Delaware Investments Closed-End Municipal Bond Funds

April 10, 2012

Market environment, in brief:

- The municipal markets, in general, had a strong year, posting positive total returns across all maturities, ratings, and sectors.
- Municipal bonds became increasingly appealing to income-oriented investors seeking relatively high yields in an environment of low interest rates.
- A favorable supply-demand imbalance was an important source of support for municipal bond prices.

National economic environment

As the Funds fiscal year ended March 31, 2012 began, many investors were concerned about a U.S. economy that was growing quite weak and suffering through a historically high unemployment rate. Moving into summer 2011, additional challenges rattled investors, including Washington s political battles over government spending and the decision by credit-rating agency Standard & Poor s to issue a downgrade of U.S. Treasury bonds.

Starting in late 2011 and continuing into early 2012, however, the macroeconomic backdrop began to show mild signs of improvement. The U.S. job market, while still weak, appeared to be moving in a better direction, with the unemployment rate falling from 9.0% in September 2011 to 8.3% by January 2012 the lowest level since February 2009. At the same time, fourth-quarter economic growth reached an estimated rate of 3.0%, up from 1.8% in the prior quarter.

Data: U.S. Labor Department, U.S. Commerce Department.

Municipal market trends

Driven by significant risk aversion, many investors were drawn toward U.S. Treasury securities, pushing interest rates to historically low levels. This development was among the prominent factors that helped drive municipal bond prices upward during the Funds fiscal year, as municipal bonds increasingly appealed to income-oriented investors seeking relatively high yields in an environment of low interest rates.

Municipal bond markets also benefited from a substantial easing of credit fears. Early in the fiscal year, municipal markets were weighed down by media reports of pending defaults; as this period progressed, however, these dire predictions were shown to be unwarranted.

A favorable supply-demand imbalance was a third source of support for municipal bond prices. Consider the supply-demand relationship as it played out over the course of calendar year 2011: On the supply side, the availability of municipal bonds was significantly lower than it was in 2010. According to Municipal Bond Buyer, issuance of tax-exempt debt was approximately \$295 billion during 2011, almost one-third below the level of debt seen in the prior year. At the same time, demand for the municipal bond asset class was strengthening, due in part to increased attention from individual investors as well as hedge funds and other nontraditional institutional investors.

Generally speaking, the longer a bond s maturity, the more likely it was to outperform during the Funds fiscal year. As a result, the municipal yield curve flattened during the period, indicating that yields on long-term bonds were falling faster than those of short-term bonds. The same was true of credit ratings; lower-rated bonds tended to outperform their higher-rated counterparts as investors generally became comfortable accepting slightly more credit risk in exchange for the potential for additional income.

Fund positioning

At the start of the fiscal year, the Funds portfolios were positioned somewhat less aggressively in lower-rated credits. At that time, we expected the 2010 conclusion of the Build America Bond program (which had been diverting supply away from the municipal bond market) to precipitate an increase in 2011 municipal bond supply, putting pressure on bond prices. We believed the Funds relatively conservative stance would more effectively accommodate this steadier stream of supply.

As the period progressed, this increase in bond supply failed to materialize, we believe, in part because state and municipal governments had become more reluctant to

Portfolio management review

Delaware Investments Closed-End Municipal Bond Funds

add to their debt burdens. The prevailing environment of reduced supply and strong investor demand led us to gradually increase each Fund s allocation to securities at the lower end of the investment grade spectrum, and we generally maintained this stance throughout the rest of the fiscal year. (It s important to note that these allocation changes took place primarily at the margins of each Fund s portfolio. They did not represent a meaningful departure from each Fund s long-standing risk-reward profile.)

Performance effects

Overall, the best-performing bonds within the Funds tended to have lower credit ratings and longer maturity dates, as was the performance trend in the broad municipal market.

On an individual security basis, the two best-performing bonds within **Delaware Investments Colorado Municipal Income Fund, Inc.** (the Colorado Fund) were revenue bonds issued by the Denver Convention Center Hotel Authority and the Public Authority for Colorado Energy, maturing in 2035 and 2038, respectively. The bonds were issued with coupon rates of 5.0% and 6.5%, respectively. Additionally, both bonds were rated medium grade by Standard & Poor s. The Colorado Fund s worst-performing bonds had maturity dates of 2016 and 2013. A bond issued by the Colorado Educational and Cultural Facilities Authority to fund a project at the University of Denver (maturing in 2016) generated a return of 5.27% while another bond issued by the Denver Convention Center Hotel Authority, with a 2013 maturity date, returned slightly less than 2.50% for the fiscal year. Both securities were removed from the Fund s portfolio in the final months of the fiscal year.

Similar to the Colorado Fund, **Delaware Investments Minnesota Municipal Income Fund II, Inc.** (the Minnesota Fund) benefited from holdings with longer maturity dates and lower credit qualities. Both of its best-performing securities were rated BBB (medium grade) by S&P and had maturity dates in the mid- to late 2030s. A bond issued by the Puerto Rico Commonwealth Infrastructure Fund, for example, generated a notable 34% return. The second best-performing bond, an unrated education bond issued by the University of the Virgin Islands, experienced a notable return of almost 31%. Both of these bonds were liquidated from the Fund s portfolio in the late months of the fiscal year. Both of the poorest-performing bonds within the Minnesota Fund a general obligation bond issued by Olmsted County (3.5% coupon, 2027 maturity) and a bond issued by the Western Minnesota Municipal Power Agency were rated AAA by S&P. Both of these bonds were liquidated from the Fund s portfolio in the late months of the fiscal year.

The top two contributors within **Delaware Investments National Municipal Income Fund** (the National Fund) were best characterized by their long maturity dates, as neither bond was rated by S&P. The top contributor was a student housing bond issued by the New Jersey Economic Development Authority to benefit Montclair State University. Its maturity date is 2042. The second best performing bond was issued by the California Statewide Communities Development Authority with a maturity date of 2046. The National Fund s greatest detractor (declining 5.09%) was an airline bond issued by the New York City Industrial Development Agency to support the construction of a new American Airlines terminal at the John F. Kennedy International Airport. The second worst-performing bond was issued by the Puerto Rico Sales Tax Financing Corporation, and had an A+ (upper medium grade) rating by S&P. All four bond issues were removed from the Fund s portfolio before the fiscal year came to a close.

Variable rate security. The rate shown is the rate as of March 31, 2012. Interest rates reset periodically.

\$Pre-Refunded bonds. Municipal bonds that are generally backed or secured by U.S. Treasury bonds. For pre-refunded bonds, the stated maturity is followed by the year in which the bond is pre-refunded. See Note 9 in Notes to financial statements.

^Zero coupon security. The rate shown is the yield at the time of purchase.

See Note 6 in Notes to financial statements.
