Syngenta and DSM to develop and commercialize biological solutions for agriculture

Plans to jointly commercialize solutions from the discovery platform

Collaboration to deliver broad spectrum of pre- and post-harvest tools

Double-digit growth in use of biological solutions over next 10 years

Syngenta and DSM today announced an R&D partnership to develop microbial-based agricultural solutions, including bio-controls, bio-pesticides and bio-stimulants. The companies aim to jointly commercialize solutions from their discovery platform.

The collaboration aims to accelerate the delivery of a broad spectrum of products based on naturally occurring micro-organisms for pre- and post-harvest application around the world. These organisms can protect crops from pests and diseases, combat resistance and enhance plant productivity and fertility.

Over the next decade, use of biological solutions is set to record double-digit growth and by 2030 could represent up to 10 percent of the global crop protection market.

Syngenta will contribute specialized know-how in agronomic applications and plant biotechnology, as well as its global market access and commercial strength. DSM will complement this with its unique microbial database, discovery platform and decades of experience in scaling and manufacturing of microbial products. Syngenta will also provide a dedicated R&D program for the selection of relevant micro-organisms.

Trish Malarkey, Syngenta Head of R&D, said: “New microbial-based solutions will contribute to meeting the challenge of producing more food from fewer resources, benefiting farmers, consumers, the environment and society. Our collaboration with DSM brings together breakthrough science and the ability to formulate and deliver biological tools on a global scale.”

Rob van Leen, Chief Innovation Officer of DSM, said: “Our society asks for sustainable solutions to safeguard food and nutrition security. With DSM’s bright science in the micro-organism field, we can help address this global challenge

together with Syngenta and its specialized know-how and market access. We look forward to using our long-standing experience and leading competence in bio (process) technology to accelerate the development of biological solutions for agriculture.”

About Syngenta

Syngenta is a leading agriculture company helping to improve global food security by enabling millions of farmers to make better use of available resources. Through world class science and innovative crop solutions, our 28,000 people in over 90 countries are working to transform how crops are grown. We are committed to rescuing land from degradation, enhancing biodiversity and revitalizing rural communities. To learn more visit www.syngenta.com and www.goodgrowthplan.com.
