EXHIBITS

Exhibit 99.1: Press release issued February 20, 2008 in which the Registrant announced that Resource Modeling Inc. (“RMI”) has completed an updated independent National Instrument 43-101 mineral resource estimate for the Mitchell zone at the Registrant’s 100% owned Kerr-Sulphurets-Mitchell project, located near Stewart, British Columbia, Canada. More than 55% of the total Mitchell gold resource is now classified as indicated whereas all of the 2007 Mitchell resource was classified as inferred. A new National Instrument 43-101 Technical Report will be filed on SEDAR within 45 days. The updated independent resource estimate incorporates results from 37 core holes totaling approximately 15,300 meters drilled by the Registrant during 2007. The 2007 drill program was designed to upgrade much of the then existing 564 million tonne inferred mineral resource to the indicated category and to pursue extensions of the deposit to the south, north and at depth. A summary of the results is set forth in the press release.
