23rd April 2007

AstraZeneca to acquire MedImmune for \$58 per share in a fully recommended, all-cash transaction with a total enterprise value of \$15.2 billion

Acquisition delivers AstraZeneca biologics ambition faster

Creates a leading, fully-integrated biotechnology business within AstraZeneca with critical mass in research, development, regulatory and manufacturing with global sales reach

Significantly expands product pipeline by adding 45 projects including 2 late-stage products and a blockbuster marketed monoclonal antibody, Synagis

Summary

AstraZeneca PLC (“AstraZeneca”) today announced that it has entered into a definitive agreement to acquire MedImmune, Inc. (“MedImmune”), in an all-cash transaction. Under the terms of the agreement, which has unanimous MedImmune Board support, AstraZeneca will acquire all of the fully diluted shares of MedImmune common stock at a price of \$58 per share, for a total consideration of approximately \$15.6 billion (including approximately \$340m net cash).

The acquisition of MedImmune significantly accelerates AstraZeneca’s biologics strategy. The combination of MedImmune with AstraZeneca’s wholly-owned subsidiary Cambridge Antibody Technology (“CAT”) will create a world-class, fully integrated biologics and vaccines business within the AstraZeneca Group with critical mass in research, development, regulatory, manufacturing and global sales and marketing reach.

MedImmune is a world-leading, profitable, biotechnology company with a record of proven success with revenue in 2006 of \$1.3bn, profit before tax of \$75m and gross assets of \$3.0bn.

The acquisition extends AstraZeneca’s R&D science base to allow it to address novel drug targets through 3 key technological approaches: small molecules, biologics and, for the first time, vaccines.

Overall, the combination of MedImmune with AstraZeneca’s existing capabilities will be capable of delivering a greater number of new biologic products to bring benefit to patients in AstraZeneca’s prioritised disease areas.

The deal is expected to close in June 2007.

Highlights and acquisition benefits

R&D capability

- Expands and diversifies AstraZeneca’s science base by establishing an international platform capable of delivering a greater flow of new medicines in AstraZeneca’s prioritised disease areas, embracing small molecules, monoclonal antibodies, next generation biologics and vaccines

- Natural fit between CAT and MedImmune
 - Complementary with existing AstraZeneca therapeutic area strengths in Oncology, Infection and Respiratory & Inflammation
 - Provides entry into vaccines; through proprietary live attenuated vaccines capability
 - Brings significant regulatory experience in making Biologics License Applications
-

- Enhanced biologics capability positions AstraZeneca as a more compelling licensing partner, improving AstraZeneca's externalisation position

Manufacturing

- MedImmune is a leader in protein engineering and biologics manufacturing, with a production capacity of over 30,000L planned by 2010 and world leading cell line productivity levels. Through further modest investment, capacity could be increased to over 60,000L. This would secure production requirements for the long-term and avoid the need for major near-term 'green-field' manufacturing investment by AstraZeneca to support its biologics strategy

Pipeline

- Adds 2 late-stage assets: the next generation follow-on to 'Synagis', 'Numax' and refrigerated formulation 'FluMist' with an anticipated US launch for 2007-2008 influenza season
- Increases the proportion of biologics in AstraZeneca's pipeline from 7 percent to 27 percent and enlarges the total pipeline by 45 projects to 163 projects
- Diversifies and expands R&D capability to deliver a greater flow of new biologic products

Financial benefits

- Synergies from the acquisition of MedImmune and from related AstraZeneca activities are expected to be towards \$500m per annum by 2009
- The acquisition is expected to be cash earnings enhancing in 2009
- The acquisition will be fully funded in cash, bringing improved financial efficiency through balance sheet leverage. Previously announced \$4bn share buyback programme for 2007 unchanged
- Addition of attractive marketed products including 'Synagis' and 'FluMist' to AstraZeneca's portfolio adds \$1.2bn in sales. Consensus sales growth for this portfolio is forecast at 12% CAGR to 2010
- Provides AstraZeneca with several other substantial assets, including a royalty stream on the sales of the HPV vaccines with estimated consensus peak sales of \$5.5bn, potential milestones and royalties on MedImmune's other licensed products and \$1.5bn cash, including \$89.4m relating to MedImmune Ventures investments at book value

People

- Strong desire to retain employees and maintain culture, with emphasis on retaining key talent and critical skills
- One-time retention grant for employees
-

Edgar Filing: MEDIMMUNE INC /DE - Form SC TO-C

David M. Mott, the Chief Executive Officer and President of MedImmune, and James F. Young, Ph.D., the President, Research and Development of MedImmune, have committed to remain with MedImmune and it is expected that other members of MedImmune's senior management will stay with the company following the closing

- David M. Mott will take a leadership role within AstraZeneca
-

Commenting on the Offer, David Brennan, Chief Executive Officer of AstraZeneca, said:

"This acquisition represents a transformational step to deliver our biologics strategy sooner than anticipated. It creates a leading fully integrated biologics and vaccines business with critical mass and enhances AstraZeneca's R&D science base through which we will deliver a stronger product pipeline.

MedImmune adds an exciting existing pipeline, including 2 late-stage products, great expertise in biologic drug development and state of the art manufacturing facilities.

We look forward to welcoming MedImmune's employees into AstraZeneca and are excited by the potential to create significant value for all our shareholders, employees and patients that this acquisition brings."

David M. Mott, CEO and President of MedImmune, said:

"After conducting a full and open process, whereby we evaluated potential interest in the value we have built over our 19 year history, we are very pleased to become a part of AstraZeneca. We believe that this transaction is in the best interest of all parties, including shareholders, employees and ultimately patients. The potential to harness the combined skills and capabilities of MedImmune, AstraZeneca and CAT and take our combined world class biologics capabilities to the next level, is very exciting and a challenge to which I am personally committed."

The Transaction

The acquisition is structured as an all cash tender offer for all outstanding shares of MedImmune common stock followed by a merger in which each remaining untendered share of MedImmune would be converted into the same \$58 cash per share price paid in the tender offer. The acquisition is subject to the satisfaction of customary conditions, including the tender of a majority of the outstanding MedImmune shares on a fully-diluted basis and the expiration or earlier termination of the Hart-Scott-Rodino waiting period and other regulatory approvals. The tender offer will be commenced within 10 working days and is expected to close in June 2007, unless extended. The tender offer is not subject to a financing contingency.

The acquisition price represents a premium of approximately 53.3% to MedImmune's closing share price of \$37.84 on 11th April, 2007, this being the last business day prior to MedImmune's announcement to explore strategic alternatives.

The transaction has been unanimously recommended by the Board of Directors of MedImmune.

The acquisition will be effected pursuant to a merger agreement. The merger agreement contains certain termination rights for each of AstraZeneca and MedImmune and further provides that, upon termination of the merger agreement under specified circumstances, MedImmune may be required to pay AstraZeneca a termination fee of \$450 million.

Financing

The total consideration for the acquisition of MedImmune amounts to approximately \$15 billion in cash. AstraZeneca will draw from a committed banking facility in the amount of \$15 billion to provide the initial financing for the acquisition.

Additional Information

The tender offer described in this press release has not yet commenced, and this press release is neither an offer to purchase nor a solicitation of an offer to sell MedImmune common stock. Investors and security holders are urged to read both the tender offer statement and the solicitation/recommendation statement regarding the tender offer described in this press release when they become available because they will contain important information. The tender offer statement will be filed by AstraZeneca and a subsidiary of AstraZeneca with the Securities and Exchange Commission (“SEC”), and the solicitation/recommendation statement will be filed by MedImmune with the SEC. Investors and security holders may obtain a free copy of these statements (when available) and other documents filed by AstraZeneca or MedImmune with the SEC at the website maintained by the SEC at www.sec.gov. The tender offer statement and related materials may be obtained for free by directing such requests to AstraZeneca (Investor Relations) at +44 (0) 207 304 5000. The solicitation/recommendation statement and such other documents may be obtained by directing such requests to MedImmune (Investor Relations) at 301-398-4358.

AstraZeneca acquisition of
MedImmune and 1Q results

Analyst call

Delivers biologics ambition faster

- o Creates leading, fully-integrated biologics & vaccines business
 - o Critical mass in discovery, development, regulatory, manufacturing and sales
 - o Natural fit with CAT
- o Significantly expands pipeline
 - o Improves long term product flow
 - o Diversifies and expands R&D (small molecules, biologics, vaccines)
- o Enhances future growth prospects
 - o Profitable, high quality business entering growth phase
 - o Cash earnings enhancement in 2009

Accelerates delivery of AZ biologics strategy at lower execution risk
Transforms science base

2

The Deal

- o Fully recommended all cash offer of \$58 per share;
total enterprise value of \$15.2bn
 - o Transaction has been unanimously recommended by the
boards of both companies.
 - o Expected to close in June 2007

MedImmune

- o One of the World's Leading Biologics Players
 - o Top 10 biopharmaceutical company by equity value
 - o A leader in protein engineering, biologics development & manufacturing
- o 2006 revenues of \$1.3bn
- o 3 marketed products, including 'blockbuster'; Synagis
- o Development pipeline adds 45 projects

MedImmune is a scarce asset - fully integrated biologics capability,
with world-class development and manufacturing,
profitable and entering growth phase

Key strengths

- o Discovery 'Search'
 - o Target identification and access
 - o Highly externally focused
 - o Well 'networked' internal venture fund (MedImmune Ventures)
 - o Extensive and effective partnering machine
- o Development
 - o Antibody generation - "create, engineer, refine"
 - o Vaccines - proprietary live attenuated vaccine platform
 - o Clinical - innovative, paediatrics
 - o Regulatory - significant FDA experience (Biologic License Application)

MedImmune a recognised leader in
biologics development & manufacturing

Delivers high capability, scale, lowers execution risk

- o Production capacity of over 30,000L planned by 2010.
- o Significant production yield advantages
- o Capacity could readily be increased to over 60,000L.
- o Secures production requirements for the long term
- o Avoids near-term major 'green-field' manufacturing investment by Atlanta to support its biologics strategy

Rest of World
(manufacturing):
UK - Speke
Netherlands - Nijmegen

Manufacturing Facility
Laboratory
Vaccines

R&D capability

- o Expands and diversifies AstraZeneca/CAT technology base
 - o small molecules,
 - o monoclonal antibodies & next generation biologics
 - o provides entry into vaccines
- o Externalisation/ partnering
- o Strengthened product pipeline
 - o particularly in AstraZeneca's core areas of Oncology, Infection and Respiratory & Inflammation

7

Edgar Filing: MEDIMMUNE INC /DE - Form SC TO-C

MedImmune brings a significant pipeline

- o 45 projects in R&D
 - o 7 antibody and 5 vaccine projects in clinical development
- o RSV next generation follow-on, Numax (2H 07 filing)
 - o Superior potency giving possible wider utility and refreshed patent estate
- o Refrigerated FluMist (CAIV-T) with anticipated US launch for 2007-2008 influenza season
 - o Extended paediatric label under review

Significant boost to the AstraZeneca pipeline, with vaccines, oncology and inflammation-targeting biologics

8

Additional Information

PRESENTATION DISCLAIMER

- o The tender offer described in this presentation has not yet commenced, and this presentation is neither an offer to purchase nor a solicitation of an offer to sell MedImmune common stock. Investors and security holders are urged to read both the tender offer statement and the solicitation/recommendation statement regarding the tender offer described in this presentation when they become available because they will contain important information. The tender offer statement will be filed by AstraZeneca and a subsidiary of AstraZeneca with the Securities and Exchange Commission (SEC), and the solicitation/recommendation statement will be filed by MedImmune with the SEC. Investors and security holders may obtain a free copy of these statements (when available) and other documents filed by AstraZeneca or MedImmune with the SEC at the website maintained by the SEC at www.sec.gov. The tender offer statement and related materials may be obtained for free by directing such requests to AstraZeneca (Investor Relations) at +44 (0) 207 304 5000. The solicitation/recommendation statement and such other documents may be obtained by directing such requests to MedImmune (Investor Relations) at 301 398 4358.
- o Copies of this presentation and any documentation relating to the Offer are not being, and must not be, directly or indirectly, mailed or otherwise forwarded, distributed or sent in or into or from Canada, Japan or Australia or any other jurisdiction where to do so would be unlawful.
- o This presentation may contain certain forward-looking statements about AstraZeneca and MedImmune which are subject to risks and uncertainties and may be influenced by factors that could cause actual outcomes and results to be materially different from those predicted. We have identified the forward-looking statements by using the words 'anticipates', 'believes', 'expects', 'intends' and similar expressions in such statements. Important factors that could cause actual results to differ materially from those contained in forwardlooking statements, certain of which are beyond our control, include, among other things: difficulties in integrating MedImmune leading to greater costs and lower integration benefits than we anticipate; regulatory conditions being imposed on the acquisition of MedImmune; patent litigation and early loss or expiration of patents, marketing exclusivity or trade marks; substantial adverse outcomes of litigation and government litigation; exchange rate fluctuations; the risk that R&D will not yield new products that achieve commercial success; the impact of competition, price controls and price reductions; taxation risks; the risk of substantial product liability claims; the impact of any failure by third parties to supply materials or services; the risk of delay to new product launches; the difficulties of obtaining and maintaining governmental approvals for products; the risk of failure to observe ongoing regulatory oversight; the risk that new products do not perform as we expect; and the risk of environmental liabilities. For further discussion of factors that may cause actual results to differ from expectations, you should read AstraZeneca's most recent UK Annual Report and MedImmune's most recent regulatory filings and submissions, including the Annual Reports on Form 20-F and Form 10-K of AstraZeneca and MedImmune, respectively. You are cautioned not to place undue reliance on any forward-looking statements, which speak only as of the date of this presentation. Except as required by applicable law or regulation, AstraZeneca and MedImmune do not undertake any obligation to publicly release any update or revisions to these forward-looking statements.
