PRESS RELEASE

Veolia Water is selected by SIAAP
to renovate Europe's biggest wastewater treatment plant

Paris, February 7, 2012 – SIAAP, the interdepartmental wastewater authority for the Greater Paris area, has selected OTV, a subsidiary of Veolia Water Solutions & Technologies, to head the consortium that has been awarded the contract to renovate the Seine Aval biological wastewater treatment plant in Achères. After the Chicago plant, Seine Aval is the second largest wastewater treatment plant in the world.

The contract awarded to the consortium is worth 776.7 million euros and is the biggest ever signed by OTV. The company will have a 25% share of the total revenue.

OTV has three major assignments:

- to lead the project and coordinate all the participants in the Biosav consortium (architects, design firms, civil engineering and wastewater treatment process companies);
 - to design and build the structures;
 - to supply the treatment process.

Expertise in project management

Besides its technical expertise, OTV was selected due to its capacity to head up such a major project, which requires complying strictly with schedules and with publicly funded budgets.

In the contract, OTV has made clear commitments to the safety, reliability and programming of the works, which will enable SIAAP to continue providing and guaranteeing top-quality service to the 6.5 million customers throughout the period of the renovation project. Commissioning of the new facilities is planned for the end of 2017.

High environmental performance

The objective of this operation is to rebuild a new, more efficient biological treatment train as part of the total renovation of the site put into motion by SIAAP.

The main challenge lies in transforming the plant's core process, which involves designing a more advanced treatment process, especially to deal with nitrogen, in the aim of making an active contribution to the good ecological status of the River Seine.

The solution put forward by OTV and the Biosav partners combines the extension of the existing biofiltration structures (BIOSTYR® process) and the construction of a new membrane filtration treatment train.

The compactness of the new structures will enable SIAAP, in a second phase, to dismantle the former uncovered biological treatment tanks and to gradually make use of 17 hectares of land along the banks of the Seine.

“The signing of this contract is a recognition of OTV's expertise in the design and construction of plants that are exceptional both in terms of their size and in the technical prowess of the processes implemented. Aside technological expertise, when local public authorities make investments of this order, they must be able to count on a responsible partner that can guarantee the results and deadlines and that there will not be any budget overruns. That is the commitment from Veolia Water,” says Jean-Michel Herrewyn, Chairman of Veolia Water Solutions & Technologies and Chief Executive Officer of Veolia Water.

Veolia Water, the water division of Veolia Environnement, is the world leader in water and wastewater services. Specialized in outsourcing services for municipal authorities, as well as industrial and service companies, it is also one of the world's major designers of technological solutions and constructor of facilities needed in water and wastewater services. With 96,260 employees in 67 countries, Veolia Water provides water service to 100 million people and wastewater service to 71 million. Its 2010 revenue amounted to €12.1 billion. www.veoliaeau.com

Veolia Environnement (Paris Euronext: VIE and NYSE: VE) is the worldwide reference in environmental solutions. With more than 315,000 employees the company has operations all around the world and provides tailored solutions to meet the needs of municipal and industrial customers in four complementary segments: water management, waste management, energy management and passenger transportation. Veolia Environnement recorded revenue of €34.8 billion in 2010. www.veolia.com
