No. 1 Regulatory News Service Announcement, dated 28 July 2016 re: LBG 2016 half-year Pillar 3 disclosures

Lloyds Banking Group plc

2016 Half-Year Pillar 3 disclosures

28 July 2016

#### **BASIS OF PRESENTATION**

This report presents the condensed half-year Pillar 3 disclosures of Lloyds Banking Group plc ('the Group') as at 30 June 2016, prepared in accordance with European Banking Authority (EBA) guidelines on Pillar 3 disclosure frequency. The report should be read in conjunction with the 2016 Lloyds Banking Group Half-Year Results News Release.

The EBA guidelines on Pillar 3 disclosure frequency set out key information that institutions in the EU banking sector should consider disclosing on a more frequent than annual basis under Pillar 3. The Group's assessment of these guidelines has resulted in the disclosure of specific capital and leverage information at the interim quarter ends, with further detailed analysis provided at half-year as covered by this report. These half-year disclosures remain in addition to the full annual disclosure of the Group's Pillar 3 report. Risk-weighted assets by type of risk are included in the individual half-year Management Reports for the Group's significant subsidiaries; 'Lloyds Bank Group' and 'Bank of Scotland Group'.

A number of significant differences exist between accounting disclosures published in accordance with International Financial Reporting Standards (IFRS) and Pillar 3 disclosures published in accordance with prudential requirements which prevent direct comparison in a number of areas. Of particular note are the differences surrounding scope of consolidation, the definition of credit risk exposure and the recognition, classification and valuation of capital securities.

Unless otherwise specified, credit risk exposures are defined as the exposure at default (EAD), prior to the application of credit risk mitigation (CRM). EAD is defined as the aggregate of drawn (on balance sheet) exposures, undrawn (off balance sheet) commitments and contingent liabilities, after application of credit conversion factors (CCF), and other relevant regulatory adjustments. Notable exceptions to this definition include securitisation positions and counterparty credit risk exposures. A summary, noting the definitions applied, is provided below.

Exposure type
Credit risk exposures (excluding securitisation positions)

Exposure type

EAD pre CRM1

Counterparty credit risk exposures EAD post CRM

Securitisation positions

The aggregate of the Group's retained or purchased positions, excluding those positions rated below BB- or that are unrated and therefore deducted from capital.

<sup>1</sup> For credit risk exposures risk-weighted under the Standardised Approach the EAD pre CRM value is stated net of specific credit risk adjustments (SCRAs). SCRAs relating to credit risk exposures risk-weighted under a relevant Internal Ratings Based (IRB) Approach methodology are netted against expected losses.

#### FORWARD LOOKING STATEMENTS

This document contains certain forward looking statements with respect to the business, strategy and plans of Lloyds Banking Group and its current goals and expectations relating to its future financial condition and performance. Statements that are not historical facts, including statements about Lloyds Banking Group's or its directors' and/or

management's beliefs and expectations, are forward looking statements. By their nature, forward looking statements involve risk and uncertainty because they relate to events and depend upon circumstances that will or may occur in the future. Factors that could cause actual business, strategy, plans and/or results (including but not limited to the payment of dividends) to differ materially from the plans, objectives, expectations, estimates and intentions expressed in such forward looking statements made by the Group or on its behalf include, but are not limited to: general economic and business conditions in the UK and internationally; market related trends and developments; fluctuations in interest rates (including low or negative rates), exchange rates, stock markets and currencies; the ability to access sufficient sources of capital, liquidity and funding when required; changes to the Group's credit ratings; the ability to derive cost savings; changing customer behaviour including consumer spending, saving and borrowing habits; changes to borrower or counterparty credit quality; instability in the global financial markets, including Eurozone instability, the exit by the UK from the European Union (EU) and the potential for one or more other countries to exit the EU or the Eurozone and the impact of any sovereign credit rating downgrade or other sovereign financial issues; technological changes and risks to cyber security; natural, pandemic and other disasters, adverse weather and similar contingencies outside the Group's control; inadequate or failed internal or external processes or systems; acts of war, other acts of hostility, terrorist acts and responses to those acts, geopolitical, pandemic or other such events; changes in laws, regulations, accounting standards or taxation, including as a result of an exit by the UK from the EU, a further possible referendum on Scottish independence; changes to regulatory capital or liquidity requirements and similar contingencies outside the Group's control; the policies, decisions and actions of governmental or regulatory authorities or courts in the UK, the EU, the US or elsewhere including the implementation and interpretation of key legislation and regulation; the ability to attract and retain senior management and other employees; requirements or limitations on the Group as a result of HM Treasury's investment in the Group; actions or omissions by the Group's directors, management or employees including industrial action; changes to the Group's post-retirement defined benefit scheme obligations; the provision of banking operations services to TSB Banking Group plc; the extent of any future impairment charges or write-downs caused by, but not limited to, depressed asset valuations, market disruptions and illiquid markets; the value and effectiveness of any credit protection purchased by the Group; the inability to hedge certain risks economically; the adequacy of loss reserves; the actions of competitors, including non-bank financial services and lending companies; and exposure to regulatory or competition scrutiny, legal, regulatory or competition proceedings, investigations or complaints. Please refer to the latest Annual Report on Form 20-F filed with the US Securities and Exchange Commission for a discussion of certain factors together with examples of forward looking statements. Except as required by any applicable law or regulation, the forward looking statements contained in this document are made as of today's date, and Lloyds Banking Group expressly disclaims any obligation or undertaking to release publicly any updates or revisions to any forward looking statements. The information, statements and opinions contained in this document do not constitute a public offer under any applicable law or an offer to sell any securities or financial instruments or any advice or recommendation with respect to such securities or financial instruments.

#### 2016 Half-Year Pillar 3 Update

The following disclosures include information on Lloyds Banking Group's own-funds, leverage, risk-weighted assets and capital requirements by type of risk and by exposure class. Additional detail has been included in relation to the Group's exposures subject to the Internal Ratings Based (IRB) approach.

	At 30 June 2016	At 31 Dec 2015
Key ratios and risk-weighted assets		
Fully loaded common equity tier 1 (CET1) capital ratio2	13.0%	13.0%
Fully loaded tier 1 capital ratio	15.4%	15.2%
Fully loaded total capital ratio	18.7%	18.0%
Fully loaded total risk-weighted assets	£222,297m	£222,747m
•		
Transitional CET1 capital ratio	13.1%	12.8%
Transitional tier 1 capital ratio	16.4%	16.4%
Transitional total capital ratio	21.8%	21.5%
Transitional total risk-weighted assets	£222,778m	£222,845m
-		
Leverage ratio1,2	4.7%	4.8%
Average leverage ratio3	4.8%	

<sup>1</sup> Reported on a fully loaded basis.

The average leverage ratio is based on the average of the month end tier 1 capital and exposure measures over the 3 quarter (1 April 2016 to 30 June 2016). The average of 4.8 per cent compares to 4.7 per cent at the start and end of the quarter.

Table 1: Risk-weighted assets movement by key driver

Movement to fully loaded							(401)
risk-weighted assets2							(481)
Fully loaded risk-weighted assets as at 30							222,297
June 2016							,,

Threshold risk-weighted assets reflect the element of significant investments and deferred tax assets that are 1 permitted to be risk-weighted instead of deducted from CET1 capital. Significant investments primarily arise from the investment in the Group's Insurance business.

Differences may arise between transitional and fully loaded threshold risk-weighted assets where deferred tax assets 2 reliant on future profitability and arising from temporary timing differences and significant investments exceed the fully loaded threshold limit, resulting in an increase in amounts deducted from CET1 capital rather than being risk-weighted.

3 Counterparty credit risk includes movements in contributions to the default fund of central counterparties and movements in credit valuation adjustment risk.

The risk-weighted assets movement table provides analysis of the reduction in risk-weighted assets in the period by risk type and an insight into the key drivers of the movements. The key driver analysis is compiled on a monthly basis through the identification and categorisation of risk-weighted asset movements and is subject to management judgment.

Movements in credit risk-weighted assets in the six months to 30 June 2016 were driven by the following:

Asset size movements include risk-weighted asset movements arising from new lending and asset run-off. During the six months to 30 June, credit risk-weighted assets assessed on both Standardised and Internal Ratings Based approaches decreased by £2.8 billion primarily due to repayments and exits, partly offset by growth in targeted customer segments.

Disposal of the Group's interest in Visa Europe and further disposals within the run-off business reduced credit risk-weighted assets by £1.7 billion.

Model update increases of £3.2 billion were mainly driven by a change in approach for the Retail Buy-to-let mortgage portfolio and other small model refinements.

Methodology and policy movements include changes due to refinements in the application of regulatory policy.

Asset quality movements capture movements in the assessed quality of assets due to changes in borrower risk, including changes in the economic environment. Net reductions in credit risk-weighted assets of £1.8 billion primarily relate to model calibrations and a net change in credit quality, partially offset by increases in valuation of centrally held strategic equity investments.

Foreign exchange movements reflect the depreciation of Sterling which has contributed to a £2.9 billion increase in credit risk-weighted assets of which £2.3 billion arose in the final week of June following the outcome of the EU referendum.

Counterparty credit risk and CVA risk increases of £0.6 billion are principally driven by yield curve and foreign exchange movements of which £0.9 billion arose in the final week of June following the outcome of the EU referendum, partially offset by increased capital relief from CVA related hedges.

Market risk-weighted assets reduced by £0.9 billion due to a reduction in the Value-at-Risk multiplier and active portfolio management.

The risk-weighted assets and Pillar 1 capital requirements, by key regulatory risk type, of the Group as at 30 June 2016 are presented in the table below.

Credit risk exposures subject to other IRB approaches include specialised lending exposures risk-weighted in accordance with supervisory slotting criteria, equity exposures risk-weighted in accordance with the Simple Risk Weight Method and securitisation positions risk-weighted in accordance with the Internal Assessment Approach (IAA) and Ratings Based Approach (RBA).

Securitisation positions exclude amounts allocated to the 1,250 per cent risk weight category. These amounts are 2 deducted from capital after the application of specific credit risk adjustments (SCRA), rather than being risk-weighted.

Other items (Standardised Approach) and non-credit obligation assets (IRB Approach) predominantly relate to other 3 balance sheet assets that have no associated credit risk. These comprise various non-financial assets, including fixed assets, cash, items in the course of collection, prepayments and sundry debtors.

Credit risk exposures subject to other IRB approaches include corporate specialised lending exposures risk-weighted 1 in accordance with supervisory slotting criteria, equity exposures risk-weighted in accordance with the Simple Risk Weight Method and securitisation positions risk-weighted in accordance with the IAA and the RBA.

Exposures subject to the IRB approach – key movements

#### FIRB Corporate Main

Overall Corporate Main exposures have remained relatively flat, with underlying reductions driven by active portfolio management, offset by the impact of Sterling depreciation, particularly in the last week of June.

#### FIRB Corporate SME

The average risk-weight on FIRB Corporate SME lending has reduced to 66 per cent, driven by targeted new lending which has resulted in an overall improvement in credit quality. This has also led to a reduction in the average PD.

### FIRB Central governments and central banks

FIRB Central governments and central banks exposures increased by £5.1 billion driven by an increase in deposits with the Federal Reserve.

#### Retail IRB Residential mortgages

Retail IRB residential mortgage exposures decreased by £3.5 billion reflecting the Group's focus on balancing margin and risk considerations with volume growth in the current competitive low growth market. The small increase in average risk weight was driven by model updates.

### Retail Qualifying revolving

Retail IRB Qualifying revolving retail exposures increased by £0.4 billion largely due to targeted growth in credit cards. The average risk weight reduced from 34 per cent to 32 per cent largely due to improved asset quality.

Securitisation positions exclude amounts allocated to the 1,250 per cent risk weight category. These amounts are deducted from capital, after the application of SCRAs, rather than being risk-weighted at 1,250 per cent. Other items (Standardised Approach) and non-credit obligation assets (IRB approach) predominantly relate to other 3 balance sheet assets that have no associated credit risk. These comprise various non-financial assets, including fixed assets, cash, items in the course of collection, prepayments and sundry debtors.

#### Retail Other non-SME

Retail other (non-SME) exposures have increased by £1.0 billion and average risk weights have reduced from 79 per cent to 75 per cent primarily as a result of continued growth in UK Motor Finance

### **Equities**

There was a minimal reduction in equities compared to December 2015 as the impact of disposals of certain strategic investments (including Visa Europe) was largely offset by increases in the valuation of centrally held investments.

#### Securitisation positions

Securitisation exposures decreased by £1.3 billion mainly due to net sales in the period.

Exposures subject to the Standardised Approach – key movements

Standardised Central governments and central banks

Standardised central governments and central banks' exposures increased by £11.5 billion primarily due to management of the liquid asset portfolio, specifically placement of funds with European sovereigns, primarily Netherlands.

#### **Internal Rating Scales**

Within the Group, PD internal rating scales are used in assessing the credit quality of the Foundation IRB and Retail IRB portfolios. Two separate scales exist within the business – a Corporate Master Scale which covers all relevant corporate, central government and central bank and institution portfolios and a Retail Master Scale which covers all relevant retail portfolios.

#### PD master scales

### Table 4: Corporate master scale

In commercial portfolios the PD models segment counterparties into a number of rating grades, with each grade representing a defined range of default probabilities and there are a number of different model rating scales. Counterparties/exposures migrate between rating grades if the assessment of the PD changes. The modelled PD 'map' through local scales to a single Corporate (non-retail) master scale comprising of 19 non-default ratings. Together with four default ratings the Corporate master scale forms the basis on which internal reporting is completed. These ratings scales can also be mapped to External Ratings as shown below.

	Range			External S&P Rating
PD Grades	Lower	Mid	Upper	(Approximate Equivalent)
1-4	0.000%	0.018%	0.035%	AAA to AA-
5	0.036%	0.043%	0.050%	A+
6	0.051%	0.060%	0.080%	A

Table 5: Retail master scale

In the principal retail portfolios, EAD and loss given default models are also in use. For reporting purposes, customers are segmented into a number of rating grades, each representing a defined range of default probabilities and exposures migrate between rating grades if the assessment of the counterparty PD changes. The Retail master scale comprises 13 non-default ratings and one default rating.

Analysis of credit risk exposures subject to the Foundation IRB Approach

The section that follows provides a detailed analysis, by PD Grade, of credit risk exposures subject to the Foundation IRB approach.

Disclosures provided in the tables that follow take into account PD floors and LGD floors specified by regulators in respect of the calculation of regulatory capital requirements.

The 10 per cent LGD floor that applies to residential mortgage exposures is applied at portfolio level rather than at account level. This means that LGD per cent for a given grade can be less than 10 per cent but that for the relevant portfolio cannot.

2Undrawn commitments predominantly relate to pipeline mortgages, offered but not drawn down by the customer.

Corporate Specialised Lending Exposures Subject to Supervisory Slotting

The Group applies the Supervisory Slotting Approach to certain corporate specialised lending exposures (including the Group's commercial real estate exposures).

As at 30 June 2016 corporate specialised lending exposures subject to supervisory slotting amounted to £19.8 billion (31 December 2015: £19.9 billion). Risk-weighted assets arising from this amounted to £14.3 billion (31 December 2015: £14.4 billion) as analysed in the table below.

Table 15: Corporate specialised lending exposures subject to supervisory slotting

Total	7,041	3,967	12,795	10,329	6,412	3,811	13,475	10,575	

The average risk weight percentage in the Strong slotting grade is below the specified regulatory value as a result of exposures to customers which are classed as Strong, typically in the shipping industry, having facilities which have been structured such that the Group also benefits from additional financial collateral from third parties which is not ordinarily part of the security package for Slotting transactions. As a result, recognition of the collateral is applied outside the standard Slotting risk weights, in line with the IRB approach, resulting in a risk weight that is below that ordinarily used in Slotting.

Table 16: Lloyds Banking Group own funds template

Transitional rules Fully loaded rules

<sup>&</sup>lt;sup>2</sup>Exposures categorised as 'default' do not attract a risk weighting but are instead treated as expected loss deductions at a rate of 50 per cent of the exposure value.
