G receives an award with an initial value of 300 per cent of salary under this plan. Maximum vesting is 100 per cent of the number of phantom shares</p>

circumstances.

originally awarded.

Operation

**Share
ownership
guidelines**

The guidelines for share ownership were increased to the following levels in 2013:

350 per cent of salary for the Group Chief Executive; and

200 per cent of salary for other executive directors.

Executives have five years from the implementation of these increased guidelines (or from the date of their appointment, if later) to build this level of ownership.

The full Policy sets out the Committee's powers in respect of executive directors joining or leaving the Board, where a change in performance conditions is appropriate or in the case of corporate transactions (such as a takeover, merger or rights issue). The Policy also describes legacy long-term incentive plans under which some executive directors continue to hold awards.

Table of Contents

Remuneration for Non-Executive Directors and the Chairman

	Fees	Benefits	Share Ownership Guidelines
Non-executive directors	<p>All non-executive directors receive a basic fee for their duties as a Board member. Additional fees are paid for added responsibilities such as chairmanship and membership of committees or acting as the Senior Independent Director. Fees are paid to non-executives in cash. Fees are reviewed annually by the Board with any changes effective from 1 July.</p> <p>If, in a particular year, the number of meetings is materially greater than usual, the Company may determine that the provision of additional fees is fair and reasonable.</p>	<p>Travel and expenses for non-executive directors are incurred in the normal course of business, for example in relation to attendance at Board and Committee meetings. The costs associated with these are all met by the Company.</p>	<p>It is expected that non-executive directors will hold shares with a value equivalent to one times the annual basic fee (excluding additional fees for chairmanship and membership of any committees).</p> <p>Non-executive directors are expected to attain this level of share ownership within three years of their appointment.</p>
Non-executive Chairman	<p>The Chairman receives an annual fee for the performance of their role. On appointment, the fee may be fixed for a specified period of time. Fees will otherwise be reviewed annually with any changes effective from 1 July.</p> <p>The Chairman is not eligible to participate in annual bonus plans or long-term incentive plans.</p>	<p>The Chairman may be offered benefits including:</p> <ul style="list-style-type: none"> Health and wellness benefits Protection and security benefits Transport benefits Relocation and expatriate benefits (where appropriate) <p>The Chairman is not eligible to receive a pension allowance or to participate in the Group's employee pension schemes.</p>	<p>The Chairman has a share ownership guideline of one times his annual fee and is expected to attain this level of share ownership within five years of the date of his appointment.</p>

In setting the Directors Remuneration Policy, the Committee considers a range of factors including:

Conditions elsewhere in company

Across the Group, remuneration is reviewed regularly with the intention that all employees are paid appropriately in the context of their local market and given their individual skills, experience and performance. Each business unit's salary increase budget is set with reference to local market conditions. The Remuneration Committee considers salary increase budgets in each business unit when determining the salaries of executive directors.

Prudential does not consult with employees when setting the directors' remuneration policy; Prudential is a global organisation with employees, and agents in multiple business units and geographies. As such, there are practical challenges associated with consulting with employees directly on this matter. As many employees are also shareholders, they will be able to participate in the binding vote on the Directors' Remuneration Policy.

Shareholder views

The Remuneration Committee and the Company undertake regular consultation with key institutional investors on the remuneration policy and implementation. This engagement is led by the Remuneration Committee Chairman and is an integral part of the Company's investor relations programme. The Committee is grateful to shareholders for their feedback which is provided and takes this into account when determining executive remuneration.

Table of Contents**Annual Report on Remuneration****Remuneration in respect of performance in 2014****Base salary**

Executive directors' salaries were reviewed in 2013 with changes effective from 1 January 2014. When the Remuneration Committee took these decisions it considered:

- The salary increases awarded to other employees
- The performance and experience of each executive;
- The relative size of each director's role; and
- The performance of the Group.

Salary increases for the wider workforce vary across our business units, reflecting local market conditions; in 2014 salary budgets increased between 2.8 per cent and 6 per cent for the wider workforce.

To provide context for this review, information was also drawn from the following market reference points:

Director	Role	Benchmark(s) used to assess remuneration
John Foley ¹	Group Investment Director	- FTSE 40 - FTSE 40
Jackie Hunt	Chief Executive, UK & Europe	- International Insurance Companies - McLagan UK Investment Management Survey
Michael McLintock	Chief Executive, M&G	- International Insurance Companies - FTSE 40
Nic Nicandrou	Chief Financial Officer	- International Insurance Companies
Barry Stowe	Chief Executive, PCA	- Towers Watson Asian Insurance Survey - FTSE 40
Tidjane Thiam	Group Chief Executive	- International Insurance Companies - Towers Watson US Financial Services Survey
Mike Wells	President & CEO, JNL	- LOMA US Insurance Survey

Note

1. John Foley stepped down from the board on 1 April 2014.

After careful consideration the Remuneration Committee decided to increase salaries by 3 per cent for all executive directors with the exception of the Chief Financial Officer. Mr Nicandrou's base salary increase of five per cent was part of a wider change to his remuneration package.

Executive	2013 salary	2014 salary
-----------	-------------	-------------

Pierre-Olivier Bouée ¹	n/a	£630,000
John Foley ²	£628,300	£648,000
Jackie Hunt	£625,000	£644,000
Michael McLintock	£370,800	£382,000
Nic Nicandrou	£648,900	£682,000
Barry Stowe	HK\$ 8,240,000	HK\$ 8,490,000
Tidjane Thiam	£1,030,000	£1,061,000
Mike Wells	US\$1,081,500	US\$ 1,114,000

Notes

1. Pierre-Olivier Bouée was appointed to the board on 1 April 2014.
2. John Foley stepped down from the board on 1 April 2014. He remains a member of the Group Executive Committee.

Table of Contents**Annual bonus***2014 annual bonus opportunities*

Executive directors' bonus opportunities, the weighting of performance measures for 2014 and the proportion of annual bonuses deferred are set out below:

Executive	Maximum AIP opportunity (%) of salary)	Deferral requirement	Weighting of measures		
			Group	Business Unit	Personal objectives
Pierre-Olivier Bouée ¹	160%	40% of total bonus	50%	-	50%
John Foley ²	160%	40% of total bonus	50%	-	50%
Jackie Hunt	160%	40% of total bonus	20%	60%	20%
Michael McLintock ³	600%	40% of total bonus	20%	60%	20%
Nic Nicandrou	175%	40% of total bonus	80%	-	20%
Barry Stowe	160%	40% of total bonus	20%	60%	20%
Tidjane Thiam	200%	40% of total bonus	80%	-	20%
Mike Wells ⁴	160%	40% of total bonus	80%	-	20%

- Notes
1. Pierre-Olivier Bouée was appointed to the board on 1 April 2014. The maximum bonus opportunity shown represents his annual opportunity as an executive director – this was pro-rated for the portion of the year for which he was an Executive director. Please see the section on 2014 Annual Incentive Plan Payments for details.
 2. John Foley stepped down from the board on 1 April 2014. The maximum bonus opportunity shown represents his annual opportunity as an executive director – this was pro-rated for the portion of the year for which he was an Executive director. Please see the section on 2014 Annual Incentive Plan Payments for details.
 3. Michael McLintock's annual bonus opportunity in 2014 was the lower of 0.75 per cent of M&G's IFRS profit and six times annual salary. M&G's IFRS profit in 2014 was £446 million.
 4. In addition to the AIP, Mike Wells receives a ten per cent share of the Jackson Senior Management Bonus Pool. This is determined by the financial performance of Jackson.

Table of Contents

2014 AIP performance measures and achievement

Financial performance

The financial performance measures set for 2014 are shown below. Prior to the start of the year the Committee set stretching performance ranges for each of these measures in line with the Group's performance targets. The Committee reviewed performance against these ranges at its meeting in February 2015; in all of our key performance metrics the Group's 2014 results exceeded those achieved in 2013. The Committee also reviewed a report from the Group Chief Risk Officer which confirmed that these results were achieved within the Group's risk appetite and framework.

The performance measures, and the relative achievement compared to the performance range, is illustrated below. The Board believe that, due to the commercial sensitivity of these targets, disclosing further details may damage the competitive position of the Group.

Notes

1 The weighting of each measure within the Group financial element of the bonuses for all executives excluding the Chief Executive, M&G. In addition, investment performance (measured over a one and three-year period) forms 30 per cent of the Chief Executive, M&G's annual bonus weighting.

Table of Contents

Personal performance

As set out in our Remuneration Policy, a proportion of the annual bonus for each executive director is based on the achievement of personal objectives. These objectives include the executive's contribution to Group strategy as a member of the Board and specific goals related to their functional and/or business unit role. 2014 objectives were set for each executive prior to the start of the financial year and performance against these objectives was assessed by the Committee at its meeting in February 2015.

2014 Annual Incentive Plan Payments

On the basis of the outstanding performance of the Group and its business units, and the Committee's assessment of each executive's personal performance, the Committee determined the following 2014 AIP payments:

Executive	Role	2014 Salary	2014 AIP		2014 AIP payment
			Maximum AIP	2014 AIP (as a percentage of maximum)	
Pierre-Olivier Bouée ¹	Group Chief Risk Officer	£630,000	160%	99.5%	£752,220
John Foley ²	Group Investment Director	£648,000	160%	98.5%	£255,312
Jackie Hunt	Chief Executive, UK & Europe	£644,000	160%	98.6%	£1,015,717
Michael McLintock ³	Chief Executive, M&G	£382,000	600%	100.0%	£2,292,000
Nic Nicandrou	Chief Financial Officer	£682,000	175%	99.4%	£1,186,339
Barry Stowe	Chief Executive, PCA	HK\$ 8,490,000	160%	98.4%	HK\$ 13,370,052
Tidjane Thiam	Group Chief Executive	£1,061,000	200%	100.0%	£2,122,000
Mike Wells ⁴	President & CEO, JNL	\$1,114,000	160%	99.8%	\$1,778,835

Notes

- 1 Pierre-Olivier Bouée was appointed to the board on 1 April 2014. The bonus shown above was paid in respect of his services as an Executive director.
- 2 John Foley stepped down from the board on 1 April 2014. The bonus shown above was paid in respect of his services as an Executive director. Please see the *Payments to past directors* section for details.
- 3 Michael McLintock's annual bonus opportunity in 2014 was the lower of 0.75 per cent of M&G's IFRS profit and six times annual salary. M&G's IFRS profit in 2014 was £446 million.
- 4 In addition to the AIP Mike Wells also received 10 per cent of the JNL senior management bonus pool. His total bonus including his AIP and JNL Senior Management award is US\$7,163,061.

2014 Jackson bonus pool

In 2014 the Jackson bonus pool was determined by Jackson's profitability, capital adequacy, remittances to Group, in-force experience and credit rating. Across all of these measures Jackson delivered excellent performance and exceeded prior year performance. As a result of this performance the Committee determined that Mike Wells' share of the bonus pool would be US\$5,384,226.

Long Term Incentive Plans with performance periods ending on 31 December 2014

Our long-term incentive plans have stretching performance conditions which are aligned to the strategic priorities of the Group. In deciding the portion of the awards to be released, the Committee considered actual financial results against these performance targets. The Committee also reviewed underlying Company performance to ensure vesting levels were appropriate. The Remuneration Policy Report contains further details of the design of Prudential's long-term incentive plans. Further details may also be found in note B3.2 to the consolidated financial statements in item 18. in the long-term incentives awarded in 2014 section of this report.

Group Performance Share Plan (GPSP) and UK BUPP awards

In 2012, all executive directors were made awards under the GPSP. The line chart below compares Prudential's TSR during the performance period (1 January 2012 to 31 December 2014) with that of the peer group index TSR. Identical performance conditions apply to the PLTIP award made to Jackie Hunt on her recruitment which replaced a 2012 award made by her previous employer. As a result of Prudential's excellent TSR performance, which was in excess of 120 per cent of the index, these awards will be released in full:

Table of Contents**Total Shareholder Return**

Notes

1. Companies in the peer group for the 2012 GPSP and UK BUPP awards are:
Aegon, Allianz, Aviva, Axa, Generali, ING, Legal & General, Manulife, Old Mutual and Standard Life
2. A 2012 UK BUPP award was made to Rob Devey subject to identical performance conditions. This will be pro-rated for time employed as detailed in the 2013 Annual Report.

Asia BUPP

In 2012 Barry Stowe received an award under the Asia BUPP. This award vests based on new business profit, IFRS profit and cash remittances of the Asian business. The chart below illustrates the achievement against performance ranges for the 2012 Asia BUPP award:

M&G Executive Long-Term Incentive Plan

The phantom share price at vesting for the 2012 M&G Executive Long-Term Incentive award is determined by the increase or decrease in M&G's profitability over the three-year performance period with adjustments for the investment performance of its funds. M&G performance and the resulting phantom share price for Michael McLintock are shown below:

Award	3 year profit growth of M&G	M&G Investment performance	2014 Phantom share price
2012 M&G Executive LTIP	62%	Second quartile	£2.07

Jackson BUPP

Mike Wells received an award under the Jackson BUPP in 2012. The Jackson BUPP award vests subject to Shareholder Capital Value (SCV) growth over the performance period. This performance measure is an estimation of the shareholder value created by the Jackson business over the period. As a result of excellent SCV growth of 20.5 per cent per annum over the performance period this award will vest in full:

Table of Contents

The value generated for shareholders through share price growth and dividends paid over the last three years is reflected in the value of 2014 LTIP releases, as illustrated in the chart below.

Value of LTIP Releases**Pension entitlements**

Pension provisions in 2014 were:

Executive	2014 pension arrangement	Life assurance provision
Barry Stowe	Pension supplement in lieu of pension of 25 per cent of salary and a HK\$33,500 payment to the Hong Kong Mandatory Provident Fund. Matching contributions of 6 per cent of base salary capped at US\$260,000.	Four times salary
Mike Wells	An annual profit sharing contribution equivalent to 6 per cent of pensionable salary was made in 2014. Contributions into the defined contribution pension scheme and a cash supplement with a total value of 25 per cent of salary.	Two times salary
Pierre-Olivier Bouée All other UK-based executives	Pension supplement in lieu of pension of 25 per cent of salary	Up to four times salary plus a dependants pension. Up to four times salary plus a dependants pension.

Table of Contents

Michael McLintock previously participated in a contributory defined benefit scheme which was open at the time he joined the Company. The scheme provided a target pension of two thirds of final pensionable earnings on retirement for an employee with 30 years or more potential service who remained in service to Normal Retirement Date, he is now a deferred member of the scheme. Mr McLintock's Normal Retirement Date under the scheme is age 60, should he claim his deferred pension before this age it will be subject to an actuarial reduction. There are no additional benefits payable should Mr McLintock retire early.

At the end of 2014 the transfer value of this entitlement was £1,364,404. This equates to an annual pension of £58,990 which will increase broadly in line with inflation in the period before Mr McLintock's retirement.

During the portion of the year he served as an executive director, John Foley received contributions into the defined contribution scheme and a cash supplement with a total value of 25 per cent of salary

Table of 2014 executive director total remuneration – The Single Figure

Mike Wells ⁴	676	58	4,348	2,609	1,739	6,292	19	11,393
Total	4,745	1,352	13,017	7,811	5,206	28,425	1,040	48,579

* Benefits include (where provided) the cost of providing the use of a car and driver, medical insurance, security arrangements and relocation/expatriate benefits.

In line with the regulations, the estimated value of LTIP releases has been calculated based on the average share price over the last three months of 2014. The actual value of LTIPs, based on the share price on the date awards are released, will be shown in the 2015 report.

2014 pension benefits include cash supplements for pension purposes, and contributions into DC schemes as outlined on the previous page.

§ Each remuneration element is rounded to the nearest £1,000 and totals are the sum of these rounded figures. Total Remuneration is calculated using the methodology prescribed by Schedule 8 of the Companies Act.

Notes

1 Pierre-Olivier Bouée was appointed to the board on 1 April 2014. The remuneration above was paid in respect of his service as an executive director.

- 2 John Foley stepped down from the board on 1 April 2014. The remuneration above was paid in respect of his service as an executive director.
- 3 Barry Stowe's 2014 benefits relate primarily to his expatriate status, including costs of £217,393 for housing, £18,272 for children's education, £76,319 for home leave and a £340,473 Executive Director Location Allowance.
- 4 Mike Wells' bonus figure excludes a contribution of £9,469 from a profit sharing plan which has been made into a 401(k) retirement plan. This is included under 2014 pension benefits.

* Benefits include (where provided) the cost of providing the use of a car and driver, medical insurance, security arrangements and relocation/expatriate benefits.

Table of Contents

In line with the regulations, the value of LTIP releases has been re-calculated based on the actual value of LTIPs, based on the share price on the date awards were released.

2013 pension benefits include cash supplements for pension purposes, and contributions into DC schemes as outlined in the 2013 report.

§ Each remuneration element is rounded to the nearest £1,000 and totals are the sum of these rounded figures. Total Remuneration is calculated using the methodology prescribed by Schedule 8 of the Companies Act.

Notes

- 1 Jackie Hunt joined the Company on 5 September 2013. Her benefits included a one-off relocation payment of £188,679 to cover additional expenses such as stamp duty and estate agent fees. She also received an Other Payment in 2013 (of £801,000) consisting of a cash payment in respect of shares forfeited when leaving Standard Life, the net value of which was used to purchase Prudential shares.
- 2 Barry Stowe's benefits relate primarily to his expatriate status, including costs of £224,612 for housing, £35,230 for children's education, £70,452 for home leave and a £252,142 Executive Director Location Allowance.
- 3 Mike Wells' bonus figure excludes a contribution of £9,779 from a profit sharing plan which has been made into a 401(k) retirement plan. This is included under 2013 pension benefits.

Performance graph and table

The chart below illustrates the TSR performance of Prudential, the FTSE 100 and International Insurers over the past six years. The information in the table below shows the total remuneration for the Group Chief Executive over the period:

	2009	2009	2010	2011	2012	2013	2014
Group Chief Executive	Mark Tucker	Tidjane Thiam	Tidjane Thiam	Tidjane Thiam	Tidjane Thiam	Tidjane Thiam	Tidjane Thiam
Salary, pension and benefits	1,013	286	1,189	1,241	1,373	1,411	1,455

single figure
total
remuneration

Notes

- 1 Mark Tucker left the Company on 30 September 2009. Tidjane Thiam became Group Chief Executive on 1 October 2009. The figures shown for Tidjane Thiam's remuneration in 2009 relate only to his service as Group Chief Executive.

Relative importance of spend on pay

The table below sets out the amounts paid in respect of 2013 and 2014 on all employee pay and dividends:

	2013	2014	Percentage change
All employee pay (£m) ¹	1,562	1,543	-1.2%
Dividends (£m)	859	945	+10.0%

Note

- 1 All employee pay as taken from note B3.1 to the financial statements.

Table of Contents**Percentage change in remuneration**

The table below sets out how the change in remuneration for the Group Chief Executive between 2013 and 2014 compared to a wider employee comparator group:

	Salary	Benefits	Bonus
Group Chief Executive	3.0%	7.3%	3.2%
All UK employees	3.1%	10.4%	11.2%

The employee comparator group used for the purpose of this analysis is all UK employees. This includes employees in the UK Insurance Operations business, M&G and Group Head Office and reflects the average change in pay for employees employed in both 2013 and 2014. The salary increase includes uplifts made through the annual salary review as well as any additional changes in the year, for example promotions or role changes.

The UK work force has been chosen as the most appropriate comparator group as it reflects the economic environment for the location in which the Group Chief Executive is employed.

Long-term incentives awarded in 2014**2014 share-based long-term incentive awards**

The table below shows the awards made to executive directors in 2014 under share based long-term incentive plans and the performance conditions attached to these awards:

Executive	Role	Face value of award (% of salary)	Face value of award* (£s)	Percentage of award released for achieving targets	End of performance period	Weighting of performance conditions Group TSR	IFRS Profit Group Asia	US
Geoffrey Leung ¹	Group Chief Risk Officer	250%	1,574,992	25%	31-Dec-16	50%	50%	
Michael Hunt	Chief Executive, UK & Europe	225%	1,449,000	25%	31-Dec-16	50%		
Michael McLintock ²	Chief Executive, M&G	150%	572,993	25%	31-Dec-16	100%		
Geoffrey Nicandrou	Chief Financial Officer	250%	1,704,990	25%	31-Dec-16	50%	50%	
Geoffrey Stowe	Chief Executive, PCA	225%	1,478,933	25%	31-Dec-16	50%		50%
Geoffrey Thiam	Group Chief Executive	400%	4,243,999	25%	31-Dec-16	50%	50%	
Geoffrey Wells	President & CEO, JNL	460%	3,077,728	25%	31-Dec-16	50%		50%

Notes:

* Awards for executive directors are calculated based on the average share price over the three dealing days prior to the awards being granted (1 April 2014).

The percentage of award released for achieving maximum targets is 100 per cent.

- 1 Pierre-Olivier Bou  e was appointed to the board on 1 April 2014. The table above shows his entire 2014 award.
 - 2 The awards made under the PLTIP to the Chief Executive, M&G are subject only to the TSR performance condition. The IFRS profit of M&G is a performance condition under the M&G Executive LTIP.
 - 3 John Foley received an LTIP award equivalent to 250% of base salary on 1 April 2014.
- Group TSR performance will be measured on a ranked basis. 25 per cent of the award will vest for TSR at the median of the peer group increasing to full vesting for performance at the upper quartile. The peer group for 2014 awards is:

Aegon	Aflac	AIA	AIG
Allianz	Aviva	AXA	Generali
Legal & General	Manulife	MetLife	Munich Re
Old Mutual	Prudential Financial	Standard Life	Sun Life Financial
Swiss Re	Zurich Insurance Group		

Table of Contents

Performance ranges for IFRS operating profit measured on a cumulative basis over three years are set at the start of the performance period. Due to commercial sensitivities these are not published in advance but will be disclosed for Group, when awards vest.

2014 cash long-term incentive awards

In addition to his PLTIP award Michael McLintock receives an annual award under the M&G Executive LTIP. In 2014 he received the following award:

Executive	Role	Face value of award (% of salary)	Face value of award £s	Percentage of award released for achieving threshold targets	End of performance period
Michael McLintock	Chief Executive, M&G	300%	1,146,000	See note	31 Dec 16

Note

The value of the award on vesting will be based on the profitability and investment performance of M&G over the performance period as described in the directors' remuneration policy.

Non-executive director remuneration in 2014**Chairman's fees**

The annual fee paid to the Chairman, Paul Manduca, remained unchanged at £600,000 during 2014.

Mr Manduca's fee has been fixed since his appointment as Chairman in July 2012. On his appointment, Mr Manduca agreed that Prudential would be his principal focus but his actual time commitment has been significantly higher than we anticipated at the time. The Committee has decided to increase the Chairman's fee from £600,000 to £700,000 with effect from 1 July 2015 to recognise the increased demands of the role. This fee will next be reviewed in 2016.

Non-executive director fees

An increase of just under 3 per cent was made to the basic non-executive director fee with effect from 1 July 2014. There were no changes made to the fees for Committee Chairmanship/Membership. The revised fees are shown below:

	From 1 July 2013	From 1 July 2014
Annual Fees	(£)	(£)
Basic fee	90,000	92,500

Additional fees:

Audit Committee Chairman	70,000	70,000
Audit Committee member	25,000	25,000
Remuneration Committee Chairman	60,000	60,000
Remuneration Committee member	25,000	25,000
Risk Committee Chairman	65,000	65,000
Risk Committee member	25,000	25,000
Nomination Committee member	10,000	10,000
Senior Independent Director	50,000	50,000

Note

- 1 If, in a particular year, the number of meetings is materially greater than usual, the Company may determine that the provision of additional fees is fair and reasonable.

Table of Contents

The resulting fees paid to non-executives are:

£000s	2014 fees	2013 fees	2014 taxable benefits*	2013 benefits*	Total 2014 remuneration:	Total 2013 remuneration:
					The Single Figure	The Single Figure

Alice Schroeder	116	64	-	-	116	64
Lord Turnbull	186	174	-	-	186	174
Total	1,863	1,722	114	129	1,977	1,851

*Benefits include the cost of providing the use of a car and driver, medical insurance and security arrangements. Each remuneration element is rounded to the nearest £1,000 and totals are the sum of these rounded figures. Total Remuneration is calculated using the methodology prescribed by Schedule 8 of the Companies Act. The Chairman and non-executive directors are not entitled to participate in annual bonus plans or long-term incentive plans.

Statement of directors shareholdings

The shareholding requirements and share ownership guidelines are outlined below:

	Articles of Association			Share ownership guideline		
	Number of shares	Period to meet the requirement ¹	Where applicable, requirement met?	Number of shares as a percentage of salary/fee	Period to meet the guideline ²	Where applicable, requirement met?
Group Chief Executive	2,500	1 year	ü	350%	5 years	ü
Other executive directors	2,500	1 year	ü	200%	5 years	ü
Chairman	2,500	1 year	ü	100%	5 years	ü
Non-executive directors	2,500	1 year	ü	100%	3 years	ü

Notes

1. Holding requirement of the Articles of Association (2,500 ordinary shares) must be obtained within one year of appointment to the Board.
2. The increased guidelines for executive directors were introduced with effect from 1 January 2013. Executive directors have 5 years from this date (or date of joining if later) to reach the enhanced guideline. The guideline for

non-executive directors was introduced on 1 July 2011. Non-executive directors have 3 years from this date (or date of joining if later) to reach the guideline.

Table of Contents

The interests of directors in ordinary shares of the Company are set out below. Beneficial interest includes shares owned outright, shares acquired under the Share Incentive Plan and deferred annual incentive awards, detailed in the Supplementary information section. It is only these shares that count towards the share ownership guidelines.

	01 Jan 2014		31 Dec 2014			16 March 2015

* Based on the closing share price on 31 December 2014 (£14.92)

Further information on share awards subject to performance conditions are detailed in the share-based long-term incentive awards section of the Supplementary information.

The Company and its directors, chief executives and shareholders have been granted a partial exemption from the disclosure requirements under part XV of the SFO. As a result of this exemption, directors, chief executives and shareholders do not have an obligation under the SFO to notify the Company of shareholding interests, and the Company is not required to maintain a register of directors and chief executives interests under section 352 of the SFO, nor a register of interests of substantial shareholders under section 336 of the SFO. The company is, however, required to file with the Hong Kong Stock Exchange any disclosure of interests notified to it in the United Kingdom.

Notes

- 1 Pierre-Olivier Bouée was appointed to the Board on 1 April 2014.
- 2 John Foley stepped down from the Board on 1 April 2014.

- 3 For the 1 January 2014 figure Barry Stowe's beneficial interest in shares is made up of 203,794 ADRs (representing 407,588 ordinary shares), (8,513.73 of these ADRs are held within an investment account which secures premium financing for a life assurance policy). For the 31 December 2014 figure the beneficial interest in shares is made up of 142,144 ADRs (representing 284,288 ordinary shares).
- 4 For the 1 January 2014 figure Mike Wells' beneficial interest in shares is made up of 203,944 ADRs (representing 407,888 ordinary shares). For the 31 December 2014 figure his beneficial interest in shares is made up of 222,790 ADRs (representing 445,580 ordinary shares).
- 5 For the 1 January 2014 figure Alice Schroeder's beneficial interest in shares is made up of 1,000 ADRs (representing 2,000 ordinary shares). For the 31 December 2014 figure her beneficial interest in shares is made up of 1,250 ADRs (representing 2,500 ordinary shares).

Table of Contents**Outstanding share options**

The following table sets out the share options held by the directors in the UK Savings-Related Share Option Scheme (SAYE) as at the end of the period. No other directors held shares in any other option scheme.

	Date of grant	Market price at 31 Dec 2014		Exercise period		Number of options					
		(pence)	(pence)	Beginning	End	Beginning of period	Granted	Exercised	Expired	Forfeited	End of period
Pierre-Olivier Bouée	23 Sep 14	1155	1492	1 Dec 17	31 May 18	1,558	-	-	-	-	1,558
Jackie Hunt	23 Sep 14	1155	1492	1 Dec 17	31 May 18	1,558	-	-	-	-	1,558
Michael McLintock	23 Sep 14	1155	1492	1 Dec 19	31 May 20	2,622	-	-	-	-	2,622
Nic Nicandrou	16 Sep 11	466	1492	1 Dec 16	31 May 17	3,268	-	-	-	-	3,268
Nic Nicandrou	23 Sep 14	1155	1492	1 Dec 19	31 May 20	1,311	-	-	-	-	1,311
Tidjane Thiam	16 Sep 11	466	1492	1 Dec 14	29 May 15	965	-	-	-	-	965
Tidjane Thiam	20 Sep 13	901	1492	1 Dec 16	31 May 17	499	-	-	-	-	499
Tidjane Thiam	23 Sep 14	1155	1492	1 Dec 17	31 May 18	1,168	-	-	-	-	1,168

Notes

- 1 No gain was made by directors in 2014 on the exercise of SAYE options.
- 2 No price was paid for the award of any option.
- 3 The highest and lowest closing share prices during 2014 were 1552.5 pence and 1204 pence respectively.
- 4 All exercise prices are shown to the nearest pence.
- 5 John Foley participated in this plan during his time as an executive director.

Directors terms of employment**Executive directors service contracts**

The Remuneration Policy Report contains further details of the terms included in executive director service contracts. Details of the service contracts of each executive director are outlined below:

Executive director	Date of contract	Notice period to the Company	Notice period from the Company
Pierre-Olivier Bou��e	6 August 2013	12 months	12 months
John Foley ¹	8 December 2010	12 months	12 months
Jackie Hunt	25 April 2013	12 months	12 months
Michael McLintock	21 November 2001	6 months	12 months
Nic Nicandrou	26 April 2009	12 months	12 months
Barry Stowe	18 October 2006	12 months	12 months
Tidjane Thiam	20 September 2007	12 months	12 months
Mike Wells ²	15 October 2010	12 months	12 months

Notes

- 1 John Foley stepped down from the board on 1 April 2014.
- 2 The contract for Mike Wells is a renewable one year fixed term contract. The contract is renewable automatically upon the same terms and conditions unless the Company or the director gives at least 90 days' notice prior to the end of the relevant term.

The normal notice of termination that the Company is required to give executive directors is 12 months. Accordingly, in normal circumstances, a director whose contract is terminated would be entitled to one year's salary and benefits in respect of their notice period. Additionally, outstanding awards under annual and long-term incentive plans may vest depending on the circumstances and according to the rules of the plans. When considering the termination of any service contract, the Remuneration Committee will have regard to the specific circumstances of each case, including the director's obligation to mitigate his loss. Payments are phased over the notice period.

Table of Contents**Letters of appointment of the Chairman and non-executive directors**

The Remuneration Policy Report contains further details on non-executive directors' letters of appointment. Details of their individual appointments are outlined below:

Non-executive director/Chairman	Appointment by the Board	Initial election by shareholders at AGM	Notice period	Expiration of current term of appointment
Chairman				
Paul Manduca	15 October 2010	AGM 2011	12 months	AGM 2018
Non-executive director				
Howard Davies	15 October 2010	AGM 2011	6 months	AGM 2017
Ann Godbehere ¹	02 August 2007	AGM 2008	6 months	AGM 2015
Alistair Johnston	01 January 2012	AGM 2012	6 months	AGM 2015
Kaikhushru Nargolwala	01 January 2012	AGM 2012	6 months	AGM 2015
Anthony Nightingale	01 June 2013	AGM 2014	6 months	AGM 2017
Philip Remnant	01 January 2013	AGM 2013	6 months	AGM 2016
Alice Schroeder	10 June 2013	AGM 2014	6 months	AGM 2017
Lord Turnbull	18 May 2006	AGM 2006	6 months	AGM 2015

1. Ann Godbehere was reappointed in 2014 for one year. The Board will consider a further renewal term in May 2015.

Non-executive directors' letters of appointment

Non-executive directors do not have service contracts but are appointed pursuant to letters of appointment with notice periods of six months without liability for compensation. Under the terms of their letters of appointment, continuation of the non-executive directors' appointment is contingent on satisfactory performance and re-election by shareholders. Non-executive directors are typically expected to serve two three year terms from the date of their election by shareholders. Thereafter, the Board may invite the Director to serve for an additional period.

External appointments

Subject to the Group Chief Executive's or the Chairman's approval, executive directors are able to accept external appointments as non-executive directors of other organisations. Fees payable are retained by the executive directors. During 2014:

Jackie Hunt received £59,500 as a non-executive director for another organisation;
 Michael McLintock received £65,000 as a trustee and non-executive director of another organisation; and
 Tidjane Thiam received £22,285 as a non-executive director for another organisation. This sum included deferred stock units.

Other directors served on the boards of educational, development, charitable and cultural organisations without receiving a fee for these services.

Recruitment arrangements**Pierre-Olivier Bou  e**

Pierre-Olivier Bouée was appointed to the Prudential Board on 1 April 2014 in his role as Group Chief Risk Officer. He did not receive any recruitment payments on joining the board. His outstanding share awards under deferred bonus plans and long-term incentives awarded before his appointment to the board will continue to vest on the normal timescale and subject to the original performance conditions.

Payments to past directors

Rob Devey

Rob Devey's employment in the Group ended on 31 October 2013. The 2013 directors' remuneration report provided details of the remuneration arrangements that would apply to Rob Devey after his resignation. These arrangements were implemented as intended by the Committee. In line with his contractual entitlements, Mr Devey was entitled to receive a payment in lieu of salary and pension allowance for the period 1 November 2013 to 25 April 2014. This entitlement was subject to mitigation if Mr Devey commenced other employment during this period, which he did on 15 April 2014. As a result the total amount paid in 2014 was £236,809. Medical and life assurance cover was provided until 25 April 2014.

Table of Contents

As set out in the section on Remuneration in respect of performance in 2014, the performance conditions attached to Rob Devey's 2012 GPSP and UK BUPP awards were met in full and 100% of these awards will be released in 2015. These awards were prorated based on the time Mr Devey was employed by Prudential as a proportion of the performance periods (22 of 36 months).

John Foley

On stepping down from the Board, John Foley received no loss of office payment and his outstanding share awards under deferred bonus plans and long-term incentives will continue to vest on the normal timescale and subject to the original performance conditions.

Other directors

A number of former directors receive retiree medical benefits for themselves and their partner (where applicable). This is consistent with other senior members of staff employed at the same time. A de minimis threshold of £10,000 has been set by the Committee; any payments or benefits provided to a past director under this amount will not be reported.

Statement of implementation in 2015

Executive directors' salaries were reviewed in 2014 with changes effective from 1 January 2015. When the Committee took these decisions, it considered the salary increases awarded to other employees in 2014 and the expected increases in 2015. The Committee also took account of the performance and experience of each executive, and the relative size of each director's role, as well as the performance of the Group. The external markets used to provide context to the Committee were identical to those used for 2014 salaries.

The 2015 salary increase for the Chief Executive, PCA was 5 per cent, all other executive directors received a 3 per cent increase. These uplifts are in line with 2015 salary increase budgets for other employees across our business units (2.5 per cent to 5 per cent). 2015 salaries are set out in the Our executive remuneration at a glance section.

Changes were made to the maximum opportunities under the annual incentive plan and long-term incentive awards for two executive directors - Chief Executive, PCA and Chief Executive, UK & Europe; there were no changes to the maximum opportunities for the other executive directors

Chief Executive, PCA; increase in maximum AIP and LTIP awards to 180% and 250% of salary respectively. This reflects the importance of PCA's 2017 strategic initiatives which are crucial to the achievement of Group wide objectives. The incumbent has also demonstrated considerable personal performance and contribution to the Group.

Chief Executive, UK & Europe; increase in maximum AIP and LTIP awards to 175% and 250% of salary respectively. The scope of the incumbent's role has increased due to the Group's expansion into Africa. Additionally, to reflect the ambition of the UK & Europe business as it relates to the Group's growth and cash ambitions. The incumbent has also demonstrated considerable personal performance and contribution to the Group.

In making these adjustments, the Remuneration Committee was mindful to ensure that the majority of the additional opportunity be provided through long-term incentive awards, so that the full value is only realised over the long term and subject to the achievement of stretching performance conditions. Major shareholders were consulted on this change prior to implementation.

In preparation for the implementation of Solvency II, part of executive directors' 2015 bonuses will be determined by the achievement of economic capital targets. The performance measures attached to long-term

incentive awards remain unchanged from those set out in the Remuneration in respect of 2014 section of this report.

From 1 January 2015, the Committee has, at its discretion, the power to recover all (or part of) bonuses and share awards for a period after they are received by executives. These clawback provisions complement the Committee's existing malus powers which enable unvested share awards to be reduced or cancelled in specific circumstances.

Notes

- 1 The awards for Barry Stowe and Mike Wells were made in ADRs (1 ADR = 2 Prudential plc shares). The figures in the table are represented in terms of Prudential plc shares.

Table of Contents

- 2 In 2010 a scrip dividend equivalent and in 2011, 2012 and 2013 a DRIP dividend equivalent were accumulated on these awards.
- 3 The table above reflects the maximum number of shares (150 per cent of the original number awarded) which may be released to Mike Wells under the JNL Performance Share Plan. This maximum number of shares may be released if stretch performance targets are achieved.

Business-specific cash-based long-term incentive plans

Details of all outstanding awards under cash-based long-term incentive plans are set out in the table below. The performance period for all M&G Executive LTIP awards is three years:

	Year of initial award	Face value of conditional share awards outstanding at 1 January 2014 £000	Payments made conditionally awarded in 2014 £000	Payments made outstanding at 31 December 2014 £000	Face value of conditional share awards outstanding at 31 December 2014 £000	Date of end of performance period
Michael McLintock						
M&G Executive LTIP	2011	1,318		3,032	-	31-Dec-13
M&G Executive LTIP	2012	953			953	31-Dec-14
M&G Executive LTIP	2013	1,112			1,112	31-Dec-15
M&G Executive LTIP	2014		1,146		1,146	31-Dec-16
Total payments made in 2014				3,032		
Mike Wells						
JNL LTIP	2010	906		634	-	31-Dec-13
Total payments made in 2014				634		

Note

Under the M&G Executive LTIP, the value of each unit at award is £1. The value of units changes based on M&G's profit growth and investment performance over the performance period. For the 2011 award of 1,318,148 units, the unit price at the end of the performance period was £2.30 which resulted in a payment of £3,031,740 to Michael McLintock during 2014. For the 2012 award of 952,960 units, the unit price at the end of the performance period was £2.07. This will result in payment of £1,972,627 to Michael McLintock in 2015.

As outlined in the 2013 Directors' Remuneration Report, on 31 December 2013 the performance period for the JNL LTIP came to an end. Over the four-year performance period the shareholder value of the US business grew by 70.848 per cent. This resulted in 70.848 per cent of Mike Wells' cash-settled award vesting. This was the last JNL LTIP award made before Mike Wells became an executive director and it is anticipated that no further awards will be made to him under this plan.

The sterling value of the award has been calculated using the average exchange rate for the year in which the grant was made. The dollar value of conditional awards outstanding on 1 January 2014 and 31 December was US\$1,400,000 and nil respectively.

Table of Contents**Other share awards**

The table below sets out executive directors' deferred bonus share awards.

	Year of grant	Conditional share awards outstanding at 1 Jan 2014 (Number of shares)	Dividends accumulated in 2014 (Number of shares)		Conditional share awards outstanding at 31 Dec 2014 (Number of shares)	Date of end of restricted period	Date of release of award	Market price		
			2014	(note 2)				Shares released in 2014	at date of vesting or release	at date of release

Notes

- 1 The Deferred Share Awards for Barry Stowe and Mike Wells were made in ADRs (1 ADR = 2 ordinary shares). The figures in the table are represented in terms of ordinary shares.
- 2 The number of shares awarded initially awarded is calculated using the average share price over the three business days prior to the date of grant For the awards from the 2013 annual incentives, made in 2014, the average share price was 1288 pence.
- 3 DRIP dividend equivalents accumulate on these awards.

All-employee share plans

It is important that all employees are offered the opportunity to own shares in Prudential, connecting them both to the success of the Company and to the interests of other shareholders. Executive directors are invited to participate in these plans on the same basis as other staff in their location.

Save As You Earn (SAYE) schemes

UK based executive directors are eligible to participate in the HM Revenue and Customs (HMRC) approved Prudential Savings-Related Share Option Scheme and Barry Stowe is invited to participate in the similar International Share Ownership Scheme. These schemes allow all eligible employees to save towards the exercise of options over Prudential plc shares with the option price set at the beginning of the savings period at a discount of up to 20 per cent of the market price.

In 2014 participants could elect to enter into savings contracts of up to £500 per month for a period of three or five years. At the end of this term, participants may exercise their options within six months and purchase shares. If an option is not exercised within six months, participants are entitled to a refund of their cash savings plus interest if applicable under the rules. Shares are issued to satisfy those options which are exercised. No options may be granted under the schemes if the grant would cause the number of shares which have been issued, or which remain issuable pursuant to options granted in the preceding 10 years under the scheme and any other option schemes operated by the Company, or which have been issued under any other share incentive scheme of the Company, to exceed 10 per cent of the Company's ordinary share capital at the proposed date of grant.

Details of executive directors' rights under the SAYE scheme are set out in the Statement of directors' shareholdings.

Table of Contents*Share Incentive Plan (SIP)*

UK based executive directors are also eligible to participate in the Company's Share Incentive Plan (SIP). From April 2014, all UK based employees were able to purchase Prudential plc shares up to a value of £150 per month from their gross salary (partnership shares) through the SIP. For every four partnership shares bought, an additional matching share is awarded which is purchased by Prudential on the open market. Dividend shares accumulate while the employee participates in the plan. If the employee withdraws from the plan, or leaves the Group, matching shares may be forfeited.

The table below provides information about shares purchased under the SIP together with Matching Shares (awarded on a 1:4 basis) and dividend shares.

		Share Incentive Plan awards held in Trust at 1 Jan 2014 (Number of shares)	Partnership shares accumulated in 2014 (Number of shares)	Matching shares accumulated in 2014 (Number of shares)	Dividend shares accumulated in 2014 (Number of shares)	Share Incentive Plan awards held in Trust at 31 Dec 2014 (Number of shares)

Tidjane Thiam	2014	-	85	21	-	106

Dilution

Releases from the Prudential Long Term Incentive Plan, GPSP and BUPP are satisfied using new issue shares rather than by purchasing shares in the open market. Shares relating to options granted under all-employee share plans are also satisfied by new issue shares. The combined dilution from all outstanding shares and options at 31 December 2014 was 0.1 per cent of the total share capital at the time. Deferred shares will continue to be satisfied by the purchase of shares in the open market.

Share Ownership**Directors shareholdings**

The current shareholding policy and the interests of directors in ordinary shares of Prudential are shown under the sections Compensation Shareholding guidelines and Compensation Directors Shareholdings above.

Prudential is not owned or controlled directly or indirectly by another corporation or by any government or by any other natural or legal person severally or jointly and Prudential does not know of any arrangements that might result in a change in Prudential's control.

In addition, Prudential's directors held, as at 16 March 2015, options to purchase 12,949 shares, all of which were issued under Prudential's Savings-Related Share Option Scheme (SAYE). These options and plans are described in more detail below under "Options to purchase securities from Prudential" in this section.

Outstanding options of directors and other executive officers

The SAYE is open to all UK and certain overseas employees. Options under this scheme up to HM Revenue & Customs (HMRC) limits are granted at a 20 per cent discount and cannot normally be exercised until a minimum of three years has elapsed. No payment is made for the grant of any options.

The share options held by the directors and other executive officers as at the end of period are shown under the section "Compensation Outstanding share options" above.

Options to purchase and discretionary awards of securities from Prudential

As of 16 March 2015, 8,376,259 options were outstanding, which Prudential issued under the SAYE schemes. As of 16 March 2015 directors and other executive officers held 12,949 of such outstanding options. Except as described above in "Outstanding options of directors and other executive officers", each option represents the right of the bearer to subscribe for one share at a particular pre-determined exercise price at a pre-set exercise date.

Table of Contents

As of 16 March 2015, 436,010 shares were outstanding under the Prudential Jackson National Life US Performance Share Plan. There are no such outstanding awards held by directors or other executive officers at 31 December 2014

As of 16 March 2015, 25,634,758 shares were outstanding under other awards. Of those, 1,372,254 shares were outstanding under the Annual Incentive Plan, 497,463 shares were outstanding under the PruCap Deferred Bonus Plan, 215,677 shares were outstanding under the Momentum Retention Plan, 197,048 shares were outstanding under the One Off Awards, 12,046,065 shares were outstanding under the PLTIP, 2,884,680 shares were outstanding under the GPSP, 1,032,891 shares were outstanding under the BUPP, 648,999 shares were outstanding under the Deferred Share Plans and 5,802,681 shares were outstanding under the PCA LTIP and 937,000 were outstanding under the Prudential Agency Long Term Incentive Plan. Such outstanding awards held by directors or other executive officers at 31 December 2014 are included under Long-term incentive plans in the Compensation section above.

The aggregate proceeds that would arise if all outstanding options under the SAYE schemes were exercised is £70 million. The latest expiration dates for exercise or release of the securities underlying the options or awards and the number of options or shares are set out in the table below.

Year of Expiration	Shares Outstanding Under the Prudential Jackson National Life US Performance Share Plan	Options Outstanding Under Savings Related Share Option Scheme	Shares Outstanding Under Other Awards	Total

Information concerning the Group's share award and share option plans for its employees is provided in Compensation above as well as in note B3.2 to the consolidated financial statements in Item 18.

Board Practices

In accordance with Prudential's Articles of Association, the Board or the members in a general meeting, may appoint up to 20 directors. In line with UK corporate governance guidelines, all directors submit themselves for annual re-election by shareholders at the Annual General Meeting and any director appointed by the Board will retire at the first Annual General Meeting following his or her appointment and offer himself or herself for election by shareholders.

Non-executive directors are appointed on the understanding that they serve an initial term of three years. Subject to review by the Nomination Committee, it would be expected that they would serve a second term of three years. In both instances, non-executive directors remain subject to re-election at the Annual General Meeting. After six years of service, non-executive directors may be appointed for a further year, up to a maximum of three years, subject to rigorous review by the Nomination Committee and annual election at the Annual General Meeting. Good governance does not generally support the practice of serving longer than nine years on the Board as a non-executive director.

The Chairman is responsible for ensuring that induction programmes are provided for all new directors. These are tailored to reflect the experience of each director and their position as either executive or non-executive. On appointment, all directors embark upon a wide-ranging induction program covering, amongst other things, the principal bases of accounting for the Group's results, the role of the Board and its key Committees, the Group's key risks and the risk management framework within which these sit, as well as the compliance environment in which the Group operates. In addition, they receive detailed briefings on the Group's principal businesses, its

Table of Contents

product range, the markets in which it operates and the overall competitive environment. These sessions are facilitated through meetings with executive management and other senior members of the management team. Other areas addressed include the directors' obligations under the different listing regimes, legal issues affecting directors of financial services companies, the Group's governance arrangements and its investor relations programme, as well as its remuneration policies.

Directors have a statutory duty to avoid conflicts of interest with the Company. The Company's Articles of Association allow its directors to authorise conflicts of interest, and the Board has adopted a policy and effective procedures to manage and, where appropriate, approve conflicts or potential conflicts of interest. Under these procedures directors are required to declare all directorships or other appointments to companies which are not part of the Group, along with other appointments which could result in conflicts or could give rise to a potential conflict.

The Nomination Committee, or the Board where appropriate, evaluates and approves each such situation individually where applicable and reviews authorisations annually prior to the publication of the Annual Report.

Directors' external appointments

Directors may hold directorships or other significant interests in companies outside the Group which may have business relationships with the Group.

Non-executive directors may hold positions on a number of external company boards or other bodies provided that they are able to demonstrate satisfactory time commitment to their role at Prudential and that they discuss any new appointment with the Chairman prior to accepting. This ensures that they do not compromise their independence and that any potential conflicts of interest and any possible issues arising out of the time commitments required by the new role can be identified and addressed appropriately. The major commitments of the non-executive directors are detailed in their biographies in Item 6, Directors, Senior Management and Employees on page 188.

Executive directors may accept external directorships and retain any fees earned from those directorships subject to prior discussion with either the Chairman or Group Chief Executive and, where necessary, consideration by the Nomination Committee. Permission is granted provided that they do not lead to any conflicts of interest.

Some executive directors hold directorships of other listed companies, but would not be expected to hold more than one such appointment, nor hold the chairmanship of a FTSE100 company. In addition, Executive Directors may also hold directorships or trustee positions of unquoted companies or institutions. Details of any fees retained are included Item 6, Compensation on page 210.

Directors' indemnities and protections

The Company's Articles of Association permit the directors and officers of the Company to be indemnified in respect of liabilities incurred as a result of their office.

Suitable insurance cover is in place in respect of legal action against directors and senior managers of companies within the Group. Directors and certain senior managers of companies within the Group are provided with protection against personal financial exposure which may be incurred in their capacity as such. These include qualifying third party indemnity provisions (as defined by the Companies Act 2006) for the benefit of directors of Prudential plc and other such persons including, where applicable, in their capacity as directors of other companies within the Group. These indemnities were in force during 2014 and remain in force.

Board Committee reports

The Board has established Audit, Remuneration, Nomination and Risk Committees as principal standing Committees of the Board. These Committees form a key element of the Group governance framework. A report on the activities undertaken by each Committee during the course of the year is set out below.

Audit Committee Report

Members

Ann Godbehere (Chairman)

Howard Davies

Alistair Johnston

Philip Remnant

Alice Schroeder

Table of Contents

Role and Responsibilities

The role and responsibilities of the Committee are set out in its terms of reference, which are reviewed by the Committee and approved by the Board on an annual basis. The terms of reference can be found on the Company's website.

The principal responsibilities of the Committee are:

monitoring the integrity of the Group's Annual Report and Accounts and any other periodic financial reporting, as well as the Company's financial statements, reviewing the accounting policies adopted, decisions taken regarding major areas of judgement, significant adjustments resulting from the audit, the going concern assumption and compliance with accounting standards, listing rules, legal, regulatory and other reporting requirements;

reviewing and providing advice to the Board as to whether, to the best of the Committee's belief, the Group's Annual Report and Accounts, taken as a whole, is fair, balanced and understandable; and providing such additional assurance as the Board may reasonably require regarding the reliability of financial information submitted to it;

keeping under review the framework and effectiveness of the Group's systems of internal control, including the adequacy of resources, qualifications and experience of accounting and financial reporting staff and their training programmes;

assessing the performance, independence and objectivity of the external auditor, monitoring the effectiveness of the audit process and reviewing their quality control procedures and steps taken to respond to regulatory, professional and other changes;

approving the internal audit plan and resources, and reviewing the effectiveness and performance of the internal audit function;

approving the annual compliance plan for the Group and considering the effectiveness of compliance arrangements

reviewing the anti-money laundering procedures in place, as well as the review of procedures operated for handling allegations from whistleblowers;

reviewing the effectiveness of the Group governance framework; and

reviewing the effectiveness of the business unit Audit Committees.

Governance

The Committee members are all non-executive directors. In keeping with the provisions of the UK and HK governance codes, the Board is satisfied that Ann Godbehere has recent and relevant financial experience.

During 2014, the Committee held 11 meetings. The Committee continued to work closely with the Risk Committee to ensure that any significant areas of overlap were appropriately addressed. Ann Godbehere, the Committee Chairman, is a member of the Risk Committee and the Chairman of the Risk Committee is likewise a member of the Audit Committee. This cross-membership helps to ensure that both Committees work together effectively to cover all relevant issues. Where there is a perceived overlap of responsibilities between these two committees, the terms of reference enable the respective Committee Chairmen to determine which committee is the most appropriate to fulfil the obligation.

Table of Contents

The Committee Chairman reported matters of significance to the Board after each meeting and the minutes of the meetings are made available to all Board members.

The Chairman of the Board, the Group Chief Executive, the Chief Financial Officer, the Group Chief Risk Officer, the Group General Counsel and the Director of Group-wide Internal Audit, as well as other senior staff from the Group Finance, Group-wide Internal Audit, Risk, Compliance and Security functions attended meetings of the Committee by invitation to contribute to the discussions relating to their respective areas of expertise. The external auditor also attended all meetings.

The Committee received the minutes from the Disclosure Committee and the Assumptions Approval Committee. The latter reviews the key assumptions used for financial reporting, business planning, forecasting and the IAS19 valuation of the three UK defined benefit pension schemes. Where it affects the results of the assurances under the Turnbull compliance statement, the Committee also received appropriate reporting from Group Risk.

In performing its duties, the Committee has access to all employees and their financial or other relevant expertise across the Group and external advisers as necessary.

Key areas of review in 2014

Considering key accounting judgements and estimates

Approving the Audit plan and monitoring the Auditor's independence

Formulating a view as to whether the Annual Report was fair, balanced and understandable

Considering the Audit findings report and the terms of engagement and fees to be paid to the Auditor

Monitoring the integrity of the financial statements

**Financial External
reporting audit**

Reviewing procedures for handling allegations from whistleblowers

Approving the Internal audit plan, including resources, coverage and delivery

Reviewing procedures to combat financial crime

**Procedures
and Assurance
framework**

Considering the conclusions of the Internal audit reports

Reviewing the effectiveness of the Group Governance Framework

Monitoring the effectiveness and performance of Group-wide Internal Audit

Approving the annual compliance plan for the Group and monitoring its delivery

Reviewing the effectiveness of internal control framework

Compliance Internal

Considering the effectiveness of the Group's compliance arrangements

Control

Considering the statements in the Annual Report regarding the effectiveness of internal control

Reviewing compliance with Sarbanes Oxley

How the Committee discharged its responsibilities

Financial reporting

The Committee assessed whether suitable accounting policies had been adopted throughout the accounting period and whether management had made appropriate estimates and judgements over recognition, measurement and presentation of the financial results. There were no new or altered accounting standards in 2014 that had a material effect on the Group's financial statements.

The Committee also focused on the accounting for material transactions, clarity of disclosures in financial reports, the going concern assumptions, and compliance with accounting standards and obligations under applicable laws, regulations and governance codes. The Committee further considered the fair, balanced and understandable requirement under the UK Code, providing advice to the Board in respect of this requirement.

Table of Contents

In addition, with the expansion of the term and geographic scope of our strategic pan-Asian bancassurance partnership with Standard Chartered Bank, the Committee reviewed the IFRS and EEV accounting bases applied to distribution rights. The Committee also considered the impact that the disposal of the Group's remaining stake in Pru Health and Pru Protect and the disposal of the Japan life business would have on the financial statements.

Key assumptions and judgements in respect of the Group's investments, insurance liabilities, and deferred acquisition costs are important. In this regard, the main areas of focus were oversight of the assumptions applied and operation of internal controls, in the preparation of the results, including the following items:

mortality and credit risk for UK annuity business;

economic and policyholder behaviour assumptions affecting the measurement of Jackson guarantee liabilities and amortisation of deferred acquisition costs;

non-recurrent adjustments to Asia policyholder liabilities; and

investment and derivative valuations, in particular considering the results of independent valuations by the external Auditor.

The Committee also considered judgemental matters regarding provisions for certain open tax items and presentation of deferred tax assets and liabilities.

The Committee received detailed papers from management regarding Group and subsidiary capital and liquidity prior to recommending to the Board that it could conclude that the financial statements should continue to be prepared on the going concern basis.

As part of its assessment of the explanation of performance, the Committee considered judgmental aspects of the Group's reporting of non-GAAP metrics. In particular, in relation to the Group's supplementary reporting on the European Embedded Value (EEV) basis, the Committee considered the appropriateness of the economic assumptions underpinning the projected rates of return and risk discount rates and of changes to EEV operating assumptions and the level of operating experience variances. The Committee reviewed the effect of moving EEV reporting to a post-tax basis, including the appropriateness of effective tax rates.

For Economic Capital, the Committee, in conjunction with the Risk Committee, reviewed the methodology for the basis of calculation and the disclosures within the supplementary information included in the full-year results announcement and Annual Report.

The Committee considered the effects of volatility in equity market movements, and changes in interest and foreign currency translation rates on the Group's results. The impact of these market driven effects on the accounting, presentation and disclosure of the Group's longer-term investment return assumptions and resultant short-term fluctuations in investment return was an area of focus.

For all of the above areas, the Committee received input from management and the external Auditor prior to reaching its conclusions.

In addition to these reporting matters, the Committee also received and considered regular updates from management on the status and implications for the Group's preparations for the Phase II insurance accounting standard which is under development by the International Accounting Standards Board, and other financial reporting developments.

Internal control and risk management

The Committee reviewed the Group's system of internal control and the developments having an impact on it over the course of 2014. The Committee considered the process used to evaluate the effectiveness of the system, as well the findings of the review. In light of these findings, the Committee assessed the statement on internal control systems prior to its endorsement by the Board.

Table of Contents

Pursuant to the requirements of Section 404 of the Sarbanes-Oxley Act, the Group undertakes an annual assessment of the effectiveness of internal control over financial reporting.

External audit

The Group's external auditor is KPMG LLP and oversight of the relationship with them is one of the Committee's key responsibilities. The Committee approved KPMG's terms of engagement and recommended their remuneration for the statutory audit. The Committee met privately with the Auditor on two occasions during 2014 and the Committee Chairman maintained regular contact with the audit partner throughout the year.

Effectiveness

To assess the effectiveness of the Auditor, the Committee reviewed the audit approach and strategy and received a report on their performance. The evaluation was conducted using a questionnaire which was circulated to the Committee Chairman, the Chief Financial Officer and the Group's senior finance leadership for completion. The feedback provided was reviewed and compiled into a report for the Committee which covered areas such as the knowledge and expertise of the partners and team members, their understanding of the Group, the resourcing applied to the audit and continuity of the team, liaison with Group-wide Internal Audit and approach to resolution of issues, as well as factors such as their co-ordination across the Group's multiple jurisdictions and quality of their written and oral communication. The degree of challenge and robustness of approach to the audit were particularly key components of the evaluation. Audit fees and the FRC Audit Quality review findings were also considered.

The Committee Chairman invited other Group stakeholders to provide their views on the performance of the Auditor and KPMG were given the opportunity to respond to the findings in the report. On completion of the exercise, the Committee concluded that the audit had been effective and challenge appropriately robust across all parts of the Group.

Auditor independence and objectivity

The Committee is responsible for monitoring auditor independence and objectivity and is supported in doing so by the Group's Auditor Independence Policy (the Policy). The Policy sets out the circumstances in which the external auditor may be permitted to undertake non-audit services and is based on four key principles which specify that the auditor should not:

- audit its own firm's work;
- make management decisions for the Group;
- have a mutuality of financial interest with the Group; or
- be put in the role of advocate for the Group.

The Policy has two permissible service types: those that require specific approval by the Committee on an engagement basis and those that are pre-approved by the Committee with an annual limit. In accordance with the Policy, the Committee approved these permissible services, classified as either audit or non-audit services, and monitored the annual limits on a quarterly basis. All non-audit services undertaken by KPMG were agreed prior to the commencement of work and were confirmed as permissible for the external auditor to undertake under the provisions of the Sarbanes-Oxley Act.

In keeping with professional ethical standards, KPMG also confirmed their independence to the Committee and set out the supporting evidence for their conclusion in a report which was considered by the Committee prior to the publication of the financial results.

Fees paid to the Auditor

The fees paid to KPMG for the year ended 31 December 2014 amounted to £16.6 million, of which £5.1 million was payable in respect of non-audit services. Non-audit services accounted for 31 per cent of total fees payable.

Table of Contents

A further breakdown on the fees paid to KPMG can be found in Note B3.4 to the consolidated financial statements in Item 18.

Re-appointment

Based on the outcome of the effectiveness evaluation and all other considerations, the Committee recommended to the Board that KPMG be re-appointed as the Auditor. A resolution to this effect will be proposed to shareholders at the 2015 Annual General Meeting.

Audit tender

The Group operates a policy under which at least once every five years a formal review is undertaken by the Committee to assess whether the external audit should be re-tendered. The external audit was last put out to competitive tender in 1999 when the present auditor was appointed. Since 2005 the Committee has annually considered the need to re-tender the external audit service and it again considered this in February 2015, concluding that there was nothing in the performance of the Auditor which required a change.

The Committee acknowledges the provisions contained in the UK Code in respect of audit tendering, along with European rules on mandatory audit rotation and audit tendering. In light of this and conforming to the requirements of the European Union rules, it is expected that the Company will be required to change auditor no later than for the 2023 financial year-end. The Committee also recognises that the industry is in a period of unprecedented change with the introduction of Solvency II in 2016 and the IASB expecting to issue a new insurance accounting standard for implementation, mostly likely, in 2019. The Committee currently believes any change of auditor should be scheduled to limit operational disruption during such a period of change and, as a consequence, is not currently planning to re-tender the audit ahead of this date.

In line with the Auditing Practices Board Ethical Statements and the Sarbanes-Oxley Act, a new lead audit partner was appointed in respect of the 2012 financial year and remains in this position.

Internal Audit

The independent assurance provided by Group-wide Internal Audit formed a fundamental part of the Committee's deliberations on the Group's overall control environment. The Committee approved Group-wide Internal Audit's annual plan, resource and budget, and considered the performance of the Director of Group-wide Internal Audit.

Each of the Group's business units has an internal audit team, the heads of which report to the Director of Group-wide Internal Audit. The function also has a Quality Assurance Director, whose primary role is to monitor and evaluate adherence to industry practice guidelines and Group-wide Internal Audit's own standards and methodology. Internal audit resources, plans, budgets and its work are overseen by both the Committee and the relevant business unit audit committee. The Director of Group-wide Internal Audit reports functionally to the Chairman of the Committee and for management purposes to the Group Chief Executive.

As part of its remit, the Committee periodically meets with the Director of Group-wide Internal Audit without the presence of management, a practice replicated at the business unit level.

Internal Auditor performance

In addition to the periodic external effectiveness review required every five years (last conducted by PwC in 2012); the Committee annually assesses the performance and effectiveness of the internal audit function. The internal effectiveness review, performed by the Group-wide Internal Audit Quality Assurance Director, was conducted in accordance with the professional practice standards of the Chartered Institute of Internal Auditors (CIIA). The review concluded that Group-wide Internal Audit continued to comply with the requirements of internal audit policies, procedures and practices, and standards in all material respects and that the function continued to be aligned with its mandated objectives.

Furthermore, following the introduction in July 2013 of the CIIA guidance for Effective Internal Audit in the Financial Services (the Code), an independent third party has assessed Group-wide Internal Audit's conformance

Table of Contents

with the Code. In February 2015, their conclusions for 2014 were reported to the Group Audit Committee. They reported that the function had designed and implemented enhanced practices to comply with the CIIA guidelines, that the Group-wide Internal Audit was generally conformant with the Code, with most areas of the Code embedded and with work well advanced to embed the remaining areas in 2015.

The Committee considered the findings of the Quality Assurance review and the opinion provided by the external verification, and concluded that Group-wide Internal Audit had continued to operate effectively during 2014.

Group Compliance

Regular updates from Group Compliance were provided to the Committee. This function is responsible for assessing the risks posed to the Group as a result of non-compliance with relevant regulations, including those in respect of anti-money laundering and sanctions.

Each business unit has its own compliance function, and the role of Group Compliance is to assess the effectiveness of these functions, as well as to provide oversight and support in the identification, mitigation and reporting of regulatory risks arising from both current business activities and from changes in the regulatory environment.

Group Compliance is responsible for ensuring Group-wide compliance policies remain up to date and fit for purpose. These include the Group Compliance Policy, Group Sanctions Policy, Group Anti-Money Laundering Policy and the Policy regulating communications with the Prudential Regulation Authority and Financial Conduct Authority. All these were reviewed during the year and changes considered by the Committee in October.

Financial Crime and Whistleblowing

The Committee is responsible for reviewing the Group's whistleblowing procedures and received, regular updates on concerns raised through these channels, as well as management actions taken in response.

The Confidential Helpline Reporting Policy is kept under regular review by the Committee and is maintained as part of the Group Governance Manual. The Group Resilience Director is responsible for the policy and the Committee met with him privately during the year as required to discuss any concerns regarding such issues.

Ongoing development

Throughout the year, the Committee received detailed presentations on a range of topics including updated financial accounting developments, new reporting requirements and briefings on developments in the regulatory environment. Members of the Committee and relevant executive directors attended a joint session with the Risk Committee in respect of the results of the internal model developed under Solvency II provisions.

Business unit audit committees

The Committee is supported by the work carried out by the business unit audit committees. These committees provide oversight of the respective business units and are comprised primarily of senior management who are independent of the business unit. The minutes of these committees are reported regularly to the Committee and their meetings are attended by the external auditor as well as senior management from the business unit (including the BU Chief Executive, heads of Finance, Risk, Compliance and Group-wide Internal Audit). Group-wide Internal Audit assesses the effectiveness of each business unit audit committee annually and provides a report to the Committee.

Each business unit audit committee has adopted the Group's standard terms of reference, with minor variations to address local regulations or the particular requirements of the business. During 2014 and with the approval of the Committee, these were updated to improve alignment with the Committee's own terms of reference. The Committee Chairman also reviewed and approved appointments of business unit audit committee members during the year.

Effectiveness

Group-wide Internal Audit carries out an annual assessment of the effectiveness of the business unit audit committees. This is to ensure that these committees continue to function effectively and provide appropriate support enabling the Committee to fulfil its responsibilities.

Table of Contents

Internal audit teams in each of the business units carried out the assessments, considering whether each of the committees fulfilled the responsibilities as documented in their terms of reference. Attendance rates by committee members and evidence of the committees' coverage of key business unit issues, as well as the appropriate escalation of concerns to the Committee, formed part of the criteria used for the evaluation. The assessment further factored in the suitability of the business unit audit committee structures and the appropriateness of the membership on each committee.

The Committee considered a report on the findings of the assessment at its October meeting, noting the conclusion that these continued to operate effectively.

Lord Turnbull

Role and Responsibilities

The role and responsibilities of the Committee are set out in its terms of reference, which are reviewed by the Committee and approved by the Board on an annual basis. The terms of reference can be found on the Company's website.

The principal responsibilities of the Committee are:

keeping under review the leadership needs of the Group and ensuring suitable Board succession plans are in place;

reviewing the size, structure and composition of the Board, including knowledge, experience and diversity, and making recommendations to the Board with regard to any changes;

identifying and nominating candidates, based on merit and against objective criteria, for approval by the Board to fill any Board vacancies, with the exception of the Chairman or Group Chief Executive which shall be a matter for the whole Board;

considering and authorising any actual or potential situational conflicts, on any terms considered appropriate by the Committee, arising from either new or existing appointments; and

developing, where appropriate, and periodically reviewing any objectives established for the implementation of diversity on the Board and monitor progress toward achievement of those objectives.

Governance

With the exception of the Chairman, all the members of the Committee are non-executive directors. As announced in October 2014, Anthony Nightingale is to join the Committee in May 2015.

The Committee met three times during the year and the Chairman reported to the Board on matters of significance after each meeting. The Group Chief Executive is closely involved in the work of the Committee and was invited to attend and contribute to meetings, as was the Group HR Director.

Table of Contents***Key areas of review in 2014***

<i>Board Composition</i>	Considering the effectiveness of the composition of Board and Committees
	Evaluating the Board's diversity including experience, perspective and knowledge
<i>Succession planning</i>	Considering the future retirement of non-executive directors
	Considering the overall skills and knowledge required to support strategic goals of the Group
<i>Conflicts of interest</i>	Conducting the annual review of the conflicts of interest register
	Considering potential conflicts of interest for existing directors and individuals recommended to the Board for appointment as directors

How the Committee discharged its responsibilities**Board composition and succession planning**

The Committee reviewed the composition of the Board and, in particular, the non-executive directors to ensure that the balance of skills, experience and knowledge continued to be appropriate to oversee the achievement of the Group's strategic objectives. The Committee also considered whether any additional skills and experience would be needed, either to complement those already on the Board or to plan for filling vacancies due to future retirements. The Committee reviewed the succession plans for both executive and non-executive directors taking into account the board composition criteria outlined above, as well as the level of diversity desirable for a global Group. The process included consideration of the anticipated demands of the business, and the skills and knowledge required to successfully deliver against these.

Diversity

Given the global reach of the Group's operations, the Board makes every effort to ensure it is able to recruit Directors from different backgrounds, with diverse experience, perspectives and skills. This diversity not only contributes towards Board effectiveness but is essential for successfully delivering the strategy of an international Group. The Board is duty bound to recruit the best available talent and remains committed to appointing the most appropriate candidate for each role. This same approach is applied by all our businesses and bringing the right skills and knowledge to every role is key to the ongoing success of the Group.

As part of a much wider approach to diversity, the Board takes care to consider gender when selecting new members. Although the Board does not endorse quotas, it does commit to having an increasing representation of women in senior positions in the Group and on the Board.

Conflicts of interest and independence

The Board has delegated authority to the Committee to consider, and where necessary authorise, any actual or potential conflicts of interest arising in respect of the directors. The Committee considered potential conflicts of interest as they arose during the course of the year and in respect of the appointment of new directors.

The Committee also reviewed conflicts previously considered and authorised prior to the publication of the Annual Report and considered the independence of the non-executive directors in the context of the criteria set out in the UK and HK Codes.

Lord Turnbull

Role and Responsibilities

The role and responsibilities of the Committee are set out in its terms of reference, which are reviewed by the Committee and approved by the Board on an annual basis. The terms of reference can be found on the Company's website.

The principal responsibilities of the Committee are:

recommending the Group's overall risk appetite and tolerance to the Board for approval;

reviewing the Group's risk framework and approving risk policies, standards and limits within the overall appetite and tolerance approved by the Board;

reviewing the Group's processes for determining risk appetite tolerance, monitoring compliance with approved risk tolerance levels and policies and the resultant action in respect of policy breaches;

reviewing the Group's material risk exposures, including market, credit, insurance, operational, liquidity and economic and regulatory capital risks against the Group's risk methodologies and management's actions to monitor and control such exposures;

annually reviewing and approving the Group's key risks;

reviewing the Group's stress testing and monitoring management's response to the results;

reviewing the Group's investment framework and approving investment policies, standards and limits within the overall strategy approved by the Board;

advising the Board on the risks inherent in strategic transactions and business plans;

advising the Remuneration Committee on risk weightings to be applied to performance objectives for Executive remuneration; and

reviewing and monitoring the effectiveness of the Group Chief Risk Officer.

Governance

The Committee met on six occasions during the year and continued to maintain close links to the Audit Committee. Howard Davies, the Committee Chairman, is a member of the Audit Committee and similarly, the Audit Committee Chairman is a member of the Committee. This cross-membership facilitates an effective linkage between both Committees, ensuring that any risk assurance relevant to financial reporting is referred to the Audit Committee. In addition, where there is a perceived overlap of responsibilities between these two committees, the terms of reference enable the respective Committee Chairmen to determine which committee is the most appropriate to fulfil the obligation.

The Committee Chairman reported matters of significance to the Board after each meeting and the minutes of the meetings are made available to all Board members.

Table of Contents

The Chairman of the Board, the Group Chief Executive, the Chief Financial Officer, the Group Chief Risk Officer, the Group Investment Director, the Group-wide Internal Audit Director, the Group General Counsel as well as senior staff from the Group Risk function attended meetings of the Committee by invitation to contribute to the discussions relating to their respective areas of expertise.

The Committee received the minutes of the Group Executive Risk Committee, along with any matters escalated by the other risk management committees. The Committee is provided with regular reports on the activities of the Group Risk function and, where it affects the results of the assurances under the Turnbull compliance statement, the Audit Committee also receives appropriate reporting from this function.

The Group's capital position and overall position against risk limits are reviewed regularly by the Committee. Key economic capital metrics, as well as risk-adjusted profitability information, are included in the business plans which are reviewed by the Group Executive Risk Committee, the Committee and the Board.

Key areas of review in 2014

Considering the economic capital methodology and results including feedback to Prudential Regulation Authority

Monitoring developments within the developing G-SII process

Overseeing the development of the Internal Model

Overseeing and signing off on key deliverables, including the Recovery Plan, Systemic Risk Management Plan, Liquidity Risk Management Plan

Monitoring the effectiveness of Group Risk Framework

**Capital model development
Risk management
and Group Risk Framework**

**G-SII designation
Group Investment framework**

Considering the remit of the Group Investment Director and scope of the Group investment function

Monitoring business and regulatory developments with risk implications

Overseeing the alignment of the Group's risk and investment frameworks

Overseeing the process for compiling and the detailed review of the ORSA, making recommendations to the Board

How the Committee discharged its responsibilities**Risk management and the Group Risk Framework**

The Committee continued to receive detailed reports on key risk exposures, emerging and potential risks, and the drivers of risk throughout the Group. It received regular updates from the Group Investment Director and various departments on market conditions and their impact on the business as a whole. The Committee considered the stress scenarios and results of the Group's stress testing, and considered the appropriateness of the three lines of defence model on which the Group Risk Framework is based. More information on the model can be found in Item 4, Group Risk Framework. The information received enabled the Committee to monitor capital and liquidity management, and

to assess and challenge both the effectiveness and appropriateness of the Group Risk Framework, ensuring that it continued to support the risk appetite as determined by the Board. Adjustments to specific limits and policies within the established risk appetite were considered and approved by the Committee.

The findings of the regular survey on risk culture across the Group were reviewed by the Committee and provided a backdrop to the environment in which the Group Risk Framework is implemented.

Cyber risk

The Committee reviewed an in-depth report into the Group's arrangements for managing cyber risk. This included measuring the current arrangements against the approved appetite and tolerance and considering the levels of inter-connectedness between the Group's operating business units.

Table of Contents

Economic capital models and regulatory reporting

The Committee continued to oversee the development of the Group's economical capital model ahead on the implementation of Solvency II in 2016. The model continues to be based on draft rules and a number of working assumptions. The Committee's oversight will continue through 2015 as the model is finalised and agreed with the Prudential Regulation Authority.

The Committee reviewed a number of regulatory submissions and recommended them to the Board for approval. One of the key new submissions in the year was the Group's Own Risk and Solvency Assessment (ORSA). The Committee was also kept updated on the discussions with the Prudential Regulation Authority in respect of the findings of the ORSA.

The Group's response to the 2014 European Insurance and Occupational Pensions Authority Guidelines on the System of Governance stress test was considered by the Committee prior to its submission to the Regulator.

Globally Systemically Important Insurer (G-SII)

In July 2013, the Group was designated as a globally systemically important insurer by the Financial Stability Board. The Committee continued to oversee the deliverables required as a result of the Group's designation and dialogue remained ongoing with the Prudential Regulation Authority in respect of the growing scope of this project.

Group Investment Framework

The alignment of the Group risk and investment frameworks was considered by the Committee. The views of the Group Chief Risk Officer and Group Investment Director were taken into account, as was the need to maintain a clear separation between the relevant lines of defence.

The Group Risk Framework already encompassed established limits and processes in respect of managing credit, liquidity, market, operational and other risks, and it was deemed appropriate to use this framework to enhance the Group's oversight of its investment approach. The Committee's terms of reference were updated accordingly to reflect this responsibility.

Ongoing development

The Committee regularly received updates from the Group Investment Director, the Group Risk and Group Treasury functions on industry and market developments and their impact on the Group. Members of the Committee and relevant executive directors attended a joint session with the Audit Committee in respect of the results of the internal model developed under Solvency II provisions.

NYSE Corporate Governance Rules compared to Prudential plc's Corporate Governance Practice

Pursuant to NYSE rule 303A Prudential has disclosed the differences between the NYSE Corporate Governance Rules and its Corporate Governance Practice on its website at www.prudential.co.uk/site-services/governance-and-policies/nyse-and-prudential-plcs-corporate-governance-rules-and-practice. See also Item 16G, Corporate Governance on page 226.

Employees

The average numbers of staff employed by the Prudential group, excluding employees of the venture investment subsidiaries of the PAC with-profits fund, for the following periods were:

	2014	2013	2012
Business operations:			
Asia operations	13,957	12,239	11,284
US operations	4,494	4,414	4,000
UK operations	5,464	5,533	5,035
Total	23,915	22,186	20,319

Table of Contents

At 31 December 2014, Prudential employed 20,544 employees representing an increase in the year from 20,052 employees as at 31 December 2013. Most of the increase relates to Asia due to regular business growth, supporting growth in operations along with expansions in certain countries. Of the 20,544 employees, approximately 27 per cent were located in the United Kingdom, 51 per cent in Asia and 22 per cent in the United States. In the United Kingdom at 31 December 2014, Prudential had 371 employees paying union subscriptions through the payroll. At 31 December 2014, Prudential had 432 temporary employees in the United Kingdom, 3,357 in Asia and 90 in the United States. At 31 December 2014, Prudential had 239 fixed term contractors in the United Kingdom, 616 in Asia and none in the United States.

Item 7. Major Shareholders and Related Party Transactions**Major Shareholders**

The Disclosure and Transparency Rules issued by the FCA provide that a person or corporate entity that acquires an interest of 3 per cent or more in Prudential ordinary shares is required to notify Prudential of that interest. If such interest subsequently reaches, exceeds or falls below a whole percentage point, this must also be notified. Similarly, a notification is required once the interest falls below 3 per cent. At 31 March 2015 Prudential had received the following notifications:

Significant Changes in Ownership**2012**

In April 2012, BlackRock Inc. notified an increase in interest to 129,499,098 shares, representing 5.08 per cent of the issued share capital.

In September 2012, Capital Group Companies, Inc. (formerly interests notified by Capital Research and Management Company) notified an increase in interest to 256,652,047 shares, representing 10.04 per cent of the issued share capital.

2013

In May 2013, Capital Group Companies Inc. notified a decrease in interest to 255,851,954 shares, representing 9.99 per cent of the issued share capital.

In July 2013, Capital Group Companies, Inc. notified an increase in interest to 259,009,041 shares representing 10.12 per cent of the issued share capital.

In September 2013, Legal and General plc notified a decrease in interest to 101,803,187 shares, representing less than 3 per cent of the issued share capital.

2014 and 2015

No notifications were received during 2014.

In 2015 to date, one notification was received in February from Capital Group Companies notifying a decrease in their interest to 255,928,904 representing 9.96% of the issued share capital.

Table: Notifications received from major shareholders as at 31 March 2015

Shareholder	Date advised	Percentage of share capital	Shareholding
Capital Group Companies, Inc.	18/02/2015	9.96%	255,928,904
BlackRock Inc	05/04/2012	5.08%	129,499,098
Norges Bank	26/11/2010	4.03%	102,495,000

Major shareholders of Prudential have the same voting rights per share as other shareholders. See Item 10, Additional Information Memorandum and Articles of Association - Voting Rights .

Table of Contents

As at 16 March 2015, there were 129 shareholders with a US address on Prudential's register of shareholders. These shares represented approximately 0.01 per cent of Prudential's issued ordinary share capital. As at 16 March 2015 there were 54 registered Prudential ADR holders. The shares represented by these ADRs amounted to approximately 2.07 per cent of Prudential's issued ordinary share capital.

Prudential does not know of any arrangements which may at a subsequent date result in a change of control of Prudential.

Related Party Transactions

Information on the related party transactions of the Group is provided in note D7 to the consolidated financial statements in Item 18.

Item 8. Financial Information

See Item 18, Financial Statements.

Item 9. The Offer and Listing**Comparative Market Price Data**

The tables below set forth the highest and lowest closing middle-market quotations for Prudential shares, as derived from the Daily Official List of the London Stock Exchange, the actual ADRs high and low closing sale prices for the periods indicated on the New York Stock Exchange and the highest and lowest closing prices on the Hong Kong Stock Exchange and Singapore Stock Exchange.

Year	Prudential Ordinary Shares		Prudential ADRs		Prudential Ordinary Shares (Hong Kong)*		Prudential Ordinary Shares (Singapore)*

* Prudential listed on these stock exchanges on 25 May 2010. Accordingly, the market price data shown above for these stock exchanges is only from this date.

** Trading on the Singapore Stock Exchange was infrequent during the periods listed above.

Market Data

Prudential ordinary shares are listed on the Premium Listing segment of the Official List of the UK Listing Authority and traded on the London Stock Exchange under the symbol PRU . On 25 May 2010, Prudential ordinary shares were admitted to listing on the Main Board of the Hong Kong Stock Exchange and are traded in board lots of 500 shares with the short name PRU and stock code 2378; and as a secondary listing on the Singapore Stock Exchange, also traded in board lots of 500 shares, with the abbreviated name PRU 500 .

Prudential American Depositary Shares (ADSs) have been listed for trading on the New York Stock Exchange since 28 June 2000 under the symbol PUK .

Item 10. Additional Information**Memorandum and Articles of Association**

Prudential plc is incorporated and registered in England and Wales, under registered number 1397169. Its objects are unrestricted, in line with the default position under the Companies Act 2006.

The following is a summary of both the rights of Prudential shareholders and certain provisions of Prudential's Articles of Association. Rights of Prudential shareholders are set out in Prudential's Articles of Association or are provided for by English law. This document is a summary and, therefore, does not contain full details of Prudential's Articles of Association. A complete copy of Prudential's Articles of Association was filed as an exhibit to Form 20-F for the year ended 31 December 2008. In addition, the Articles of Association may be viewed on Prudential's website.

Issued share capital

The issued share capital as at 31 December 2014 consisted of ordinary shares of 5 pence each, all fully paid up and listed on the London Stock Exchange and the Hong Kong Stock Exchange. Further information can be found in Note C10 to the consolidated financial statements in Item 18.

	Issued share capital	Number of accounts on the register
2014	2,567,779,950	55,760
2013	2,560,381,736	57,013

Prudential also maintains secondary listings on the Singapore Stock Exchange; and the New York Stock Exchange in the form of American Depositary Receipts which are referenced to ordinary shares on the main UK register.

Prudential has maintained a sufficiency of public float throughout the reporting period as required by the Hong Kong Listing Rules.

Table of Contents

A number of dividend waivers are in place and these relate to shares issued but not allocated under the Group's employee share plans. These shares are held by the Trustees and will, in due course, be used to satisfy requirements under the Group's employee share plans.

The issued share capital of Prudential is not currently divided into different classes of shares. The Companies Act 2006 abolished the requirement for a company to have an authorised share capital.

As at 16 March 2015, the directors retained authority granted at the Annual General Meeting on 15 May 2014 to allot before the earlier of 30 June 2015 and the Annual General Meeting of the Company to be held in 2015, ordinary shares of up to an aggregate nominal value of £42,735,626 subject to limitations and reductions in certain circumstances. Of those shares, directors retained authority to allot equity securities for cash up to a maximum nominal value of £6,410,334 without first being required to offer such securities to shareholders in proportion with their existing holding. In the case of a rights issue, directors retained authority to allot equity securities in favor of ordinary shareholders up to an aggregate nominal amount equal to £85,471,253 subject to reduction in certain circumstances.

At the Annual General Meeting scheduled to be held on 14 May 2015, the shareholders are to vote on granting the directors a similar authority to allot (up to approximately 33 per cent of the issued share capital) before the earlier of 30 June 2016 and the Annual General Meeting of the Company to be held in 2016.

In addition the directors have authority to allot Sterling preference shares up to a maximum nominal amount of £20 million, Dollar preference shares up to a maximum nominal amount of US\$20 million, and Euro preference shares up to a maximum nominal value of 20 million, the terms of which will be determined by the Board on allotment. Shareholders renewed this authority at the Annual General Meeting held on 15 May 2014.

The Board shall determine whether the preference shares are to be redeemable, their dividend rights, their rights to a return of capital or to share in the assets of the Company on a winding up or liquidation and their rights to attend and vote at general meetings of the Company prior to the date on which the preference shares are allotted. Under the Company's Articles of Association, the Board has discretion to determine the terms and manner of redemption of redeemable shares when the shares are allotted.

The Board may only capitalise any amounts available for distribution in respect of any series or class of preference shares if to do so would mean that the aggregate of the amounts so capitalised would be less than the multiple, if any, determined by the Board of the aggregate amount of the dividends payable in the 12 month period following the capitalisation on the series or class of preference shares and on any other preference shares in issue which rank *pari passu* in relation to participation in profits. This restriction may be overturned with either: (i) the written consent of the holders of at least three-quarters in nominal value; or (ii) a special resolution passed at a general meeting of the holders of the class or series of preference shares.

Dividends and other distributions

Under English law, Prudential may pay dividends only if distributable profits are available for that purpose. Distributable profits are accumulated, realised profits not previously distributed or capitalised, less accumulated, realised losses not previously written off in a reduction or reorganisation of capital. Even if distributable profits are available, Prudential may only pay dividends if the amount of its net assets is not less than the aggregate of its called-up share capital and undistributable reserves, including, for example, the share premium account, and the payment of the dividend does not reduce the amount of the net assets to less than that aggregate. Subject to these restrictions, Prudential's directors may recommend to ordinary shareholders that a final dividend be declared,

recommend the amount of any such dividend, determine whether to pay a distribution by way of an interim dividend, and the amount of any such interim dividend out of the profits of the Company, but must take into account Prudential's financial position. Final dividends become a legal liability of a company upon the later of the date they are declared by shareholders and the date the shareholder approval expresses them to be payable. Interim dividends only become a legal liability of a company at the moment they are paid.

The Company or its directors determine the date on which Prudential pays dividends. Prudential pays dividends to the shareholders on its share registers on the record date in proportion to the number of shares held by each

Table of Contents

shareholder. There are no fixed dates on which entitlements to dividends arise. Interest is not payable on dividends or other amounts payable in respect of shares.

If a shareholder does not claim a dividend within 12 years of such dividend becoming due for payment, such shareholder forfeits their right to receive it. Such unclaimed amounts may be invested or otherwise used for Prudential's benefit.

Shareholder meetings

English law provides for shareholders to exercise their power to decide on corporate matters at general meetings. In accordance with English law, the Company is required to call and hold annual general meetings. At annual general meetings, shareholders receive and consider the statutory accounts and the reports by the Company's auditor and its directors, approve the directors' remuneration report, elect and re-elect directors, declare final dividends, approve the appointment of the Company's auditor, authorise the directors to determine the auditor's remuneration, and transact any other business which ought to be transacted at a general meeting, either pursuant to the Articles of Association or English law. General meetings to consider specific matters may be held at the discretion of Prudential's directors and must be convened, in accordance with English law, following the written request of shareholders representing at least five per cent of the voting rights of the issued and paid-up share capital. The quorum required under Prudential's Articles of Association for a general meeting is two shareholders present in person or by proxy and entitled to vote on the business to be transacted.

Under the Companies (Shareholders' Rights) Regulations 2009, notice periods for all general meetings have to be 21 days, except for a meeting (i) which is not an annual general meeting, (ii) for which an electronic facility for voting and appointing proxies is available to all members, and (iii) in respect of which a company obtains shareholder approval annually to retain the shorter 14-day notice period. Prudential has been able to call general meetings (other than annual general meetings) on 14-days' notice and obtained initial shareholder approval at the Annual General Meeting on 19 May 2010 to enable it to continue to do so after the implementation of the Regulations. A similar resolution has been put to shareholders for approval at each subsequent Annual General Meeting and the current authority will be effective until the Company's Annual General Meeting on 14 May 2015 when it will once again be proposed.

Voting rights

Voting at any meeting of shareholders is by show of hands unless the Company's intention to call a poll on the resolution is stated in the notice to the general meeting or, before or on the declaration of the result of a vote on the show of hands or on the withdrawal of any other demand for a poll, a poll is duly demanded. The Company's practice is for all votes at its AGM to be conducted by way of poll. A poll may be demanded as described below. On a show of hands, every shareholder holding ordinary shares who is present in person, or a duly appointed proxy or in the case of a corporation, its duly authorised corporate representative, has one vote. On a poll, every shareholder who is present in person or by proxy and every duly authorised corporate representative has one vote for every share held. Only the holders of fully paid shares are allowed to attend, be counted in the quorum at meetings and vote. If more than one joint shareholder votes, only the vote of the shareholder whose name appears first in the register is counted. A shareholder whose shareholding is registered in the name of a nominee may only attend and vote at a general meeting if appointed by his or her nominee as a proxy or a corporate representative.

Resolutions of Prudential's shareholders generally require the approval of a majority of the shareholders to be passed. Such resolutions, referred to as ordinary resolutions, require:

on a show of hands, a majority in number of the shareholders present and voting in person or by duly appointed proxies or (in the case of corporate shareholders) by authorised corporate representatives to vote in favor, or

on a poll, more than 50 per cent of the votes cast to be in favor.

Some resolutions, referred to as special resolutions, such as a resolution to amend the Articles of Association, require a 75 per cent majority. Such special resolutions require:

on a show of hands, at least 75 per cent of the shareholders present and voting in person or by duly appointed proxies or (in the case of corporate shareholders) by authorised corporate representative to vote in favor, or

on a poll, at least 75 per cent of the votes cast to be in favor.

Table of Contents

Any shareholder who is entitled to attend and vote at a general meeting may appoint one or more proxies to attend and vote at the meeting on his or her behalf.

The following persons may demand a poll:

the chairman of the meeting,
at least five shareholders present in person, by corporate representative or by proxy having the right to vote on the resolution,
any shareholder or shareholders present in person, by corporate representative or by proxy and representing at least 10 per cent of the total voting rights of all shareholders having the right to vote on the resolution, or
any shareholder or shareholders present in person, by corporate representative or by proxy and holding shares conferring a right to vote on the resolution on which an aggregate sum has been paid up equal to at least 10 per cent of the total sum paid up on all shares conferring that right.

Transfer of shares

Transfers of shares may be made by an instrument of transfer. An instrument of transfer must be signed by or on behalf of the transferor and, unless the share is fully paid, by or on behalf of the transferee. The transferor remains the holder of the relevant shares until the name of the transferee is entered in the share register. Transfers of shares may also be made by a computer-based system and transferred without a written instrument in accordance with English law. The directors may in certain circumstances refuse to register transfers of shares, but only if such refusal does not prevent dealings in the shares from taking place on an open and proper basis. If the directors refuse to register a transfer they must send the transferee notice of the refusal within two months stating the reason(s) for such refusal.

Changes in share capital

Directors require authority to allot from shareholders before issuing new shares. The class and other rights attaching to new classes of shares may be determined by resolution of the shareholders or may be delegated by the shareholders to the directors. The following changes in share capital may only take place after approval by an ordinary resolution of the shareholders:

share consolidations, and
subdivisions of shares.

Reductions in Prudential's issued share capital and share premium account must be approved by a special resolution of the shareholders and must be confirmed by an order of the court.

Variation of rights

If the share capital is divided into different classes of shares, the rights of any class of shares may be changed or taken away only if such measure is approved by a special resolution passed at a separate meeting of the members of that class, or with the written consent of at least three quarters of the members of that class. Two persons holding or representing by proxy at least one-third in nominal amount of the issued shares of the class must be present at such a meeting in person or by proxy to constitute a quorum.

The Board may not authorise, create or increase the amount of, any shares of any class or any security convertible into shares of any class or any security which is convertible into shares of any class ranking, as regards rights to participate

in the profits or assets in the company, in priority to a series or class of preference shares without the consent in writing of at least three-quarters in nominal value of, or the sanction of a special resolution of, the holders of such series or class of preference shares.

Lien

Prudential has a lien on every share that is not a fully paid share.

Table of Contents

Accidental omission to give notice

Accidental omission to send notice of a meeting to any person entitled to receive it, or the non-receipt for any reason of any such notice, shall not invalidate the proceedings of that meeting.

Shareholders resident abroad

There are no limitations on non-resident or foreign shareholders' rights to own Prudential securities or exercise voting rights where such rights are given under English company law.

Winding-up

Prudential is subject to the general insolvency law applicable to UK companies.

Board of directors

Prudential's Board of directors manages the Company business. However, the Company's shareholders must approve certain matters, such as changes to the share capital and the election and re-election of directors. Directors are appointed subject to the Articles of Association. The Board may appoint directors to fill vacancies and appoint additional directors who hold office until the next Annual General Meeting. The Articles of Association require that each director must have beneficial ownership of a given number of ordinary shares. The number of shares is determined by ordinary resolution at a general meeting and is currently 2,500. The minimum number of directors is eight and the maximum number is 20. Shareholders may vary the limits on the number of directors by ordinary resolution. There are currently 16 directors on Prudential's Board.

Any director who has been appointed by the Board since the last Annual General Meeting; or who held office at the time of the two preceding Annual General Meetings and who did not retire at either of them; or who has held office with the Company, other than employment or executive office, for a continuous period of nine years or more at the date of the meeting, shall retire from office and may offer himself or herself for re-election by shareholders. Shareholders may remove any director before the end of his or her term of office by ordinary resolution and may appoint another person in his or her place by ordinary resolution. The UK Corporate Governance Code, contains a provision recommending that directors stand for annual re-election at the Annual General Meeting. In line with these provisions, all directors are expected to stand for re-election at the 2015 Annual General Meeting.

The directors may exercise all the powers of the Company to borrow money and to mortgage or charge any of its assets provided that the total amount borrowed does not, when aggregated with the total borrowing (which excludes, amongst other things, intra-group borrowings and amounts secured by policies, guarantees, bonds or contracts issued or given by Prudential or its subsidiaries in the course of its business) of all of Prudential's subsidiaries, exceed the aggregate of the share capital and consolidated reserves and of one-tenth of the insurance funds of Prudential and each of its subsidiaries as shown in the most recent audited consolidated balance sheet of the Group prepared in accordance with the English law.

There is no age restriction applicable to directors in the Articles of Association.

Disclosure of interests

There are no provisions in Prudential's Articles of Association that require persons acquiring, holding or disposing of a certain percentage of Prudential's shares to make disclosure of their ownership percentage. The basic disclosure

requirement under Part 6 of the Financial Services and Markets Act 2000 and Rule 5 of the Disclosure and Transparency Rules of the FCA imposes a statutory obligation on a person to notify Prudential and the FCA of the percentage of the voting rights he or she directly or indirectly holds or controls, or has rights over, through his direct or indirect holding of certain financial instruments, if the percentage of those voting rights:

reaches, exceeds or falls below 3 per cent and/or any subsequent whole percentage figure as a result of an acquisition or disposal of shares or financial instruments; or
reaches, exceeds or falls below any such threshold as a result of any change in the number of voting rights attached to shares in Prudential.

Table of Contents

The Disclosure and Transparency Rules set out in detail the circumstances in which an obligation of disclosure will arise, as well as certain exemptions from those obligations for specified persons. Under section 793 of the UK Companies Act 2006, Prudential may, by notice in writing, require a person that Prudential knows or has reasonable cause to believe is or was during the three years preceding the date of notice interested in Prudential's shares, to indicate whether or not that is the case and, if that person does or did hold an interest in Prudential's shares, to provide certain information as set out in that Act.

Where a company serves notice under the provisions described above on a person who is or was interested in shares of the company and that person fails to give the company the information required by the notice within the time specified in the notice, the company may apply to an English court for an order directing that the shares in question be subject to restrictions prohibiting, among other things, any transfer of those shares, the exercise of voting rights in respect of those shares and, other than in liquidation, payments in respect of those shares.

In addition, under the Articles of Association, a shareholder may lose the right to vote his shares if he or any other person appearing to be interested in those shares fails to comply within a prescribed period of time with such a request to give the required information with respect to past or present ownership or interests in those shares, or makes a statement in response to such a request which is in the opinion of the directors false or misleading in any material manner. In the case of holders of 0.25 per cent or more of the issued share capital of Prudential (or any class of the share capital), in addition to disenfranchisement, the sanctions that may be applied by the Company under its Articles of Association include withholding the right to receive payment of dividends on those shares, and restrictions on transfers of those shares. In the case of holders of less than 0.25 per cent of the issued share capital of Prudential, the sanction is disenfranchisement alone.

The Disclosure and Transparency Rules further deal with the disclosure by certain persons, including directors, of interests in shares of the listed companies of which they are directors, and in derivatives or other financial instruments relating to those shares. The City Code on Takeovers and Mergers also imposes strict disclosure requirements with regard to dealings in the securities of an offeror or offeree company on all parties to a takeover and also on their respective associates during the course of an offer period.

Directors' interests in contracts

A director may hold positions with or be interested in other companies and, subject to applicable legislation, contract with the Company or any other company in which Prudential has an interest.

A director may not vote or be counted in the quorum in relation to any resolution of the Board in respect of any contract in which he or she has an interest. This prohibition does not, however, apply to any resolution where that interest cannot reasonably be regarded as likely to give rise to a conflict of interest or where that interest arises only from certain matters specified in the Articles of Association (filed as an exhibit to Form 20-F), including the following:

- certain matters that benefit the Group (such as a guarantee, indemnity or security in respect of money lent or obligations undertaken by the director at the request of or for the benefit of Prudential or one of its subsidiaries);
- certain matters that are available to all other directors and/or employees (such as the provision to the director of an indemnity where all other directors are being offered indemnities on substantially the same terms or in respect of any contract for the benefit of Group employees under which the director benefits in a similar manner to the employees); and

certain matters that arise solely from the director's interest in shares or debentures of the Company (such as where Prudential or one of its subsidiaries is offering securities in which offer the director is entitled to participate as a holder of securities or in respect of any contract in which a director is interested by virtue of his interest in securities in the Company).

The Company may by ordinary resolution suspend or relax these provisions to any extent or ratify any contract not properly authorised by reason of a contravention of these provisions contained in its Articles of Association.

In accordance with English company law, the Articles of Association allow the Board to authorise any matter which would otherwise involve a director breaching his duty under the Companies Act 2006 to avoid conflicts of interest

Table of Contents

or potential conflicts of interest and the relevant director is obliged to conduct himself or herself in accordance with any terms imposed by the Board in relation to such authorisation.

Directors power to vote on own terms of appointment

A director shall not vote on or be counted in the quorum in relation to any resolution of the Board concerning his own appointment, or the settlement or variation of the terms or the termination of his own appointment, as the holder of any office or place of profit with the Company or any other company in which the Company is interested.

Directors remuneration

The remuneration of the executive directors and the Chairman is determined by the Remuneration Committee, which consists of non-executive directors. The remuneration of the non-executive directors is determined by the Board. For further details see Item 6, Directors, Senior Management and Employees Compensation .

Transactions with directors

Prudential may only grant a loan or quasi-loan, or provide security or financial accommodation, to its directors and their connected persons if approval has been obtained from shareholders at a general meeting.

Payments to directors for loss of office

For further details see Item 6, Directors, Senior Management and Employees Compensation .

Change of control

There is no specific provision in Prudential's Articles of Association that would have an effect of delaying, deferring or preventing a change in control of Prudential and that would operate only with respect to a merger, acquisition or corporate restructuring involving Prudential, or any of its subsidiaries.

Exclusive jurisdiction

Under Prudential's Articles of Association, any proceeding, suit or action between a shareholder and Prudential and/or its directors arising out of or in connection with the Articles of Association or otherwise, between Prudential and any of its directors (to the fullest extent permitted by law), between a shareholder and Prudential's professional service providers and/or between Prudential and Prudential's professional service providers (to the extent such proceeding, suit or action arises in connection with a proceeding, suit or action between a shareholder and such professional service provider) may only be brought in the courts of England and Wales.

Material Contracts

Not applicable.

Exchange Controls

Other than the requirement to report certain events and transactions to HM Revenue and Customs, there are currently no UK laws, decrees or regulations that restrict the export or import of capital, including, but not limited to, foreign exchange controls, or that affect the remittance of dividends or other payments to non-UK residents or to US holders

of Prudential's securities, except as otherwise set forth under Taxation in this section.

Taxation

The following is a summary, under current law and practice, of the principal UK tax, US federal income tax, Hong Kong and Singapore tax considerations relating to an investment by a US taxpayer in Prudential ordinary shares or ADSs. This summary applies to you only if:

you are an individual US citizen or resident, a US corporation, or otherwise subject to US federal income tax on a net income basis in respect of your holding of Prudential ordinary shares or ADSs;

Table of Contents

you hold Prudential ordinary shares or ADSs or shares held or traded in Singapore through CDP as a capital asset for tax purposes;

if you are an individual, you are not resident in the United Kingdom for UK tax purposes, and do not hold Prudential ordinary shares or ADSs for the purposes of a trade, profession, or vocation that you carry on in the United Kingdom through a branch or agency or if you are a corporation, you are not resident in the UK for UK tax purposes and do not hold the securities for the purpose of a trade carried on in the United Kingdom through a permanent establishment in the United Kingdom; and

you are not domiciled in the UK for inheritance tax purposes.

This summary does not address any tax consideration other than certain UK tax, US federal income tax, Hong Kong tax and Singapore tax considerations and does not purport to be a comprehensive description of all of the tax considerations that may be relevant to any particular investor, and does not address the tax treatment of investors that are subject to special rules. Prudential has assumed that you are familiar with the tax rules applicable to investments in securities generally and with any special rules to which you may be subject. You should consult your own tax advisers regarding the tax consequences of the ownership of Prudential ordinary shares or ADSs in the context of your own particular circumstances.

The discussion is based on laws, treaties, judicial decisions, and regulatory interpretations in effect on the date hereof, all of which are subject to change possibly retrospectively.

Beneficial owners of ADSs will be treated as owners of the underlying Prudential ordinary shares for US federal income tax purposes and for purposes of the 24 July 2001 Treaty between the United States and the United Kingdom. Deposits and withdrawals of Prudential ordinary shares in exchange for ADSs generally will not result in the realisation of gain or loss for US federal income tax purposes.

UK Taxation of Dividends

UK tax is not required to be withheld in the United Kingdom at source from cash dividends paid to US resident holders.

UK Taxation of Capital Gains

A holder of Prudential ordinary shares or ADSs who for UK tax purposes is a US corporation that is not resident in the United Kingdom will not be liable for UK taxation on capital gains realised on the disposal of Prudential ordinary shares or ADSs unless at the time of disposal:

the holder carries on a trade in the United Kingdom through a permanent establishment in the United Kingdom, and

the Prudential ordinary shares or ADSs are or have been used, held or acquired for use by or for the purposes of such trade or permanent establishment.

Subject to the comments in the following paragraph, a holder of Prudential ordinary shares or ADSs who, for UK tax purposes, is an individual who is not resident in the United Kingdom will not be liable for UK taxation on capital gains realised on the disposal of Prudential ordinary shares or ADSs unless at the time of the disposal:

the holder carries on a trade, profession or vocation in the United Kingdom through a branch or agency, and

the Prudential ordinary shares or ADSs are or have been used, held, or acquired for use by or for the purposes of such trade, profession, or vocation, or for the purposes of such branch or agency.

A holder of Prudential ordinary shares or ADSs who is an individual who is temporarily a non-UK resident for UK tax purposes will, in certain circumstances, become liable to UK tax on capital gains in respect of gains realised while he or she was not resident in the UK.

Table of Contents**UK Inheritance Tax**

Prudential ordinary shares which are registered on the main Prudential share register are assets situated in the United Kingdom for the purposes of UK inheritance tax (the equivalent of US estate and gift tax). Prudential ADSs are likely to be treated in the same manner as the underlying Prudential ordinary shares and as situated in the United Kingdom. Subject to the discussion of the UK-US estate tax treaty in the next paragraph, UK inheritance tax may apply if an individual who holds Prudential ordinary shares which are registered on the main Prudential share register or ADSs gifts them or dies even if he or she is neither domiciled in the United Kingdom nor deemed to be domiciled there under UK law. For inheritance tax purposes, a transfer of Prudential ordinary shares or ADSs at less than full market value may be treated as a gift for these purposes. Special inheritance tax rules apply (1) to gifts if the donor retains some benefit, (2) to close companies and (3) to trustees of settlements. Prudential ordinary shares which are registered on the Hong Kong or Irish branch register should not be treated as situated in the United Kingdom for the purpose of UK inheritance tax.

However, as a result of the UK-US estate tax treaty, Prudential ordinary shares which are registered on the main Prudential share register or ADSs held by an individual who is domiciled in the United States for the purposes of the UK-US estate tax treaty and who is not a UK national will, subject to special rules relating to trusts and settlements, not be subject to UK inheritance tax on that individual's death or on a gift of the Prudential ordinary shares or ADSs unless the Prudential ordinary shares or ADSs:

are part of the business property of a permanent establishment of an enterprise in the United Kingdom, or

pertain to a fixed base in the UK used for the performance of independent personal services.

The UK-US estate tax treaty provides a credit mechanism if the Prudential ordinary shares or ADSs are subject to both UK inheritance tax and to US estate and gift tax.

UK Stamp Duty and Stamp Duty Reserve Tax

Relevant legislation provides that, subject to certain exemptions, UK stamp duty would be payable on a transfer of, and UK stamp duty reserve tax (SDRT) would be payable upon a transfer or issue of, Prudential ordinary shares to the depository of Prudential ordinary shares that is responsible for issuing ADSs (the ADS Depository), or a nominee or agent of the ADS depository, in exchange for American Depository Receipts (ADRs) representing ADSs. For this purpose, the current rate of stamp duty and SDRT is 1.5 per cent (rounded up, in the case of stamp duty, to the nearest £5).

However, as a result of case law, HMRC's current position is that they will not seek to levy a 1.5 per cent SDRT charge on an issue of UK shares to a person providing clearance services or issuing depository receipts, wherever located. HMRC do not, however, agree that the recent case law extends to transfers of shares to a person providing clearance services or issuing depository receipts, wherever located, where that transfer is not an integral part of an issue of share capital. It is recommended that, should this charge arise, independent professional tax advice be sought without delay.

Provided that the instrument of transfer is not executed in the United Kingdom no UK stamp duty should be required to be paid on any transfer of Prudential ADRs representing ADSs. Based on Prudential's understanding of HMRC's application of the exemption from SDRT for depository receipts a transfer of Prudential ADRs representing ADSs

should not, in practice, give rise to a liability to SDRT.

Subject to the special rules relating to clearance systems and issuers of depository receipts, a transfer for value of Prudential ordinary shares (but excluding Prudential ordinary shares registered on the Hong Kong or Irish branch register unless the instruments of transfer are executed in the UK), as opposed to ADSs, will generally give rise to a charge to UK stamp duty or SDRT, other than where the amount or value of the consideration for the transfer is £1,000 or under and the transfer instrument is certified to that effect, at the rate of 0.5 per cent (rounded up, in the case of stamp duty, to the nearest £5). The rate is applied to the price payable for the relevant Prudential ordinary shares. To the extent that UK stamp duty is paid on a transfer of Prudential ordinary shares, no SDRT should

Table of Contents

generally be payable on the agreement for that transfer. Subject to certain special rules relating to clearance services, a transfer of ordinary shares from a nominee to their beneficial owner (other than on sale), including a transfer of underlying Prudential ordinary shares from the ADS depository or its nominee to an ADS holder, is not subject to UK stamp duty. No UK SDRT should be payable on an agreement to transfer Prudential ordinary shares registered on the Hong Kong or Irish branch registers, subject to the special rule relating to clearance systems and issuers of depository receipts.

UK stamp duty is usually paid by the purchaser. Although SDRT is generally the liability of the purchaser, any such tax payable on the transfer or issue of Prudential ordinary shares to the ADS depository or its nominee will (subject to the change referred to above) be payable by the ADS depository as the issuer of the ADSs. In accordance with the terms of the Deposit Agreement, the ADS depository will recover an amount in respect of such tax from the initial holders of the ADSs.

US Federal Income Tax Treatment of Distributions on Prudential Ordinary Shares or ADSs

If Prudential pays dividends, you must include those dividends in your income when you receive them. The dividends will be treated as foreign source income. You should determine the amount of your dividend income by converting pounds sterling into US dollars at the exchange rate in effect on the date of your (or the depository's, in the case of ADSs) receipt of the dividend. Subject to certain exceptions for short-term and hedged positions, the US dollar amount of dividends received by an individual will be subject to taxation at a lower rate than ordinary income if the dividends are qualified dividends. Dividends received with respect to the ordinary shares or ADSs will be qualified dividends if Prudential was not, in the year prior to the year in which the dividend was paid, and is not, in the year in which the dividend is paid, a passive foreign investment company (PFIC). Based on the nature of its business activities and its expectations regarding such activities in the future, Prudential believes that it was not treated as a PFIC within the meaning of the Code with respect to its 2014 taxable year and does not anticipate becoming a PFIC for its 2015 taxable year.

US Federal Income Tax Treatment of Capital Gains

If you sell your Prudential ordinary shares or ADSs, you will recognise a US source capital gain or loss equal to the difference between the US dollar value of the amount realised on the disposition and the US dollar basis in the ordinary shares of the ADSs. A gain on the sale of Prudential ordinary shares or ADSs held for more than one year will be treated as a long-term capital gain. The net long-term capital gain generally is subject to taxation at a lower rate than ordinary income. Your ability to offset capital losses against ordinary income is subject to limitations.

US Federal Medicare Tax on Net Investment Income

A 3.8 per cent surtax will generally apply to the net investment income of individuals whose modified adjusted gross income exceeds certain threshold amounts. For 2015, these amounts are \$200,000 in the case of single taxpayers, \$250,000 in the case of married taxpayers filing joint returns, and \$125,000 in the case of married taxpayers filing separately. Net investment income includes, among other items, dividends, interest, and net gain from the disposition of property (other than certain property held in a trade or business).

US Information Reporting and Backup Withholding

Under the US tax code, a US resident holder of Prudential ordinary shares or ADSs may be subject, under certain circumstances, to information reporting and possibly backup withholding with respect to dividends and proceeds from the sale or other disposition of Prudential ordinary shares or ADSs, unless the US resident holder provides proof of an

applicable exemption or correct taxpayer identification number and otherwise complies with applicable requirements of the backup withholding rules. Any amount withheld under the backup withholding rules is not additional tax and may be refunded or credited against the US resident holder's federal income tax liability, so long as the required information is furnished to the IRS.

Hong Kong Taxation of Dividends

No tax will be payable in Hong Kong in respect of dividends Prudential pays to its US resident holders. Dividends distributed to Prudential's US resident holders will be free of withholding taxes in Hong Kong.

Table of Contents

Hong Kong Taxation on gains of sale

No tax is imposed in Hong Kong in respect of capital gains. However, trading gains from the sale of property by persons carrying on a trade, profession or business in Hong Kong where the trading gains are derived from or arise in Hong Kong will be chargeable to Hong Kong profits tax. Hong Kong profits tax is currently charged at the rate of 16.5 per cent on corporations and at a maximum rate of 15 per cent on individuals. Certain categories of taxpayers whose business consists of buying and selling shares are likely to be regarded as deriving trading gains rather than capital gains (e.g. financial institutions, insurance companies and securities dealers) unless these taxpayers can prove that the investment securities are held for long-term investment purposes.

Trading gains from the sale of the Prudential Shares by US resident holders effected on the Hong Kong Stock Exchange will be considered to be derived from Hong Kong. A liability for Hong Kong profits tax would thus arise in respect of trading gains derived by US resident holders from the sale of Prudential Shares effected on the Hong Kong Stock Exchange where such trading gains are realised by US resident holders from a business carried on in Hong Kong.

Hong Kong Stamp duty

Hong Kong stamp duty, currently charged at the ad valorem rate of 0.1 per cent on the higher of the consideration for or the value of the Prudential Shares, will be payable by the purchaser on a purchase and by the seller on a sale of Prudential Shares where the transfer is required to be registered in Hong Kong (i.e. a total of 0.2 per cent is ordinarily payable on a sale and purchase transaction involving ordinary shares). In addition, a fixed duty of HK\$5.00 is currently payable on any instrument of transfer of ordinary shares.

Hong Kong Estate duty

Hong Kong estate duty has been abolished with effect to all deaths occurring on or after 11 February 2006.

Singapore Taxation on gains of sale

Disposal of the Prudential Shares

Singapore does not impose tax on capital gains. However, gains of an income nature may be taxable in Singapore. There are no specific laws or regulations which deal with the characterisation of whether a gain is income or capital in nature. Gains arising from the disposal of the Prudential Shares by US resident holders may be construed to be of an income nature and subject to Singapore income tax, especially if they arise from activities which are regarded as the carrying on of a trade or business and the gains are sourced in Singapore.

Adoption of FRS 39 for Singapore Tax Purposes

Any US resident holders who apply, or who are required to apply, the Singapore Financial Reporting Standard 39 Financial Instruments Recognition and Measurement (FRS 39) for the purposes of Singapore income tax may be required to recognise gains or losses (not being gains or losses in the nature of capital) in accordance with the provisions of FRS 39 (as modified by the applicable provisions of Singapore income tax law) even though no sale or disposal is made. Taxpayers who may be subject to such tax treatment should consult their own accounting and tax advisers regarding the Singapore income tax consequences of their acquisition, holding and disposal of the Prudential Shares.

Singapore Taxation of Dividend distributions

As Prudential is incorporated in England and Wales and is not tax resident in Singapore for Singapore tax purposes, dividends paid by Prudential will be considered as sourced outside Singapore (unless the Prudential Shares are held as part of a trade or business carried out in Singapore in which event the US resident holders of such shares may be taxed on the dividends as they are derived).

Table of Contents

Foreign-sourced dividends received or deemed received in Singapore by an US resident individual not resident in Singapore is exempt from Singapore income tax. This exemption will also apply in the case of a Singapore tax resident individual who receives his foreign-sourced income in Singapore on or after 1 January 2004 (except where such income is received through a partnership in Singapore).

Foreign-sourced dividends received or deemed received by corporate investors in Singapore (including US investors) will ordinarily be liable to Singapore tax. However, foreign-sourced income in the form of dividends, branch profits and service income received or deemed to be received in Singapore by Singapore tax resident companies on or after 1 June 2003 can be exempt from tax if certain prescribed conditions are met, including the following:

- (i) such income is subject to tax of a similar character to income tax under the law of the jurisdiction from which such income is received; and
- (ii) at the time the income is received in Singapore, the highest rate of tax of a similar character to income tax (by whatever name called) levied under the law of the territory from which the income is received on any gains or profits from any trade or business carried on by any company in that territory at that time is not less than 15 per cent.

Certain concessions and clarifications have also been announced by the Inland Revenue Authority of Singapore with respect to such conditions.

Singapore Stamp duty

As Prudential is incorporated in England and Wales and the Prudential Shares are not registered on any register kept in Singapore, no stamp duty is payable in Singapore:

- (i) on the issuance of the Prudential Shares; and
- (ii) on any transfer of the Prudential Shares.

Prudential Shares held or traded in Singapore through CDP will be registered on the HK Register. As such, Hong Kong stamp duty will be payable on a transfer of Prudential Shares held or traded in Singapore through CDP. Please refer to the description under the Hong Kong stamp duty section above.

All persons, including US resident holders, who hold or transact in Prudential Shares in Singapore through the SGX-ST and/or CDP should expect that they will have to bear Hong Kong stamp duty in respect of transactions in Prudential Shares effected in Singapore through the SGX-ST and/or CDP. Such persons should consult their brokers, or custodians for information regarding what procedures may be instituted for collection of Hong Kong stamp duty from them.

Singapore Estate duty

Singapore estate duty has been abolished with respect to all deaths occurring on or after 15 February 2008.

Singapore Goods and Services Tax

There is no Goods and Services Tax (GST) payable in Singapore on the subscription or issuance of the Prudential Shares. The clearing fees, instruments of transfer deposit fees and share withdrawal fees are subject to GST at the prevailing standard-rate (currently 7 per cent) if the services are provided by a person belonging to Singapore to a holder of the Prudential Shares. However, such fees could be zero-rated when provided to a US resident holder of the Prudential Shares belonging outside Singapore provided certain conditions are met. For a holder of the Prudential Shares belonging in Singapore who is registered for GST, the GST incurred is generally not recoverable as input tax credit from the Inland Revenue Authority of Singapore unless certain conditions are satisfied. These GST-registered holders of the Prudential Shares should seek the advice of their tax advisors on these conditions.

Please call the SEC at (202) 551 8090 for further information on the conventional reading rooms. Copies of these materials can also be obtained by email to PublicInfo@sec.gov or mail at prescribed rates from the Office of Investor Education and Advocacy of the Securities and Exchange Commission, 100 F Street, N.E., Room 1580, Washington, D.C. 20549. In addition, some of Prudential's filings with the Securities and Exchange Commission, including all those filed on or after 4 November 2002, are available on the websites of the Securities and Exchange Commission and the New York Stock Exchange.

Prudential also files reports and other documents with the London, Hong Kong and Singapore stock exchanges. This information may be viewed on the websites of each of those exchanges as well as via the UK Financial Conduct Authority's National Storage Mechanism. All reports and other documents filed with the each of the exchanges are also published on Prudential's website.

Item 11. Quantitative and Qualitative Disclosures about Market Risk

Overview

As a provider of financial services, including insurance, the management of risk lies at the heart of the Group's business. The control procedures and systems established within the Group are designed to manage, rather than eliminate, the risk of failure to meet business objectives. They can only provide reasonable and not absolute assurance against material misstatement or loss, and focus on aligning the levels of risk taking with the achievement of business objectives.

The Group's internal control processes are detailed in the Group Governance Manual. This is supported by the Group Risk Framework, which provides an overview of the Group-wide philosophy and approach to risk management. Where appropriate, more detailed policies and procedures have been developed at Group and/or business unit levels. These include Group-wide mandatory policies on certain operational risks, including: health, safety, fraud, money laundering, bribery, business continuity, information security and operational security, and policies on certain financial risks. Additional guidelines are provided for some aspects of actuarial and financial activity.

Prudential's Group Risk Framework requires that all of the Group's businesses and functions establish processes for identifying, evaluating and managing the key risks faced by the Group. The Group Risk Framework is based on the

concept of three lines of defence : Risk management; risk oversight and independent assurance. Primary responsibility for strategy, performance management and risk control lies with the Board, which has established the Group Risk Committee to assist in providing leadership, direction and oversight in respect of the Group s significant risks, and with the Group Chief Executive and the chief executives of each business unit. Risk taking and management thereof is facilitated through both the Group Executive Committee and the Balance Sheet and Capital Management Committee. Risk oversight is provided by a number of Group level risk committees, chaired by either the Chief Financial Officer or the Group Chief Risk Officer. Independent assurance comprises the Group-wide Internal Audit function, which provides independent and objective assurance to the Board, its Audit and Risk Committees and the Group Executive Committee.

The Group s risk reporting framework forms an important part of the Group s business processes and planning. Business units review their risks as well as opportunities as part of their business plans, and risks against business objectives are regularly discussed with Group executive management.

Table of Contents

Additional information on the Group's risk framework is included in the risk and capital management section under Group Risk Framework in Item 4 Information on the Company.

The management of the risk attached to the Group's financial instruments and insurance liabilities, together with the inter-relationship with the management of capital is summarised in the following sections.

Major Risks

Specific business environmental and operational risks are discussed under Item 3, Key Information Risk Factors, Item 4, Group Risk Framework and Item 5, Operating and Financial Review and Prospects Principal Factors Affecting Prudential's Results of Operations. Risks discussed under Item 4, Information on the Company Business of Prudential include Business of Prudential UK Business and Business of Prudential Legal Proceedings.

Market and financial risks

A detailed analysis of market and financial risks is provided in Item 4 Group Risk Framework and note C7 to the consolidated financial statements in Item 18. Additional discussion on the currency of the Group's investments and core structural borrowings is provided below.

Currency of Investments

Prudential's investments are generally held in the same currency as its liabilities and, accordingly, pound sterling liabilities will generally be supported by pound sterling assets and US dollar liabilities will generally be supported by US dollar assets. However, where Prudential believes it is appropriate, it holds some non-domestic equities in the equity portfolios in the belief that this diversifies the overall portfolio risk.

Further quantitative disclosure of Prudential's currency of financial assets and liabilities is provided in note C3.5(a)(iii) and C3.5(b) to the consolidated financial statements in Item 18.

Currency of Core Borrowings

Prudential is subject to certain interest rate risk and foreign exchange risk on its core borrowings. At 31 December 2014, Prudential held £2,339 million of pounds sterling debt, £1,949 million, or approximately \$3,039 million, of US dollar debt and £16 million, or approximately 20 million of Euro debt. £4,013 million of the core debt was at fixed rates of interest and £291 million was at or has been swapped into floating rates of interest.

The profit and loss accounts of foreign subsidiaries are translated at average exchange rates for the year. Assets and liabilities of foreign subsidiaries are translated at closing exchange rates. Foreign currency borrowings that have been used to provide a hedge against Group equity investments in overseas subsidiaries are also translated at closing exchange rates. The impact of these translations is recorded as other comprehensive income.

Sensitivity Analysis

Prudential is sensitive to interest rate movements, movements in the values of equities and real estate and foreign exchange fluctuations.

Sensitivity analysis with regard to the Group's investments in debt securities, equities and real estate, to insurance contracts and to foreign exchange fluctuations, is provided in note C7 to the consolidated financial statements in

Item 18.

246

Table of Contents

Additional sensitivity analysis of the Group's long-term debt and interests in derivatives contracts has been provided below.

Interest Rate Risk - Long-term Debt

The table below quantifies the estimated increase in fair value of long-term borrowings at 31 December 2014 and 2013, resulting from a 100 basis point reduction in interest rates at those dates. The carrying value of short-term borrowings, which approximates their fair value, would not be materially increased by a 100 basis point reduction in interest rates. Prudential believes this to be a reasonably possible near-term market change for interest rates.

	31 December 2014 £m			31 December 2013 £m		
	Carrying Value	Fair Value	Estimated Increase in Fair Value	Carrying Value	Fair Value	Estimated Increase in Fair Value

Total	4,404	5,040	569	4,736	5,180	491

- (i) The 20 million borrowings were issued at 20-year Euro Constant Maturity Swap (capped at 6.5 per cent). These have been swapped into borrowings of £14 million with interest payable at three month £LIBOR plus 1.2 per cent.

Table of Contents

- (ii) The US\$250 million 6.75 per cent borrowings, the US\$300 million 6.5 per cent borrowings, the US\$550 million 7.75 per cent borrowings and the US\$700 million 5.25 per cent borrowings can be converted, in whole or in part, at the Company's option and subject to certain conditions, on any interest payment date, into one or more series of Prudential preference shares.
- (iii) The Prudential Capital bank loan of £275 million has been made in two tranches: a £160 million loan maturing on 20 December 2017 and a £115 million loan also maturing on 20 December 2017. These two tranches are currently drawn at a cost of 12 month £LIBOR plus 0.40 per cent.
- (iv) The Jackson borrowings are unsecured and subordinated to all present and future indebtedness, policy claims and other creditor claims of Jackson.
- (v) On 23 December 2014, the Company exercised its right to redeem early the US\$750 million 11.75 per cent Tier 1 perpetual subordinated capital securities at their aggregate nominal amount together with accrued interest. There is no impact on profit at 31 December 2014 and 2013 as a result of these reductions in interest rates because the liabilities are recognised in the financial statements at carrying value, which is equal to their amortised cost.

Derivative Contracts

As at 31 December 2014 the net market value exposure of derivatives was an asset of £1,089 million of which the largest exposures were held by the UK and US insurance operations. Excluding derivative contracts within assets held to cover linked liabilities and those attributable to unit holders of consolidated unit trusts and similar funds, as at 31 December 2014 the market value exposure of derivatives of the UK and US insurance operations was an asset of £1,656 million. The tables below show the sensitivity of the UK and US insurance operations derivatives, measured in terms of fair value, to equity and real estate market increases and decreases of 10 per cent and to interest rate increases and decreases of 100 basis points. Prudential believes these increases and decreases to be reasonably possible near-term market changes. These exposures will change as a result of ongoing portfolio and risk management activities.

Table of Contents*Limitations*

The above sensitivities do not consider that assets and liabilities are actively managed and may vary at the time any actual market movement occurs. There are strategies in place to minimise the exposure to market fluctuations. For example, as market indices fluctuate, Prudential would take certain actions including selling investments, changing investment portfolio allocation, and adjusting bonuses credited to policyholders. In addition, these analyses do not consider the effect of market changes on new business generated in the future.

Other limitations on the sensitivities include: the use of hypothetical market movements to demonstrate potential risk that only represent Prudential's view of reasonably possible near-term market changes and that cannot be predicted with any certainty; the assumption that interest rates in all countries move identically; the assumption that all global currencies move in tandem with the US dollar against pounds sterling; and the lack of consideration of the inter-relation of interest rates, equity markets and foreign currency exchange rates.

Item 12. Description of Securities other than Equity Securities*Payments received from the ADR Depositary*Direct payments

J.P. Morgan Chase Bank, N.A. is the depositary (ADR Depositary) of Prudential's ADR program. The ADR Depositary has agreed to reimburse Prudential for certain reasonable expenses related to Prudential's ADR program and incurred by Prudential in connection with the ADR program. Pursuant to this agreement, Prudential can claim up to US\$75,000 for each incremental increase of 4,000,000 American Depositary Shares (ADS) issued and outstanding above the prior year's balance. The reimbursements shall be used by Prudential for actual expenses incurred in connection with the program during the contract year (year ending 19 May in each year), including but not limited to, expenses related to US investor relations servicing, US investor presentations, financial advertising and public relations.

No reimbursements were made by the ADR Depositary to Prudential in 2014 and 2013.

Indirect payments

As part of its service to Prudential, the ADR Depositary has agreed to waive the following fees for the standard costs associated with the maintenance of the ADR program:

Category	Limit
General services, AGM services, report mailing services	up to US\$5,000 per contract year
The amount of fees waived in each of the 2013 and 2014 contract years was US\$5,000.	

Fees or charges payable by ADR holders

The ADR holders of Prudential are required to pay the following fees to the ADR Depositary for general depositary services:

Category	ADR Depositary actions	Associated fee or charge
Depositing or surrendering the underlying shares	Each person to whom ADRs are delivered against deposits of shares, and each person surrendering ADRs for withdrawal of deposited securities	Up to US\$5.00 for each 100 ADSs (or portion thereof) evidenced by the ADRs delivered or surrendered
Cable fee	Cable fee for delivery of underlying shares in the home market on the back of a cancellation	US\$25 for each delivery
Currency charges	Charges incurred by the ADR Depositary in the conversion of foreign currency into US Dollars	Amount paid by the ADR Depositary, and such charges are reimbursable out of such foreign currency

Table of Contents**Item 13. Defaults, Dividend Arrearages and Delinquencies**

None.

Item 14. Material Modifications to the Rights of Security Holders

None.

Item 15. Controls and Procedures

Management has evaluated, with the participation of Prudential plc's Group Chief Executive and Chief Financial Officer, the effectiveness of Prudential plc's disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) of the Securities Exchange Act of 1934, as amended ("Exchange Act")) as of 31 December 2014. There are inherent limitations to the effectiveness of any system of disclosure controls and procedures, including the possibility of human error and the circumvention or overriding of the controls and procedures. Accordingly, even effective disclosure controls and procedures can only provide reasonable assurance of achieving their control objectives. Based upon Prudential plc's evaluation, Prudential plc's Group Chief Executive and Chief Financial Officer have concluded that as of 31 December 2014 Prudential plc's disclosure controls and procedures were effective to provide reasonable assurance that information required to be disclosed by Prudential plc in the reports Prudential plc files and submits under the Exchange Act is recorded, processed, summarised and reported, within the time periods specified in the applicable rules and forms and that it is accumulated and communicated to Prudential plc's management, including Prudential plc's Group Chief Executive and Chief Financial Officer, as appropriate to allow timely decisions regarding required disclosure.

Prudential plc is required to undertake an annual assessment of the effectiveness of internal control over financial reporting under Section 404 of the Sarbanes-Oxley Act 2002 ("Section 404"). In accordance with the requirements of Section 404 the following report is provided by management in respect of Prudential plc's internal control over financial reporting (as defined in Rules 13a-15(f) and 15d-15(f) under the Exchange Act).

Management's Annual Report on Internal Control over Financial Reporting

Management acknowledges its responsibility for establishing and maintaining adequate internal control over financial reporting for Prudential plc. Internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with International Financial Reporting Standards as issued by the International Accounting Standards Board.

Management has conducted, with the participation of Prudential plc's Group Chief Executive and Chief Financial Officer, an evaluation of the effectiveness of internal control over financial reporting based on the criteria set forth in "2013 Internal Control - Integrated Framework" issued by the Committee of Sponsoring Organizations of the Treadway Commission ("COSO"). Based on the assessment under these criteria, management has concluded that, as of 31 December 2014, Prudential plc's internal control over financial reporting was effective.

In addition, there have been no changes in Prudential plc's internal control over financial reporting during 2014 that have materially affected, or are reasonably likely to affect materially, Prudential plc's internal control over financial reporting.

KPMG LLP, which has audited the consolidated financial statements of Prudential plc for the year ended 31 December 2014, has also audited the effectiveness of Prudential plc's internal control over financial reporting in accordance with the standards of the Public Company Accounting Oversight Board (United States). KPMG LLP's report on internal control over financial reporting is shown on page F-2 in Item 18.

Item 16A. Audit Committee Financial Expert

The Board has determined that Ann Godbehere, Chairman of the Audit Committee, qualifies as an audit committee financial expert within the meaning of Item 16A of Form 20-F, and that Ms Godbehere is independent within the meaning of Rule 10A-3 under the Exchange Act.

Table of Contents**Item 16B. Code of Ethics**

Prudential has a code of ethics, as defined in Item 16B of Form 20-F under the Exchange Act, (which Prudential calls its Group Code of Business Conduct) which applies to the Group Chief Executive, Group Chief Financial Officer, the Group Chief Risk Officer and persons performing similar functions as well as to all other employees. Prudential's Code of Business Conduct is available on its website at www.prudential.co.uk. If Prudential amends the provisions of the Code of Business Conduct, as it applies to the Group Chief Executive, Group Chief Financial Officer and the Group Chief Risk Officer or if Prudential grants any waiver of such provisions, the Company will disclose such amendment or waiver on the Prudential website.

Item 16C. Principal Accountant Fees and Services

Total fees payable to KPMG for the fiscal years ended 31 December are set out below:

	2014 £m	2013 £m
Fees payable to the Company's auditor for the audit of the Company's annual accounts	2.0	2.0
Fees payable to the Company's auditor and its associates for other services:		
Audit of subsidiaries pursuant to legislation	6.6	6.8
Audit-related assurance services	2.9	2.8
Tax compliance services	0.7	0.8
Other assurance services	1.9	1.1
Services relating to corporate finance transactions	0.1	0.5
All other services	2.4	1.2
Total	16.6	15.2

In addition, there were fees of £0.1 million (2013: £0.1 million) for the audit of pension schemes.

2014

Fees of £2.0 million for the audit of Prudential's annual accounts comprised statutory audit fees of £0.8 million, US reporting audit fees of £0.5 million and EEV reporting audit fees of £0.7 million. Fees of £6.6 million for audit of subsidiaries and associates pursuant to legislation mainly related to the audit of local and statutory accounts and to statutory audit work in connection with the submission of results to be consolidated in Prudential's annual accounts.

Fees of £2.9 million for audit related assurance services supplied pursuant to legislation comprised of Sarbanes-Oxley reporting of £2.3 million and interim and regulatory reporting of £0.6 million.

Fees of £0.7 million for services relating to taxation related to tax compliance throughout the Group.

Fees of £1.9 million for all other assurance services comprised services in respect of accounting and regulatory requirements.

Fees of £2.4 million for all other services comprised model validation services of £1.6 million and other services of £0.8 million principally for advice on regulatory projects and IT security matters and other advisory services.

2013

Fees of £2.0 million for the audit of Prudential's annual accounts comprised statutory audit fees of £0.8 million, US reporting audit fees of £0.5 million and EEV reporting audit fees of £0.7 million. Fees of £6.8 million for audit of subsidiaries and associates pursuant to legislation mainly related to the audit of local and statutory accounts and to statutory audit work in connection with the submission of results to be consolidated in Prudential's annual accounts.

Fees of £2.8 million for audit related assurance services supplied pursuant to legislation comprised of Sarbanes-Oxley reporting of £2.2 million and interim and regulatory reporting of £0.6 million.

Fees of £0.8 million for services relating to taxation related to tax compliance throughout the Group.

Table of Contents

Fees of £1.1 million for all other assurance services comprised services in respect of accounting and regulatory requirements.

Fees of £1.2 million for all other services comprised model validation services of £1.0 million and other services of £0.2 million.

Item 16D. Exemptions from the Listing Standards for Audit Committees

Not applicable

Item 16E. Purchases of Equity Securities by Prudential plc and Affiliated Purchasers

The following table sets forth information with respect to purchases made by or on behalf of Prudential or any affiliated purchasers (as that term is defined in Rule 10b-18(a)(3) under the Securities Exchange Act of 1934, as amended) of Prudential's ordinary shares or American depository shares for the year ended 31 December 2014.

Period	Total Number of Shares Purchased ⁽¹⁾	Average Price Paid Per Share (£)	Total Number of Shares Purchased at Partially Publicly Announced Plans or Programs	Maximum Number of Shares that May Yet be Purchased Under Plans or Programs
1 January 31 January	13,740	13.56	N/A	N/A
1 February 28 February	16,841	12.77		
1 March 31 March	4,623,303	13.01		
1 April 30 April	149,199	13.45		
1 May 31 May	1,361,688	14.09		
1 June 30 June	11,290	13.80		
1 July 31 July	10,745	13.83		
1 August 31 August	11,321	13.22		
1 September 30 September	355,268	14.28		
1 October 31 October	51,199	13.76		
1 November 30 November	51,314	14.37		
1 December 31 December	1,223,290	14.70		

Note

- (1) The shares listed in this column were acquired by employee benefit trusts during the year to satisfy future obligations to deliver shares under the Company's employee incentive plans, the savings related share option scheme and the share participation plan.

This table excludes Prudential plc shares purchased by investment funds managed by M&G in accordance with investment strategies that are established by M&G acting independently of Prudential plc.

Item 16F. Change in Registrant's Certifying Accountant

Our auditors, KPMG Audit Plc has instigated an orderly wind down of the business due to reorganisation within KPMG in the UK. The Board therefore put KPMG LLP, forward to be appointed as auditor and a resolution concerning their appointment was put to a shareholder vote at the Annual General Meeting on 15 May 2014.

During the years ended 31 December 2013 and 2012 and the subsequent interim period through to the date of the Annual General Meeting, (1) KPMG Audit Plc had not issued any reports on the financial statements of the Company or on the effectiveness of internal control over financial reporting that contained an adverse opinion or a disclaimer of opinion, nor were the auditors' reports of KPMG Audit Plc qualified or modified as to uncertainty, audit scope, or accounting principles and (2) there had not been any disagreement over any matter of accounting principles or practices, financial statement disclosure, or auditing scope or procedures, which disagreements if not resolved to KPMG Audit Plc's satisfaction would have caused it to make reference to the subject matter of the disagreement in connection with its auditors' reports, or any reportable event as described in Item 16F(a)(1)(v) of Form 20-F.

Table of Contents

The Company has provided KPMG Audit Plc with a copy of the foregoing disclosure and has requested that KPMG Audit Plc furnish the Company with a letter addressed to the Securities and Exchange Commission (the "SEC") stating whether KPMG Audit Plc agrees with such disclosure and, if not, stating the respects in which it does not agree. A copy of KPMG Audit Plc's letter, dated 31 March 2015, in which KPMG Audit Plc states that it agrees with such disclosure, is filed herewith as Exhibit 15.6.

Item 16G. Corporate Governance

On 4 November 2003, the New York Stock Exchange (the "NYSE") established new corporate governance rules. The application of the NYSE's rules is restricted for foreign companies, recognising that they have to comply with domestic requirements. As a foreign private issuer, Prudential must comply with the following NYSE rules:

1. The Company must satisfy the audit committee requirements of the SEC;
2. The Group Chief Executive must promptly notify the NYSE in writing after any executive officer of the Company becomes aware of any non-compliance with any applicable provisions of Section 303(A) of the NYSE's Listed Company Manual;
3. The Company must submit an executed written affirmation annually to the NYSE affirming the Company's compliance with applicable NYSE Corporate Governance Standards and submit an interim written affirmation notifying it of specified changes to its audit committee or a change to the Company's status as a foreign private issuer; and
4. The Company must provide a brief description of any significant difference between its corporate governance practices and those followed by US companies under the NYSE listing standards.

As a company listed on the London Stock Exchange, Prudential is required to comply with the Listing Rules, Disclosure and Transparency Rules and Prospectus Rules issued by the FCA and to report and explain non-compliance with the UK Corporate Governance Code (the "UK Code") which is issued by the Financial Reporting Council. As a result of its listing on the Hong Kong Stock Exchange, Prudential is also required to comply with certain continuing obligations set forth in the Rules Governing the Listing of Securities on The Stock Exchange of Hong Kong Limited (the "HK Listing Rules") and is expected to comply with or explain any deviation from the provisions of the Corporate Governance Code contained in Appendix 14 to the HK Listing Rules (the "HK Code"). Any deviation from compliance with either corporate governance code is set out fully in the corporate governance report in the Annual Report 2014.

The table below discloses differences between Prudential's corporate governance practices and the NYSE rules on corporate governance. Unless specifically indicated otherwise, compliance with the provisions of the UK Code in the table below also includes compliance with the HK Code.

	Description of differences between Prudential's governance practice and the NYSE
NYSE Corporate Governance Rules	Corporate Governance Rules
1 Director independence	
Listed companies must have a majority of independent directors.	Prudential complies with the equivalent requirements contained in the UK Code.

The UK Code requires that the Board should include a balance of executive and non-executive directors such that no individual or small group of individuals can dominate the Board's decision taking. At least half the Board, excluding the Chairman, should comprise non-executive directors determined by the Board to be independent.

The Board considers that Howard Davies, Ann Godbehere, Alistair Johnston, Kai Nargolwala, Anthony Nightingale, Philip Remnant, Alice Schroeder, and Lord Turnbull are independent under the UK Code. The Board is therefore compliant with the relevant composition requirement of the UK Code.

Table of Contents

Description of differences between Prudential's governance practice and the NYSE

NYSE Corporate Governance Rules

In order to tighten the definition of independent director for purposes of these standards:

a) i) No director qualifies as independent unless the Board of directors affirmatively determines that the director has no material relationship with the listed company (either directly or as a partner, shareholder or officer of an organisation that has a relationship with the company). The listed company must comply with the disclosure requirements set forth in Item 407(a) of Regulation S-K.

ii) In addition, in affirmatively determining the independence of any director who will serve on the compensation committee of the listed company's board of directors, the board of directors must consider all factors specifically relevant to determining whether a director has a relationship to the listed company which is material to that director's ability to be independent from management in connection with the duties of a compensation committee member, including, but not limited to:

(A) the source of compensation of such director, including any consulting, advisory or other compensatory fee paid by the listed company to such director; and

(B) whether such director is affiliated with the listed company, a subsidiary of the listed company or an affiliate of a subsidiary of the listed company.

b) In addition, a director is not independent if:

Corporate Governance Rules

The Board is required to determine whether directors (including directors serving on the Audit Committee and the Remuneration Committee) are independent in character and judgement and whether there are relationships or circumstances which are likely to affect, or could affect, the directors' judgement. If the Board determines that a director is independent notwithstanding the existence of relationships or circumstances which may appear relevant to its determination it shall state its reasons. In undertaking this process the Board is required, amongst other factors, to consider if the director:

Has been an employee of Prudential plc or the Group within the last five years;

Has, or has had within the last three years, a material business relationship with Prudential either directly, or as a partner, shareholder, director or senior employee of a body that has such a relationship with Prudential;

i) The director is, or has been within the last three years, an employee of the listed company, or an immediate family member is, or has been within the last three years, an executive officer of the listed company.

Table of Contents**Description of differences between Prudential's governance practice and the NYSE****NYSE Corporate Governance Rules**

ii) The director has received, or has an immediate family member who has received, during any twelve-month period within the last three years, more than \$120,000 in direct compensation from the listed company, other than director and committee fees and pension or other forms of deferred compensation for prior service (provided such compensation is not contingent in any way on continued service). Prudential complies with the corresponding domestic requirements contained in the Code, which sets out the principles for the Company to determine whether a director is independent.

iii) (A) The director is a current partner or employee of a firm that is the listed company's internal or external auditor; (B) the director has an immediate family member who is a current partner of such a firm; (C) the director has an immediate family member who is a current employee of such a firm and personally works on the listed company's audit; or (D) the director or an immediate family member was within the last three years a partner or employee of such a firm and personally worked on the listed company's audit within that time.

iv) The director or an immediate family member is, or has been within the last three years, employed as an executive officer of another company where any of the listed company's present executive officers at the same time serves or served on that company's compensation committee.

v) The director is a current employee, or an immediate family member is a current executive officer, of a company that has made payments to, or received payments from, the listed company for property or services in an amount which, in any of the last three fiscal years, exceeds the greater of \$1 million, or 2 per cent of such other company's consolidated gross revenues.

Corporate Governance Rules

Has received or receives additional remuneration from Prudential apart from a director's fee, participates in Prudential's share option or a performance-related pay scheme, or is a member of Prudential's pension scheme;

Has close family ties with any of Prudential's advisers, directors or senior employees;

Holds cross-directorships or has significant links with other directors through involvement in other companies or bodies;

Represents a significant shareholder; or

Has served on the Board for more than nine years from the date of their first election.

In addition, in assessing whether its directors are independent, the Board considers further factors set out in the HK Listing Rules taken into account by the Hong Kong Stock Exchange in assessing the independence of non-executive directors (without treating any such factor as necessarily conclusive). These include, among others, whether a director:

is a director, partner or principal of a professional adviser which currently provides, or has within one year immediately prior to the date of his proposed appointment provided, services, or is an employee of such professional adviser who is or has been involved in providing such services during the same period to,

among others, Prudential or any of its subsidiaries;

is, or has at any time during the two years immediately prior to the date of proposed appointment been, an executive or director (other than an independent non-executive director) of, among others, Prudential or any of its subsidiaries.

Alistair Johnston was a partner in Prudential's auditor, KPMG, from 1986 to 2010. However, he did not audit the Group and he no longer has any financial or other interest in KPMG. The Board does not consider that this former relationship with KPMG affected Mr Johnston's status as an independent director of Prudential.

The non-executive directors considered by the Board to be independent are identified in the Company's Annual Reports in accordance with the UK Code and on Prudential's website.

Table of Contents

NYSE Corporate Governance Rules	Description of differences between Prudential's governance practice and the NYSE
2 Executive Sessions	Corporate Governance Rules
To empower non-management directors to serve as a more effective check on management, the non-management directors of each listed company must meet at regularly scheduled executive sessions without management.	Throughout the year, all non-executive directors were considered by the Board to be independent in character and judgement and met the provisions for independence set out in the UK and HK Codes. Prudential has received confirmation of independence from each of the independent non-executive directors as required by the HK Listing Rules.
3 Nominating/Corporate Governance Committee	Prudential complies with the equivalent provisions set out in the UK Code, which requires that the Chairman of Prudential should hold meetings with the non-executive directors without executives present. The Chairman of Prudential usually meets formally, at least annually, with the non-executive directors without the executive directors being present.
a) Listed companies must have a nominating/ corporate governance committee composed entirely of independent directors.	Prudential complies with the corresponding provisions set out in the UK Code, which requires that Prudential has a Nomination Committee, which should comprise a majority of independent non-executive directors.
b) The nominating/corporate governance committee must have a written charter that addresses:	Prudential's Nomination Committee has written terms of reference in accordance with the UK Code. The terms of reference are available on Prudential's website, and explain the Nomination Committee's role and the authority delegated to it by the Board.
i) the committee's purpose and responsibilities which, at minimum, must be to: identify individuals qualified to become board members, consistent with criteria approved by the Board, and to select, or to recommend that the Board select, the director nominees for the next annual meeting of shareholders; develop and recommend to the Board a set of corporate governance guidelines applicable to the corporation; and oversee the evaluation of the Board and management; and	The Board is responsible for regularly reviewing its corporate governance standards and practices. Requirements of the UK code to which Prudential is subject, do not mandate it to establish a corporate governance committee.
ii) an annual performance evaluation of the committee.	Under the UK Code, the Board should state in the annual report how performance evaluation of the Board, its committees and its individual directors has been

conducted. Prudential includes such description in its Annual Report, which is available on its website.

4 Compensation Committee	
a) Listed companies must have a compensation committee composed entirely of independent directors. Compensation committee members must satisfy the additional independence requirements specific to compensation committee membership set forth in Section 303A.02(a)(ii).	Prudential complies with the equivalent provisions set out in the UK Code, which require that Prudential must have a Remuneration Committee that is comprised of at least three independent non-executive directors.
b) The compensation committee must have a written charter that addresses:	Prudential's Remuneration Committee has written terms of reference in accordance with the UK Code. The terms of reference are available on Prudential's website.
i) the committee's purpose and responsibilities which, at minimum, must be to have direct responsibility to:	Prudential complies with the equivalent requirement set out in the UK Code, which provides that the Remuneration Committee:
(A) review and approve corporate goals and objectives relevant to CEO compensation, evaluate the CEO's performance in light of those goals and objectives, and, either as a committee or together with the other independent directors (as directed by the Board), determine and approve the CEO's compensation level based on this evaluation;	a) should have delegated responsibility for setting remuneration for all executive directors and the chairman, including pension rights and any compensation payments;
(B) make recommendations to the Board with respect to non-CEO executive officer compensation, and incentive-compensation and equity-based plans that are subject to Board approval; and	b) should recommend and monitor the level and structure of remuneration for senior management;
(C) prepare the disclosure required by Item 407(e)(5) of Regulation S-K;	c) should carefully consider what compensation commitments (including pension contributions and all other elements) their directors' terms of appointment would entail in the event of early termination;
	d) should invite shareholders specifically to approve all new long-term incentive schemes and significant changes to existing schemes;

ii) an annual performance evaluation of the compensation committee; and

e) should judge where to position the Company relative to other companies and should be sensitive to pay and employment conditions elsewhere in the group, especially when determining annual salary increases;

f) should consider whether the directors should be eligible for annual bonuses and benefits under long-term incentive schemes, bearing in mind that performance-related elements of executive directors remuneration should be designed to promote the long-term success of the group; and

g) that the annual report should include a description of the work of the Remuneration Committee.

The Remuneration Committee has the authority to engage independent counsel and other advisers as it determines necessary to carry out its duties. Prudential must provide appropriate funding for the Remuneration Committee.

The UK Code requires that, where remuneration consultants are appointed, they should be identified in Prudential's annual report and a statement made as to whether they have any connection with Prudential.

NYSE Corporate Governance Rules

Corporate Governance Rules

Under the UK Code, the Board should state in the annual report how performance evaluation of the Board, its committees and its individual directors has been conducted. Prudential includes such description in its Annual Report which is available on its website.

iii) the rights and responsibilities of the compensation committee set forth in Section 303A.05(c).

c) i) The compensation committee may, in its sole discretion, retain or obtain the advice of a compensation consultant, independent legal counsel or other advisor.

ii) The compensation committee shall be directly responsible for the appointment, compensation and oversight of the work of any compensation consultant, independent legal counsel or other adviser retained by the compensation committee.

iii) The listed company must provide for appropriate funding, as determined by the compensation committee, for payment of reasonable compensation to a compensation consultant, independent legal counsel or any other adviser retained by the compensation committee.

iv) The compensation committee may select a compensation consultant, legal counsel or other advisor to the compensation committee only after taking into consideration all factors relevant to that person's independence from management, including the following:

(A) the provision of other services to the listed company by the person that employs the compensation consultant, legal counsel or other adviser;

(B) the amount of fees received from the listed company by the person that employs the compensation consultant, legal counsel or other adviser, as a percentage of the total revenue of the person that employs the consultant, legal counsel or other adviser;

(C) the policies and procedures of the person that employs the compensation consultant, legal counsel or other adviser that are designed to prevent conflicts of interest;

(D) any business or personal relationship of the compensation consultant, legal counsel or other adviser with a member of the compensation committee;

(E) any stock of the listed company owned by the compensation consultant, legal counsel or other adviser; and

(F) any business or personal relationship of the compensation consultant, legal counsel, other adviser or the person employing the adviser with an executive officer of the listed company.

Corporate Governance Rules

5 Audit Committee

Listed companies must have an audit committee that satisfies the requirements of Rule 10A-3 under the Securities Exchange Act.

Prudential complies with equivalent requirements set out in the UK Code, which requires that Prudential has an Audit Committee that is comprised entirely of at least three independent non-executive directors.

In general:

Rule 10A-3(1) requires that each member of the audit committee be a member of the board of directors of the listed issuer, and be independent within the meaning of the Rule, subject to certain exemptions;

Prudential's Audit Committee has written terms of reference prepared in accordance with the requirements of the UK Code and related guidance. The terms of reference are available on Prudential's website and explain the Audit Committee's role and the authority delegated to it by the Board.

Rule 10A-3(2) requires the audit committee to be directly responsible for the appointment, compensation, retention and oversight of the work of the independent auditor engaged for the purpose of preparing or issuing an audit report or performing other audit, review or attest services for the issuer, and the independent auditor must report directly to the audit committee;

The terms of reference, amongst other items, set out the Committee's role and responsibilities in respect of the external audit.

The Committee reviews management's and the external and internal auditors' reports on the effectiveness of systems for internal control, financial reporting and risk

management. It also reviews the effectiveness of the Group governance framework.

Rule 10A-3(3) requires that an audit committee establish procedures for the receipt, retention and treatment of complaints received by the issuer regarding accounting, internal accounting controls or auditing matters and for the confidential, anonymous submission by employees of concerns regarding questionable accounting or auditing matters;

The Audit Committee makes recommendations, through the Board, to be put to shareholders for approval at the Annual General Meeting, in relation to the appointment, re-appointment or removal of the external auditor.

Rule 10A-3(4) requires that an audit committee have the authority to engage outside advisors, including counsel, as it determines necessary to carry out its duties. The Rule also requires the issuer to provide appropriate funding, as determined by the audit committee, for payment of compensation to the issuer's independent auditor and to any advisors employed by the audit committee;

The Audit Committee has established a procedure for the receipt, retention and treatment of complaints regarding accounting, internal accounting controls or auditing matters.

The Audit Committee has the authority to engage independent counsel and other advisers as it determines necessary to carry out its duties.

Prudential must provide appropriate funding for the Audit Committee.

Table of Contents

Description of differences between Prudential's governance practice and the NYSE

NYSE Corporate Governance Rules

Rule 10A-3(5) requires that the audit committee be directly responsible for the appointment, compensation, retention and oversight of the work of the independent auditor engaged for the purpose of preparing an audit report or performing other audit, review or attest services for the issuer, and the independent auditor must report directly to the audit committee.

(a) The audit committee must have a minimum of three members. All audit committee members must satisfy the requirements for independence set out in Section 303A.02 and, in the absence of an applicable exemption Rule 10A-3(6)(1).

Corporate Governance Rules

Prudential complies with the equivalent provisions set out in the UK Code which requires that the Audit Committee should comprise a minimum of three independent non-executive directors.

Prudential has determined that each member of its Audit Committee is independent for the purposes of Rule 10A-3(6)(1) under the Securities Exchange Act and UK Code.

Prudential complies with the equivalent provisions set out in the UK Code which requires that the Board should satisfy itself that at least one member of the Audit Committee has recent and relevant financial experience. The Board of Prudential has designated that Ann Godbehere, Chairman of the Audit Committee, qualifies as an audit committee financial expert.

(b) The audit committee must have a written charter that addresses:

Prudential's Audit Committee has written terms of reference in accordance with the UK Code. The terms of reference are available on Prudential's website.

(i) the committee's purpose which, at minimum, must be to:

The UK Code requires that the main role and responsibilities of the Audit Committee should include:

(A) assist board oversight of (1) the integrity of the listed company's financial statements, (2) the listed company's compliance with legal and regulatory requirements, (3) the independent auditor's qualifications and To monitor the integrity of the financial statements of the Company;

independence, and (4) the performance of the listed company's internal audit function and independent auditors; (if the listed company does not yet have an internal audit function because it is availing itself of a transition period pursuant to Section 303A.00, the charter must provide that the committee will assist board oversight of the design and implementation of the internal audit function); and

To review the Company's internal financial controls and risk management systems as they related to financial reporting;

To monitor and review the effectiveness of the Company's internal audit function;

To make recommendations to the Board, for it to put to the shareholders for their approval in general meeting, in relation to the appointment, re-appointment and removal of the external auditor and to authorise the Board to set the remuneration and terms of engagement of the external auditor.

To review and monitor the external auditor's independence and objectivity and the effectiveness of the audit process, taking into consideration relevant UK professional and regulatory requirements; and

Table of Contents

Description of differences between Prudential's governance practice and the NYSE

NYSE Corporate Governance Rules

Corporate Governance Rules

To develop and implement policy on the engagement of the external auditor to supply non-audit services, taking into account relevant guidance regarding the provision of non-audit services by the external audit firm, and to report to the Board, identifying any matters in respect of which it considers that action or improvement is needed and making recommendations as to the steps to be taken;

To report to the Board on how it has discharged its responsibilities; and

To review arrangements by which staff of the Company may, in confidence, raise concerns about possible improprieties in matters of finance reporting or other matters.

(B) prepare the disclosure required by Item 407(d)(3)(i) of Regulation S-K;

The UK Code requires that there is a separate section in a Company's Annual Report which describes the work of the Committee in discharging its duties.

(ii) an annual performance evaluation of the audit committee; and

A description of the Committee's evaluation is included in the Annual Report.

(iii) the duties and responsibilities of the audit committee which, at a minimum, must include those set out in Rule 10A-3(6)(2), (3), (4) and (5) of the Exchange Act, as well as to:

(A) at least annually, obtain and review a report by the independent auditor describing: the firm's internal quality-control procedures; any material issues raised by the most recent internal quality-control review, or peer review, of the firm, or by any inquiry or investigation by governmental or professional authorities, within the preceding five years, respecting one or more independent audits carried out by the firm, and any steps taken to deal with any such issues; and (to assess the auditor's independence) all relationships between the independent auditor and the listed company;

Prudential's Audit Committee monitors and reviews the effectiveness of the Company's internal audit function.

(B) Meet to review and discuss the listed company's

Prudential's Audit Committee monitors the integrity of

annual audited financial statements and quarterly financial statements with management and the independent auditor, including reviewing the listed company's specific disclosures under Management's Discussion and Analysis of Financial Condition and Results of Operations ;

the financial statements of the Company, and any formal announcements relating to the Company's financial performance, reviewing significant financial reporting judgements contained in them.

Table of Contents

Description of differences between Prudential's governance practice and the NYSE

NYSE Corporate Governance Rules

(C) Discuss the listed company's earnings press releases, as well as financial information and earnings guidance provided to analysts and rating agencies;

(D) Discuss policies with respect to risk assessment and risk management;

(E) Meet separately, periodically, with management, with internal auditors (or other personnel responsible for the internal audit function) and with independent auditors;

(F) review with the independent auditor any audit problems or difficulties and management's response;

(G) set clear hiring policies for employees or former employees of the independent auditors; and

(H) report regularly to the Board of directors.

(c) Each listed company must have an internal audit function.

Corporate Governance Rules

Prudential's Audit Committee reviews the press releases associated with key financial results prior to their publication.

Prudential's Audit Committee reviews the Company's internal financial controls and, unless expressly addressed by the Board itself, reviews the Company's internal control and risk management systems in relation to financial reporting. The Group Risk Committee has responsibility for the oversight of risk management.

Committee members meet separately with management throughout the year and at least annually meet alone with the internal and external auditors.

The terms of reference of Prudential's Audit Committee require it to consider management's responses to any major external audit recommendations, and to resolve disagreements between management and the external auditor regarding financial reporting.

The terms of reference of Prudential's Audit Committee require it to set clear hiring policies for employees or former employees of the external auditor.

Prudential's Audit Committee reports regularly to the Board of directors.

Where there is no internal audit function, the audit committee should consider annually, under the requirements of the UK Code, whether there is a need for an internal audit function and make a recommendation to the Board, and the reasons for the absence of such a function should be explained in the relevant section of the annual report.

6 Shareholder Approval of Equity Compensation Plans

Shareholders must be given the opportunity to vote on all equity-compensation plans and material revisions thereto, except for employment inducement awards, certain grants, plans and amendments in the context of mergers and acquisitions, and certain specific types of plans.

Prudential complies with corresponding domestic requirements in the Listing Rules issued by the UK Listing Authority which mandate that the Company must seek shareholder approval for employee share plans.

REPORTS OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors and Shareholders of Prudential plc

We have audited the accompanying consolidated statement of financial position of Prudential plc (the Company) and its subsidiaries (collectively, the Group) as at 31 December 2014, and the related consolidated statements of income, comprehensive income, changes in equity, and cash flows for the year then ended, including the disclosures marked audited within the Risk Management section on pages 48 to 60 of Item 4 of the 2014 Form 20-F of the Group, and the related condensed financial statement Schedule II of the Company. We also have audited the Group's internal control over financial reporting as of 31 December 2014, based on criteria established in *Internal Control - Integrated Framework (2013)* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). The Group's management is responsible for these consolidated financial statements and condensed financial statement schedule, for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying Management's Annual Report on Internal Control over Financial Reporting within Item 15. Our responsibility is to express an opinion on the accompanying consolidated financial statements and condensed financial statement schedule and an opinion on the Group's internal control over financial reporting based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the financial statements are free of material misstatement and whether effective internal control over financial reporting was maintained in all material respects. Our audits of the consolidated financial statements included examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorisations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorised acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of the Group as of 31 December 2014 and the results of its operations and its cash flows for the year

then ended, in conformity with International Financial Reporting Standards (IFRS) as issued by the International Accounting Standards Board (IASB). Also, in our opinion, the related condensed financial statement schedule of the Company, when considered in relation to the basic consolidated financial statements taken as a whole, presents fairly, in all material respects, the information set forth therein in conformity with UK generally accepted accounting practice (UK GAAP). Accounting principles under UK GAAP vary in certain significant respects from IFRS as issued by the IASB. Information relating to the nature and effect of such differences is presented in note 3 to the condensed financial statement schedule of the Company. Also in our opinion, the Group maintained, in all material respects, effective internal control over financial reporting as of 31 December 2014, based on criteria established in *Internal Control - Integrated Framework (2013)* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO).

* This measure is the formal profit before tax measure under IFRS but it is not the result attributable to shareholders. This is principally because the corporate taxes of the Group include those on the income of consolidated with-profits and unit-linked funds that, through adjustments to benefits, are borne by policyholders. These amounts

are required to be included in the tax charge of the Company under IAS 12. Consequently, the profit before all taxes measure (which is determined after deducting the cost of policyholder benefits and movements in the liability for unallocated surplus of the PAC with-profits fund after adjusting for taxes borne by policyholders) is not representative of pre-tax profits attributable to shareholders.

Cash and cash equivalents at end of year	6,409	6,785	6,126
--	--------------	-------	-------

Notes

- (i) This measure is the formal profit before tax measure under IFRS but it is not the result attributable to shareholders.
- (ii) Other non-cash items consist of the adjustment of non-cash items to profit before tax together with other net items, net purchases of treasury shares and other net movements in equity.
- (iii) In November 2014 PAC sold its 25 per cent equity stake in the PruHealth and PruProtect businesses to Discovery Group Europe Limited resulting in a net cash inflow of £152 million. The net cash inflow of £23 million for change in Group's holdings in 2012 was in respect of the dilution of M&G's holdings in PPM South Africa resulting in a reclassification from a subsidiary to an associate.
- (iv) Structural borrowings of shareholder-financed operations exclude borrowings to support short-term fixed income securities programmes, non-recourse borrowings of investment subsidiaries of shareholder-financed operations and other borrowings of shareholder-financed operations. Cash flows in respect of these borrowings are included within cash flows from operating activities.
- (v) Interest paid on structural borrowings of with-profits operations relate solely to the £100 million 8.5 per cent undated subordinated guaranteed bonds, which contribute to the solvency base of the Scottish Amicable Insurance Fund (SAIF), a ring-fenced sub-fund of the PAC with-profits fund. Cash flows in respect of other borrowings of with-profits funds, which principally relate to consolidated investment funds, are included within cash flows from operating activities.

Table of Contents**Prudential plc and subsidiaries****Notes to the consolidated financial statements****31 December 2014****A BACKGROUND AND ACCOUNTING POLICIES****A1 Basis of preparation and exchange rates**

Prudential plc (the Company) together with its subsidiaries (collectively, the Group or Prudential) is an international financial services group with its principal operations in Asia, the US and the UK. Prudential offers a wide range of retail financial products and services and asset management services throughout these territories. The retail financial products and services principally include life insurance, pensions and annuities as well as collective investment schemes.

Basis of preparation

These statements have been prepared in accordance with IFRS as issued by the International Accounting Standards Board (IASB) and as endorsed by the European Union (EU) as required by EU law (IAS Regulation EC1606/2032). EU-endorsed IFRS may differ from IFRS issued by the IASB if, at any point in time, new or amended IFRS have not been endorsed by the EU. At 31 December 2014, there were no unendorsed standards effective for the two years ended 31 December 2014 affecting the consolidated financial information of the Group and there were no differences between IFRS endorsed by the EU and IFRS issued by the IASB in terms of their application to the Group.

Except for the adoption of the new and amended accounting standards for Group IFRS reporting as described in note A2 below, the accounting policies applied by the Group in determining the IFRS basis results in this report are the same as those previously applied in the Group's consolidated financial statements for the year ended 31 December 2013.

Exchange rates

The exchange rates applied for balances and transactions in currency other than the presentational currency of the Group, pounds sterling (GBP) were:

	Closing	Average	Closing	Average	Closing	Average	Opening
	rate at	rate for	rate at	rate for	rate at	rate for	rate at
	31 Dec 2014	2014	31 Dec 2013	2013	31 Dec 2012	2012	1 Jan 2012
Local currency: £							
Hong Kong	12.09	12.78	12.84	12.14	12.60	12.29	12.07
Indonesia	19,311.31	19,538.56	20,156.57	16,376.89	15,665.76	14,842.01	14,091.80

Edgar Filing: PRUDENTIAL PLC - Form 20-F

Malaysia	5.45	5.39	5.43	4.93	4.97	4.89	4.93
Singapore	2.07	2.09	2.09	1.96	1.99	1.98	2.02
India	98.42	100.53	102.45	91.75	89.06	84.70	82.53
Vietnam	33,348.46	34,924.62	34,938.60	32,904.71	33,875.42	33,083.59	33,688.16
Thailand	51.30	53.51	54.42	48.11	49.72	49.26	49.03
US	1.56	1.65	1.66	1.56	1.63	1.58	1.55

The exchange movement arising during 2014 recognised in other comprehensive income is:

	2014 £m	2013 £m	2012 £m
Asia operations	109	(319)	(87)
US operations	243	(37)	(187)
Unallocated to a segment (central funds)*	(137)	101	60
	215	(255)	(214)

* The exchange rate movement unallocated to a segment mainly reflects the translation of currency borrowings which have been designated as a net investment hedge against the currency risk of the investment in Jackson. The consolidated financial statements do not represent Prudential's statutory accounts for the purposes of the UK Companies Act. These financial statements are based on the prescribed formats. The Groups external auditors have reported on the 2014, 2013 and 2012 statutory accounts. Statutory accounts for 2013 and 2012 have been delivered to the UK Registrar of Companies and those for 2014 will be delivered following the Company's Annual General Meeting. The auditors reports were (i) unqualified, (ii) did not include a reference to any matters to which the auditors drew attention by way of emphasis without qualifying their report and (iii) did not contain a statement under Section 498(2) or (3) of the UK Companies Act 2006.

Table of Contents**A2 Adoption of new accounting pronouncements in 2014**

The Group has adopted the following accounting pronouncements in 2014 but their adoption has had no material impact on the results and financial position of the Group:

Amendments to IAS 32 Offsetting financial assets and financial liabilities ; and
IFRIC 21, Levies.

This is not intended to be a complete list as only those accounting pronouncements that could have an impact upon the Group's financial statements are described.

A3 Accounting policies**A3.1 Accounting policies and use of estimates and judgements**

This note provides detailed accounting policies adopted by the Group to prepare the consolidated financial statements. These accounting policies are applied consistently for all years presented and normally are not subject to changes unless new accounting standards, interpretations or amendments are introduced by the IASB.

(a) Critical accounting policies, accounting estimates and judgements

Prudential believes that its critical accounting policies are limited to those referenced in the table below:

	Accounting policy reference
Critical accounting policies	
Classification of insurance and investment contracts	A3.1(c)
Measurement of policyholder liabilities and unallocated surplus of with-profits fund	A3.1(d)
Measurement and presentation of derivatives and debt securities of US insurance operations	A3.1(j)(v)
Presentation of results before tax	A3.1(k)
Segmental analysis of results and earnings distributable to shareholders	A3.1(m)
The preparation of these financial statements requires Prudential to make estimates and judgements that affect the reported amounts of assets, liabilities, revenues and expenses, and the related disclosure of contingent assets and liabilities. Prudential evaluates its estimates, including those related to long-term business provisioning and the fair value of assets. The table below sets out items that require the Group to make critical estimates and judgements in applying the relevant accounting policy:	
	Accounting policy reference
Critical accounting estimates and assumptions	
Classification of insurance and investment contracts	A3.1(c)
Measurement of policyholder liabilities	A3.1(d)

Measurement of deferred acquisition costs	A3.1(f)
Determination of fair value of financial investments	A3.1(j)(ii)
Determining impairment relating to financial assets	A3.1(j)(iii)

(b) Basis of consolidation

The Group consolidates those investees it is deemed to control. The Group has control over an investee if all three of the following are met: (1) it has power over an investee; (2) it is exposed to, or has rights, to variable returns from its involvement with the investee; and (3) it has ability to use its power over the investee to affect its own returns.

Table of Contents**(i) Subsidiaries**

Subsidiaries are those investees which the Group controls. The vast majority of Group's subsidiaries are corporate entities where the Group holds the majority of voting rights and are consolidated. The consolidation of other vehicles held by the Group is discussed below:

The Group's insurance operations invest in a number of limited partnerships, either directly or through unit trusts, through a mix of capital and loans. These limited partnerships are managed by general partners, in which the Group hold equity. Such interest in general partners and limited partnerships provide the Group with voting and similar rights to participate in the governance framework of the relevant activities in which limited partnerships are engaged in. Accounting for the limited partnerships as subsidiaries, joint ventures, associates or other financial investments depends on the terms of each partnership agreement and the shareholdings in the general partners. In the context of direct investment in limited partnerships, the following circumstances may indicate a relationship in which, in substance, the Group controls and consequently consolidates a limited partnership:

The Group has existing rights that give it the current ability to direct the relevant activities of the limited partnership, ie activities that significantly affect the generation of economic returns from the limited partnership's operation;

The Group has the power to obtain the significant benefits of the activities of the limited partnerships. Generally, it is presumed that the Group has significant benefits if its participation in the limited partnership is greater than 20 per cent; and

The Group's current ability to join together with other partners to direct the activities of the partnership.

The Group performs a re-assessment of consolidation whenever there is a change in the substance of the relationship between the Group and a limited partnership. Where the Group is deemed to control limited partnership, it is treated as a subsidiary and its results, assets and liabilities are consolidated. Where the Group holds a minority share in a limited partnership, with no control over their associated general partners, the investments are carried at fair value through profit or loss within financial investments in the consolidated statement of financial position.

The limited partnerships consolidated by the Group include Qualifying Partnerships as defined under the UK Partnerships (Accounts) Regulations 2008 (the Partnerships Act). Certain of these limited partnerships have taken advantage of the exemption under regulation 7 of the Partnerships Act from the financial statements requirements under regulations 4 to 6, on the basis that these limited partnerships are dealt with on a consolidated basis in these financial statements.

The Group does not have subsidiaries with a material percentage of non-controlling interests.

(ii) Joint ventures and associates

Joint ventures are joint arrangements arising from a contractual agreement whereby the Group and other investors have joint control of the net assets of the arrangement. In a number of these arrangements, the Group's share of the underlying net assets may be less than 50 per cent but the terms of the relevant agreement make it clear that control is jointly exercised between the Group and the third party. Associates are entities over which the Group has significant influence, but it does not control. Generally it is presumed that the Group has significant influence if it holds between 20 per cent and 50 per cent voting rights of the entity.

With the exception of those referred to below, the Group accounts for its investments in joint ventures and associates by using the equity method of accounting. The Group's share of profit or loss of its joint ventures and associates is recognised in the income statement and its share of movements in other comprehensive income is recognised in other comprehensive income. The equity method of accounting does not apply to investments in associates and joint ventures held by the Group's insurance or investment funds including venture capital business or mutual funds or unit trusts, which as allowed by IAS 28, *Investments in Associates and Joint Ventures*, are carried at fair value through profit or loss.

(iii) Structured entities

Structured entities are those which have been designed so that voting or similar rights are not the dominant factor in deciding who controls the entity such as when any voting rights relate to administrative tasks only and the relevant activities are directed by means of contractual arrangements. In addition to the entities discussed above in A3.1b(i), the Group as part of its business strategy invests in structured entities such as Open-Ended

Table of Contents

Investment Companies (OEICs), Unit Trusts (UTs), variable interest entities, investment vehicles within separate accounts offered through variable annuities, collateral debt obligations, mortgage-backed securities, and similar asset-backed securities.

Open-ended investment companies and unit trusts

The Group invests in open-ended investment companies and unit trusts, which invest mainly in equities, bonds, cash and cash equivalents, and properties. The Group's percentage ownership in these entities can fluctuate on a daily basis according to the participation of the Group and other investors in them. For these entities, the following circumstances may indicate, in substance, the Group has power over an entity:

The entity is managed by the Group's asset manager and the group holds a significant investment in the entity; and
Where the entity is managed by asset manager outside the Group, Prudential has existing rights that gives it the ability to direct the current activities of the entity. In assessing the Group's ability to direct an entity, the Group considers its ability relative to other investors. The Group has limited number of open-ended investment companies and unit trusts where it considers it has such ability.

For the entity managed by asset managers outside the Group with no current ability to direct its activities, the Group is deemed to have no power over such an entity.

For those entities managed by the Group's asset managers, it is generally presumed that the Group is exposed to, or has rights, to variable returns from an entity and has ability to use its power to affect its own returns where Group's holding is greater than 50 per cent and is deemed to have no significant influence over an entity for participation less than 20 per cent. For holdings between 20 per cent and 50 per cent, the Group performs an assessment of power and associated control over an entity on a case by case basis. For these entities, the following circumstances may indicate that the Group controls an entity:

The Group has power over the relevant activities of the entity; and

The exposure, or rights, to variable returns (including administrative and performance fee earned by the Group's asset manager) from the entity is higher than the Group's interest.

Where the Group is deemed to control these entities they are treated as a subsidiary and are consolidated, with the interests of investors other than the Group being classified as liabilities and appear as net asset value attributable to unit holders of consolidated unit trusts and similar funds.

Where the Group does not control these entities (as it is deemed to be acting as an agent) and they do not meet the definition of associates, they are carried at fair value through profit or loss within financial investments in the consolidated statement of financial position.

Where the Group's asset manager set up the open-ended investment companies and unit trusts as part of asset management operations, the Group's interest is limited to the administration fees charged to manage the assets of such entities. With no participation in these entities, the Group does not retain risks associated with open-ended investment companies and unit trusts.

The Group generates returns and retains the ownership risks in investment vehicles commensurate to its participation and does not have any further exposure to the residual risks of the open-ended investment companies and unit trusts.

For these open-ended investment companies and unit-trusts, the Group is not deemed to control the entities but to be acting as an agent.

Jackson's separate account assets

Jackson offers variable contracts that invest contract holder's premiums, at the contract holder's direction, in investment vehicles (Separate Accounts) that invest in equity, fixed income, bonds and money market mutual funds. The contract holder retains the underlying returns and the ownership risks related to the separate accounts and its underlying investments. The shareholder's economic interest in separate accounts is limited to the administrative fees charged. The separate accounts are set up as separate regulated entities governed by a Board of Governors or trustees for which the majority of the members are independent of Jackson or any affiliated entity. The independent members represent contract holder's interest and are responsible for any decision making that impacts contract holder's interest and governs the operational activities of the entities' advisors, including asset managers managing the investment vehicles. Accordingly the Group does not control these vehicles. These investments are carried at fair value through profit or loss within financial investments in the consolidated statement of financial position.

Table of Contents*Other structured entities*

The Group holds investments in mortgage-backed securities, collateral debt obligations and similar asset-backed securities that are actively traded in a liquid market. The Group is not the sponsor of the vehicles in which it holds investments and has no administrative rights over the vehicle's activities. The Group generates returns and retains the ownership risks commensurate to its holding and its exposure to the investments. Accordingly the Group does not have power over the relevant activities of such vehicles and all are carried at fair value through profit or loss within financial investments in the consolidated statement of financial position.

The table below provides aggregate carrying amounts of the investments in unconsolidated structured entities reported in the Group's statement of financial position:

	2014 £m			2013 £m		
		Separate account	Other structured entities	OEICs/UTs	Separate account	Other structured entities
Statement of financial position						
line items						
Equity securities and portfolio holdings in unit trusts	12,690	81,741	-	13,175	65,681	-
Debt securities	-	-	12,715	-	-	13,190
Total	12,690	81,741	12,715	13,175	65,681	13,190

The Group generates returns and retains the ownership risks in these investments commensurate to its participation and does not have any further exposure to the residual risks or losses of the investments or the vehicles in which it holds investments.

As at 31 December 2014, the Group does not have an agreement, contractual or otherwise, or intention to provide financial support to structured entities that could expose the Group to a loss.

(c) Classification of insurance and investment contracts

IFRS 4 requires contracts written by insurers to be classified as either insurance contracts or investment contracts depending on the level of insurance risk transferred. Insurance risk is a pre-existing risk, other than financial risk, transferred from the contract holder to the contract issuer. If significant insurance risk is transferred to the Group then it is classified as an insurance contract. Contracts that transfer financial risk to the Group but not significant insurance risk are termed investment contracts. Furthermore, some contracts, both insurance and investment, contain discretionary participating features representing the contractual right to receive additional benefits as a supplement to guaranteed benefits:

- a That are likely to be a significant portion of the total contract benefits;
- b Whose amount or timing is contractually at the discretion of the insurer; and

c That are contractually based on asset or fund performance, as discussed in IFRS 4.

Business units	Insurance contracts and investment contracts with discretionary participation features	Investment contracts without discretionary participation features
Asia	<p>With-profits contracts</p> <p>Non-participating term contracts</p> <p>Whole life contracts</p> <p>Unit-linked policies</p> <p>Accident and health policies</p>	<p>Minor amounts for a number of small categories of business</p>
US	<p>Variable annuity contracts</p> <p>Fixed annuity contracts</p> <p>Life insurance contracts</p>	<p>Guaranteed investment contracts (GICs)</p> <p>Minor amounts of annuity certain contracts</p>
UK	<p>With-profits contracts</p> <p>Bulk and individual annuity business</p> <p>Non-participating term contracts</p>	<p>Certain unit-linked savings and similar contracts</p>

Table of Contents**(d) Measurement of policyholder liabilities and unallocated surplus of with-profits funds**

The measurement basis of policyholder liabilities is dependent upon the classification of the contracts under IFRS 4 described in note A3.1(c) above.

IFRS 4 permits the continued usage of previously applied Generally Accepted Accounting Practices (GAAP) for insurance contracts and investment contracts with discretionary participating features. Accordingly, except for UK regulated with-profits funds as discussed below, the modified statutory basis of reporting as set in the Statement of Recommended Practice issued by Association of British Insurers (ABI) was adopted by the Group on first time adoption of IFRS in 2005.

For investment contracts that do not contain discretionary participating features, IAS 39 and, where the contract includes an investment management element, IAS 18, Revenue, apply measurement principles to assets and liabilities attaching to the contract.

For with-profits funds, as the shareholders' participation in the cost of bonuses arises only on distribution, the Group has elected to account for the unallocated surplus of UK regulated with-profits funds as a liability with no allocation to equity.

The policy of measuring contract liabilities at business unit level is noted below. Additional details are discussed in note C4.2.

(i) Insurance contracts*Asia insurance operations*

The policyholder liabilities for businesses in Asia are determined in accordance with methods prescribed by local GAAP adjusted to comply, where necessary, with the modified statutory basis. Refinements to the local reserving methodology are generally treated as changes in estimates, dependent on their nature.

For the operations in India, Japan, Taiwan and, until 2012, Vietnam, the local GAAP is not appropriate as a starting point in the context of the modified statutory basis, and, instead, the accounting for insurance contracts is based on US GAAP. For these operations the business written is primarily non-participating linked and participating business. The future policyholder benefit provisions for non-participating linked business are determined using the net level premium method, with an allowance for surrenders, maintenance and claim expenses. Rates of interest used in establishing the policyholder benefit provisions vary by operation depending on the circumstances attaching to each block of business. Where appropriate, liabilities for participating business for these operations include provisions for the policyholders' interest in investment gains and other surpluses that have yet to be declared as bonuses.

While the basis of valuation of liabilities in this business is in accordance with the requirements of the ABI SORP, it may differ from that determined on the modified statutory basis for UK operations with the same features.

US insurance operations

In accordance with the modified statutory basis, the policyholder liabilities for Jackson's conventional protection-type policies are determined under US GAAP principles with locked in assumptions for mortality, interest, policy lapses and expenses along with provisions for adverse deviations. For non-conventional protection-type policies, the policyholder liabilities includes the policyholder account balance. Acquisition costs are accounted for as explained in

section (f) below.

UK insurance operations

The UK regulated with-profits funds are accounted for by the voluntary application of the UK accounting standard FRS 27 Life Assurance that requires liabilities to be calculated as the realistic basis liabilities. The realistic basis liabilities are measured by reference to the PRA's Peak 2 basis of reporting. This Peak 2 basis requires the value of liabilities to be calculated as:

A with-profits benefits reserve; plus
Future policy related liabilities; plus
The realistic current liabilities of the fund.

F-18

Table of Contents

The with-profits benefits reserve is primarily based on the retrospective calculation of accumulated asset shares but is adjusted to reflect future policyholder benefits and other outgoings. Asset shares broadly reflect the policyholders share of the with-profits fund assets attributable to their policies.

The future policy related liabilities must include a market consistent valuation of costs of guarantees, options and smoothing, less any related charges, and this amount is determined using either a stochastic approach, hedging costs or a series of deterministic projections with attributed probabilities.

The Peak 2 basis realistic liabilities for with-profits business included in the PRA regulatory returns include the element for the shareholders share of the future cost of bonuses consistent with the contract asset shares. For accounting purposes under FRS 27, this latter item is not shown as part of contract liabilities. This is because, consistent with the current basis of financial reporting, shareholder transfers are recognised only on declaration. Instead the shareholders share of future costs of bonuses is included within the liabilities for unallocated surplus.

Other UK insurance contracts that contain significant insurance risk include unit-linked, annuity and other non-profit business. For the purposes of local regulations, segregated accounts are established for linked business for which policyholder benefits are wholly or partly determined by reference to specific investments or to an investment-related index. The interest rates used in establishing policyholder benefit provisions for pension annuities in the course of payment are adjusted each year. Mortality rates used in establishing policyholder benefits are based on published mortality tables adjusted to reflect actual experience.

(ii) Investment contracts with discretionary participation features

For investment contracts with discretionary participation features, the accounting basis is consistent with the accounting for similar with-profits insurance contracts. Other investment contracts are accounted for on a basis that reflects the hybrid nature of the arrangements, where part is accounted for as a financial instrument under IAS 39 and the investment management service component is accounted for under IAS 18.

For those investment contracts in the US with fixed and guaranteed terms, the Group uses the amortised cost model to measure the liability.

Those investment contracts without fixed and guaranteed terms are designated as fair value through profit or loss because the resulting liabilities are managed and their performance is evaluated on a fair value basis. Where the contract includes a surrender option its carrying value is subject to a minimum carrying value equal to its surrender value.

(iii) Investment contracts without discretionary participation features

The measurement of investment contracts without discretionary participation features is carried out in accordance with IAS 39 to reflect the deposit nature of the arrangement, with premiums and claims reflected as deposits and withdrawals and taken directly to the statement of financial position as movements in the financial liability balance.

Under IFRS, investment contracts (excluding those with discretionary participation features) accounted for as financial liabilities in accordance with IAS 39 which also offer investment management services, require the application of IAS 18 for the revenue attached to these services. Incremental, directly attributable acquisition costs relating to the investment management element of these contracts are capitalised and amortised in line with the related

revenue. If the contracts involve up-front charges, this income is also deferred and amortised through the income statement in line with contractual service provision.

(iv) Unallocated surplus of with-profits funds

Unallocated surplus represents the excess of assets over policyholder liabilities for the Group's with-profits funds that have yet to be appropriated between policyholders and shareholders. As allowed under IFRS 4, the Group has opted to continue to record unallocated surplus of with-profits funds wholly as a liability with no allocation to equity. The annual excess (shortfall) of income over expenditure of the with-profits funds, after declaration and attribution of the cost of bonuses to policyholders and shareholders, is transferred to (from) the unallocated surplus each year through a charge (credit) to the income statement. The balance retained in the unallocated surplus represents cumulative income arising on the with-profits business that has not been allocated to policyholders or shareholders. The balance of the unallocated surplus is determined after full provision for deferred tax on unrealised appreciation on investments.

Table of Contents**(e) Reinsurance**

The measurement of reinsurance assets is consistent with the measurement of the underlying direct insurance contracts. The treatment of any gains or losses arising on the purchase of reinsurance contracts is dependent on the underlying accounting basis of the entity concerned.

(f) Deferred acquisition costs for insurance contracts

Except for acquisition costs of with-profits contracts of the UK regulated with-profits funds, which are accounted for under the realistic PRA regime, costs of acquiring new insurance business are accounted for in a way that is consistent with the principles of the ABI SORP with deferral and amortisation against margins in future revenues on the related insurance policies. Costs of acquiring new insurance business, principally commissions, marketing and advertising and certain other costs associated with policy insurance and underwriting that are not reimbursed by policy charges, are specifically identified and capitalised as part of deferred acquisition costs. In general, this deferral is presentationally shown by an explicit carrying value in the balance sheet. However, in some Asia operations the deferral is implicit through the reserving methodology. The recoverability of the explicitly and implicitly deferred acquisition costs is measured and are deemed impaired if the projected margins are less than the carrying value. To the extent that the future margins differ from those anticipated, then an adjustment to the carrying value will be necessary.

The deferral and amortisation of acquisition costs is of most relevance to the Group's results for Asia and US insurance operations. The deferred acquisition costs for US and some Asia operations is determined with reference to US GAAP principles.

Asia insurance operations

For those territories applying US GAAP to insurance assets and liabilities, as permitted by the ABI SORP, principles similar to those set out in the US insurance operations paragraph below are applied to the deferral and amortisation of acquisition costs. For other territories in Asia, the general principles of the ABI SORP are applied with, as described above, deferral of acquisition costs being either explicit or implicit through the reserving basis.

US insurance operations

Under IFRS 4, the Group applies grandfathered US GAAP for measuring the insurance assets and liabilities of US insurance operations. The Group adopted FAS ASU 2010-26 on Accounting for Costs Associated with Acquiring or Renewing Insurance Contracts from 1 January 2012 and capitalises only those incremental costs directly relating to successfully acquiring a contract.

For term business, acquisition costs are deferred and amortised in line with expected premiums. For annuity and interest-sensitive life business, acquisition costs are deferred and amortised in line with expected gross profits on the relevant contracts. For interest-sensitive business, the key assumption is the long-term spread between the earned rate on investments and the rate credited to policyholders, which is based on an annual spread analysis. In addition, expected gross profits depend on mortality assumptions, assumed unit costs and terminations other than deaths (including the related charges), all of which are based on a combination of Jackson's actual industry experience and future expectations. A detailed analysis of actual mortality, lapse and expenses experience is performed using internally developed experience studies.

For US variable annuity business a key assumption is the investment return from the separate accounts, which is determined using a mean reversion methodology. Under the mean reversion methodology, projected returns over the

next five years are flexed (subject to capping) so that, combined with the actual rates of return for the current and the previous two years is maintained. The projected rates of return are capped at no more than 15 per cent for each of the next five years. These returns affect the level of future expected profits through their effects on the fee income with consequential impact on the amortisation of deferred acquisition costs. The level of acquisition costs carried in the statement of financial position is also sensitive to unrealised valuation movements on debt securities held to back the liabilities and solvency capital. Further details are discussed in note C5.1(b).

As permitted by IFRS 4, Jackson uses shadow accounting to make adjustments to the liabilities or related deferred acquisition costs which are recognised directly in other comprehensive income. Jackson accounts for the majority of its investment portfolio on an available-for-sale basis whereby unrealised gains and losses are recognised in other comprehensive income. To the extent that recognition of unrealised gains or losses on available-for-sale securities causes adjustments to the carrying value and amortisation patterns of deferred acquisition costs and

Table of Contents

deferred income, these adjustments are recognised in other comprehensive income to be consistent with the treatment of the gains or losses on the securities. More precisely, shadow deferred acquisition costs adjustments reflect the change in deferred acquisition costs that would have arisen if the assets held in the statement of financial position had been sold, crystallising unrealised gains or losses, and the proceeds reinvested at the yields currently available in the market.

UK insurance operations

For UK regulated with-profits funds where the realistic FSA regime is applied, the basis of setting liabilities is such that it would be inappropriate for acquisition costs to be deferred therefore these costs are expensed as incurred. The majority of the UK shareholder-backed business is individual and group annuity business where the incidence of acquisition costs is negligible.

(g) Liability adequacy test

The Group performs adequacy testing on its insurance liabilities to ensure that the carrying amounts (net of related deferred acquisition costs) and, where relevant, present value of acquired in-force business is sufficient to cover current estimates of future cash flows. Any deficiency is immediately charged to the income statement.

(h) Earned premiums, policy fees and claims paid

Premium and annuity considerations for conventional with-profits policies and other protection type insurance policies are recognised as revenue when due. Premiums and annuity considerations for linked policies, unitised with-profits and other investment type policies are recognised as revenue when received or, in the case of unitised or unit-linked policies, when units are issued. These amounts exclude premium taxes and similar duties where Prudential collects and settles taxes borne by the customer.

Policy fees charged on linked and unitised with-profits policies for mortality, asset management and policy administration are recognised as revenue when related services are provided.

Claims paid include maturities, annuities, surrenders and deaths. Maturity claims are recorded as charges on the policy maturity date. Annuity claims are recorded when each annuity instalment becomes due for payment. Surrenders are charged to the income statement when paid and death claims are recorded when notified.

(i) Investment return

Investment return included in the income statement principally comprises interest income, dividends, investment appreciation/depreciation (realised and unrealised gains and losses) on investments designated as fair value through profit or loss, and realised gains and losses (including impairment losses) on Jackson's debt securities designated as available-for-sale. Movements in unrealised appreciation/depreciation of Jackson's debt securities designated as available-for-sale are recorded in other comprehensive income. Interest income is recognised as it accrues, taking into account the effective yield on investments. Dividends on equity securities are recognised on the ex-dividend date and rental income is recognised on an accrual basis.

(j) Financial investments other than instruments classified as long-term business contracts

(i) Investment classification

The Group holds financial investments in accordance with IAS 39, whereby subject to specific criteria, financial instruments are required to be accounted for under one of the following categories:

Financial assets and liabilities at fair value through profit or loss – this comprises assets and liabilities designated by management as fair value through profit or loss on inception and derivatives that are held for trading. These investments are measured at fair value with all changes thereon being recognised in investment return in the income statement;

Financial investments on an available-for-sale basis – this comprises assets that are designated by management as available-for-sale and/or do not fall into any of the other categories. These assets are initially recognised at fair value plus attributable transaction costs. For available-for-sale debt securities, the difference between their cost and par value is amortised to the income statement using the effective interest rate. The effective interest rate is the rate that exactly discounts estimated future cash receipts through the expected life of the financial instrument or, when appropriate, a shorter period to the net carrying amount of the financial asset;

Table of Contents

Available-for-sale assets are subsequently measured at fair value. Interest income is recognised on an effective interest basis in the income statement. Except for foreign exchange gains and losses on debt securities, not in functional currency, which are included in the income statement, unrealised gains and losses are recognised in other comprehensive income. Upon disposal or impairment, accumulated unrealised gains and losses are transferred from other comprehensive income to the income statement as realised gains or losses; and Loans and receivables – except for those designated as at fair value through profit or loss or available-for-sale, these instruments comprise non-quoted investments that have fixed or determinable payments. These instruments include loans collateralised by mortgages, deposits, loans to policyholders and other unsecured loans and receivables. These investments are initially recognised at fair value plus transaction costs. Subsequently, these instruments are carried at amortised cost using the effective interest method.

The Group uses the trade date method to account for regular purchases and sales of financial assets.

(ii) Use of fair value

The Group uses current bid prices to value its investments with quoted prices. Actively traded investments without quoted prices are valued using prices provided by third parties as described further in note C3.2. If there is no active established market for an investment, the Group applies an appropriate valuation technique such as a discounted cash flow technique.

Determining the fair value of financial investments when the markets are not active

The Group holds certain financial investments for which the markets are not active. These can include financial investments which are not quoted on active markets and financial investments for which markets are no longer active as a result of market conditions eg market illiquidity. When the markets are not active, there is generally no or limited observable market data to account for financial investments at fair value. The determination of whether an active market exists for a financial investment requires management's judgement.

If the market for a financial investment of the Group is not active, the fair value is determined by using valuation techniques. The Group establishes fair value for these financial investments by using quotations from independent third parties, such as brokers or pricing services, or by using internally developed pricing models. Priority is given to publicly available prices from independent sources when available, but overall the source of pricing and/or the valuation technique is chosen with the objective of arriving at a fair value measurement which reflects the price at which an orderly transaction would take place between market participants on the measurement date. The valuation techniques include the use of recent arm's length transactions, reference to other instruments that are substantially the same, discounted cash flow analysis, option-adjusted spread models and, if applicable, enterprise valuation and may include a number of assumptions relating to variables such as credit risk and interest rates. Changes in assumptions relating to these variables could positively or negatively impact the reported fair value of these financial investments.

Financial investments measured at fair value are classified into a three level hierarchy as described in note C3.2(b).

Table of Contents**(iii) Determining impairments relation to financial assets
Available-for-sale securities**

The majority of Jackson's debt securities portfolio are accounted for on an available-for-sale basis. The consideration of evidence of impairment requires management's judgement. In making this determination the factors considered include, for example:

Determining factors

Whether the decline of the financial investment's fair value is substantial

The impact of the duration of the security on the calculation of the revised estimated cash flows

The duration and extent to which the amortised cost exceeds fair value

The financial condition and prospects of the issuer

If a loss event that will have a detrimental effect on cash flows is identified an impairment loss is recognised in the income statement. The loss recognised is determined as the difference between the book cost and the fair value of the relevant impaired securities. This loss comprises the effect of the expected loss of contractual cash flows and any additional market-price-driven temporary reductions in values.

Consideration of evidence of impairment

A substantial decline in fair value might be indicative of a credit loss event that would lead to a measurable decrease in the estimated future cash flows.

The duration of a security to maturity helps to inform whether assessments of estimated future cash flows that are higher than market value are reasonable.

This factor provides an indication of how the contractual cash flows and effective interest rate of a financial asset compares with the implicit market estimate of cash flows and the risk attaching to a fair value measurement. The length of time for which that level of difference has been in place may also provide further evidence as to whether the market assessment implies an impairment loss has arisen.

These factors and other observable conditions may indicate that an investment is impaired.

For Jackson's residential mortgage-backed and other asset-backed securities, all of which are classified as available-for-sale, the model used to analyse cash flows, begins with the current delinquency experience of the underlying collateral pool for the structure, by applying assumptions about how much of the currently delinquent loans will eventually default, and multiplying this by an assumed loss severity. Additional factors are applied to anticipate ageing effects. After applying a cash flow simulation an indication is obtained as to whether or not the security has suffered, or is anticipated to suffer, contractual principal or interest payment shortfalls. If a shortfall applies an impairment charge is recorded. The difference between the fair value and book cost for unimpaired securities designated as available-for-sale is accounted for as unrealised gains or losses, with the movements in the accounting period being included in other comprehensive income.

The Group's review of fair value involves several criteria, including economic conditions, credit loss experience, other issuer-specific developments and future cash flows. These assessments are based on the best available information at the time. Factors such as market liquidity, the widening of bid/ask spreads and a change in cash flow assumptions can contribute to future price volatility. If actual experience differs negatively from the assumptions and other considerations used in the consolidated financial statements, unrealised losses currently in equity may be recognised in the income statement in future periods. Additional details on the impairments of the available-for-sale securities of Jackson are described in notes C3.5(d).

Assets held at amortised cost

Financial assets classified as loans and receivables under IAS 39 are carried at amortised cost using the effective interest rate method. The loans and receivables include loans collateralised by mortgages, deposits and loans to policyholders. In estimating future cash flows, the Group looks at the expected cash flows of the assets and applies historical loss experience of assets with similar credit risks that has been adjusted for conditions in the historical loss experience which no longer exist, or for conditions that are expected to arise. The estimated future cash flows are discounted using the financial asset's original or variable effective interest rate and exclude credit losses that have not yet been incurred.

F-23

Table of Contents

The risks inherent in reviewing the impairment of any investment include: the risk that market results may differ from expectations; facts and circumstances may change in the future and differ from estimates and assumptions; or the Group may later decide to sell the asset as a result of changed circumstances.

Certain mortgage loans of the UK insurance operations and, consequent upon the purchase of REALIC in 2012 by Jackson, policy loans held to back funds withheld under reinsurance arrangements have been designated at fair value through profit or loss as these loan portfolios are managed and evaluated on a fair value basis.

Assets carried at cost or amortised cost are subject to impairment testing where appropriate under IFRS requirements.

Reversal of impairment loss

If, in subsequent periods, an impaired debt security held on an available-for-sale basis or an impaired loan or receivable recovers in value (in part or in full), and this recovery can be objectively related to an event occurring after the impairment, then the previously recognised impairment loss is reversed through the income statement (in part or in full).

(iv) Derivatives and hedge accounting

Derivative financial instruments are used to reduce or manage investment, interest rate and currency exposures, to facilitate efficient portfolio management and for investment purposes. The Group may designate certain derivatives as hedges.

For hedges of net investments in foreign operations, the effective portion of any change in fair value of derivatives or other financial instruments designated as net investment hedges is recognised in other comprehensive income. The ineffective portion of changes in the fair value of the hedging instrument is recorded in the income statement. The gain or loss on the hedging instrument is recognised directly in other comprehensive income while the foreign operation is held. For fair value hedges, movements in the fair value of the hedged item attributable to the hedged risk are recognised in the income statement.

The Group does not regularly seek to apply fair value or cash flow hedging treatment under IAS 39. The exceptions, where hedge accounting has been applied in 2014 and 2013, are summarised in note C3.5(b).

All derivatives that are not designated as hedging instruments are carried at fair value with movements in fair value being recorded in the income statement.

The primary areas of the Group's continuing operations where derivative instruments are held are the UK with-profits funds and annuity business, and Jackson.

For UK with-profits funds the derivative programme derivatives are used for the purposes of efficient portfolio management or reduction in investment risk.

For shareholder-backed UK annuity business the derivatives are held to contribute to the matching as far as practical, of asset returns and duration with those of liabilities to policyholders. The carrying value of these liabilities is sensitive to the return on the matching financial assets including derivatives held.

For Jackson, an extensive derivative programme is maintained. Value movements on the derivatives held can be very significant in their effect on shareholder results. Further details on this aspect of the Group's financial reporting are described in note B1.2.

(v) Measurement and presentation of derivatives and debt securities of US insurance operations

The policies for these items are significant factors in contributing to the volatility of the income statement result and shareholders' equity. Under IAS 39, derivatives are required to be carried at fair value. Unless net investment hedge accounting is applied, value movements on derivatives are recognised in the income statement.

For derivative instruments of Jackson that are entered into to mitigate economic exposures, the Group has considered whether it is appropriate to undertake the necessary operational changes to qualify for hedge accounting so as to achieve matching of value movements in hedging instruments and hedged items in the performance statements. In reaching the decision a number of factors were particularly relevant. These were:

IAS 39 hedging criteria have been designed primarily in the context of hedging and hedging instruments that are assessable as financial instruments that are either stand-alone or separable from host contracts, rather than, for example, duration characteristics of insurance contracts;

Table of Contents

The high hurdle levels under IAS 39 of ensuring hedge effectiveness at the level of individual hedge transactions;
The difficulties in applying the macro hedge provisions under IAS 39 (which are more suited to banking arrangements) to Jackson's derivative book;

The complexity of asset and liability matching of US life insurers such as those with Jackson's product range; and finally

Whether it is possible or desirable, without an unacceptable level of costs and constraint on commercial activity, to achieve the accounting hedge effectiveness required under IAS 39.

Taking account of these considerations, the Group has decided that, except for occasional circumstances, it is not appropriate to seek to achieve hedge accounting under IAS 39. As a result of this decision, the total income statement results are more volatile as the movements in the value of Jackson's derivatives are reflected within it. This volatility is reflected in the level of short-term fluctuations in investment returns, as shown in notes B1.1 and B1.2.

Under IAS 39, unless carried at amortised cost (subject to impairment provisions where appropriate) under the held-to-maturity category, debt securities are also carried at fair value. The Group has chosen not to classify any financial assets as held-to-maturity. Debt securities of Jackson are designated as available-for-sale with value movements, unless impaired, being recorded as movements within other comprehensive income. Impairments are recorded in the income statement.

(vi) Embedded derivatives

Embedded derivatives are present in host contracts issued by various Group companies, in particular Jackson. They are embedded within other non-derivative host financial instruments and insurance contracts to create hybrid instruments. Embedded derivatives meeting the definition of an insurance contract are accounted for under IFRS 4. Where economic characteristics and risks of the embedded derivatives are not closely related to the economic characteristics and risks of the host instrument, and where the hybrid instrument is not measured at fair value with the changes in fair value recognised in the income statement, the embedded derivative is bifurcated and carried at fair value as a derivative in accordance with IAS 39. For Jackson's not for life Guaranteed Minimum Withdrawal Benefit and Fixed Index Annuity reserves the determination of fair value requires assumptions regarding future mix of Separate Account assets, equity volatility levels, and policyholder behaviour.

In addition, the Group applies the option under IFRS 4 to not separate and fair value surrender options embedded in host contracts and with-profits investment contracts whose strike price is either a fixed amount or a fixed amount plus interest. Further details on the valuation basis for embedded derivatives attaching to Jackson's life assurance contracts are provided in note C4.2.

(vii) Securities lending including repurchase agreements

The Group is party to various securities lending agreements under which securities are loaned to third parties on a short-term basis. The loaned securities are not derecognised; rather, they continue to be recognised within the appropriate investment classification. The Group's policy is that collateral in excess of 100 per cent of the fair value of securities loaned is required from all securities borrowers and typically consists of cash, debt securities, equity securities or letters of credit.

In cases where the Group takes possession of the collateral under its securities lending programme, the collateral, and corresponding obligation to return such collateral, are recognised in the consolidated statement of financial position.

(viii) Derecognition of financial assets and liabilities

The Group's policy is to derecognise financial assets when it is deemed that substantially all the risks and rewards of ownership have been transferred.

The Group derecognises financial liabilities only when the obligation specified in the contract is discharged, cancelled or has expired.

(ix) Financial liabilities designated at fair value through profit or loss

Consistent with the Group's risk management and investment strategy and the nature of the products concerned, the Group has designated under IAS 39 classification certain financial liabilities at fair value through profit or loss as these instruments are managed and their performance evaluated on a fair value basis. These instruments include liabilities related to consolidated collateralised debt obligations and net assets attributable to unit holders of consolidated unit trusts and similar funds.

Table of Contents

(k) Presentation of results before tax

The total tax charge for the Group reflects tax that in addition to relating to shareholders' profits, is also attributable to policyholders and unallocated surplus of with-profits funds and unit-linked policies. This is explained in more detail in note B5. Reported profit before the total tax charge is not representative of pre-tax profits attributable to shareholders. Accordingly, in order to provide a measure of pre-tax profits attributable to shareholders the Group has chosen to adopt an income statement presentation of the tax charge and pre-tax results that distinguishes between policyholder and shareholder components.

(l) Segments

Under IFRS 8, 'Operating Segments', the Group determines and presents operating segments based on the information that is internally provided to the Group Executive Committee which is the Group's chief operating decision maker.

The operating segments identified by the Group reflect the Group's organisational structure, which is by both geography (Asia, US and UK) and by product line (insurance operations and asset management).

The products of the insurance operations contain both significant and insignificant levels of insurance risk. The products are managed together and there is no distinction between these two categories other than for accounting purposes. This segment also includes the commission earned on general insurance business and investment subsidiaries held to support the Group's insurance operations.

Asset management comprises both internal and third-party asset management services, inclusive of portfolio and mutual fund management, where the Group acts as an advisor, and broker-dealer activities. The nature of the products and the managing of the business differ from the risks inherent in the insurance operations segments, and the regulatory environment of the asset management industry differs from that of the insurance operations segments.

Further information on the Group's operating segments is provided in note B1.3.

(m) Segmental analysis of results and earnings attributable to shareholders

The Group uses operating profit based on longer-term investment returns as the segmental measure of its results. The basis of calculation is disclosed in note B1.3.

For shareholder-backed business, with the exception of debt securities held by Jackson and assets classified as loans and receivables at amortised cost, all financial investments and investment property are designated as assets at fair value through profit or loss. The short-term fluctuations affect the result for the year and the Group provides additional analysis of results before and after short-term fluctuations in investment returns, together with other items that are of a short-term, volatile or one-off nature. Short-term fluctuations in investment returns on such assets held by with-profits funds, do not affect directly reported shareholder results. This is because (i) the unallocated surplus of with-profits funds is accounted for as a liability and (ii) excess or deficits of income and expenditure of the funds over the required surplus for distribution are transferred to or from unallocated surplus.

(n) Borrowings

Although initially recognised at fair value, net of transaction costs, borrowings, excluding liabilities of consolidated collateralised debt obligations, are subsequently accounted for on an amortised cost basis using the effective interest method. Under the effective interest method, the difference between the redemption value of the borrowing and the initial proceeds (net of related issue costs) is amortised through the income statement to the date of maturity or for hybrid debt, over the expected life of the instrument.

(o) Investment properties

Investments in leasehold and freehold properties not for occupation by the Group, including properties under development for future use as investment properties, are carried at fair value, with changes in fair value included in the income statement. Properties are valued annually either by the Group's qualified surveyors or by taking into consideration the advice of professional external valuers using the Royal Institution of Chartered Surveyors valuation standards. Each property is externally valued at least once every three years.

Leases of investment property where the Group has substantially all the risks and rewards of ownership are classified as finance leases (leasehold property). Finance leases are capitalised at the lease's inception at the lower of the fair value of the leased property and the present value of the minimum lease payments.

Table of Contents**(p) Pension schemes**

For the Group's defined benefit schemes, if the present value of the defined benefit obligation exceeds the fair value of the scheme assets, then a liability is recorded in the Group's statement of financial position. By contrast, if the fair value of the assets exceeds the present value of the defined benefit obligation then the surplus will only be recognised if the nature of the arrangements under the trust deed, and funding arrangements between the Trustee and the Company, support the availability of refunds or recoverability through agreed reductions in future contributions. In addition, if there is a constructive obligation for the Company to pay deficit funding, this is also recognised such that the financial position recorded for the scheme reflects the higher of any underlying IAS 19 deficit and the obligation for deficit funding.

The Group utilises the projected unit credit method to calculate the defined benefit obligation. This method sees each period of service as giving rise to an additional unit of benefit entitlement and measures each unit separately to build up the final obligation. Estimated future cash flows are then discounted at a high-quality corporate bond rate, adjusted to allow for the difference in duration between the bond index and the pension liabilities where appropriate, to determine its present value.

The plan assets of the Group's pension schemes exclude several insurance contracts that have been issued by the Group. These assets are excluded from plan assets in determining the pension obligation recognised in the consolidated statement of financial position.

The aggregate of the actuarially determined service costs of the currently employed personnel and the net interest on the net defined benefit liability (asset) at the start of the period, is charged to the income statement. Actuarial and other gains and losses as a result of changes in assumptions or experience variances are recognised as other comprehensive income.

Contributions to the Group's defined contribution schemes are expensed when due.

(q) Share-based payments and related movements in own shares

The Group offers share award and option plans for certain key employees and a Save As You Earn plan for all UK and certain overseas employees. Shares held in trust relating to these plans are conditionally gifted to employees.

The compensation expense charged to the income statement is primarily based upon the fair value of the options granted, the vesting period and the vesting conditions.

The Company has established trusts to facilitate the delivery of Prudential plc shares under employee incentive plans and savings-related share option schemes. The cost to the Company of acquiring these treasury shares held in trusts is shown as a deduction from shareholders' equity.

(r) Tax

Current tax expense is charged or credited based upon amounts estimated to be payable or recoverable as a result of taxable amounts for the current year. To the extent that losses of an individual UK company are not offset in any one year, they can be carried back for one year or carried forward indefinitely to be offset against profits arising from the same company.

Deferred taxes are provided under the liability method for all relevant temporary differences. IAS 12, Income Taxes does not require all temporary differences to be provided for, in particular, the Group does not provide for deferred tax on undistributed earnings of subsidiaries where the Group is able to control the timing of the distribution and the temporary difference created is not expected to reverse in the foreseeable future. Deferred tax assets are only recognised when it is more likely than not that future taxable profits will be available against which these losses can be utilised.

The tax charge for long-term business includes tax expense attributable to both policyholders and shareholders. In the UK, life insurance companies are taxed on both their shareholders' profits and on their policyholders' insurance and investment returns on certain insurance and investment products. Tax on shareholders' profits is calculated at the standard corporation tax rate, and tax on policyholders' investment returns is calculated at the basic rate of income tax. Although both types of tax are included in the total tax charge in the Group's consolidated income statement, they are presented separately in the income statement to provide the most relevant information about tax that the Group pays on its profits.

Table of Contents

Deferred tax is measured at the tax rates that are expected to apply to the period when the asset is realised or the liability settled, based on tax rates (and laws) that have been enacted or are substantively enacted at the end of the reporting period.

(s) Business acquisitions and disposals

Business acquisitions are accounted for by applying the purchase method of accounting, which adjusts the net assets of the acquired company to fair value at the date of purchase. The excess of the acquisition consideration over the fair value of the assets and liabilities of the acquired entity is recorded as goodwill. Expenses related to acquiring new subsidiaries are expensed in the period in which they are incurred. Income and expenses of acquired entities are included in the income statement from the date of acquisition.

Income and expenses of entities sold during the period are included in the income statement up to the date of disposal. The gain or loss on disposal is calculated as the difference between sale proceeds net of selling costs, less the net assets of the entity at the date of disposal adjusted for foreign exchange movements attaching to the sold entity that are required to be recycled to the income statement under IAS 21.

(t) Goodwill

Goodwill arising on acquisitions of subsidiaries and businesses is capitalised and carried on the Group statement of financial position as an intangible asset at initial value less any accumulated impairment losses. Goodwill impairment testing is conducted annually and when there is an indication of impairment. For the purposes of impairment testing, goodwill is allocated to cash generating units.

(u) Intangible assets

Intangible assets acquired on the purchase of a subsidiary or portfolio of contracts are measured at fair value on acquisition. Deferred acquisition costs are accounted for as described in policy notes (d) and (f) above. Other intangible assets, such as distribution rights and software, are valued initially at the price paid to acquire them and are subsequently carried at cost less amortisation and any accumulated impairment losses. Distribution rights relate to fees paid under bancassurance partnership arrangements for bank distribution of products for the term of the contract. Amounts for distribution rights are amortised on a basis to reflect the pattern in which the future economic benefits are expected to be consumed by reference to new business levels. The same principles apply to determining the amortisation method for other intangible assets unless the pattern cannot be determined reliably, in which case a straight line method is applied. Amortisation of intangible assets is charged to the acquisition costs and other expenditure line in the income statement.

(v) Cash and cash equivalents

Cash and cash equivalents consist of cash at bank and in hand, deposits held at call with banks, treasury bills and other short-term highly liquid investments with less than 90 days maturity from the date of acquisition.

(w) Shareholders dividends

Interim dividends are recorded in the period in which they are paid. Final dividends are recorded in the period in which they are approved by shareholders.

(x) Share capital

Where there is no obligation to transfer assets, shares are classified as equity. The difference between the proceeds received on issue of the shares, net of share issue costs, and the nominal value of the shares issued, is credited to share premium. Where the Company purchases shares for the purposes of employee incentive plans, the consideration paid, net of issue costs, is deducted from retained earnings. Upon issue or sale any consideration received is credited to retained earnings net of related costs.

(y) Foreign exchange

The Group's consolidated financial statements are presented in pounds sterling, the Group's presentation currency. Accordingly, the results and financial position of foreign subsidiaries must be translated into the presentation currency of the Group from their functional currencies, ie the currency of the primary economic environment in which the entity operates. All assets and liabilities of foreign subsidiaries are converted at year end exchange rates while all income and expenses are converted at average exchange rates where this is a reasonable approximation of the rates prevailing on transaction dates. The impact of these currency translations is recorded as a separate component in the statement of comprehensive income.

Table of Contents

Foreign currency borrowings that are used to provide a hedge against Group equity investments in overseas subsidiaries are translated at year end exchange rates and movements recognised in other comprehensive income. Other foreign currency monetary items are translated at year end exchange rates with changes recognised in the income statement.

Foreign currency transactions are translated at the spot rate prevailing at the time.

(z) Earnings per share

Basic earnings per share is calculated by dividing the earnings attributable to ordinary shareholders by the weighted average number of ordinary shares outstanding during the year, excluding those held in employee share trusts and consolidated unit trusts and Open Ended Investment Companies (OEICs), which are treated as cancelled.

For diluted earnings per share, the weighted average number of shares in issue is adjusted to assume conversion of all dilutive potential ordinary shares. The Group's only class of potentially dilutive ordinary shares are those share options granted to employees where the exercise price is less than the average market price of the Company's ordinary shares during the year. No adjustment is made if the impact is anti-dilutive overall.

A3.2 New accounting pronouncements not yet effective

The following standards, interpretations and amendments have been issued but are not yet effective in 2014, including those which have not yet been adopted in the EU. This is not intended to be a complete list as only those standards, interpretations and amendments that could have an impact upon the Group's financial statements are discussed.

(a) Accounting pronouncements endorsed by the EU but not yet effective**Annual improvements to IFRS – 2010-2012 Cycle and 2011-2013 Cycle**

These improvements include minor changes to ten IFRS standards, and are effective for annual periods beginning on or after 1 July 2014. The amendment to IFRS 2 – Share-based payment – and IFRS 3 – Business combinations – included in Annual improvements to IFRSs 2010 to 2012 cycle are applied to share-based payment transactions for which the grant date is on or after 1 July 2014 and to business combinations for which the date of acquisition is on or after 1 July 2014, respectively. In these financial statements, the Group had no transactions on or after 1 July that were affected by these amendments. The Group is assessing the impact of the remaining amendments, but they are not expected to have a significant impact on the Group's financial statements.

(b) Accounting pronouncements not yet endorsed by the EU**Clarification of Acceptable Methods of Depreciation and Amortisation (Amendments to IAS 16 and IAS 38)**

The amendments published in May 2014 provide additional guidance on how the depreciation or amortisation of property, plant and equipment and intangible assets should be calculated. They are effective for annual periods beginning on or after 1 January 2016, with earlier application being permitted. The Group does not expect these amendments to have a significant impact on the Group's financial statements.

IFRS 15, Revenue from Contracts with Customers

This standard effective for annual periods beginning on or after 1 January 2017, provides a single framework to recognise revenue for contracts with different characteristics and overrides the framework provided for such contracts in other standards. The following contracts are exempt from this standard:

- Lease contracts within IAS 17;
- Insurance contracts within IFRS 4;
- Financial instruments as covered within IAS 39, IFRS 9, 10 and 11; and
- IAS 27, IAS 28 and IAS 29.

The Group is assessing the impact of this standard but it is not expected to have a significant impact on the Group's financial statements.

IFRS 9, Financial instruments: Classification and measurement

In July 2014, the IASB published a complete version of IFRS 9 with the exception of macro hedge accounting. The standard becomes mandatorily effective for the annual periods beginning on or after 1 January 2018, with early

Table of Contents

application permitted and transitional rules apply. This standard replaces the existing IAS 39, Financial Instruments - Recognition and measurement , and will affect:

The classification and the measurement of financial assets and liabilities.

Under IFRS 9, financial assets are classified under one of the following categories: amortised cost, fair value through other comprehensive income (FVOCI) and fair value through profit or loss (FVTPL) based on their contractual cash flow characteristics and/or the business model in which they are held. The existing amortised cost measurement for financial liabilities is largely maintained under IFRS 9 but for financial liabilities designated at FVTPL, changes in fair value due to changes in entity's own credit risk are to be recognised in other comprehensive income;

The calculation of the impairment charge relevant for financial assets held at amortised cost or FVOCI. A new impairment model based on an expected credit loss approach replaces the existing IAS 39 incurred loss impairment model; and

The hedge accounting requirements which are more closely aligned with the risk management activities of the company.

The Group is assessing the impact of this standard in conjunction with the requirements of the IASB's proposals for insurance contracts accounting as they are developed to a final standard. The adoption of the requirements of IFRS 9 may result in reclassification of certain of the Group's financial assets and hence lead to a change in the measurement of these instruments or the performance reporting of value movements. In addition, for the Group's investments classified as FVOCI, as noted above, the impairment provisioning approach is altered. The Group does not currently apply hedge accounting for most of its derivative programmes but will reconsider its approach in light of new requirements under the standard on adoption.

Notes

- (i) The Group's UK insurance operations transferred its general insurance business to Churchill in 2002. General insurance commission represents the commission receivable net of expenses for Prudential-branded general insurance products as part of this arrangement, which terminates at the end of 2016.
- (ii) Corporate expenditure as shown above is for Group Head Office and Asia Regional Head Office.

F-31

Table of Contents

- (iii) Restructuring costs are incurred in the UK and represent one-off business development expenses.
- (iv) In November 2014, PAC completed the sale of its 25 per cent equity stake in the PruHealth and PruProtect businesses to Discovery Group Europe Limited.
- (v) Amortisation of acquisition accounting adjustments principally relate to the acquired REALIC business of Jackson.

B1.2 Short-term fluctuations in investment returns on shareholder-backed business

	2014 £m	2013 £m	2012 £m
Insurance operations:			
Asia ^{note (i)}	178	(204)	54
US ^{note (ii)}	(1,103)	(625)	(90)
UK ^{note (iii)}	464	(254)	136
Other operations ^{note (iv)}	(113)	(27)	87
Total	(574)	(1,110)	187

Notes*(i) Asia insurance operations*

In Asia, the positive short-term fluctuations of £178 million (2013: negative £(204) million; 2012: positive £54 million) primarily reflect net unrealised movements on bond holdings following falls in bond yields across the region during the year.

(ii) US insurance operations

The short-term fluctuations in investment returns for US insurance operations comprise amounts, net of related change in amortisation of deferred acquisition costs, in respect of the following items:

	2014 £m	2013 £m	2012 £m
Net equity hedge result ^{note (a)}	(1,574)	(255)	(302)
Other than equity-related derivatives ^{note (b)}	391	(531)	135
Debt securities ^{note (c)}	47	42	32
Equity-type investments: actual less			
longer-term return	16	89	23
Other items	17	30	22
Total	(1,103)	(625)	(90)

The short-term fluctuations in investment returns shown in the table above are stated net of a credit for the related change in amortisation of deferred acquisition costs of £653 million (2013: credit of £228 million; 2012: credit of £76 million). See note C5.1(b).

Notes*(a) Net equity hedge result*

This result comprises the net effect of:

The accounting value movements on the variable and fixed index annuity guarantee liabilities;
Fair value movements on free standing equity derivatives;
Fee assessments and claim payments in respect of guarantee liabilities; and
Related changes to DAC amortisation.

Movements in the accounting values of the variable and fixed index annuity guarantee liabilities comprise those for:

The Guaranteed Minimum Death Benefit and Guaranteed Minimum Withdrawal Benefit for life guarantees which are valued under the US GAAP insurance measurement basis applied for IFRS in a way that substantially does not recognise the effect of equity market and interest rate changes. These represent the majority of the guarantees offered by Jackson; and
GMWB not for life embedded derivative liabilities which are required to be fair valued. Fair value movements on these liabilities include the effects of changes to levels of equity markets, implied volatility and interest rates.

The free standing equity derivatives are held to manage equity exposures of the variable annuity and fixed index annuity guarantees.

The net equity hedge result therefore includes significant accounting mismatches and other factors that detract from the presentation of an economic result caused by:

The variable annuity and fixed annuity business guarantees being only partially fair valued under grandfathered GAAP;

The interest rate exposure being managed through the other than equity related derivative programme explained in note (b) below; and

Jackson's management of its economic exposures for a number of other factors that are treated differently in the accounting frameworks such as future fees and assumed volatility levels.

Table of Contents

(b) Other than equity-related derivatives

The fluctuations for this item comprise the net effect of:

Fair value movements on free standing, other than equity-related derivatives;
Accounting effects of the Guaranteed Minimum Income Benefit and its reinsurance; and
Related changes to DAC amortisation.

The free-standing, other than equity-related derivatives, are held to manage interest rate exposures and durations within the general account and the variable annuity and fixed index annuity guarantees described in note (a) above.

The GMIB liability is valued using the US GAAP measurement basis applied for IFRS reporting in a way that substantially does not recognise the effects of market movements. Reinsurance arrangements are in place so as to essentially fully insulate Jackson from the GMIB exposure. Notwithstanding that the liability is essentially fully reinsured, as the reinsurance asset is net settled it is deemed a derivative under IAS 39 which requires fair valuation.

The fluctuations for this item therefore include significant accounting mismatches caused by:

The fair value movements booked in the income statement on the derivative programme being in respect of the management of interest rate exposures of the variable and fixed index annuity business, as well as the fixed annuity business guarantees and durations within the general account;
Fair value movements on Jackson's debt securities of the general account being booked in other comprehensive income rather than the income statement; and
The mixed measurement model that applies for the GMIB and its reinsurance.

(c) Short-term fluctuations related to debt securities

	2014 £m	2013 £m	2012 £m
Short-term fluctuations relating to debt securities			
Credits (charges) in the year:			
Losses on sales of impaired and deteriorating bonds	(5)	(5)	(23)
Bond write downs	(4)	(8)	(37)
Recoveries / reversals	19	10	13
Total credits (charges) in the year	10	(3)	(47)
Less: Risk margin allowance deducted from operating profit based on longer-term investment returns ^{note}	78	85	79
	88	82	32
Interest-related realised gains:			
Arising in the year	63	64	94
Less: Amortisation of gains and losses arising in current and prior years to operating profit based on longer-term investment returns	(87)	(89)	(91)
	(24)	(25)	3
Related amortisation of deferred acquisition costs	(17)	(15)	(3)
Total short-term fluctuations related to debt securities	47	42	32

Note

The debt securities of Jackson are held in the general account of the business. Realised gains and losses are recorded in the income statement with normalised returns included in operating profit with variations from year to year included in the short-term fluctuations category. The risk margin reserve charge for longer-term credit-related losses included in operating profit based on longer-term investment returns of Jackson for 2014 is based on an average annual risk margin reserve of 24 basis points (2013: 25 basis points; 2012: 26 basis points) on average book values of US\$54.5 billion (2013: US\$54.4 billion; 2012: US\$47.6 billion) as shown below:

Risk margin reserve charge to operating profit for longer-term credit related losses			(104)	(63)			(109)	(69)			(104)	(66)

Consistent with the basis of measurement of insurance assets and liabilities for Jackson's IFRS results, the charges and credits to operating profits based on longer-term investment returns are partially offset by related amortisation of deferred acquisition costs.

In addition to the accounting for realised gains and losses described above for Jackson general account debt securities, included within the statement of other comprehensive income is a pre-tax credit for unrealised gains on debt securities classified as available-for-sale net of related change in amortisation of deferred acquisition costs of £869 million (2013: net unrealised losses of £(1,591) million; 2012: net unrealised gains £592 million). Temporary market value movements do not reflect defaults or impairments. Additional details of the movement in the value of the Jackson portfolio are included in note C3.3(b).

(iii) UK insurance operations

The positive short-term fluctuations in investment returns for UK insurance operations of £464 million (2013: negative £(254) million; 2012: positive £136 million) include net unrealised movements on fixed income assets supporting the capital of the shareholder-backed annuity business, reflecting the fall in bond yields since the end of 2013.

(iv) *Other*

Short-term fluctuations in investment returns of other operations, were negative £(113) million (2013: negative £(27) million; 2012: positive £87 million) representing unrealised value movements on investments and foreign exchange items. The positive £87 million in 2012 included an economic hedge value movement of a negative £32 million. This item represents the cost on short-dated hedge contracts taken out in the first half of 2012 to provide downside protection against severe equity market falls through a period of particular uncertainty with respect to the Eurozone. The hedge contracts were terminated in the second half of 2012.

(v) *Default losses*

The Group did not experience any default losses on its shareholder-backed debt securities portfolio in 2014, 2013 or 2012.

B1.3 Determining operating segments and performance measure of operating segments

Operating segments

The Group's operating segments, determined in accordance with IFRS 8, *Operating Segments*, are as follows:

Insurance operations:

Asia
US (Jackson)

UK

Asset management operations:

Eastspring Investments
US broker-dealer and asset management (including Curian)

M&G (including Prudential Capital)

The Group's operating segments are also its reportable segments for the purposes of internal management reporting with the exception of Prudential Capital (PruCap) which has been incorporated into the M&G operating segment for the purposes of segment reporting.

Table of Contents

Performance measure

The performance measure of operating segments utilised by the Company is IFRS operating profit attributable to shareholders based on longer-term investment returns, as described below. This measurement basis distinguishes operating profit based on long-term investment returns from other constituents of the total profit as follows:

Short-term fluctuations in investment returns;

Gain on the sale of the Group's stake in the PruHealth and PruProtect businesses in 2014 as explained in note D1;

Amortisation of acquisition accounting adjustments arising on the purchase of business. This comprises principally the charge for the adjustments arising on the purchase of REALIC in 2012;

(Loss) profit attaching to the held for sale Japan Life business. See note D1 for further details;

The costs associated with the domestication of the Hong Kong branch which became effective on 1 January 2014; and

For 2012, gain on dilution of the Group's holdings in PPM South Africa.

Segment results that are reported to the Group Executive Committee include items directly attributable to a segment as well as those that can be allocated on a reasonable basis. Unallocated items are mainly in relation to the Group Head Office and the Asia Regional Head Office.

Determination of operating profit based on longer-term investment return for investment and liability movements:

(a) *General principles*

(i) UK style with-profits business

The operating profit based on longer-term returns reflects the statutory transfer gross of attributable tax. Value movements in the underlying assets of the with-profits funds do not affect directly the determination of operating profit.

(ii) Unit-linked business

The policyholder unit liabilities are directly reflective of the asset value movements. Accordingly, the operating results based on longer-term investment returns reflect the current period value movements in both the unit liabilities and the backing assets.

(iii) US Variable Annuity and Fixed Index Annuity business

This business has guarantee liabilities which are measured on a combination of fair value and other, US GAAP derived, principles. These liabilities are subject to an extensive derivative programme to manage equity and, with those of the general account, interest rate exposures. The principles for determination of the operating profit and short-term fluctuations are necessarily bespoke, as discussed in section (c) below.

(iv) Business where policyholder liabilities are sensitive to market conditions

Under IFRS, the degree to which the carrying values of liabilities to policyholders are sensitive to current market conditions varies between territories depending upon the nature of the grandfathered measurement basis. In general, in those instances where the liabilities are particularly sensitive to routine changes in market conditions, the accounting basis is such that the impact of market movements on the assets and liabilities is broadly equivalent in the income statement, and operating profit based on longer-term investments returns is not distorted. In these circumstances, there is no need for the movement in the liability to be bifurcated between the elements that relate to longer-term market conditions and short-term effects.

However, some types of business movements in liabilities do require bifurcation to ensure that at the net level (ie after allocated investment return and change for policyholder benefits) the operating result reflects longer-term market returns.

Examples of where such bifurcation is necessary are in Hong Kong and for UK shareholder-backed annuity business, as explained in sections (b)(i) and (d)(i), respectively.

(v) Other shareholder-financed business

The measurement of operating profit based on longer-term investment returns reflects the particular features of long-term insurance business where assets and liabilities are held for the long-term and for which the accounting

Table of Contents

basis for insurance liabilities under current IFRS is not generally conducive to demonstrating trends in underlying performance of life businesses exclusive of the effects of short-term fluctuations in market conditions. In determining the profit on this basis, the following key elements are applied to the results of the Group's shareholder-financed operations.

Except in the case of assets backing liabilities which are directly matched (such as linked business) or closely correlated with value movements (as discussed below) operating profit based on longer-term investment returns for shareholder-financed business is determined on the basis of expected longer-term investment returns.

Debt, equity-type securities and loans

Longer-term investment returns comprise actual income receivable for the period (interest/dividend income) and for both debt and equity-type securities longer-term capital returns.

In principle, for debt securities and loans, the longer-term capital returns comprise two elements:

Risk margin reserve based charge for the expected level of defaults for the period, which is determined by reference to the credit quality of the portfolio. The difference between impairment losses in the reporting period and the risk margin reserve charge to the operating result is reflected in short-term fluctuations in investment returns; and

The amortisation of interest-related realised gains and losses to operating results based on longer-term investment returns to the date when sold bonds would have otherwise matured.

At 31 December 2014, the level of unamortised interest-related realised gains and losses related to previously sold bonds for the Group was a net gain of £467 million (2013: £461 million; 2012: £495 million).

Equity type securities

For equity-type securities, the longer-term rates of return are estimates of the long-term trend investment returns for income and capital having regard to past performance, current trends and future expectations. Equity-type securities held for shareholder-financed operations other than the UK annuity business, unit-linked and US variable annuity are of significance for the US and Asia insurance operations. Different rates apply to different categories of equity-type securities.

Derivative value movements

Generally, derivative value movements are excluded from operating results based on longer-term investment returns (unless those derivative value movements broadly offset changes in the accounting value of other assets and liabilities included in operating profit). The principal example of non-equity based derivatives (for example interest rate swaps and swaptions) whose value movements are excluded from operating profit arises in Jackson, as discussed below in section (c).

(b) Asia insurance operations

(i) Business where policyholder liabilities are sensitive to market conditions

For certain Asia non-participating business, for example in Hong Kong, the economic features are more akin to asset management products with policyholder liabilities reflecting asset shares over the contract term. For these products, the charge for policyholder benefits in the operating results should reflect the asset share feature rather than volatile movements that would otherwise be reflected if the local regulatory basis (also applied for IFRS basis) was used.

For certain other types of non-participating business, longer-term interest rates are used to determine the movement in policyholder liabilities for determining operating results.

(ii) Other Asia shareholder-financed business

Debt securities

For this business the realised gains and losses are principally interest related. Accordingly, all realised gains and losses to date for these operations are being amortised over the period to the date those securities would otherwise have matured, with no explicit risk margin reserve charge.

Table of Contents*Equity-type securities*

For Asia insurance operations, excluding assets of the Japan Life held for sale business, investments in equity securities held for non-linked shareholder-financed operations amounted to £932 million as at 31 December 2014 (2013: £571 million; 2012: £474 million). The rates of return applied in the years 2014, 2013 and 2012 ranged from 2.73 per cent to 13.75 per cent with the rates applied varying by territory. These rates are determined after consideration by the Group's in-house economists of long-term expected real government bond returns, equity risk premium and long-term inflation. These rates are broadly stable from period to period but may be different between countries reflecting, for example, differing expectations of inflation in each territory. The assumptions are for returns expected to apply in equilibrium conditions. The assumed rates of return do not reflect any cyclical variability in economic performance and are not set by reference to prevailing asset valuations.

The longer-term investment returns for the Asia insurance joint ventures accounted for using the equity method are determined on a similar basis as the other Asia insurance operations described above.

(c) US Insurance operations**(i) Separate account business**

For such business the policyholder unit liabilities are directly reflective of the asset value movements. Accordingly, the operating results based on longer-term investment returns reflect the current period value movements in unit liabilities and the backing assets.

(ii) US variable and fixed index annuity business

The following value movements for Jackson's variable and fixed index annuity business are excluded from operating profit based on longer-term investment returns. See note B1.2 note (ii):

Fair value movements for equity-based derivatives;

Fair value movements for embedded derivatives for Guaranteed Minimum Withdrawal Benefit not for life and fixed index annuity business, and Guaranteed Minimum Income Benefit reinsurance (see below);

Movements in accounts carrying value of Guaranteed Minimum Death Benefit and Guaranteed Minimum Withdrawal Benefit for life and Guaranteed Minimum Income Benefit liabilities, for which, under the grandfathered US GAAP applied under IFRS for Jackson's insurance assets and liabilities, the measurement basis gives rise to a muted impact of current period market movements;

Fee assessments and claim payments, in respect of guarantee liabilities; and

Related amortisation of deferred acquisition costs for each of the above items.

Embedded derivatives for variable annuity guarantee features

The Guaranteed Minimum Income Benefit liability, which is essentially fully reinsured, subject to a deductible and annual claim limits, is accounted for in accordance with Financial Accounting Standards Board (FASB) Accounting Standards Codification (ASC) Subtopic 944-80 Financial Services Insurance Separate Accounts (formerly SOP 03-1) under IFRS using grandfathered US GAAP. As the corresponding reinsurance asset is net settled, it is considered to be a derivative under IAS 39, Financial Instruments: Recognition and Measurement, and the asset is therefore recognised at fair value. As the Guaranteed Minimum Income Benefit is economically reinsured the mark to market element of

the reinsurance asset is included as a component of short-term fluctuations in investment returns.

(iii) Other derivative value movements

The principal example of non-equity based derivatives (for example interest rate swaps and swaptions) whose value movements are excluded from operating profit arises in Jackson. Non-equity based derivatives are primarily held by Jackson as part of a broadly-based hedging programme for features of Jackson's bond portfolio (for which value movements are booked in the statement of comprehensive income rather than the income statement), product liabilities (for which US GAAP accounting as grandfathered under IFRS 4 does not fully reflect the economic features being hedged), and the interest rate exposure attaching to equity-based embedded derivatives.

(iv) Other US shareholder-financed business

Debt securities

Jackson is the shareholder-backed operation for which the distinction between impairment losses and interest-related realised gains and losses is in practice relevant to a significant extent. Jackson has used the ratings by Nationally Recognised Statistical Ratings Organisations (NRSRO) or ratings resulting from the regulatory ratings

Table of Contents

detail issued by the National Association of Insurance Commissioners (NAIC) developed by external third parties such as PIMCO or BlackRock Solutions to determine the average annual risk margin reserve to apply to debt securities held to back general account business. Debt securities held to back separate account and reinsurance funds withheld are not subject to risk margin reserve charge. Further details of the risk margin reserve charge, as well as the amortisation of interest-related realised gains and losses, for Jackson are shown in note B1.2.

Equity-type securities

As at 31 December 2014, the equity-type securities for US insurance non-separate account operations amounted to £1,094 million (2013: £1,118 million; 2012: £1,004 million). For these operations, the longer-term rates of return for income and capital applied in 2014 and 2013, which reflect the combination of the average risk free rates over the period and appropriate risk premiums are as follows:

	2014	2013	2012
Equity-type securities such as common and preferred stock and portfolio holdings in mutual funds	6.2% to 6.7%	5.7% to 6.8%	5.5% to 6.2%
Other equity-type securities such as investments in limited partnerships and private equity funds	8.2% to 8.7%	7.7% to 9.0%	7.5% to 8.2%

(d) UK Insurance operations***(i) Shareholder-backed annuity business***

For this business, policyholder liabilities are determined by reference to current interest rates. The value movements of the assets covering liabilities are closely correlated with the related change in liabilities. Accordingly, asset value movements are recorded within the operating results based on longer-term investment returns. Policyholder liabilities include a margin for credit risk. Variations between actual and best estimate expected impairments are recorded as a component of short-term fluctuations in investment returns.

The operating result based on longer-term investment returns reflects the impact of value movements on policyholder liabilities for annuity business in PRIL and the PAC non-profit sub-fund after adjustments to allocate the following elements of the movement to the category of short-term fluctuations in investment returns :

The impact on credit risk provisioning of actual upgrades and downgrades during the period;

Credit experience compared to assumptions; and

Short-term value movements on assets backing the capital of the business.

Credit experience reflects the impact of defaults and other similar experience, such as asset exchanges arising from debt restructuring by issuers that include effectively an element of permanent impairment of the security held. Positive or negative experience compared to assumptions is included within short-term fluctuations in investment returns without further adjustment. The effects of other changes to credit risk provisioning are included in the operating result, as is the net effect of changes to the valuation rate of interest due to portfolio rebalancing to align more closely with management benchmark.

(ii) Non-linked shareholder-financed business

For debt securities backing non-linked shareholder-financed business of the UK insurance operations (other than the annuity business) the realised gains and losses are principally interest related. Accordingly, all realised gains and losses to date for these operations are being amortised over the period to the date those securities would otherwise have matured, with no explicit risk margin reserve charge.

(e) Fund management and other non-insurance businesses

For these businesses, the particular features applicable for life assurance noted above do not apply. For these businesses it is inappropriate to include returns in the operating result on the basis described above. Instead, it is appropriate to generally include realised gains and losses in the operating result with temporary unrealised gains and losses being included in short-term fluctuations. In some instances it may also be appropriate to amortise realised gains and losses on derivatives and other financial instruments to operating results over a time period that reflects the underlying economic substance of the arrangements.

Table of Contents**Notes**

- (i) This measure is the formal profit (loss) before tax measure under IFRS but is not the result attributable to shareholders.
- (ii) Investment return principally comprises:
- Interest and dividends;
 - Realised and unrealised gains and losses on securities and derivatives classified as fair value through profit and loss under IAS 39; and
 - Realised gains and losses, including impairment losses, on securities classified as available-for-sale under IAS 39.
- (iii) In addition to the results of the central operations, unallocated to a segment includes intra-group eliminations. In 2014, this column includes the elimination of the intra-group reinsurance contract entered into during the year between the UK with-profits and Asia with-profits operations.

B1.5 Revenue

	2014 £m	2013 £m	2012 £m
Long-term business premiums			
Insurance contract premiums	29,973	28,339	26,650
Investment contracts with discretionary participation feature premiums	2,637	1,877	2,243
Inwards reinsurance premiums	222	286	220
Less: reinsurance premiums ceded	(799)	(658)	(491)
Earned premiums, net of reinsurance ^{note (iv)}	32,033	29,844	28,622
Investment return			
Realised and unrealised gains and losses on securities at fair value through profit or loss	16,532	12,879	15,270
Realised and unrealised losses and gains on derivatives at fair value through profit or loss	142	(1,724)	75
Realised gains on available-for-sale securities, previously recognised in other comprehensive income	84	64	68
Realised gains (losses) on loans	(61)	11	(51)
Interest ^{notes (i),(ii)}	6,802	6,771	6,586
Dividends	1,559	1,740	1,424
Other investment return	729	606	559
Investment return	25,787	20,347	23,931

Total revenue	60,126	52,375	54,438

Notes

- (i) The segmental analysis of interest income is as follows:

Insurance operations			Asset management operations		Unallo- cated to a	Total
Asia	US	UK	M&G	US Eastspring		

						Investments	segment (central operations)	
2014 (£m)	777	1,857	4,053	101	-	2	12	6,802
2013 (£m)	562	1,981	4,178	112	1	1	(64)	6,771
2012 (£m)	336	1,778	4,374	105	1	1	(9)	6,586

(ii) Interest income includes £3 million (2013: £5 million; 2012: £13 million) accrued in respect of impaired securities.

(iii) Fee income includes £23 million (2013: £44 million; 2012: £35 million) relating to financial instruments that are not held at fair value through profit or loss. These fees primarily related to prepayment fees, late fees and syndication fees.

(iv) The following table provides additional segmental analysis of revenue from external customers:

Table of Contents

	2014 £m				Total
	Asia	US	UK	Intra-group	
Revenue from external customers:					
Insurance operations	9,558	15,387	7,375	-	32,320
Asset management	307	808	1,291	(449)	1,957
Unallocated corporate	-	-	62	-	62
Intra-group revenue*	(146)	(84)	(219)	449	-
Total revenue from external customers	9,719	16,111	8,509	-	34,339

* Eliminated on consolidation

	2013 £m				Total
	Asia	US	UK	Intra-group	
Revenue from external customers:					
Insurance operations	8,919	15,381	5,816	-	30,116
Asset management	245	855	1,165	(379)	1,886
Unallocated corporate	-	-	26	-	26
Intra-group revenue	(98)	(86)	(195)	379	-
Total revenue from external customers	9,066	16,150	6,812	-	32,028

	2012 £m				Total
	Asia	US	UK	Intra-group	
Revenue from external customers:					
Insurance operations	7,339	14,465	7,098	-	28,902
Asset management	222	725	972	(333)	1,586
Unallocated corporate	-	-	19	-	19
Intra-group revenue	(84)	(77)	(172)	333	-
Total revenue from external customers	7,477	15,113	7,917	-	30,507

Revenue from external customers comprises:

	2014 £m	2013 £m	2012* £m
Earned premiums, net of reinsurance	32,033	29,844	28,622
Fee income from investment contract business and asset management (presented as Other income)	2,306	2,184	1,885
Total revenue from external customers	34,339	32,028	30,507

The asset management operations, M&G, Eastspring Investments and US asset management provides services to the Group insurance operations for which fees are charged at appropriate arm's length prices. Intragroup fees included within asset management revenue were earned by the following asset management segment:

	2014 £m	2013 £m	2012 £m
Intragroup revenue generated by:			
M&G	219	195	172
US broker-dealer and asset management (including Curian)	84	98	77
Eastspring Investments	146	86	84

Total intragroup fees included within asset management segment	449	379	333
--	------------	-----	-----

Revenue from external customers of Asia, US and UK insurance operations shown above are net of outwards reinsurance premiums of £311 million, £265 million, and £223 million respectively (2013: £190 million, £278 million and £190 million respectively; 2012: £163 million, £193 million, and £135 million respectively). In Asia, revenue from external customers from no individual country exceeds 10 per cent of the Group total. The largest country is Hong Kong with a total revenue from external customers of £2,554 million (2013: Hong Kong £2,243 million; 2012: Hong Kong £1,745 million).

Due to the nature of the business of the Group, there is no reliance on any major customers.

Table of Contents**B2 Profit before tax asset management operations**

The profit included in the income statement in respect of asset management operations for the year is as follows:

	2014 £m			2013 £m	2012 £m
	Eastspring				
	M&G	US Investments	Total	Total	Total
Revenue (excluding NPH broker-dealer fees)	1,395	303	310	2,008	1,739
NPH broker-dealer fees ^{note (i)}	-	503	-	503	435
Gross revenue	1,395	806	310	2,511	2,174
Charges (excluding NPH broker-dealer fees)	(937)	(291)	(249)	(1,477)	(1,144)
NPH broker-dealer fees ^{note (i)}	-	(503)	-	(503)	(435)
Gross charges	(937)	(794)	(249)	(1,980)	(1,579)
Share of profit from joint ventures and associates, net of related tax	13	-	29	42	24
Profit before tax	471	12	90	573	619
Comprising:					
Operating profit based on longer-term investment returns ^{note (ii)}	488	12	90	590	479
Short-term fluctuations in investment returns ^{note (iii)}	(17)	-	-	(17)	98
Gain on dilution of Group's holdings	-	-	-	-	42
Profit before tax	471	12	90	573	619

Notes

- (i) NPH broker-dealer fees which represent commissions received that are then paid on to the writing brokers on sales of investment products. To reflect their commercial nature the amounts are also wholly reflected as charges within the income statement. After allowing for these charges, there is no effect on profit from this item. The presentation in the table above shows separately the amounts attributable to this item so that the underlying revenue and charges can be seen.
- (ii) M&G operating profit based on longer-term investment returns:

	2014 £m	2013 £m	2012 £m
Asset management fee income	953	859	728
Other income	1	4	6
Staff costs	(351)	(339)	(289)
Other costs	(203)	(166)	(147)
Underlying profit before performance-related fees	400	358	298
Share of associate results	13	12	13
Performance-related fees	33	25	9
Operating profit from asset management operations	446	395	320
Operating profit from Prudential Capital	42	46	51
Total M&G operating profit based on longer-term investment returns	488	441	371

The revenue shown above for M&G of £987 million (2013: £888 million; 2012: £743 million), comprising asset management fee income, other income and performance-related fees, is different to the amount of £1,395 million shown in the main table of this note primarily due to the inclusion of the revenue of Prudential Capital of £104 million (2013: £144 million; 2012: £218 million) in the latter. In addition, the £987 million (2013: £888 million; 2012: £743 million) is after deducting commissions which would have been included as charges in the main table. The difference in the presentation of commission is aligned with how management reviews the business.

- (iii) Short-term fluctuations in investment returns for M&G are primarily in respect of unrealised fair value movements on Prudential Capital's bond portfolio.
- (iv) The US asset management results include a charge of £38 million relating primarily to the refund of certain fees by Curian.

Table of Contents**B3 Acquisition costs and other expenditure**

	2014 £m	2013 £m	2012 £m
Acquisition costs incurred for insurance policies	(2,668)	(2,553)	(2,557)
Acquisition costs deferred less amortisation of acquisition costs	916	566	595
Administration costs and other expenditure	(4,486)	(4,303)	(3,863)
Movements in amounts attributable to external unit holders of consolidated investment funds	(514)	(571)	(207)
Total acquisition costs and other expenditure	(6,752)	(6,861)	(6,032)
Total acquisition costs and other expenditure includes:			

- (a) Total depreciation and amortisation expense of £(159) million (2013: £(510) million; 2012: £(727) million) relates primarily to amortisation of deferred acquisition costs of insurance contracts and asset management contracts. The segmental analysis of total depreciation and amortisation expense is analysed below.
- (b) The charge for non-deferred acquisition costs and the amortisation of those costs that are deferred, was £(1,752) million (2013: £(1,987) million; 2012: £(1,962) million). These amounts comprise £(1,714) million and £(38) million for insurance and investment contracts respectively (2013: £(1,953) million and £(34) million; 2012: £(1,742) million and £(220) million respectively).
- (c) Interest expense, excluding interest on core structural borrowings of shareholder-financed operations, amounted to £(128) million (2013: £(120) million; 2012: £(140) million) and is included as part of investment management expenses. The segmental interest expense is analysed below.
- (d) Finance costs of £(341) million (2013: £(305) million; 2012: £(280) million) comprises £(312) million (2013: £(275) million; 2012: £(251) million) interest on core debt of the parent company, £(12) million (2013: £(13) million; 2012: £(13) million) of interest on US insurance operations surplus notes and £(17) million (2013: £(17) million; 2012: £(16) million) on PruCap's bank loan.
- (e) Movements in amounts attributable to external unit holders are in respect of those OEICS and unit trusts which are required to be consolidated and comprises a charge of £(258) million (2013: £(583) million; 2012: £(261) million) for UK insurance operations and a charge of £(256) million (2013: a credit of £12 million; 2012: a credit of £54 million) for Asia insurance operations.
- (f) Analysis of depreciation and amortisation expense, and interest expense:

£m						Unallo- cated to a segment	Total (central segment operations)	Total
Insurance operations		Asset management operations						
Asia	US	UK	M&G	Eastspring Investments	Total			

Depreciation and amortisation expense									
2014	(206)	140	(64)	(10)	(2)	(2)	(144)	(15)	(159)
2013	(221)	(198)	(68)	(7)	(1)	(3)	(498)	(12)	(510)
2012	(329)	(302)	(65)	(6)	(1)	(3)	(706)	(21)	(727)
Interest expense									
2014	-	(13)	(81)	(26)	-	-	(120)	(8)	(128)
2013	-	(11)	(70)	(27)	-	-	(108)	(12)	(120)
2012	(7)	(28)	(62)	(18)	-	-	(115)	(25)	(140)

(g) There were no fee expenses relating to financial liabilities held at amortised cost included in acquisition costs in 2014, 2013 and 2012.

F-45

Table of Contents**B3.1 Staff and employment costs**

The average number of staff employed by the Group during the year was:

	2014	2013	2012
Business operations:			
Asia operations	13,957	12,239	11,284
US operations	4,494	4,414	4,000
UK operations	5,464	5,533	5,035
Total	23,915	22,186	20,319

The costs of employment were:

	2014 £m	2013 £m	2012 £m
Business operations:			
Wages and salaries	1,323	1,272	1,119
Social security costs	100	94	82
Pension costs*	120	196	(60)
Total	1,543	1,562	1,141

* The charge (credit) incorporates the effect of actuarial gains and losses.

B3.2 Share-based payment**(a) Description of the plans**

The Group operates a number of share award and share option plans that provides Prudential plc shares to participants upon vesting. The plans which are in operation include Prudential Long-Term Incentive Plan (PLTIP), Group Performance Share Plan (GPSP), Business Unit Performance Plan (BUPP), Jackson Long-Term Incentive Plan (Jackson LTIP), Annual Incentive Plan (AIP), savings-related share option schemes, share purchase plans and deferred bonus plans. Some of these plans are participated in by executive directors, the details of which are described in Item 6 Directors, Senior Management and Employees_Compensation . In addition, the following information is provided.

Share scheme	Description
Jackson Long-Term Incentive Plan	Eligible Jackson employees were previously granted share awards under a long-term incentive plan which rewarded the achievement of shareholder value targets. These awards were in the form of a contingent right to receive shares or a conditional allocation of shares. These share awards have vesting periods of four years and are at nil cost to the employee. Award holders do not have any right to dividends or voting rights attaching to the shares. The shares are held in the employee share trust in the form of American Depository Receipts which are tradable on the New York Stock Exchange. The final awards under this arrangement were made in 2012.

Prudential Corporation Asia Long-Term Incentive Plan (PCA LTIP)	The PCA LTIP provides eligible employees with conditional awards. Awards are discretionary and on a year-by-year basis determined by Prudential's full year financial results and the employee's contribution to the business. Awards vest after three years subject to the employee being in employment. Vesting of awards may also be subject to performance conditions. All awards are made in Prudential shares, or ADRs, except for countries where share awards are not feasible due to securities and/or tax reasons, where awards will be replaced by the cash value of the shares that would otherwise have been transferred.
Savings-related share option schemes	Employees and eligible agents in a number of geographies are eligible for plans similar to the HMRC approved Save As You Earn (SAYE) share option scheme in the UK. Eligible employees participate in the International savings-related share option scheme while eligible agents based in Hong Kong and Malaysia can participate in the non-employee savings-related share option scheme.
Share purchase plans	Eligible employees outside the UK are invited to participate in arrangements similar to the Company's HMRC approved UK SIP, which allows the purchase of Prudential plc shares. Staff based in Ireland and Asia are eligible for the Share Participation Plan.
Deferred bonus plans	The Company operates a number of deferred bonus schemes including the Group Deferred Bonus Plan, the Prudential Corporation Asia Deferred Bonus Plan (PCA DBP), the Prudential Capital Deferred Bonus Plan (PruCap DBP) and other arrangements. There are no performance conditions attached to deferred share awards made under these arrangements.

Table of Contents**(b) Outstanding options and awards**

The following table shows movement in outstanding options and awards under the Group's share-based compensation plans at 31 December 2014, 2013 and 2012:

	Options outstanding under SAYE schemes						Awards outstanding under incentive plans including conditional options		
	2014		2013		2012		2014	2013	2012
	Weighted	Weighted	Weighted	Weighted	Weighted	Weighted			
	average		average		average				
	Number	exercise	Number	exercise	Number	exercise	Number		
	of options	price of options	of options	price of options	of options	price	of awards		
	millions	£ millions	millions	£ millions	millions	£	millions		
Beginning of year:	10.2	5.60	9.4	4.54	13.3	3.55	27.1	23.7	26.7
Granted	2.6	11.55	2.5	9.01	2.4	6.29	10.9	11.9	8.8
Exercised	(3.8)	3.55	(1.2)	4.57	(5.7)	2.99	(8.5)	(7.8)	(9.4)
Forfeited	(0.2)	6.77	(0.2)	5.14	(0.2)	4.29	(0.7)	(0.6)	(1.4)
Cancelled	(0.1)	7.66	(0.1)	6.16	(0.2)	4.32	-	-	-
Lapsed / Expired	(0.1)	5.60	(0.2)	3.92	(0.2)	4.39	-	(0.1)	(1.0)
End of year	8.6	8.29	10.2	5.60	9.4	4.54	28.8	27.1	23.7
Options immediately exercisable, end of year	0.5	4.65	0.5	4.50	0.2	3.88			

The weighted average share price of Prudential plc for the year ended 31 December 2014 was £13.75 compared to £11.14 for the year ended 31 December 2013 and £7.69 for the year ended 31 December 2012.

The following table provides a summary of the range of exercise prices for Prudential plc options outstanding at 31 December.

	Outstanding						Exercisable								
	Number outstanding			Weighted average remaining contractual life			Weighted average exercise prices			Number exercisable			Weighted average exercise prices		
	(millions)			(years)			prices £			(millions)			prices £		
	2014	2013	2012	2014	2013	2012	2014	2013	2012	2014	2013	2012	2014	2013	2012
Between £2 and £3	0.2	2.6	2.8	1.9	1.0	2.0	2.88	2.88	2.88	-	-	0.1	-	2.88	2.88
Between £4 and	1.4	2.9	4.1	1.4	1.7	2.3	4.64	4.63	4.61	0.5	0.5	0.1	4.65	4.59	4.24

£5															
Between £5 and £6	-	-	0.1	0.8	0.8	0.6	5.51	5.53	5.60	-	-	-	5.52	5.51	5.67
Between £6 and £7	2.1	2.3	2.4	1.6	2.6	3.6	6.29	6.29	6.29	-	-	-	-	-	-
Between £9 and £10	2.3	2.4	-	2.9	3.9	-	9.01	9.01	-	-	-	-	-	-	-
Between £11 and £12	2.6	-	-	4.2	-	-	11.55	-	-	-	-	-	-	-	-
	8.6	10.2	9.4	2.7	2.3	2.6	8.29	5.60	4.54	0.5	0.5	0.2	4.65	4.50	3.88

The years shown above for weighted average remaining contractual life include the time period from end of vesting period to expiration of contract.

Table of Contents**(c) Fair value of options and awards**

The fair value amounts estimated on the date of grant relating to all options (including conditional nil cost options) and awards, were determined using the Black-Scholes and the Monte Carlo option-pricing models adopting the following assumptions:

	2014		Prudential		2013		2012		
	Prudential	SAYE	Other	Prudential	SAYE	Other	SAYE	Other	
	LTIP (TSR)	options	awards	LTIP/GPSP	options	awards	GPSP	options	awards
Dividend yield (%)	-	2.40	-	-	2.73	-	-	3.63	-
Expected volatility (%)	21.91	20.77	-	23.64	24.27	-	33.03	34.33	-
Risk-free interest rate (%)	1.25	1.51	-	0.73	1.06	-	0.31	0.39	-
Expected option life (years)	-	3.77	-	-	3.46	-	-	3.24	-
Weighted average exercise price (£)	-	11.55	-	-	9.01	-	-	6.29	-
Weighted average share price (£)	13.18	14.02	-	11.80	11.85	-	6.78	8.26	-
Weighted average fair value (£)	6.07	3.00	12.84	7.38	2.57	11.06	3.91	2.28	6.72

Compensation costs for all share-based compensation plans are determined using the Black-Scholes model or Monte Carlo option-pricing model. The compensation costs for all awards and options are recognised in net income over the plans' respective vesting periods. The Group uses the Black-Scholes model to value all options and awards other than the Prudential LTIP(TSR) for which the Group uses a Monte Carlo model in order to allow for the impact of the LTIP(TSR) performance conditions. These models are used to calculate fair values for share options and awards at the grant date based on the quoted market price of the stock at the measurement date, the amount, if any, that the employees are required to pay, the dividend yield, expected volatility, risk-free interest rates and exercise prices.

For all options and awards, the expected volatility is based on the market implied volatilities as quoted on Bloomberg. The Prudential specific at-the-money implied volatilities are adjusted to allow for the different terms and discounted exercise price on SAYE options by using information on the volatility surface of the FTSE 100.

Risk-free interest rates are taken from government bond spot rates with projections for two-year, three-year and five-year terms to match corresponding vesting periods. Dividend yield is determined as the average yield over a period of 12 months up to and including the date of grant. For the Prudential LTIP (TSR), volatility and correlation between Prudential and a basket of 18 competitor companies is required. For grants in 2014, the average volatility for the basket of competitors was 23.4 per cent. Correlations for the basket are calculated for each pairing from the log of daily TSR returns between April 2011 and the valuation date. Market implied volatilities are used for both Prudential and the components of the index. Changes to the subjective input assumptions could materially affect the fair value estimate.

(d) Share-based payment expense charged to the income statement

Total expense recognised in the year in the consolidated financial statements relating to share-based compensation is as follows:

	2014 £m	2013 £m	2012 £m
Share-based compensation expense	99	83	58
Amount accounted for as equity-settled	93	63	42
Carrying value at 31 December of liabilities arising from share-based payment transactions	16	23	24
Intrinsic value of above liabilities for which rights had vested at 31 December	9	17	16

F-48

Table of Contents**B3.3 Key management remuneration**

Key management constitutes the directors of Prudential plc as they have authority and responsibility for planning, directing and controlling the activities of the Group.

Total key management remuneration is analysed in the following table:

	2014 £m	2013 £m	2012 £m
Salaries and short-term benefits	15.9	16.5	13.8
Post-employment benefits	1.0	1.0	1.2
Share-based payments	16.2	14.3	11.8
	33.1	31.8	26.8

The share-based payments charge comprises £11.0 million (2013: £9.3 million; 2012: £8.0 million), which is determined in accordance with IFRS 2, Share-based Payment (see note B3.2) and £5.2 million (2013: £5.0 million; 2012: £3.8 million) of deferred share awards.

Total key management remuneration includes total directors' remuneration of £50.5 million (2013: £48.9 million; 2012: £40.1 million) less LTIP releases of £28.4 million (2013: £26.4 million; 2012: £21.3 million) as shown in Item 6 Directors, Senior Management and Employees. Further information on directors' remuneration is given in Item 6 Directors, Senior Management and Employees.

B3.4 Fees payable to the auditor

	2014 £m	2013 £m	2012 £m
Fees payable to the Company's auditor for the audit of the Company's annual accounts	2.0	2.0	2.0
Fees payable to the Company's auditor and its associates for other services:			
Audit of subsidiaries pursuant to legislation	6.6	6.8	6.5
Audit-related assurance services	2.9	2.8	3.2
Tax compliance services	0.7	0.8	0.5
Other assurance services	1.9	1.1	0.5
Services relating to corporate finance transactions	0.1	0.5	0.4
All other services	2.4	1.2	1.2
Total fees paid to the auditor	16.6	15.2	14.3

In addition, there were fees incurred of £0.1 million (2013: £0.1 million; 2012: £0.1 million) for the audit of pension schemes.

B4 Effect of changes and other accounting features on insurance assets and liabilities

The following features are of particular relevance to the determination of the 2014 results:

(a) Asia insurance operations

In 2014, the IFRS operating profit based on longer-term investment returns for Asia insurance operations included a profit of £49 million (2013: £44 million; 2012: £48 million) representing a number of non-recurring items, none of which are individually significant.

In 2012, the basis of determining the valuation rate of interest was altered to align with a permitted practice of the Hong Kong authorities for regulatory reporting. The main change was to apply a valuation rate of interest that incorporates a reinvestment yield that is weighted by reference to current and the historical three year average rather than the year end rate. The change reduced the carrying value of policyholder liabilities at 31 December 2012 by £95 million. This benefit was included within the 2012 short-term fluctuations in investment returns in the Group's supplementary analysis of profit.

(b) US insurance operations

Amortisation of deferred acquisition costs

Jackson applies a mean reversion technique for amortisation of deferred acquisition costs on variable annuity business which dampens the effects of short-term market movements on expected gross profits against which deferred acquisition costs are amortised. To the extent that the mean reversion methodology does not fully dampen the effects of market returns, there is a charge or credit for accelerated or decelerated amortisation. For 2014 there was a charge for accelerated amortisation of £13 million (2013: a credit for decelerated amortisation of

Table of Contents

£82 million; 2012: a credit for decelerated amortisation of £56 million) to the operating profit based on longer-term investment returns. See note C5.1(b) for further details.

Other

In 2013, Jackson revised its projected long-term separate account return from 8.4 per cent to 7.4 per cent net of external fund management fees. The effect of this change together with other assumption changes and recalibration of modelling of accounting values of guarantees gave rise to a net benefit of £6 million to profit before tax in 2013.

(c) UK insurance operations***Annuity business: allowance for credit risk***

For IFRS reporting, the results for UK shareholder-backed annuity business are particularly sensitive to the allowances made for credit risk. The allowance is reflected in the deduction from the valuation rate of interest for discounting projected future annuity payments to policyholders that would have otherwise applied. Credit risk allowance comprises (i) an amount for long-term best estimate defaults, and (ii) additional provisions for credit risk premium, downgrade resilience and short-term defaults.

The weighted components of the bond spread over swap rates for shareholder-backed fixed and linked annuity business for PRIL, based on the asset mix at these dates are shown below:

	31 Dec 2014 (bps)			31 Dec 2013 (bps)			31 Dec 2012 (bps)		
	Pillar 1		IFRS	Pillar 1		IFRS	Pillar 1		IFRS
	regulatory			regulatory			regulatory		
	basis	Adjustment	IFRS	basis	Adjustment	IFRS	basis	Adjustment	IFRS
Bond spread over swap rates ^{note (i)}	143	-	143	133	-	133	161	-	161
Credit risk allowance:									
Long-term expected defaults ^{note (ii)}	14	-	14	15	-	15	15	-	15
Additional provisions ^{note (iii)}	44	(12)	32	47	(19)	28	50	(23)	27
Total credit risk allowance	58	(12)	46	62	(19)	43	65	(23)	42
Liquidity premium	85	12	97	71	19	90	96	23	119

Notes

- (i) Bond spread over swap rates reflect market observed data.
- (ii) Long-term expected defaults are derived by applying Moody's data from 1970 to 2009 and the definition of the credit rating used is the second highest credit rating published by Moody's, Standard & Poor's and Fitch.
- (iii)

Additional provisions comprise credit risk premium, which is derived from Moody's data from 1970 to 2009, an allowance for a one-notch downgrade of the portfolio subject to credit risk and an additional allowance for short-term defaults.

The prudent Pillar 1 regulatory basis reflects the overriding objective of maintaining sufficient provisions and capital to ensure payments to policyholders can be made. The approach for IFRS aims to establish liabilities that are closer to best estimate.

Movement in the credit risk allowance for PRIL

The movement during 2014 of the average basis points allowance for PRIL on Pillar 1 regulatory and IFRS bases are as follows:

	Pillar 1	
	Regulatory	
	basis	IFRS
	Total (bps)	Total (bps)
Total allowance for credit risk at 31 December 2013	62	43
Credit rating changes	1	1
Asset trading	(1)	(1)
Other effects (including for new business)	(4)	3
Total allowance for credit risk at 31 December 2014	58	46

Overall the movement has led to the credit allowance for Pillar 1 purposes to be 41 per cent (2013: 47 per cent) of the bond spread over swap rates. For IFRS purposes it represents 32 per cent (2013: 32 per cent) of the bond spread over swap rates.

Table of Contents

The reserves for credit risk allowance at 31 December 2014 for the UK shareholder annuity fund were as follows:

	Pillar 1 Regulatory	
	basis Total £bn	IFRS Total £bn
PRIL	2.0	1.6
PAC non-profit sub-fund	0.2	0.1
Total 31 December 2014	2.2	1.7
Total 31 December 2013	1.9	1.3
Total 31 December 2012	2.1	1.3
<i>Other assumption changes</i>		

For the shareholder-backed business, the net effect of other assumption changes and modelling adjustments was a credit of £28 million (2013: a credit of £20 million; 2012: a charge of £17 million).

B5 Tax charge**(a) Total tax charge by nature of expense**

The total tax charge in the income statement is as follows:

	Current	2014 £m Deferred		2013 £m	2012 £m
Tax charge	tax	tax	Total	Total	Total
UK tax	(579)	1	(578)	(300)	(421)
Overseas tax	(529)	169	(360)	(436)	(533)
Total tax (charge) credit	(1,108)	170	(938)	(736)	(954)

The total tax charge comprises:

	2014 £m	2013 £m	2012 £m
Current tax expense:			
Corporation tax	(1,102)	(414)	(942)
Adjustments in respect of prior years	(6)	15	144
Total current tax	(1,108)	(399)	(798)
Deferred tax arising from:			
Origination and reversal of temporary differences	163	(392)	(182)

Impact of changes in local statutory tax rates	1	55	30
Expense in respect of a previously unrecognised tax loss, tax credit or temporary difference from a prior period	6	-	(4)
Total deferred tax credit (charge)	170	(337)	(156)
Total tax charge	(938)	(736)	(954)

The current tax charge of £1,108 million includes £37 million (2013: £18 million; 2012: £17 million) in respect of the tax charge for the Hong Kong operation. The Hong Kong current tax charge is calculated as 16.5 per cent for all periods on either (i) 5 per cent of the net insurance premium or (ii) the estimated assessable profits, depending on the nature of the business written.

The total tax charge comprises tax attributable to policyholders and unallocated surplus of with-profits funds, unit-linked policies and shareholders as shown below.

	Current	2014 £m Deferred	Total	2013 £m Total	2012 £m Total
Tax charge	tax	tax	Total	Total	Total
Tax charge to policyholders returns	(449)	(91)	(540)	(447)	(370)
Tax charge attributable to shareholders	(659)	261	(398)	(289)	(584)
Total tax (charge) credit	(1,108)	170	(938)	(736)	(954)

The principal reason for the increase in the tax charge attributable to policyholders returns is an increase in current tax in the with-profits life fund in the UK insurance operations. The main elements of the deferred tax credit

Table of Contents

shown in the table below are a credit of £309 million on short-term temporary differences reflecting future tax relief arising from increases in policy reserves in the US insurance operations and a charge of £127 million on unrealised gains and losses on investments reflecting an increase in unrealised gains on investments in the UK and Asia insurance operations.

The total deferred tax credit (charge) arises as follows:

	2014 £m	2013 £m	2012 £m
Unrealised gains and losses on investments	(127)	69	(89)
Balances relating to investment and insurance contracts	(43)	(44)	467
Short-term temporary differences	309	(314)	(206)
Capital allowances	(4)	(7)	-
Unused tax losses	35	(41)	(328)
Deferred tax credit (charge)	170	(337)	(156)

In 2014, a deferred tax charge of £295 million (2013: credit of £580 million; 2012: charge of £198 million) has been taken through other comprehensive income.

(b) Reconciliation of effective tax rate

For the purposes of explaining the relationship between tax expense and accounting profit, it is appropriate to consider the sources of profit and tax by reference to those that are attributable to shareholders and policyholders. A reconciliation of tax charge on profit attributable to shareholders is provided below.

Overview of reconciliation of effective tax rate

	2014 £m		2013 £m		2012 £m				
	Attributable to shareholders	Attributable to policyholders*	Attributable to shareholders	Attributable to policyholders*	Attributable to shareholders	Attributable to policyholders*	Total		
	to	to	to	to	to	to			
	shareholders	policyholders*	shareholders	policyholders*	shareholders	policyholders*	Total		
Profit before tax	2,614	540	3,154	1,635	447	2,082	2,747	370	3,117
Taxation charge:									
Expected tax rate	23%	100%	36%	26%	100%	42%	27%	100%	36%
Expected tax charge	(594)	(540)	(1,134)	(429)	(447)	(876)	(750)	(370)	(1,120)
Variance from expected tax charge	196	-	196	140	-	140	166	-	166

Actual tax charge	(398)	(540)	(938)	(289)	(447)	(736)	(584)	(370)	(954)
Average effective tax rate	15%	100%	30%	18%	100%	35%	21%	100%	31%

* For the column entitled "Attributable to policyholders", the profit before tax represents income before tax attributable to policyholders and unallocated surplus of with-profits funds and unit-linked policies. This income has been determined after deduction of charges for policyholder benefits and movements on unallocated surplus which are determined net of tax. Hence, the pre-tax results attributable to policyholders is the inverse of the tax charge attributable to policyholders.

Due to the requirements of the financial reporting standards IAS 1 "Presentation of Financial Statements" and IAS 12 "Income Taxes", the profit (loss) before tax and tax charge reflect the aggregate of amounts that are attributable to shareholders and policyholders.

Profit (loss) before tax comprises profit attributable to shareholders and pre-tax profit attributable to policyholders of linked and with-profits funds and unallocated surplus of with-profits funds.

The total tax charge for linked and with-profits business includes tax expense on unit-linked and with-profits funds attributable to policyholders, the unallocated surplus of with-profits funds and the shareholders' profits. This feature arises from the basis of taxation applied to life and pension business, principally in the UK, but with similar bases applying in certain Asia operations, and is explained in the "Basis of taxation for UK life and pension business" section below.

Furthermore, the basis of preparation of Prudential's financial statements incorporates the additional feature that, as permitted under IFRS 4, the residual equity of the Group's with-profits funds, ie unallocated surplus, is recorded as a liability with transfers to and from that liability reflected in pre-tax profits. This gives rise to anomalous effective tax rates for profits attributable to policyholders (as described in the "Profits attributable to policyholders and related tax" section below).

Table of Contents

In meeting the reconciliation requirements set out in paragraph 81(c) of IAS 12, the presentation shown in this disclosure note seeks to ensure that the explanation of the relationship between tax expense and accounting profit draw properly the distinction between the elements of the profit and tax charge that are attributable to policyholders and shareholders as explained below in the Profits attributable to policyholders and related tax and Reconciliation of tax charge on profit attributable to shareholders sections respectively. Due to the nature of the basis of taxation of UK life and pension business (as described in the Basis of taxation for UK life and pension business section below), and the significance of the results of the business to the Group, it is inappropriate to seek to explain the effective tax rate on profit before tax by the traditional approach that would apply for other industries.

The shareholder elements are the components of the profit and tax charge that are of most direct relevance to investors, and it is this aspect that the IAS 12 reconciliation requirement is seeking to explain for companies that do not need to account for both with-profits and unit-linked funds, where tax is borne by the Company on the policyholders behalf and which is not contemplated by the IFRS requirement.

Basis of taxation for UK life and pension business

Different rules apply under UK tax law for taxing pension business and life insurance business and there are detailed rules for apportioning the investment return and profits of the fund between the types of business.

The investment return referable to pension business, and some other less significant classes of business, is exempt from taxation, but tax is charged on the profit that shareholders derive from writing such business at the corporate rate of tax. The rules for taxing life insurance business are more complex. Initially, the UK regime seeks to tax the regulatory basis investment return less management expenses (I-E) on this business as it arises. However, in determining the actual tax charge, a calculation of the shareholder profits for taxation purposes from writing life insurance business also has to be made and compared with the I-E profit.

If the shareholder profit is higher than the I-E amount, extra income is attributable to the I-E calculation until the I-E profit equals the shareholder profit. If on the other hand, the I-E profit is the greater, then an amount equal to the shareholder profit is taxed at the corporate rate of tax, with the remainder of the I-E profit being taxed at the lower policyholder rate of tax.

The purpose of this approach is to ensure that the Company is always at a minimum taxed on the profit, as defined for taxation purposes by reference to the Company's regulatory returns (rather than IFRS basis results), that it has earned. The shareholders portion of the long-term business is taxed at the shareholders rate, with the remaining portion taxed at rates applicable to the policyholders.

It is to be noted that the calculations described are determined using data from the IFRS basis results since 2013. Under the new UK life tax rules, shareholders profits are calculated using accounting profit or loss as a starting point rather than the previous regulatory basis.

Profits attributable to policyholders and related tax

As noted above, it is necessary under IFRS requirements to include the total tax charge of the Company (both policyholder and shareholder elements) in the tax charge disclosed in the income statement.

The tax expense attributable to policyholders is a combination of current and deferred tax charges and reflects the nature of the income and expenditure of the with-profits and unit-linked funds. The current tax charge element reflects the element for the funds, determined on the I-E basis (as described in the Basis of taxation for UK life and pension

business section above) that is attributable to policyholders. For policyholder deferred tax, normally the most significant element reflects the movement on unrealised appreciation on investments. These investments are accounted for under IAS 39 on a fair value through profit or loss basis with attaching deferred tax charges or credits.

For with-profits business, total pre-tax profits reflect the aggregate of profits attributable to policyholders and shareholders. However, amounts attributable to the equity of with-profits funds are carried in the liability for unallocated surplus. Also, as described in the Basis of taxation for UK life and pension business section above, UK with-profits business is taxed on a basis that affects policyholders unallocated surplus of with-profits funds and shareholders. For the PAC with-profits sub-fund, transfers to and from unallocated surplus are recorded in the

Table of Contents

income statement, so that after charging the total tax borne by the fund, the net balance reflects the statutory transfer from the fund for the year. The statutory transfer represents 10 per cent of the actuarially determined surplus for the year that is attributable to shareholders.

For SAIF, similar transfers are made. However, in the case of SAIF, a net nil balance is derived, reflecting the lack of shareholder interest in the financial performance of the fund (other than through asset management arrangements).

The accounting anomaly that arises under IFRS is that due to the fact that the net of tax profit attributable to with-profits policyholders is zero, the Company's presentation of pre-tax profit attributable to policyholders reflects an amount that is the mirror image of the tax charge attributable to policyholders.

For unit-linked business, pre-tax profits also reflect the aggregate of profits attributable to policyholders and shareholders. The pre-tax profits attributable to policyholders represent fees earned that are used to pay tax borne by the Company on policyholders' behalf. The net of tax profit attributable to policyholders for unit-linked business is thus zero.

The combined effect of these features is such that providing a reconciliation of the tax charge attributable to policyholders to an expected charge based on the standard corporate rate of tax on IFRS basis profits attributable to policyholders is not relevant.

In summary, for accounting purposes, in all cases and for all reporting periods, the apparent effective rate for profit attributable to policyholders and unallocated surplus is 100 per cent. However, it is to be noted that the 100 per cent rate does not reflect a rate paid on the profits attributable to policyholders. It instead reflects the basis of accounting for unallocated surplus coupled with the distinction made for performance reporting between sources of profit attributable to shareholders, policyholders and unallocated surplus and IFRS requirements in respect of reporting of all pre-tax profits and all tax charges irrespective of policyholder or shareholder economic interest.

Reconciliation of tax charge on profit attributable to shareholders

	2014 £m (Except for tax rates)				Total
