OLD REPUBLIC INTERNATIONAL CORPORATION
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (Unaudited)
(\$ in Millions, Except Share Data)

1. Accounting Policies and Basis of Presentation:

The accompanying consolidated financial statements have been prepared in conformity with generally accepted accounting principles (“GAAP”) as described in the Company’s latest annual report to shareholders or otherwise disclosed herein. The financial accounting and reporting process relies on estimates and on the exercise of judgment, but in the opinion of management all adjustments, consisting only of normal recurring accruals, necessary for a fair presentation of the results were recorded for the interim periods. Amounts shown in the consolidated financial statements and applicable notes are stated (except as otherwise indicated and as to share data) in millions, which amounts may not add to totals shown due to truncation. Necessary reclassifications are made in prior periods’ financial statements whenever appropriate to conform to the most current presentation.

The Financial Accounting Standards Board’s (“FASB”) Interpretation No. 48, Accounting for Uncertainty in Income Taxes (“FIN 48”) became effective for the Company in the first quarter of 2007. FIN 48 provides recognition criteria and a related measurement model for uncertain tax positions taken or expected to be taken in income tax returns. FIN 48 requires that a position taken or expected to be taken in a tax return be recognized in the financial statements when it is more likely than not that the position would be sustained upon examination by tax authorities. The Company’s unrecognized tax benefits, including interest and penalty accruals, are not considered material to the consolidated financial statements and have not changed significantly upon the adoption of FIN 48. There are no tax uncertainties that are expected to result in significant increases or decreases to unrecognized tax benefits within the next twelve month period. The Company views its income tax exposures as consisting of timing differences whereby the ultimate deductibility of a taxable amount is highly certain but the timing of its deductibility is uncertain. Such differences relate principally to the timing of deductions for loss and premium reserves. As in prior examinations, the Internal Revenue Service (IRS) could assert that claim reserve deductions were overstated thereby reducing the Company’s statutory taxable income in any particular year. The Company believes that it establishes its reserves fairly and consistently at each balance sheet date, and that it would succeed in defending its tax position in these regards. Because of the impact of deferred tax accounting under GAAP, other than possible interest and penalties which are classified as income tax expense, the possible accelerated payment of tax to the IRS would not affect the annual effective tax rate. The IRS has audited the Company’s consolidated Federal income tax returns through year end 2003 and no significant adjustments have resulted.

The Company’s adoption of Statement of Financial Accounting Standards No. 157, Fair Value Measurements (“FAS 157”), is discussed in Note 3 of the Notes to Consolidated Financial Statements.

The adoption of FIN 48 and FAS 157 result in additional financial statement disclosures for GAAP reporting purposes and have no effect on the conduct of the Company’s business, its financial condition and results of operations.

2. Common Share Data:

Earnings Per Share - The following table provides a reconciliation of the income and number of shares used in basic and diluted earnings per share calculations.

Quarters Ended March 31,	
2008	2007

Edgar Filing: OLD REPUBLIC INTERNATIONAL CORP - Form 10-Q

Numerator:			
Net Income (loss)		\$ (19.0)	\$ 107.7
Numerator for basic earnings per share - income (loss) available to common stockholders			
		(19.0)	107.7
Numerator for diluted earnings per share - income (loss) available to common stockholders after assumed conversions			
		\$ (19.0)	\$ 107.7
Denominator:			
Denominator for basic earnings per share - weighted-average shares			
(a)		230,495,852	231,388,190
Effect of dilutive securities – stock options			
(b)		-	2,226,260
Denominator for diluted earnings per share - adjusted weighted-average shares and assumed conversions			
(a)		230,495,852	233,614,450
Earnings per share:			
Basic		\$ (.08)	\$.47
	Diluted	\$ (.08)	\$.46

- (a) All per share statistics have been restated to reflect all stock dividends and splits declared through March 31, 2008.
- (b) Outstanding stock option awards totaling 15,527,938 and 2,912,293 shares as of March 31, 2008 and 2007, respectively, were excluded from the computation of earnings per share because their effect would have been antidilutive to the periods presented.

3. Investments:

Effective January 1, 2008, the Company adopted FAS 157, Fair Value Measurements, which establishes a framework for measuring fair value, and applies to existing accounting pronouncements that require or permit fair value measurements. A fair value hierarchy is established within FAS 157 that prioritizes the sources (“inputs”) used to measure fair value into three broad levels: inputs based on quoted market prices in active markets (Level 1 inputs); observable inputs based on corroboration with available market data (Level 2 inputs); and unobservable inputs based on uncorroborated market data or a reporting entity’s own assumptions (Level 3 inputs). The adoption of FAS 157 has had no impact on the Company’s consolidated financial statements nor has it resulted in any changes in the asset valuation methods consistently followed by the Company. The Company’s Annual Report on Form 10-K contains disclosures regarding fair value techniques used for its invested asset portfolio.

The following table shows a summary of assets measured at fair value segregated among the various input levels required by FAS 157:

Fair value measurements as of March 31, 2008:

	Level 1	Level 2	Level 3	Total
Available for sale:				
Fixed maturity securities	\$ 285.7	\$ 7,092.9	\$ 10.5	\$ 7,389.2
Equity securities	617.6	.3	40.9	659.0
Short-term investments	610.3	-	7.1	617.4

The Company’s Level 3 fair value measurements are generally based upon external quotes provided from third party sources which utilize inputs that are not corroborated with observable market data, or in very few instances, upon the Company’s own internal assumptions. There were no significant changes in the fair value of assets measured with the use of significant unobservable inputs during the quarter ended March 31, 2008. Net unrealized losses on investments amounted to \$30.3 million at March 31, 2008. Unrealized depreciation of investments, before applicable deferred income tax credits of \$16.6 million at March 31, 2008 included gross unrealized gains and (losses) of \$301.2 million and \$(348.3) million, respectively. For the quarters ended March 31, 2008 and 2007, changes in net unrealized appreciation (depreciation) of investments, net of deferred income taxes (credits), amounted to \$(109.4) million and \$17.3 million, respectively.

4. Pension Plans:

The Company has three defined benefit pension plans covering a portion of its work force. All three plans have been closed to new participants since December 31, 2004. Pursuant to plan terms pension payments are based primarily on years of service and employee compensation near retirement. It is the Company’s policy to fund the plans’ costs as they accrue. Plan assets are comprised principally of bonds, common stocks and short-term investments. The components of estimated net periodic pension cost for the plans consisted of the following:

Quarter Ended March 31,	
2008	2007

Edgar Filing: OLD REPUBLIC INTERNATIONAL CORP - Form 10-Q

Service cost	\$	2.0	\$	2.3
Interest cost		3.8		3.4
E x p e c t e d r e t u r n o n p l a n assets		(4.1)		(3.9)
Recognized loss		.1		.8
Net cost	\$	1.8	\$	2.6

The Companies made no cash contributions to their pension plans in the first quarter 2008 and expect to make cash contributions of approximately \$6.0 million to their pension plans in the remaining portion of calendar year 2008.

5. Information About Segments of Business:

The Company is engaged in the single business of insurance underwriting. It conducts its operations through a number of regulated insurance company subsidiaries organized into three major segments, namely its General Insurance (property and liability insurance), Mortgage Guaranty and Title Insurance Groups. The results of a small life & health insurance business are included with those of its corporate and minor service operations. Each of the Company's segments underwrites and services only those insurance coverages which may be written by it pursuant to state insurance regulations and corporate charter provisions. Segment results exclude net realized investment gains or losses as these are aggregated in the consolidated totals. The contributions of Old Republic's insurance industry segments to consolidated totals are shown in the following table.

	Quarters Ended March 31,	
	2008	2007
General Insurance Group:		
Net premiums earned	\$ 512.7	\$ 521.7
Net investment income and other income	68.8	68.0
Total revenues before realized gains or losses	\$ 581.5	\$ 589.7
Income before taxes and realized investment gains or losses (a)	\$ 89.8	\$ 102.9
Income tax expense on above	\$ 26.5	\$ 31.0
Mortgage Guaranty Group:		
Net premiums earned	\$ 147.6	\$ 118.0
Net investment income and other income	24.7	21.3
Total revenues before realized gains or losses	\$ 172.4	\$ 139.4
Income (loss) before taxes (credits) and realized investment gains or losses	\$ (122.3)	\$ 48.3
Income tax expense (credit) on above	\$ (44.2)	\$ 15.7
Title Insurance Group:		
Net premiums earned	\$ 118.1	\$ 154.5
Title, escrow and other fees	42.5	55.5
Sub-total	160.7	210.1
Net investment income and other income	6.3	7.1
Total revenues before realized gains or losses	\$ 167.1	\$ 217.2
Income (loss) before tax credits and realized investment gains or losses (a)	\$ (12.6)	\$.7
Income tax credit on above	\$ (4.9)	\$ (.2)

Edgar Filing: OLD REPUBLIC INTERNATIONAL CORP - Form 10-Q

Consolidated Revenues:

T o t a l r e v e n u e s o f a b o v e C o m p a n y segments	\$	921.1	\$	946.3
Other sources (b)		38.4		33.3

Consolidated income (loss) before income taxes (credits)	\$	(39.6)	\$	155.6

Consolidated Income Tax Expense (Credit):

Total income tax expense (credit) for above Company segments	\$	(22.5)	\$	46.5
Other sources – net (b)		1.6		.2
Income tax expense on consolidated net realized investment gains		.3		1.0
C o n s o l i d a t e d i n c o m e t a x e x p e n s e (credit)	\$	(20.5)	\$	47.8

	March 31, 2008	December 31, 2007
Consolidated Assets:		
General	\$ 9,695.6	\$ 9,769.9
Mortgage	2,624.9	2,523.8
Title	777.7	770.4
Other assets (b)	438.9	437.9
C o n s o l i d a t i o n e l i m i n a t i o n adjustments	(287.5)	(211.5)
Consolidated	\$ 13,249.7	\$ 13,290.6

In the above tables, net premiums earned on a GAAP basis differ slightly from statutory amounts due to certain differences in calculations of unearned premium reserves under each accounting method.

- (a) Income (loss) before taxes (credits) is reported net of interest charges on intercompany financing arrangements with Old Republic's holding company parent for the following segments: General - \$3.5 million and \$4.2 million for the quarters ending March 31, 2008 and 2007, respectively; Title - \$.7 million and \$.3 million for the quarters ending March 31, 2008 and 2007, respectively.
- (b) Represents amounts for Old Republic's holding company parent, minor corporate services subsidiaries, and a small life and health insurance operation.

6. Commitments and Contingent Liabilities:

Legal proceedings against the Company arise in the normal course of business and usually pertain to claim matters related to insurance policies and contracts issued by its insurance subsidiaries. Other legal proceedings are discussed below.

Purported class action lawsuits are pending against the Company's principal title insurance subsidiary, Old Republic National Title Insurance Company ("ORNTIC") in state and federal courts in Connecticut, New Jersey, Ohio, Pennsylvania and Texas. The plaintiffs allege that, pursuant to rate schedules filed by ORNTIC or by state rating bureaus with the state insurance regulators, ORNTIC was required to, but failed to give consumers reissue and/or refinance credits on the premiums charged for title insurance covering mortgage refinancing transactions. Substantially similar lawsuits are also pending against other unaffiliated title insurance companies in these and other states as well. The actions seek damages and declaratory and injunctive relief. ORNTIC intends to defend vigorously against the actions but, at this stage in the litigation, the Company cannot estimate the ultimate costs it may incur as the actions proceed to their conclusions.

Since early February 2008, more than 50 purported consumer class action lawsuits have been filed against the principal title insurance companies, their subsidiaries and affiliates, and title insurance rating bureaus or associations in at least 10 states. The suits are substantially identical in alleging that the defendant title insurers engaged in illegal price-fixing agreements to set artificially high premium rates and conspired to create premium rates which the state insurance regulatory authorities could not evaluate and therefore, could not adequately regulate. The Company and its principal title insurance subsidiary, Old Republic National Title Insurance Company, are among the named defendants in 25 of these actions, and are likely to be included in others. A second subsidiary, American Guaranty Title Insurance Company, is also named in most but not all of the same suits. The Company and its subsidiaries intend to defend vigorously against all of these actions and, given the recency of these actions, are unable to estimate the costs they may incur in defending them to their conclusions.

Purported class action lawsuits are also pending against two of the Company's title agency subsidiaries, Old Republic Title & Escrow, Ltd. and Old Republic Title Company, in the Superior Court of Washington, King County, and the U.S. District Court for the Northern District of California, respectively. The action in Washington alleges that the Company's subsidiary overcharged customers for escrow-related fees and did not disclose to customers that it would keep interest or credits or benefits in lieu of interest on money deposited into escrow. The action in California is brought by and on behalf of Hispanic home buyers in Monterey County against various real estate developers, brokers, mortgage brokers, mortgage lenders, mortgage loan servicers, as well as the Company's title agency subsidiary, and alleges that the title agency failed to provide adequate disclosures to protect the buyers from the abusive sales and predatory lending practices of the other defendants. Both actions seek damages, declaratory and injunctive relief. The Company's subsidiaries intend to defend vigorously against both actions and are unable at this early stage in the litigation to estimate the costs they may incur in defending these actions to their conclusions.

OLD REPUBLIC INTERNATIONAL CORPORATION
MANAGEMENT ANALYSIS OF FINANCIAL POSITION AND RESULTS OF OPERATIONS
Quarters Ended March 31, 2008 and 2007
(\$ in Millions, Except Share Data)

OVERVIEW

This management analysis of financial position and results of operations pertains to the consolidated accounts of Old Republic International Corporation (“Old Republic” or “the Company”). The Company conducts its operations through three major regulatory segments, namely, its General (property and liability), Mortgage Guaranty, and Title insurance segments. A small life and health insurance business, accounting for 2.9% of consolidated revenues for the quarter ended March 31, 2008 and 2.1% of consolidated assets as of March 31, 2008, is included within the corporate and other caption of this financial report. The consolidated accounts are presented on the basis of generally accepted accounting principles (“GAAP”). This management analysis should be read in conjunction with the consolidated financial statements and the footnotes appended to them.

The insurance business is distinguished from most others in that the prices (premiums) charged for various insurance coverages are set without certainty of the ultimate benefit and claim costs that will emerge or be incurred, often many years after issuance and expiration of a policy. This basic fact casts Old Republic as a risk-taking enterprise managed for the long run. Management therefore conducts the business with a primary focus on achieving favorable underwriting results over cycles, and on the maintenance of financial soundness in support of the insurance subsidiaries’ long-term obligations to insurance beneficiaries. To achieve these objectives, adherence to insurance risk management principles is stressed, and asset diversification and quality are emphasized. In addition to income arising from Old Republic’s basic underwriting and related services functions, significant investment income is earned from invested funds generated by those functions and from shareholders’ capital. Investment management aims for stability of income from interest and dividends, protection of capital, and sufficient liquidity to meet insurance underwriting and other obligations as they become payable in the future. Securities trading and the realization of capital gains are not objectives. The investment philosophy is therefore best characterized as emphasizing value, credit quality, and relatively long-term holding periods. The Company’s ability to hold both fixed maturity and equity securities for long periods of time is in turn enabled by the scheduling of maturities in contemplation of an appropriate matching of assets and liabilities.

In light of the above factors, the Company’s affairs are managed without regard to the arbitrary strictures of quarterly or even annual reporting periods that American industry must observe. In Old Republic’s view, such short reporting time frames do not comport well with the long-term nature of much of its business. Management believes that the Company’s operating results and financial condition can best be evaluated by observing underwriting and overall operating performance trends over succeeding five to ten year intervals. Such extended periods can encompass one or two economic and/or underwriting cycles, and thereby provide appropriate time frames for such cycles to run their course and for reserved claim costs to be quantified with greater finality and effect.

EXECUTIVE SUMMARY

Old Republic’s consolidated operating results, which exclude net realized investment gains, decreased significantly in this year’s first quarter. The reduced performance stemmed from ongoing weakness in the Company’s housing-related mortgage guaranty and title insurance lines. In management’s opinion, the substantial dislocations that have enveloped all businesses with housing and mortgage-lending exposures are likely to exert earnings pressures well into 2009. These lowered expectations aside, the Company’s strong financial underpinnings and the earnings sustainability of its general insurance business should provide necessary earnings support and capital management flexibility for the resumption of positive operating trends in 2010 and beyond.

Edgar Filing: OLD REPUBLIC INTERNATIONAL CORP - Form 10-Q

Consolidated Results – The major components of Old Republic’s consolidated results were as follows for the periods shown:

	Quarters Ended March 31,		
	2008	2007	Change
Operating revenues:			
General insurance	\$ 581.5	\$ 589.7	-1.4%
Mortgage guaranty	172.4	139.4	23.7
Title insurance	167.1	217.2	-23.1
Corporate and other	29.6	24.5	
Total	\$ 950.7	\$ 970.9	-2.1%
Pretax operating income (loss):			
General insurance	\$ 89.8	\$ 102.9	-12.7%
Mortgage guaranty	(122.3)	48.3	-353.3
Title insurance	(12.6)	0.7	N/M
Corporate and other	4.6	0.6	
Sub-total	(40.5)	152.6	-126.6
Realized investment gains (losses):			
From sales	0.9	2.9	
From impairments	-	-	
Net realized investment gains	0.9	2.9	
Consolidated pretax income (loss)	(39.6)	155.6	-125.5
Income taxes (credits)	(20.5)	47.8	-143.0
Net income (loss)	\$ (19.0)	\$ 107.7	-117.7%
Consolidated underwriting ratio:			
Benefit ratio	76.6%	48.6%	
Expense ratio	39.1	43.6	
Composite ratio	115.7%	92.2%	
Components of diluted earnings per share:			
Net operating income (loss)	\$ (0.08)	\$ 0.45	-117.8%
Net realized investment gains	-	0.01	
Net income (loss)	\$ (0.08)	\$ 0.46	-117.4%

N/M = not meaningful

The above table shows both operating and net income to highlight the effects of realized investment gain or loss recognition and any non-recurring items on period-to-period comparisons. Operating income, however, does not replace net income computed in accordance with GAAP as a measure of total profitability.

The recognition of realized investment gains or losses can be highly discretionary and arbitrary due to such factors as the timing of individual securities sales, recognition of estimated losses from write-downs for impaired securities, tax-planning considerations, and changes in investment management judgments relative to the direction of securities markets or the future prospects of individual investees or industry sectors. Likewise, non-recurring items which may emerge from time to time, can distort the comparability of the Company's results from period to period. Accordingly, management uses net operating income, a non-GAAP financial measure, to evaluate and better explain operating performance, and believes its use enhances an understanding of Old Republic's basic business results.

General Insurance Results – First quarter 2008 general insurance earnings were mainly affected by a slightly lower earned premium base and the higher claim ratio shown in the following table:

	General Insurance Group		
	Quarters Ended March 31,		
	2008	2007	Change
Net premiums earned	\$ 512.7	\$ 521.7	-1.7%
Net investment income	64.5	62.8	2.7
Pretax operating income	\$ 89.8	\$ 102.9	-12.7%
Claims ratio	69.9%	64.5%	
Expense ratio	24.4	26.9	
Composite ratio	94.3%	91.4%	

Earned premiums trended lower in this year's first three months. A moderately declining rate environment for most commercial insurance prices in the past two years has precluded more positive additions to Old Republic's premium base. For this year's first quarter, the slightly lower top line was accompanied by an increase in the claims ratio to 69.9% from 64.5% in last year's first quarter, versus an average of 66.8% for the five most recent calendar years. This year's higher claims ratio was driven mostly by greater loss costs in Old Republic's consumer credit indemnity line and, to a lesser extent, those of its general aviation and truck physical damage coverages.

Expense-wise, the ratio of 24.4% to earned premiums in the first three months of 2008 compared favorably with the 26.9% registered in last year's first quarter, and the average of 24.8% for the five years ended in 2007. This most recent quarterly decline reflects temporary differences in volume contributions by insurance coverages experiencing varying year-over-year production volumes and expense content. Over the near term, however, these differences should attenuate and trend toward longer term averages.

General Insurance Group net investment income growth, up 2.7% for this year's first quarter, was influenced by the combination of a greater invested asset base, slightly higher market yields on fixed maturity securities, and lower dividend yields on equity holdings.

Mortgage Guaranty Results – A continued rise in claim costs, driven mainly by higher mortgage loan delinquencies and claim severity, overcame a strong double digit increase in net premiums earned for this year's first three months. As a consequence, pretax operating results were unprofitable for the third consecutive quarter. Key indicators of this cyclical reversal in profitability for Old Republic's second largest business segment are shown below and in the accompanying statistical exhibit.

	Mortgage Guaranty Group		
	Quarters Ended March 31,		
	2008	2007	Change
Net premiums earned	\$ 147.6	\$ 118.0	25.1%
Net investment income	21.5	18.9	13.7
Pretax operating income (loss)	\$ (122.3)	\$ 48.3	-353.3%
Claims ratio	181.1%	54.4%	
Expense ratio	16.4	20.8	
Composite ratio	197.5%	75.2%	

Mortgage guaranty premium growth of 25.1% in this year's first quarter was mostly due to a 34.2% increase in traditional primary risk in force vis-à-vis the first quarter of 2007. Growth of risk in force was in turn driven by higher persistency of traditional primary business produced in prior years (78.3% for this year's first quarter versus 73.7% in the same period of 2007), and a 70.3% year-over-year increase in new insurance written resulting from greater market acceptance of traditional primary mortgage guaranty insurance.

The unprecedented cyclical downturn in housing and related mortgage finance industries currently affecting this Old Republic segment, however, contributed to the above noted offsetting impact of claim costs. Such costs reflect the combination of unfavorable loan default trends, greater claim severity caused by the larger insured loan values of recent years, and lessened opportunities to mitigate reported claims. Inflated inventories of unsold homes, weakening home values, and a more restrictive credit environment are main causes for these lessened mitigation opportunities.

This year's first quarter incurred loss ratio increased to 181.1% from 54.4% registered in the same period last year. By contrast the ratio of paid losses to earned premiums rose from 35.3% in the first quarter of 2007 to 55.0% in the latest quarter. The disparity between paid and incurred losses is caused by much greater claim reserve provisions which accounted for 126.1 loss ratio points in this year's first quarter, compared to just 19.1 loss ratio points in the same quarter of 2007, and 76.3 loss ratio points for all of 2007 when the incurred loss ratio rested at 118.8%. As of March

31, 2008, net claims reserves of \$831.0 million were approximately 206% higher than they were one year before, and 29% greater than the year end 2007 level.

Lower production and operating expenses, at 16.4% of net premiums earned for this year's first three months, continued to be a bright spot in operating trends. The beneficial effect of this lower cost element on bottom line results, however, was offset by the more severe impact of greater claim costs. The combination of all these factors led to a rise in the composite ratio of claims and expenses to 197.5% in this year's first quarter versus 75.2% in last year's first three months, 194.6% in the final quarter of 2007, and 136.5% for all of 2007.

Underwriting results notwithstanding, Old Republic's Mortgage Guaranty segment continued to post strong operating cash flows. These have been additive to a very liquid invested asset base which reached \$1.91 billion as of March 31, 2008, up 21.1% from the level attained one year earlier. The greater invested asset base produced 13.7% more investment income for the quarter.

Title Insurance Results – Old Republic’s title insurance business registered an operating loss for this year’s first quarter. Key indicators of its results are shown in the following table:

	Title Insurance Group		
	Quarters Ended March 31,		
	2008	2007	Change
Net premiums and fees earned	\$ 160.7	\$ 210.1	-23.5%
Net investment income	6.4	6.7	-4.3
Pretax operating income (loss)	\$ (12.6)	\$ 0.7	N/M
Claims ratio	7.0%	6.0%	
Expense ratio	104.5	96.8	
Composite ratio	111.5%	102.8%	

The ongoing cyclical downturn in the housing and related mortgage lending sectors of the U.S. economy led to further reductions of premiums and fees revenues for the title segment. Direct production facilities in the Western United States continued to sustain the greatest adverse effects of this downturn. While overall 2008 production and operating expenses dropped by 17.4% quarter over quarter, the decline was insufficient to counter the much larger reduction in title premium and fees revenues.

Corporate and Other Operations – The Company’s small life and health insurance business and the net costs associated with the parent holding company and internal services subsidiaries produced a greater gain in this year’s first quarter. Period-to-period variations in the results of these relatively minor elements of Old Republic’s operations usually stem from the volatility inherent to the small scale of its life and health business, fluctuations in the costs of external debt, and net interest on intra-system financing arrangements.

Cash, Invested Assets, and Shareholders’ Equity – The following table reflects Old Republic’s consolidated cash and invested assets as well as shareholders’ equity at the dates shown:

	% Change				
	March 2008	December 2007	March 2007	March '08/ Dec '07	March '08/ March '07
Cash and invested assets at fair value	\$ 8,895.1	\$ 8,924.0	\$ 8,407.4	-0.3%	5.8%
Shareholders’ equity:					
Total	\$ 4,376.7	\$ 4,541.6	\$ 4,471.8	-3.6%	-2.1%
Per common share	\$ 18.99	\$ 19.71	\$ 19.33	-3.7%	-1.8%

Composition of shareholders’ equity per share:

Edgar Filing: OLD REPUBLIC INTERNATIONAL CORP - Form 10-Q

Equity before items below	\$	19.08	\$	19.31	\$	19.06	-1.2%	0.1%
Unrealized investment gains or losses and other accumulated comprehensive income		(0.09)		0.40		0.27		
Total	\$	18.99	\$	19.71	\$	19.33	-3.7%	-1.8%

Consolidated cash flow from operating activities amounted to \$199.3 million for the first three months of 2008 versus \$197.1 million for the same period in 2007. Other than title insurance, each Old Republic segment remained cash flow - positive in this year's first quarter. Excluding the effects of unrealized gains or losses, the cash and invested asset base grew by 1.6% to \$8.94 billion between year-end 2007 and March 31st of this year, and by 8.0% for the fiscal twelve months ended on the latter date.

The investment portfolio reflects a current allocation of approximately 85% to fixed-maturity securities and 8% to equities. As has been the case for many years, Old Republic's invested assets are managed in consideration of enterprise-wide risk management objectives intended to assure solid funding of its subsidiaries' long-term obligations to insurance policyholders and other beneficiaries. Consequently, it contains little or no insurance risk-correlated asset exposures to real estate, mortgage-backed securities and collateralized debt obligations ("CDO's"), nor to derivatives, junk bonds, or illiquid private equity investments. In a similar vein, the Company does not engage in hedging transactions and does not invest in securities whose values are predicated on non-regulated financial instruments exhibiting amorphous counter-party risk attributes.

Substantially all changes in the shareholders' equity account for the periods reported upon reflect the registered earnings or losses, dividend payments, and changes in market valuations of invested assets. A summary of changes in book value per share follows:

	Three Months Ended March 31, 2008	Fiscal Twelve Months Ended March 31, 2008
B e g i n n i n g b o o k v a l u e p e r \$ share	19.71	\$ 19.33
Changes in shareholders' equity for the periods:		
N e t o p e r a t i n g i n c o m e (loss)	(0.08)	0.44

Net change	(0.72)	(0.34)
E n d i n g b o o k v a l u e p e r \$ share	18.99	\$ 18.99

TECHNICAL MANAGEMENT ANALYSIS

CRITICAL ACCOUNTING ESTIMATES

The Company's annual and interim financial statements incorporate a large number and types of estimates relative to matters which are highly uncertain at the time the estimates are made. The estimation process required of an insurance enterprise is by its very nature highly dynamic inasmuch as it necessitates a continuous evaluation, analysis, and quantification of factual data as it becomes known to the Company. As a result, actual experienced outcomes can differ from the estimates made at any point in time, and thus affect future periods' reported revenues, expenses, net income, and financial condition.

Old Republic believes that its most critical accounting estimates relate to: a) the determination of other-than-temporary impairments in the value of fixed maturity and equity investments; b) the establishment of deferred acquisition costs which vary directly with the production of insurance premiums; c) the recoverability of reinsured paid and/or outstanding losses; and d) the establishment of reserves for losses and loss adjustment expenses. The major assumptions and methods used in setting these estimates are discussed in the Company's 2007 Annual Report on Form 10K.

CHANGES IN ACCOUNTING POLICIES

In July 2006, the Financial Accounting Standards Board (“FASB”) issued its Interpretation No. 48, Accounting for Uncertainty in Income Taxes (“FIN 48”), which became effective for the Company in the first quarter of 2007. FIN 48 provides recognition criteria and a related measurement model for uncertain tax positions taken or expected to be taken in income tax returns. FIN 48 requires that a position taken or expected to be taken in a tax return be recognized in the financial statements when it is more likely than not that the position would be sustained upon examination by tax authorities. The Company’s unrecognized tax benefits, including interest and penalty accruals, are not considered material to the consolidated financial statements and did not change significantly upon the adoption of FIN 48. There are no tax uncertainties that are expected to result in significant increases or decreases to unrecognized tax benefits within the next twelve month period. As indicated in Note 1 of the Notes to Consolidated Financial Statements, the Company believes that the major uncertainties relating to its tax position pertain to timing differences in the recognition of taxable income. Accordingly, the annual effective tax rate, other than possible interest and penalties, would be largely unaffected as an increase in currently due income taxes would likely be offset by a corresponding deferred income tax adjustment.

In September 2006, the FASB issued Statement of Financial Accounting Standards No. 157 Fair Value Measurements (“FAS 157”), which establishes a framework for measuring fair value. FAS 157 applies to existing accounting pronouncements that require or permit fair value measurements, and became effective for the Company in the first quarter of 2008. Disclosure requirements associated with the standard have been incorporated in Note 3 of the Notes to Consolidated Financial Statements.

The adoption of FIN 48 and FAS 157 result in additional financial statement disclosures for GAAP reporting purposes and have no effect on the conduct of the Company’s business, its financial condition and results of operations.

FINANCIAL POSITION

The Company's financial position at March 31, 2008 reflected decreases in assets and common shareholders' equity of .3%, and 3.6%, respectively, and increased liabilities of 1.4% when compared to the immediately preceding year-end. Cash and invested assets represented 67.1% of consolidated assets as of March 31, 2008 and December 31, 2007. Consolidated operating cash flow was positive at \$199.3 million in the first quarter of 2008 compared to \$197.1 million in the same period of 2007. As of March 31, 2008, invested assets decreased .6% to \$8,712.8 million principally as a result of a net decline in the market valuation of such assets.

Investments - During the first quarters of 2008 and 2007, the Company committed most investable funds to short to intermediate-term fixed maturity securities. At both March 31, 2008 and 2007, approximately 99% of the Company's investments consisted of marketable securities. Old Republic continues to adhere to its long-term policy of investing primarily in investment grade, marketable securities. Investable funds have not been directed to so-called "junk bonds", illiquid private equity investments, real estate, mortgage loans, mortgage-backed securities, collateralized debt obligations ("CDO's"), or derivatives. In a similar vein, the Company does not invest in securities whose values are predicated on non-regulated financial instruments exhibiting amorphous counter-party risk attributes. At March 31, 2008, the Company had no fixed maturity investments in default as to principal and/or interest.

Relatively high short-term maturity investment positions continued to be maintained as of March 31, 2008. Such positions reflect a large variety of seasonal and intermediate-term factors including current operating needs, expected operating cash flows, quarter-end cash flow seasonality, and investment strategy considerations. Accordingly, the future level of short-term investments will vary and respond to the interplay of these factors and may, as a result, increase or decrease from current levels.

The Company does not own or utilize derivative financial instruments for the purpose of hedging, enhancing the overall return of its investment portfolio, or reducing the cost of its debt obligations. With regard to its equity portfolio, the Company does not own any options nor does it engage in any type of option writing. Traditional investment management tools and techniques are employed to address the yield and valuation exposures of the invested assets base. The long-term fixed maturity investment portfolio is managed so as to limit various risks inherent in the bond market. Credit risk is addressed through asset diversification and the purchase of investment grade securities. Reinvestment rate risk is reduced by concentrating on non-callable issues, and by taking asset-liability matching considerations into account. Purchases of mortgage and asset backed securities, which have variable principal prepayment options, are generally avoided. Market value risk is limited through the purchase of bonds of intermediate maturity. The combination of these investment management practices is expected to produce a more stable long-term fixed maturity investment portfolio that is not subject to extreme interest rate sensitivity and principal deterioration.

The market value of the Company's long-term fixed maturity investment portfolio is sensitive, however, to fluctuations in the level of interest rates, but not materially affected by changes in anticipated cash flows caused by any prepayments. The impact of interest rate movements on the long-term fixed maturity investment portfolio generally affects net unrealized gains or losses. As a general rule, rising interest rates enhance currently available yields but typically lead to a reduction in the fair value of existing fixed maturity investments. By contrast, a decline in such rates reduces currently available yields but usually serves to increase the fair value of the existing fixed maturity investment portfolio. All such changes in fair value are reflected, net of deferred income taxes, directly in the shareholders' equity account, and as a separate component of the statement of comprehensive income. Given the Company's inability to forecast or control the movement of interest rates, Old Republic sets the maturity spectrum of its fixed maturity securities portfolio within parameters of estimated liability payouts, and focuses the overall portfolio on high quality investments. By so doing, Old Republic believes it is reasonably assured of its ability to hold securities

to maturity as it may deem necessary in changing environments, and of ultimately recovering their aggregate cost.

Possible future declines in fair values for Old Republic's bond and stock portfolios would negatively affect the common shareholders' equity account at any point in time, but would not necessarily result in the recognition of realized investment losses. The Company reviews the status and market value changes of each of its investments on at least a quarterly basis during the year, and estimates of other-than-temporary impairments in the portfolio's value are evaluated and established at each quarterly balance sheet date. In reviewing investments for other-than-temporary impairment, the Company, in addition to a security's market price history, considers the totality of such factors as the issuer's operating results, financial condition and liquidity, its ability to access capital markets, credit rating trends, most current audit opinion, industry and securities markets conditions, and analyst expectations to reach its conclusions. Sudden market value declines caused by such adverse developments as newly emerged or imminent bankruptcy filings, issuer default on significant obligations, or reports of financial accounting developments that bring into question the validity of previously reported earnings or financial condition, are recognized as realized losses as soon as credible publicly available information emerges to confirm such developments. Accordingly, the recognition of losses from other-than-temporary value impairments is subject to a great deal of judgment as well as turns of events over which the Company can exercise little or no control. In the event the Company's estimate of other-than-temporary impairments is insufficient at any point in time, future periods' net income would be affected adversely by the recognition of additional realized or impairment losses, but its financial condition would not necessarily be affected adversely inasmuch as such losses, or a portion of them, could have been recognized previously as unrealized losses.

The following tables show certain information relating to the Company's fixed maturity and equity portfolios as of the dates shown:

Credit Quality Ratings of Fixed Maturity Securities (a)

	March 31, 2008	December 31, 2007
Aaa	30.3%	32.9%
Aa	18.1	17.0
A	29.6	27.9
Baa	19.8	20.2

Number of Issues in Loss Position:				
Fixed Maturity Securities:				
One to six months		79	-	-
Seven to twelve months		31	1	-
More than twelve months		133	3	1
Total		243	4	1
Equity Securities:				
One to six months		8	5	1
Seven to twelve months		1	-	-
More than twelve months		-	1	-
Total		9	6	1

(h) At March 31, 2008 the number of issues in an unrealized loss position represent 12.7% as to fixed maturities, and 59.3% as to equity securities of the total number of such issues held by the Company.

The aging of issues with unrealized losses employs closing market price comparisons with an issue's original cost. The percentage reduction from original cost reflects the decline as of a specific point in time (March 31, 2008 in the previous table) and, accordingly, is not indicative of a security's value having been consistently below its cost at the percentages and throughout the periods shown.

Age Distribution of Fixed Maturity Securities

	March 31, 2008	December 31, 2007
Maturity Ranges:		
Due in one year or less	11.4%	11.7%
Due after one year through five years	50.2	46.8
Due after five years through ten years	38.1	41.1
Due after ten years through fifteen years	.3	.4
Due after fifteen years	-	-
Total	100.0%	100.0%
Average Maturity in Years		
Duration (i)	3.7	3.8

(i) Duration is used as a measure of bond price sensitivity to interest rate changes. A duration of 3.7 as of March 31, 2008 implies that a 100 basis point parallel increase in interest rates from current levels would result in a possible decline in the market value of the long-term fixed maturity investment portfolio of approximately 3.7%.

Composition of Unrealized Gains (Losses)

	March 31, 2008	December 31, 2007
Fixed Maturity Securities:		
Amortized cost	\$ 7,230.1	\$ 7,312.2
Estimated fair value	7,389.2	7,383.6
Gross unrealized gains	200.0	106.9
Gross unrealized losses	(40.9)	(35.6)
Net unrealized gains	\$ 159.0	\$ 71.3
Equity Securities:		
Cost	\$ 882.0	\$ 807.3
Estimated fair value	659.0	842.1
Gross unrealized gains	81.9	115.1

G r o s s u n r e a l i z e d losses	(304.9)	(80.4)
N e t u n r e a l i z e d g a i n s (losses)	\$ (222.9)	\$ 34.7

Other Assets - Among other major assets, substantially all of the Company's receivables are not past due. Reinsurance recoverable balances on paid or estimated unpaid losses are deemed recoverable from solvent reinsurers or have otherwise been reduced by allowances for estimated amounts unrecoverable. Deferred policy acquisition costs are estimated by taking into account the variable costs of producing specific types of insurance policies, and evaluating their recoverability on the basis of recent trends in claims costs. The Company's deferred policy acquisition cost balances have not fluctuated substantially from period-to-period and do not represent significant percentages of assets or shareholders' equity.

Liquidity - The parent holding company meets its liquidity and capital needs principally through dividends paid by its subsidiaries. The insurance subsidiaries' ability to pay cash dividends to the parent company is generally restricted by law or subject to approval of the insurance regulatory authorities of the states in which they are domiciled. The Company can receive up to \$414.7 million in dividends from its subsidiaries in 2008 without the prior approval of regulatory authorities. The liquidity achievable through such permitted dividend payments is more than adequate to cover the parent holding company's currently expected cash outflows represented mostly by interest on outstanding debt and quarterly cash dividend payments to shareholders. In addition, Old Republic can access the commercial paper market for up to \$300.0 million to meet unanticipated liquidity needs of which \$60.0 million was outstanding at March 31, 2008.

Capitalization - Old Republic's total capitalization of \$4,443.6 million at March 31, 2008 consisted of debt of \$66.9 million and common shareholders' equity of \$4,376.7 million. Changes in the common shareholders' equity account reflect primarily operating results for the period then ended, dividend payments, and changes in market valuations of invested assets. Old Republic has paid cash dividends to its shareholders without interruption since 1942, and has increased the regular annual rate in each of the past 26 years. The annual dividend rate is typically reviewed and approved by the Board of Directors in the first quarter of each year. In establishing each year's cash dividend rate the Company does not follow a strict formulaic approach. Rather, it favors a gradual rise in the annual dividend rate that is largely reflective of

long-term consolidated operating earnings trends. Accordingly, each year's dividend rate is set judgmentally in consideration of such key factors as the dividend paying capacity of the Company's insurance subsidiaries, the trends in average annual statutory and GAAP earnings for the six most recent calendar years, and management's long-term expectations for the Company's consolidated business. At its February, 2008 meeting, the Board of Directors approved a new quarterly cash dividend rate of 17 cents per share effective in the second quarter of 2008, up from 16 cents per share, subject to the usual quarterly authorizations.

At its May, 2006 meeting, the Company's Board of Directors authorized the reacquisition of up to \$500.0 million of common shares as market conditions warrant during the two year period from that date. During 2007, the Company reacquired 1,566,100 shares of its common stock for \$28.3 million or \$18.13 per share. As of March 31, 2008, a total of \$471.6 million of this authorization remains unutilized.

RESULTS OF OPERATIONS

Revenues: Premiums & Fees

Pursuant to GAAP applicable to the insurance industry, revenues are associated with the related benefits, claims, and expenses.

Substantially all general insurance premiums are reflected in income on a pro-rata basis. Earned but unbilled premiums are generally taken into income on the billing date, while adjustments for retrospective premiums, commissions and similar charges or credits are accrued on the basis of periodic evaluations of current underwriting experience and contractual obligations.

The Company's mortgage guaranty premiums primarily stem from monthly installment policies. Accordingly, substantially all such premiums are generally written and earned in the month coverage is effective. With respect to annual or single premium policies, earned premiums are largely recognized on a pro-rata basis over the terms of the policies.

Title premium and fee revenues stemming from the Company's direct operations (which include branch offices of its title insurers and wholly owned agency subsidiaries) represent approximately 34% of 2008 consolidated title business revenues. Such premiums are generally recognized as income at the escrow closing date which approximates the policy effective date. Fee income related to escrow and other closing services is recognized when the related services have been performed and completed. The remaining 66% of consolidated title premium and fee revenues is produced by independent title agents and underwritten title companies. Rather than making estimates that could be subject to significant variance from actual premium and fee production, the Company recognizes revenues from those sources upon receipt. Such receipts can reflect a three to four month lag relative to the effective date of the underlying title policy, and are offset concurrently by production expenses and claim reserve provisions.

The major sources of Old Republic's earned premiums and fees for the periods shown were as follows:

	Earned Premiums and Fees					% Change from prior period
	General	Mortgage	Title	Other	Total	
Years Ended December 31:						
2005	\$	1,805.2				8.7%

Edgar Filing: OLD REPUBLIC INTERNATIONAL CORP - Form 10-Q

While there is no consensus in the marketplace as to the precise definition of "sub-prime", Old Republic generally views loans with Fair, Issac & Company ("FICO") credit scores below 620, loans underwritten with reduced levels of documentation and loans with loan to value ratios in excess of 95% as having a higher risk of default. Risk in force concentrations by these attributes are disclosed in the following tables for both traditional primary and bulk production. Premium rates for loans exhibiting greater risk attributes are typically higher in anticipation of potentially greater defaults and claim costs. Additionally, bulk insurance policies, which represent 10.2% of total net risk in force,

are frequently subject to deductibles and aggregate stop losses which serve to limit the overall risk on a pool of insured loans. As the decline in the housing markets has accelerated and mortgage lending standards have tightened, rising defaults and the attendant increases in reserves and paid claims on higher risk loans have become more significant drivers of increased claim costs.

Net Risk in Force

Net Risk in Force by Type:	Traditional Primary	Bulk	Other	Total
As of December 31:				
2005	\$ 14,711.2	\$ 1,758.8	\$ 586.1	\$ 17,056.2

2008	34.2%	65.8%

Revenues: Net Investment Income

Net investment income is affected by trends in interest and dividend yields for the types of securities in which the Company's funds are invested during individual reporting periods. The following tables reflect the segmented and consolidated invested asset bases as of the indicated dates, and the investment income earned and resulting yields on such assets. Since the Company can exercise little control over market values, yields are evaluated on the basis of investment income earned in relation to the amortized cost of the underlying invested assets, though yields based on the market values of such assets are also shown in the statistics below.

	Invested Assets at Cost					Market Value	Invested Assets at
	General	Mortgage	Title	Corporate and Other	Total	Adjustment	Market Value
As of December 31:							
2006	\$ 5,524.8	\$ 1,571.6	\$ 611.1	\$ 246.6	\$ 7,954.3	\$ 101.8	\$ 8,056.1

Revenues: Net Realized Gains

The Company's investment policies have not been designed to maximize or emphasize the realization of investment gains. Rather, these policies aim to assure a stable source of income from interest and dividends, protection of capital, and the providing of sufficient liquidity to meet insurance underwriting and other obligations as they become payable in the future. Sales of fixed maturity securities arise mostly from scheduled maturities and early calls; for the first quarters of 2008 and 2007, 92.1% and 92.2%, respectively, of all such dispositions resulted from these occurrences. Dispositions of equity securities at a realized gain or loss reflect such factors as ongoing assessments of issuers' business prospects, rotation among industry sectors, and tax planning considerations. Additionally, the amount of net realized gains and losses registered in any one accounting period are affected by the aforementioned assessments of securities' values for other than temporary impairment. As a result of the interaction of all these factors and considerations, net realized investment gains or losses can vary significantly from period-to-period, and in the Company's view are not indicative of any particular trend or result in the basics of its insurance business.

The following table reflects the composition of net realized gains or losses for the periods shown. A significant portion of Old Republic's indexed stock portfolio was sold at a gain during 2007, with proceeds redirected to a more concentrated, select list of common stocks expected to provide greater long-term total returns. Relatively greater realized gains in equity securities in 2005 resulted largely from sales of substantial portions of actively managed equity holdings and reinvestment of proceeds in index-style investment portfolios.

Realized Gains (Losses) on Disposition of Securities	Impairment Losses on Securities

Expenses: Benefits and Claims

In order to achieve a necessary matching of premium and fee revenues and expenses, the Company records the benefits, claims and related settlement costs that have been incurred during each accounting period. Total claim costs are affected by the amount of paid claims and the adequacy of reserve estimates established for current and prior years' claim occurrences at each balance sheet date.

The following table shows a breakdown of gross and net of reinsurance claim and loss adjustment expense reserve estimates for major types of insurance coverages as of March 31, 2008 and December 31, 2007:

	March 31, 2008		December 31, 2007	
	Gross	Net	Gross	Net
Claim and Loss Adjustment Expense Reserves:				
Commercial automobile (mostly trucking)	\$ 1,027.8	\$ 841.7	\$ 1,041.6	\$ 845.6
Workers' compensation	2,214.8	1,275.3	2,195.5	1,265.8
General liability	1,175.0	592.2	1,173.2	587.1
Other coverages	705.6	496.2	691.2	476.9
Unallocated loss adjustment expense reserves	154.9	104.1	154.8	104.0
Total general insurance reserves	5,278.3	3,309.8	5,256.5	3,279.7
Mortgage guaranty				
Title	856.7	829.0	645.2	642.9
Life and health	272.1	272.1	273.5	273.5
Unallocated loss adjustment expense reserves – other coverages	32.5	26.7	30.3	24.7
Total claim and loss adjustment expense reserves	\$ 6,465.3	\$ 4,463.3	\$ 6,231.1	\$ 4,246.3
Asbestosis and environmental claim reserves included in the above general insurance reserves:				
Amount	\$ 182.6	\$ 152.4	\$ 190.5	\$ 158.1
% of total general insurance reserves	3.5%	4.6%	3.6%	4.8%

The Company's reserve for loss and loss adjustment expenses represents the accumulation of estimates of ultimate losses, including incurred but not reported losses and loss adjustment expenses. The establishment of claim reserves by the Company's insurance subsidiaries is a reasonably complex and dynamic process influenced by a large variety of factors as further discussed below. Consequently, reserves established are a reflection of the opinions of a large number of persons, of the application and interpretation of historical precedent and trends, of expectations as to future

developments, and of management's judgment in interpreting all such factors. At any point in time the Company is exposed to possibly higher or lower than anticipated claim costs and the resulting changes in estimates are recorded in operations of the periods during which they are made. Increases to prior reserve estimates are often referred to as unfavorable development whereas any changes that decrease previous estimates of the Company's ultimate liability are referred to as favorable development.

Overview of Loss Reserving Process

Most of Old Republic's consolidated claim and related expense reserves stem from its general insurance business. At March 31, 2008, such reserves accounted for 81.6% and 74.2% of consolidated gross and net of reinsurance reserves, respectively, while similar reserves at December 31, 2007 represented 84.4% and 77.2% of the respective consolidated amounts.

The Company's reserve setting process reflects the nature of its insurance business and the decentralized basis upon which it is conducted. Old Republic's general insurance operations encompass a large variety of lines or classes of commercial insurance; it has negligible exposure to personal lines such as homeowners or private passenger automobile insurance that exhibit wide diversification of risks, significant frequency of claim occurrences, and high degrees of statistical credibility. Additionally, the Company's insurance subsidiaries do not provide significant amounts of insurance protection for premises; most of its property insurance exposures relate to cargo, incidental property, and insureds' inland marine assets. Consequently, the wide variety of policies issued and commercial insurance customers served require that loss reserves be analyzed and established in the context of the unique or different attributes of each block or class of business produced by the Company. For example, accident liability claims emanating from insured trucking companies or from general aviation customers become known relatively quickly, whereas claims of a general liability nature arising from the building activities of a construction company may emerge over extended periods of time. Similarly, claims filed pursuant to errors and omissions or directors and officers' ("E&O/D&O") liability coverages are usually not prone to immediate evaluation or quantification inasmuch as many such claims may be litigated over several years and their ultimate costs may be affected by the vagaries of judged or jury verdicts. Approximately 85% of the general insurance group's claim reserves stem from liability insurance coverages for commercial customers which typically require more extended periods of investigation and at times protracted litigation before they are finally settled. As a consequence of these and other factors, Old Republic does not utilize a single, overarching loss reserving approach.

The Company prepares periodic analyses of its loss reserve estimates for its significant insurance coverages. It establishes point estimates for most losses on an insurance coverage line-by-line basis for individual subsidiaries, sub-classes, individual accounts, blocks of business or other unique concentrations of insurance risks such as directors and officers' liability, that have similar attributes. Actuarially or otherwise derived ranges of reserve levels are not utilized as such in setting these reserves. Instead the reported reserves encompass the Company's best point estimates at each reporting date and the overall reserve level at any point in time therefore represents the compilation of a very large number of reported reserve estimates and the results of a variety of formula calculations largely driven by statistical analysis of historical data. Reserve releases or additions are implicitly covered by the point estimates incorporated in total reserves at each balance sheet date. The Company does not project future variability or make an explicit provision for uncertainty when determining its best estimate of loss reserves, although over the most recent ten-year period management's estimates have developed slightly favorably on an overall basis.

Aggregate loss reserves consist of liability estimates for claims that have been reported ("case") to the Company's insurance subsidiaries and reserves for claims that have been incurred but not yet reported ("IBNR") or whose ultimate costs may not become fully apparent until a future time. Additionally, the Company establishes unallocated loss adjustment expense reserves for loss settlement costs that are not directly related to individual claims. Such reserves are based on prior years' cost experience and trends, and are intended to cover the unallocated costs of claim departments' administration of case and IBNR claims over time. Long-term, disability-type workers' compensation reserves are discounted to present value based on interest rates that range from 3.5% to 4.0%.

A large variety of statistical analyses and formula calculations are utilized to provide for IBNR claim costs as well as additional costs that can arise from such factors as monetary and social inflation, changes in claims administration processes, changes in reinsurance ceded and recoverability levels, and expected trends in claim costs and related ratios. Typically, such formulas take into account so-called link ratios that represent prior years' patterns of incurred or paid loss trends between succeeding years, or past experience relative to progressions of the number of claims reported over time and ultimate average costs per claim.

Overall, reserves pertaining to several hundred large individual commercial insurance accounts that exhibit sufficient statistical credibility, and at times may be subject to retrospective premium rating plans or the utilization of varying levels or types of self-insured retentions through captive insurers and similar risk management mechanisms are established on an account by account basis using case reserves and applicable formula-driven methods. Large account reserves are usually set and analyzed for groups of coverages such as workers compensation, commercial auto and general liability that are typically underwritten jointly for many customers. For certain so-called long-tail categories of insurance such as retained or assumed excess liability or excess workers' compensation, officers and directors' liability, and commercial umbrella liability relative to which claim development patterns are particularly long, more volatile, and immature in their early stages of development, the Company judgmentally establishes the most current accident years' loss reserves on the basis of expected loss ratios. Such expected loss ratios typically reflect currently estimated loss ratios from prior accident years, adjusted for the effect of actual and anticipated rate changes, actual and anticipated changes in coverage, reinsurance, mix of business, and other anticipated changes in external factors such as trends in loss costs or the legal and claims environment. Expected loss ratios are generally used for the two to three most recent accident years depending on the individual class or category of business. As actual claims data emerges in succeeding interim and annual periods, the original accident year loss ratio assumptions are validated or otherwise adjusted sequentially through the application of statistical projection techniques such as the Bornhuetter/Ferguson method which utilizes data from the more mature experience of prior years to arrive at a likely indication of more recent years' loss trends and costs.

Mortgage guaranty insurance loss reserves are based on statistical calculations that take into account the number of reported insured mortgage loan defaults as of each balance sheet date, as well as experience-based estimates of IBNR. Further, such loss reserve estimates also take into account a large number of variables including trends in claim severity, potential salvage recoveries, expected cure rates for reported loan delinquencies at various stages of default,

and judgments relative to future employment levels, housing market activity, and mortgage loan interest costs, demand, and extensions.

Title insurance and related escrow services loss and loss adjustment expense reserves are established as point estimates to cover the projected settlement costs of known as well as IBNR losses related to premium and escrow service revenues of each reporting period. Reserves for known claims are based on an assessment of the facts available to the Company during the settlement process. The point estimates covering all claim reserves take into account IBNR claims based on past experience and evaluations of such variables as changing trends in the types of policies issued, changes in real estate markets and interest rate environments, and changing levels of loan refinancing, all of which can have a bearing on the emergence, number, and ultimate costs of claims.

Incurred Loss Experience

Management is of the opinion that the Company's overall reserving practices have been consistently applied over many years. For at least the past ten years, previously established aggregate reserves have produced reasonable estimates of the cumulative ultimate net costs of claims incurred. However, there are no guarantees that such outcomes will continue, and accordingly, no representation is made that ultimate net claim and related costs will not develop in future years to be greater or lower than currently established reserve estimates. In management's opinion, however, such potential development is not likely to have a material effect on the Company's consolidated financial position, although it could materially affect its consolidated results of operations for any one annual or interim reporting period. See further discussion in the Company's 2007 Annual Report on Form 10-K, under Item 1A - Risk Factors.

The percentage of net claims, benefits and related settlement expenses incurred as a percentage of premiums and related fee revenues of the Company's three major operating segments and for its consolidated results were as follows:

	General	Mortgage	Title	Consolidated
Years Ended December 31:				
2005	66.9%	37.2%	6.0%	43.3%
2006	65.9	42.8	5.9	45.3
2007	67.8	118.8	6.6	60.2
Quarters Ended March 31:				
2007	64.5	54.4	6.0	48.6
2008	69.9%	181.1%	7.0%	76.6%

The percentage of net claims, benefits and related settlement expenses measured against premiums earned by major general insurance types of coverage were as follows:

General Insurance Claims Ratios by Type of Coverage

	Commercial Automobile (mostly trucking)	Workers' Compensation	Financial Indemnity	Inland Marine and Property	General Liability	Other
Years Ended December 31:						
2005	66.9%	78.9%	48.9%	52.1%	97.4%	59.5%
2006	75.4	74.5	40.6	55.0	57.5	55.6
2007	74.0	70.9	69.6	54.9	59.9	55.9
Quarters Ended March 31:						
2007	76.2	68.8	51.9	50.8	48.2	60.4
2008	73.5%	70.1%	88.5%	48.6%	65.3%	54.7%

The general insurance portion of the claims ratio reflects reasonably consistent trends for all reporting periods. To a large extent this major cost factor reflects pricing and risk selection improvements that have been applied since 2001, together with elements of reduced loss severity and frequency. The higher claim ratio for financial indemnity coverages in 2007 and the first quarter of 2008 was driven principally by greater claim frequencies experienced in Old Republic's consumer credit indemnity coverage. During the three most recent calendar years, the general insurance group experienced favorable development of prior year loss reserves primarily due to the commercial automobile and the E&O/D&O (financial indemnity) lines of business; these were partially offset by unfavorable development in excess workers compensation coverages and for ongoing development of asbestos and environmental ("A&E") exposures (general liability). Unfavorable developments attributable to A&E claim reserves are due to periodic re-evaluations of such reserves as well as reclassifications of other coverages' reserves, typically workers compensation, deemed assignable to A&E types of losses.

Except for a small portion that emanates from ongoing primary insurance operations, a large majority of the A&E claim reserves posted by Old Republic stem mainly from its participations in assumed reinsurance treaties and insurance pools which were discontinued fifteen or more years ago and have since been in run-off status. With respect to the primary portion of gross A&E reserves, Old Republic administers the related claims through its claims personnel as well as outside attorneys, and posted reserves reflect its best estimates of ultimate claim costs. Claims administration for the assumed portion of the Company's A&E exposures is handled by the claims departments of unrelated primary or ceding reinsurance companies. While the Company performs periodic reviews of certain claim files managed by third parties, the overall A&E reserves it establishes respond to the paid claim and case reserve activity reported to the Company as well as available industry statistical data such as so-called survival ratios. Such

ratios represent the number of years' average paid losses for the three or five most recent calendar years that are encompassed by an insurer's A&E reserve level at any point in time. According to this simplistic appraisal of an insurer's A&E loss reserve level, Old Republic's average five year survival ratios stood at 7.4 years (gross) and 9.2 years (net of reinsurance) as of March 31, 2008 and 7.7 years (gross) and 10.7 years (net of reinsurance) as of December 31, 2007. Fluctuations in this ratio between years can be caused by the inconsistent pay out patterns associated with these types of claims. Incurred net losses for A&E claims have averaged 2.8% of general insurance group net incurred losses for the five years ended December 31, 2007.

The mortgage guaranty claims ratios have continued to rise in recent periods, principally reflecting higher paid losses, as well as expectations of greater claim frequency and severity. The most recent quarterly and full year 2007 claim ratios comparisons reflect a significant increase due primarily to increasing loss severity on reported delinquencies as well as to higher expected claim frequencies and the resulting impact on claims reserves. Claim severity has trended upward primarily due to loans with larger unpaid principal balances and corresponding risk moving into default along with a lower level of mitigation potential due to housing depreciation trends. Expectations of greater claim frequency are impacted by several factors, including the number of loans entering into default, the outlook for the housing market, tightening lending standards which effect borrowers' ability to refinance troubled loans, the aging of the bulk business, and the state of the economy overall, especially employment levels.

Average mortgage guaranty paid claims, and certain delinquency ratio data as of the end of the periods shown are listed below:

	Average Paid Claim Amount (a)		Delinquency Ratio	
	Traditional Primary	Bulk	Traditional Primary	Bulk
	Years Ended December 31:			
	\$	\$		
2005	24,255	20,639	4.67%	3.67%
2006	25,989	21,846	4.41	3.29
2007	32,214	34,951	5.47	6.85
Quarters Ended March 31:				
2007	28,076	28,192	4.22	3.51
	\$	\$		
2008	39,311	48,762	5.79%	9.13%

(a) Amounts are in whole dollars.

Traditional Primary Delinquency Ratios for Top Ten States (b):

	FL	TX	GA	IL	OH	CA	NJ	VA	NC	PA
As of December 31:										
2005	3.1%	5.7%	5.9%	4.2%	8.3%	1.8%	4.1%	2.2%	4.9%	4.7%
2006	2.7	4.5	6.1	4.5	7.8	2.9	4.1	2.6	4.6	4.8
2007	7.7	4.5	7.2	5.4	8.1	6.7	5.4	4.1	4.8	5.2
As of March 31:										
2007	3.2	4.1	5.9	4.2	7.5	2.8	3.9	2.6	3.9	4.3
2008	10.0%	4.3%	7.2%	5.9%	7.8%	8.8%	5.9%	4.3%	4.3%	5.2%

Edgar Filing: OLD REPUBLIC INTERNATIONAL CORP - Form 10-Q

2005	2.4%	5.3%	5.3%	2.8%	7.5%	.9%	3.7%	1.6%	3.8%	4.3%
2006	2.0	4.1	5.2	3.1	7.3	1.4	3.6	1.5	3.3	4.3
2007	6.9	4.5	6.7	5.0	8.0	5.5	5.5	4.4	4.1	5.1
As of March 31:										
2007	2.4	3.9	5.1	2.9	7.1	1.6	3.6	1.8	3.1	4.0
2008	9.7%	4.4%	7.2%	5.7%	8.1%	7.7%	6.5%	6.2%	4.0%	5.4%

(b) As determined by risk in force as of March 31, 2008, these 10 states represent 49.4%, 59.3%, and 50.0%, of traditional primary, bulk, and total risk in force, respectively.

The title insurance loss ratios remain in the low single digits due to a continuation of favorable trends in claims frequency and severity for business underwritten since 1992 in particular. Though still reasonably contained, the increases in claim costs in 2007 and for the first quarter of 2008 are reflective of the continuing downturn in the housing and related mortgage lending industries.

Reinsurance Programs

To maintain premium production within its capacity and limit maximum losses and risks for which it might become liable under its policies, Old Republic may cede a portion or all of its premiums and liabilities on certain classes of insurance, individual policies, or blocks of business to other insurers and reinsurers. Further discussion of the Company's reinsurance programs can be found in Part 1 of the Company's 2007 Annual Report on Form 10-K.

Expenses: Underwriting, Acquisition and Other Expenses

The following table sets forth the expense ratios registered by each major business segment and in consolidation for the periods shown:

	General	Mortgage	Title	Consolidated
Years Ended December 31:				
2005	24.6%	22.4%	88.2%	45.2%
2006	24.4	22.5	93.6	44.7
2007	24.1	17.7	98.1	41.3
Quarters Ended March 31:				
2007	26.9	20.8	96.8	43.6
2008	24.4%	16.4%	104.5%	39.1%

Variations in the Company's consolidated ratios reflect a continually changing mix of coverages sold and attendant costs of producing business in the Company's three largest business segments. To a significant degree, expense ratios for both the general and title insurance segments are mostly reflective of variable costs, such as commissions or similar charges, that rise or decline along with corresponding changes in premium and fee income, as well as changes in general operating expenses which can contract or expand in differing proportions due to varying levels of operating efficiencies and expense management opportunities in the face of changing market conditions.

Expenses: Total

The composite ratios of the above net claims, benefits and underwriting expenses that reflect the sum total of all the factors discussed herein were as follows:

	General	Mortgage	Title	Consolidated
Years Ended December 31:				
2005	91.5%	59.6%	94.2%	88.5%
2006	90.3	65.3	99.5	90.0
2007	91.9	136.5	104.7	101.5
Quarters Ended March 31:				
2007	91.4	75.2	102.8	92.2
2008	94.3%	197.5%	111.5%	115.7%

Expenses: Income Taxes

The effective consolidated income tax rate on the first quarter 2008 pretax loss was 51.9%, compared to an effective tax rate on pretax income of 30.8% in the first quarter of 2007. The rates reflect primarily the varying proportions of pretax operating income derived from partially tax-sheltered investment income (principally state and municipal tax-exempt interest) on the one hand, and the combination of fully taxable investment income, realized investment gains or losses, and underwriting and service income, on the other hand.

OTHER INFORMATION

Reference is here made to "Information About Segments of Business" appearing elsewhere herein.

Historical data pertaining to the operating results, liquidity, and other performance indicators applicable to an insurance enterprise such as Old Republic are not necessarily indicative of results to be achieved in succeeding years.

In addition to the factors cited below, the long-term nature of the insurance business, seasonal and annual patterns in premium production and incidence of claims, changes in yields obtained on invested assets, changes in government policies and free markets affecting inflation rates and general economic conditions, and changes in legal precedents or the application of law affecting the settlement of disputed and other claims can have a bearing on period-to-period comparisons and future operating results.

Some of the oral or written statements made in the Company's reports, press releases, and conference calls following earnings releases, can constitute "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. Of necessity, any such forward-looking statements involve assumptions, uncertainties, and risks that may affect the Company's future performance. With regard to Old Republic's General Insurance segment, its results can be affected, in particular, by the level of market competition, which is typically a function of available capital and expected returns on such capital among competitors, the levels of interest and inflation rates, and periodic changes in claim frequency and severity patterns caused by natural disasters, weather conditions, accidents, illnesses, work-related injuries, and unanticipated external events. Mortgage Guaranty and Title Insurance results can be affected by similar factors, and by changes in national and regional housing demand and values, the availability and cost of mortgage loans, employment trends, and default rates on mortgage loans. Mortgage Guaranty results, in particular, may also be affected by various risk-sharing arrangements with business producers, as well as the risk management and pricing policies of government-sponsored enterprises. Life and health insurance earnings can be affected by the levels of employment and consumer spending, variations in mortality and health trends, and changes in policy lapsation rates. At the parent holding company level, operating earnings or losses are generally reflective of the amount of debt outstanding and its cost, interest income on temporary holdings of short-term investments, and period-to-period variations in the costs of administering the Company's widespread operations.

A more detailed listing and discussion of the risks and other factors which affect the Company's risk-taking insurance business are included in Part I, Item 1A - Risk Factors, of the Company's 2007 Form 10-K annual report to the Securities and Exchange Commission, which Item is specifically incorporated herein by reference.

Any forward-looking statements or commentaries speak only as of their dates. Old Republic undertakes no obligation to publicly update or revise any and all such comments, whether as a result of new information, future events or otherwise, and accordingly they may not be unduly relied upon.

OLD REPUBLIC INTERNATIONAL CORPORATION

Item 3 - Quantitative and Qualitative Disclosure About Market Risk

Market risk represents the potential for loss due to adverse changes in the fair value of financial instruments as a result of changes in interest rates, equity prices, foreign exchange rates and commodity prices. Old Republic's primary market risks consist of interest rate risk associated with investments in fixed maturities and equity price risk associated with investments in equity securities. The Company has no material foreign exchange or commodity risk.

Old Republic's market risk exposures at March 31, 2008, have not materially changed from those identified in the Company's 2007 Annual Report on Form 10-K.

Item 4 - Controls and Procedures

Evaluation of Disclosure Controls and Procedures

The Company's principal executive officer and its principal financial officer have evaluated the Company's disclosure controls and procedures as of the end of the period covered by this quarterly report. Based upon their evaluation, the principal executive officer and principal financial officer have concluded that the Company's disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) under the Securities Exchange Act of 1934) are effective for the above referenced evaluation period.

Changes in Internal Control

During the three month period ended March 31, 2008, there were no changes in internal control over financial reporting that have materially affected, or are reasonably likely to materially affect, the Company's internal control over financial reporting.

Management's Report on Internal Control Over Financial Reporting

The Company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. The Company's internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the Company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the Company are being made only in accordance with authorizations of management and directors of the Company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of the Company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.
