\* Rating based on affiliation with Lincoln Life

[1] Stock prices shown above include 2-for-1 splits in June 1993, and June 1999

[2] Indicated dividend divided by net income

[3] Indicated dividend divided by the closing price

[4] Equity used in calculation assumes securities at cost. Minority interest-preferred securities of subsidiary companies (hybrid securities) are considered 50% debt and 50% equity.

### Return on Equity/Return on Capital:

In order to accommodate the various perspectives, LNC presents three separate Return on Equity of this Statistical Report. "Net Income Divided by Average Shareholders' Equity" tends to fluctuate due to the realization of gains on the sale of investments or subsidiaries during one period and losses in another period for purposes of recovering Federal Taxes previously paid. "Income from Operations Divided by Average Shareholders' Equity" is less volatile but leaves out an important element of earnings for a company that is focused on enhancing shareholder value by realizing investment gains. "Adjusted Income from Operations Divided by Average Shareholders' Equity" amortizes:

1) realized security gains on investments 2) unrealized gains on equity securities over appreciation less amortization of goodwill related to acquisitions.

Return on capital measures the effectiveness of LNC's use of its total capital, which is made up of debt and equity securities. Return on capital is calculated by dividing income from operations (after adding back depreciation and amortization) by average capital. The difference between return on capital and return on equity presents the consolidated results.
