MGIC INVESTMENT CORPORATION AND SUBSIDIARIES
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

March 31, 2008

(Unaudited)

Note 1 Basis of presentation and summary of certain significant accounting policies

The accompanying unaudited consolidated financial statements of MGIC Investment Corporation and its wholly-owned subsidiaries have been prepared in accordance with the instructions to Form 10-Q as prescribed by the Securities and Exchange Commission (SEC) for interim reporting and do not include all of the other information and disclosures required by accounting principles generally accepted in the United States of America. These statements should be read in conjunction with the consolidated financial statements and notes thereto for the year ended December 31, 2007 included in our Annual Report on Form 10-K.

In the opinion of management such financial statements include all adjustments, consisting primarily of normal recurring accruals, necessary to fairly present our financial position and results of operations for the periods indicated. The results of operations for the three months ended March 31, 2008 may not be indicative of the results that may be expected for the year ending December 31, 2008.

New Accounting Standards

In March 2008 the Financial Accounting Standards Board issued SFAS No. 161, Disclosures about Derivative Instruments and Hedging Activities. The new standard is intended to improve financial reporting about derivative instruments and hedging activities by requiring enhanced disclosures to enable investors to better understand their effects on an entity's financial position, financial performance, and cash flows. It is effective for financial statements issued for fiscal years and interim periods beginning after November 15, 2008. We are currently evaluating the provisions of this statement and the impact, if any, this statement will have on our disclosures.

In February 2008, the FASB issued Financial Statement of Position FAS 157-2. This statement defers the effective date of FAS 157 for all non-financial assets and non-financial liabilities measured on a non-recurring basis to fiscal years beginning after November 15, 2008, and interim periods within those fiscal years. We are currently evaluating the requirements of this statement and the impact, if any, this statement will have on our financial position and results of operations.

Fair Value Measurements

Effective January 1, 2008, we adopted the fair value measurement provisions of SFAS No. 157, Fair Value Measurements. SFAS No. 157 provides enhanced guidance for using fair value to measure assets and liabilities. This statement defines fair value, expands disclosure requirements about fair value and specifies a hierarchy of valuation techniques based on whether the inputs to those valuation techniques are observable or

unobservable. Observable inputs reflect market data obtained from independent sources, while unobservable inputs reflect a company's market assumptions. Fair value is used on a recurring basis for assets and liabilities in which fair value is the primary basis of accounting (i.e., available-for-sale securities). Additionally, fair value is used on a nonrecurring basis to evaluate assets or liabilities for impairment or for disclosure purposes.

Fair value is defined as the price that would be received in a sale of an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. Depending on the nature of the asset or liability, we use various valuation techniques and assumptions when estimating fair value. In accordance with SFAS No. 157, we applied the following fair value hierarchy in order to measure fair value for assets and liabilities:

Level 1 Quoted prices for identical instruments in active markets that we have the ability to access. Financial assets utilizing Level 1 inputs include certain U.S. Treasury securities and obligations of the U.S. government.

Level 2 Quoted prices for similar instruments in active markets; quoted prices for identical or similar instruments in markets that are not active; and inputs, other than quoted prices, that are observable in the marketplace for the financial instrument. The observable inputs are used in valuation models to calculate the fair value of the financial instruments. Financial assets utilizing Level 2 inputs include certain municipal and corporate bonds.

Level 3 Valuations derived from valuation techniques in which one or more significant inputs or value drivers are unobservable. Level 3 inputs reflect our own assumptions about the assumptions a market participant would use in pricing an asset or liability. Financial assets utilizing Level 3 inputs include certain state, corporate and mortgage-backed securities.

Non-financial assets which utilize Level 3 inputs include real estate acquired through claim settlement. Additionally, financial liabilities utilizing Level 3 inputs consist of derivative financial instruments.

The adoption of SFAS No. 157 resulted in no changes to January 1, 2008 retained earnings.

Fair Value Option

In conjunction with the adoption of SFAS No. 157, we have adopted SFAS No. 159, The Fair Value Option for Financial Assets and Financial Liabilities. This statement provides companies with an option to report selected financial assets and liabilities at fair value on an instrument-by-instrument basis. After the initial adoption, the election to report a financial asset or liability at fair value is made at the time of acquisition and it generally may not be revoked. The objective of this statement is to reduce both complexity in accounting for financial instruments and the volatility in earnings caused by measuring related assets and liabilities differently. The adoption of SFAS No. 159 resulted in no changes to January 1, 2008 retained earnings as we elected not to apply the fair value option to financial instruments not currently carried at fair value.

Reclassifications

Certain reclassifications have been made in the accompanying financial statements to 2007 amounts to conform to 2008 presentation.

Note 2 Short- and long-term debt

We have a commercial paper program, which is rated A-3 by Standard and Poors (S&P) and P-2 by Moody s. The amount available under this program is \$300 million less any amounts drawn under the credit facility discussed below. At March 31, 2008 and December 31, 2007 we had no commercial paper outstanding because, as noted below, in 2007 we made a draw on the entire amount of our revolving credit facility and repaid the amounts then-outstanding under this program.

We have a \$300 million, five year revolving credit facility, expiring in March 2010. The credit facility requires us to maintain shareholders equity of at least \$2.25 billion and Mortgage Guaranty Insurance Corporation (MGIC) to maintain a statutory risk-to-capital ratio of not more than 22:1 and maintain policyholders position (which includes MGIC s statutory surplus and its contingency reserve) of not less than the amount required by Wisconsin insurance regulations. However the credit facility was amended on March 14, 2008 to modify the shareholders equity requirement to require us to maintain a consolidated shareholders equity balance of no less than \$2.25 billion at any time prior to March 31, 2008 and after July 1, 2008, and no less than \$1.85 billion during the period between March 31, 2008 through and including July 1, 2008. The amendment did not modify the other requirements under the terms of the credit facility. At March 31, 2008, these requirements were met. Our shareholders equity was \$2.99 billion and \$2.59 billion at March 31, 2008 and December 31, 2007, respectively. Prior to August 2007, the credit facility had been used as a liquidity back up facility for the outstanding commercial paper. In August 2007, we drew the entire \$300 million on the credit facility. These funds, in part, were utilized to repay the outstanding commercial paper, which approximated \$177 million at the time of the credit facility draw. We drew the portion of the revolving credit facility equal to the outstanding commercial paper because we believed that funding with a long-term maturity was superior to funding that required frequent renewal on a short-term basis. We drew the remainder of the credit facility to provide us with greater financial flexibility at the holding company level. At March 31, 2008 we continued to have the entire \$300 million outstanding under this facility.

At March 31, 2008 and December 31, 2007 we had \$200 million, 5.625% Senior Notes due in September 2011 and \$300 million, 5.375% Senior Notes due in November 2015, as well as \$300 million outstanding under the credit facility. At March 31, 2008 and December 31, 2007, the fair value of this outstanding debt was \$714.0 million and \$772.0 million, respectively.

Interest payments on all long-term and short-term debt were \$10.2 million and \$12.5 million for the three months ended March 31, 2008 and 2007, respectively.

If we fail to maintain any of the requirements under the credit facility discussed above and are not successful in obtaining an agreement from banks holding a majority of the debt outstanding under the facility to change (or waive) the applicable requirement, then banks holding a majority of the debt outstanding under the facility would have the right to declare the entire amount of the outstanding debt due and payable. If the debt under our bank facility were accelerated in this manner, the holders of 25% or more of our publicly traded \$200 million 5.625% Senior Notes due in September 2011, and the holders of 25% or more of our publicly traded \$300 million 5.375% Senior Notes due in November 2015, each would have the right to accelerate the maturity of that debt. In addition, the Trustee of these two issues of Senior Notes, which is also a lender under our bank credit facility, could, independent of any action by holders of Senior Notes, accelerate the maturity of the Senior Notes.

Note 3 Convertible debentures and related derivative

In March 2008 we completed the sale of \$365 million principal amount of 9% Convertible Junior Subordinated Debentures due in 2063. In April 2008, the initial purchasers exercised an option to purchase an additional \$25 million aggregate principal amount of these debentures. The debentures were sold in private placements to qualified institutional buyers pursuant to Rule 144A under the Securities Act of 1933, as amended. Interest on the debentures will be payable semi-annually in arrears on April 1 and October 1 of each year, beginning on October 1, 2008. We may defer interest, under an optional deferral provision, for one or more consecutive interest periods up to ten years without giving rise to an event of default. Deferred interest will accrue additional interest at the rate then applicable to the debentures.

The debentures will rank junior to all of our existing and future senior indebtedness. The net proceeds of the debentures issued in March of approximately \$354 million were used to increase the capital of MGIC, our principal insurance subsidiary, in order to enable us to expand the volume of our new business and will also be used for our general corporate purposes. Debt issuance costs will be amortized over the expected life to interest expense. We may redeem the debentures prior to April 6, 2013, in whole but not in part, only in the event of a specified tax or rating agency event, as defined in the indenture. In any such event, the redemption price will be equal to the greater of (1) 100% of the principal amount of the debentures being redeemed and (2) the applicable make-whole amount, in each case plus any accrued but unpaid interest. On or after April 6, 2013, we may redeem the debentures in whole or in part from time to time, at our option, at a redemption price equal to 100% of the principal amount of the debentures being redeemed plus any accrued and unpaid interest if the closing sale price of our common stock exceeds 130% of the then prevailing conversion price of the debentures for at least 20 of the 30 trading days preceding notice of the redemption. We will not be able to redeem the debentures, other than in the event of a specified tax event or rating agency event, during an optional deferral period.

The debentures are convertible, at the holder's option, at an initial conversion rate, which is subject to adjustment, of 74.0741 shares per \$1,000 principal amount of debentures at any time prior to the maturity date. This represents an initial conversion price of approximately \$13.50 per share. The initial conversion price represents a 20%

conversion premium based on the \$11.25 per share price to the public in our concurrent common stock offering. (See Note 9.)

In lieu of issuing shares of common stock upon conversion of the debentures occurring after April 6, 2013, we may, at our option, make a cash payment to converting holders equal to the value of all or some of the shares of our common stock otherwise issuable upon conversion.

Our common stock is listed on the New York Stock Exchange, or NYSE. One of the NYSE's rules limits the number of shares of our common stock that the convertible debentures may be converted into to less than 20% of the number of shares outstanding immediately before the issuance of the convertible debentures. We closed the sale of our common stock before the sale of the convertible debentures, which resulted in approximately 124.9 million shares of our common stock outstanding prior to the debentures being issued. At the initial conversion rate the outstanding debentures at March 31, 2008 are convertible into approximately 21.6% of our common stock outstanding, 2.1 million shares above the NYSE limit (giving effect to the sale of additional debentures in April 2008, 23.1% and 3.9 million shares). At a special shareholders' meeting we expect to hold in June 2008, we will ask our shareholders to approve the issuance of shares of our common stock sufficient to convert all of the convertible debentures.

At issuance approximately \$27.8 million in face value of the convertible debentures issued in March can not be settled in our common shares without prior shareholder approval and thus requires bifurcation of any embedded derivative related to those convertible debentures. The derivative value of \$9.3 million is included within Other Liabilities on the Consolidated Balance Sheet. The fair value of the derivative was determined using the Black-Scholes model. The amount of the derivative will be treated as a discount on issuance of the convertible debentures and be amortized over the expected life to interest expense.

The fair value of the convertible debentures issued in March and related derivative was approximately \$357.9 million at March 31, 2008.

Note 4 Litigation and contingencies

We are involved in litigation in the ordinary course of business. In our opinion, the ultimate resolution of this pending litigation will not have a material adverse effect on our financial position or results of operations.

Consumers are bringing a growing number of lawsuits against home mortgage lenders and settlement service providers. In recent years, seven mortgage insurers, including MGIC, have been involved in litigation alleging violations of the anti-referral fee provisions of the Real Estate Settlement Procedures Act, which is commonly known as RESPA, and the notice provisions of the Fair Credit Reporting Act, which is commonly known as FCRA. MGIC's settlement of class action litigation against it under RESPA became final in October 2003. MGIC settled the named plaintiffs' claims in litigation against it under FCRA in late December 2004 following denial of class certification in June 2004. Since December 2006, class action litigation was separately brought against a number of large lenders alleging that their captive mortgage reinsurance arrangements violated RESPA. While we are not a defendant in any of these cases,

there can be no assurance that MGIC will not be subject to future litigation under RESPA or FCRA or that the outcome of any such litigation would not have a material adverse effect on us.

In June 2005, in response to a letter from the New York Insurance Department (the NYID), we provided information regarding captive mortgage reinsurance arrangements and other types of arrangements in which lenders receive compensation. In February 2006, the NYID requested that we review our premium rates in New York and to file adjusted rates based on recent years' experience or to explain why such experience would not alter rates. In March 2006, we advised the NYID that we believe our premium rates are reasonable and that, given the nature of mortgage insurance risk, premium rates should not be determined only by the experience of recent years. In February 2006, in response to an administrative subpoena from the Minnesota Department of Commerce (the MDC), which regulates insurance, we provided the MDC with information about captive mortgage reinsurance and certain other matters. We subsequently provided additional information to the MDC, and on March 6, 2008 that Department sought additional information as well as answers to interrogatories regarding captive mortgage reinsurance. We understand from conversations with the MDC that the Department of Housing and Urban Development, commonly referred to as HUD, will also be seeking information about captive mortgage reinsurance. Other insurance departments or other officials, including attorneys general, may also seek information about or investigate captive mortgage reinsurance.

The anti-referral fee provisions of RESPA provide that HUD and the insurance commissioner or attorney general of any state may bring an action to enjoin violations of these provisions of RESPA. The insurance law provisions of many states prohibit paying for the referral of insurance business and provide various mechanisms to enforce this prohibition. While we believe our captive reinsurance arrangements are in conformity with applicable laws and regulations, it is not possible to predict the outcome of any such reviews or investigations nor is it possible to predict their effect on us or the mortgage insurance industry.

In October 2007, the Division of Enforcement of the SEC requested that we voluntarily furnish documents and information primarily relating to Credit-Based Asset Servicing and Securitization LLC, C-BASS, the now-terminated merger with Radian and the subprime mortgage assets in the Company's various lines of business. We are in the process of providing responsive documents and information to the SEC.

We understand that two law firms have recently issued press releases to the effect that they are investigating whether the fiduciaries of our 401(k) plan breached their fiduciary duties regarding the plan's investment in or holding of our common stock. With limited exceptions, our bylaws provide that the plan fiduciaries are entitled to indemnification from us for claims against them. We intend to defend vigorously any proceeding that may result from these investigations.

On June 1, 2007, as a result of an examination by the Internal Revenue Service (IRS) for taxable years 2000 through 2004, we received a Revenue Agent Report (RAR). The adjustments reported on the RAR substantially increase taxable income for those tax years and resulted in the issuance of an assessment for unpaid taxes totaling \$189.5 million in taxes and accuracy-related penalties, plus applicable interest. We have

agreed with the IRS on certain issues and paid \$10.5 million in additional taxes and interest. The remaining open issue relates to our treatment of the flow through income and loss from an investment in a portfolio of residual interests of Real Estate Mortgage Investment Conduits (REMICS). The IRS has indicated that it does not believe that, for various reasons, we have established sufficient tax basis in the REMIC residual interests to deduct the losses from taxable income. We disagree with this conclusion and believe that the flow through income and loss from these investments was properly reported on our federal income tax returns in accordance with applicable tax laws and regulations in effect during the periods involved and have appealed these adjustments. The appeals process may take some time and a final resolution may not be reached until a date many months or years into the future. On July 2, 2007, we made a payment of \$65.2 million with the United States Department of the Treasury to eliminate the further accrual of interest. Although the resolution of this issue is uncertain, we believe that sufficient provisions for income taxes have been made for potential liabilities that may result. If the resolution of this matter differs materially from our estimates, it could have a material impact on our effective tax rate, results of operations and cash flows.

Under our contract underwriting agreements, we may be required to provide certain remedies to our customers if certain standards relating to the quality of our underwriting work are not met. The cost of remedies provided by us to customers for failing to meet these standards has not been material to our financial position or results of operations for the three months ended March 31, 2008 and 2007.

Note 5 Earnings per share

Our basic and diluted earnings per share (EPS) have been calculated in accordance with SFAS No. 128, Earnings Per Share. Basic EPS is based on the weighted average number of common shares outstanding. Typically, diluted EPS is based on the weighted average number of common shares outstanding plus common stock equivalents which include stock awards, stock options and the dilutive effect of our convertible debentures. In accordance with SFAS 128, if we report a net loss from continuing operations then our diluted EPS is computed in the same manner as the basic EPS. For the three months ended March 31, 2008 and 2007, our net (loss) income is the same for both basic and diluted EPS. The following is a reconciliation of the weighted average number of shares; however for the three months ended March 31, 2008 the basic weighted-average shares was used in the calculation of both the basic and diluted EPS due to a net loss from continuing operations.

	Three Months Ended March 31,	
	2008	2007
	(in thousands)	
Weighted-average shares Basic	84,127	81,890
Common stock equivalents		464
Weighted-average shares Diluted	84,127	82,354

Note 6 Fair value measurements

As discussed in Note 1, we adopted SFAS No. 157 and SFAS No. 159 effective January 1, 2008. Both standards address aspects of the expanding application of fair-value accounting. SFAS No. 157 defines fair value, establishes a consistent framework for measuring fair value and expands disclosure requirements regarding fair-value measurements. SFAS No. 159 provides companies with an option to report selected financial assets and liabilities at fair value with changes in fair value reported in earnings. The option to account for selected financial assets and liabilities at fair value is made on an instrument-by-instrument basis at the time of acquisition. For the period ended March 31, 2008, we did not elect the fair value option for any financial instruments acquired for which the primary basis of accounting is not fair value.

In accordance with SFAS No. 157, we applied the following fair value hierarchy in order to measure fair value for assets and liabilities:

Level 1 Quoted prices for identical instruments in active markets that we have the ability to access. Financial assets utilizing Level 1 inputs include certain U.S. Treasury securities and obligations of the U.S. government.

Level 2 Quoted prices for similar instruments in active markets; quoted prices for identical or similar instruments in markets that are not active; and inputs, other than quoted prices, that are observable in the marketplace for the financial instrument. The observable inputs are used in valuation models to calculate the fair value of the financial instruments. Financial assets utilizing Level 2 inputs include certain municipal and corporate bonds.

Level 3 Valuations derived from valuation techniques in which one or more significant inputs or value drivers are unobservable. Level 3 inputs reflect our own assumptions about the assumptions a market participant would use in pricing an asset or liability. Financial assets utilizing Level 3 inputs include certain state, corporate and mortgage-backed securities. Non-financial assets utilizing Level 3 inputs include real estate acquired through claim settlement. Additionally, financial liabilities utilizing Level 3 inputs consist of derivative financial instruments.

We use a pricing service to determine the fair value of securities available-for-sale in Level 1 and Level 2 of the fair value hierarchy. These services utilize a variety of inputs to determine fair value including actual trade data, benchmark yield data, broker/dealer quotes, issuer spread data and other reference information. This information is evaluated using a multidimensional pricing model. This model combines all inputs to arrive at the fair value assigned to each security. We review the prices generated by this model for reasonableness and, in some cases, further analyze and research prices generated to ensure their accuracy. Securities whose fair value is primarily based on the use of our multidimensional pricing model are classified in Level 2 and include certain municipal and corporate bonds.

Assets and liabilities classified as Level 3 are as follows:

Securities available for sale that are not readily marketable and are valued using a combination of broker quotations and/or internally developed models based on the present value of expected cash flows utilizing data provided by the trustees.

Real estate acquired through claim settlement is fair valued at the lower of our acquisition cost or a percentage of appraised value. The percentage applied to appraised value is based upon our historical sales experience.

As discussed in Note 3 the derivative related to the outstanding debentures is valued using the Black-Scholes model. Remaining derivatives are valued internally, based on the present value of expected cash flows utilizing data provided by the trustees.

Fair value measurements for items measured at fair value included the following as of March 31, 2008 (in thousands):

	Fair Value Measurements	Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)
Assets				
Securities available-for-sale	\$6,176,989	\$ 324,363	\$ 5,820,113	\$ 32,513
Real estate acquired (1)	110,698			110,698
Liabilities				
Other liabilities (derivatives)	\$ 20,547	\$	\$	\$ 20,547

(1) Real estate acquired through claim settlement, which is held for sale, is reported in Other Assets on the consolidated balance sheet.

For assets and liabilities measured at fair value using significant unobservable inputs (Level 3), a reconciliation of the beginning and ending balances for the period ending March 31, 2008 is as follows (in thousands):

	Securities Available- for-Sale	Real Estate Acquired	Other Liabilities
Balance at January 1, 2008	\$37,195	\$145,198	\$(12,132)
Total realized/unrealized gains (losses):			
Included in earnings and reported as realized investment gains (losses), net	(2,715)		
Included in earnings and reported as other revenue			(3,473)
Included in earnings and reported as losses incurred, net		(5,587)	
Included in other comprehensive income	(1,939)		
Purchases, issuances and settlements	(28)	(28,913)	(4,942)
Transfers in/and or out of Level 3			
Balance at March 31, 2008	\$32,513	\$110,698	\$(20,547)
Amount of total gains (losses) included in earnings for the period attributable to the change in unrealized gains (losses) on assets still held at March 31, 2008	\$ (2,715)	\$ (6,588)	\$ (3,473)

Note 7 Comprehensive income

Our total comprehensive income, as calculated per SFAS No. 130, Reporting Comprehensive Income, was as follows:

	Three Months Ended March 31,	
	2008	2007
	(In thousands of dollars)	
Net (loss) income	\$ (34,394)	\$ 92,363
Other comprehensive loss	(31,458)	(4,668)
Total comprehensive (loss) income	\$ (65,852)	\$ 87,695
Other comprehensive (loss) income (net of tax):		
Change in unrealized gains and losses on investments	\$ (35,149)	\$ (5,914)
Other	3,691	1,246
Other comprehensive loss	\$ (31,458)	\$ (4,668)

At March 31, 2008, accumulated other comprehensive income of \$39.2 million included \$30.7 million of net unrealized gains on investments, \$12.1 million relating to a foreign currency translation adjustment, (\$3.2) million relating to defined benefit plans and (\$0.4) million relating to the accumulated other comprehensive loss of the Company's joint venture investments, all net of tax. At December 31, 2007, accumulated other comprehensive income of \$70.7 million included \$65.9 million of net unrealized gains on investments, (\$3.2) million relating to defined benefit plans, \$8.5 million relating to foreign currency translation adjustment and (\$0.5) million relating to the accumulated other comprehensive loss of the Company's joint venture investments.

Note 8 Benefit Plans

The following table provides the components of net periodic benefit cost for the pension, supplemental executive retirement and other postretirement benefit plans:

	Three Months Ended March 31,			
	Pension and Supplemental Executive Retirement Plans		Other Postretirement Benefits	
	2008	2007	2008	2007
	(In thousands of dollars)			
Service cost	\$ 2,036	\$ 2,504	\$ 888	\$ 890
Interest cost	3,332	3,016	1,179	1,112
Expected return on plan assets	(4,805)	(4,370)	(941)	(804)
Recognized net actuarial loss	114	63		26
Amortization of transition obligation			71	71
Amortization of prior service cost	171	141		
Net periodic benefit cost	\$ 848	\$ 1,354	\$ 1,197	\$ 1,295

We previously disclosed in its financial statements for the year ended December 31, 2007 that we expected to contribute approximately \$9.3 million and \$3.0 million, respectively, to our pension and postretirement plans in 2008. As of March 31, 2008, none of these contributions have been made, but we expect to make these contributions in 2008.

Note 9 Shareholders equity

In March 2008 we completed the public offering and sale of 42,933,333 shares of our common stock at a price of \$11.25 per share. We received net proceeds of approximately \$461 million, after deducting underwriting discount and estimated offering expenses. The number of shares and proceeds reflect the exercise in full of the underwriters' option to purchase additional shares of common stock. Of the 42.9 million shares of common stock sold, 7.1 million were newly issued shares and 35.8 million were common shares issued out of treasury. The cost of the treasury shares issued exceeded the proceeds from the sale by approximately \$1.6 billion, which resulted in a deficiency. The deficiency was

charged to paid in capital related to previous treasury share transactions, and the remainder was charged to retained earnings.

The net proceeds of the offering were used to increase the capital of MGIC, our principal insurance subsidiary, in order to enable us to expand the volume of our new business and will also be used for our general corporate purposes.

ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Overview

Through our subsidiary MGIC, we are the leading provider of private mortgage insurance in the United States to the home mortgage lending industry. Our principal products are primary mortgage insurance and pool mortgage insurance. Primary mortgage insurance may be written through the flow market channel, in which loans are insured in individual, loan-by-loan transactions. Primary mortgage insurance may also be written through the bulk market channel, in which portfolios of loans are individually insured in single, bulk transactions.

As used below, we and our refer to MGIC Investment Corporation's consolidated operations. The discussion below should be read in conjunction with Management's Discussion and Analysis of Financial Condition and Results of Operations in our Annual Report on Form 10-K for the year ended December 31, 2007. We refer to this Discussion as the 10-K MD&A. The discussion of our business in this document generally does not apply to our international operations which began in 2007, are conducted only in Australia and are immaterial. The results of our operations in Australia are included in the consolidated results disclosed.

General Business Environment

Please refer to our Annual Report on Form 10-K for the year ended December 31, 2007 for our discussion of the general business environment. There have been no material changes to that discussion.

Factors Affecting Our Results

Our results of operations are affected by:

Premiums written and earned

Premiums written and earned in a year are influenced by:

New insurance written, which increases the size of the in force book of insurance, is the aggregate principal amount of the mortgages that are insured during a period. Many factors affect new insurance written, including the volume of low down payment home mortgage originations and competition to provide credit enhancement on those mortgages, including competition from other mortgage insurers and alternatives to mortgage insurance.

Cancellations, which reduce the size of the in force book of insurance that generates premiums.

Cancellations due to refinancings are affected by the

level of current mortgage interest rates compared to the mortgage coupon rates throughout the in force book, as well as by current home values compared to values when the loans in the in force book became insured.

Premium rates, which are affected by the risk characteristics of the loans insured and the percentage of coverage on the loans.

Premiums ceded to reinsurance subsidiaries of certain mortgage lenders (captives) and risk sharing arrangements with the GSEs.

Premiums are generated by the insurance that is in force during all or a portion of the period. Hence, changes in the average insurance in force in the current period compared to an earlier period is a factor that will increase (when the average in force is higher) or reduce (when it is lower) premiums written and earned in the current period, although this effect may be enhanced (or mitigated) by differences in the average premium rate between the two periods as well as by premiums that are ceded to captives. Also, new insurance written and cancellations during a period will generally have a greater effect on premiums written and earned in subsequent periods than in the period in which these events occur.

Investment income

Our investment portfolio is comprised almost entirely of fixed income securities rated A or higher. The principal factors that influence investment income are the size of the portfolio and its yield. As measured by amortized cost (which excludes changes in fair market value, such as from changes in interest rates), the size of the investment portfolio is mainly a function of cash generated from (or used in) operations, such as investment earnings and claim payments, less cash used for non-operating activities, such as share repurchases. Realized gains and losses are a function of the difference between the amount received on sale of a security and the security's amortized cost. The amount received on sale of fixed income securities is affected by the coupon rate of the security compared to the yield of comparable securities at the time of sale.

Losses incurred

Losses incurred are the current expense that reflects estimated payments that will ultimately be made as a result of delinquencies on insured loans. As explained under Critical Accounting Policies, in the 10-K MD&A, except in the case of premium deficiency reserves, we recognize an estimate of this expense only for delinquent loans. Losses incurred are generally affected by:

The state of the economy and housing values, each of which affects the likelihood that loans will become delinquent and whether loans that are delinquent cure their delinquency. The level of delinquencies has historically followed a seasonal pattern, with a reduction in delinquencies in the first part of the year, followed by an increase in the latter part of the year. However, although this pattern has continued, the default inventory has increased each quarter since the second quarter of 2007 because the seasonal pattern has been more than offset by the development of the 2006 and 2007 books of business.

The product mix of the in force book, with loans having higher risk characteristics generally resulting in higher delinquencies and claims.

The size of loans insured. Higher average loan amounts tend to increase losses incurred.

The percentage of coverage on insured loans. Deeper average coverage tends to increase incurred losses.

Changes in housing values, which affect our ability to mitigate our losses through sales of properties with delinquent mortgages.

The distribution of claims over the life of a book. Historically, the first two years after a loan is originated are a period of relatively low claims, with claims increasing substantially for several years subsequent and then declining, although persistency, the condition of the economy and other factors can affect this pattern.

Changes in premium deficiency reserves

Each quarter, we recalculate the premium deficiency reserve on the remaining Wall Street bulk insurance in force. The premium deficiency reserve primarily changes from quarter to quarter as a result of two factors. First, it changes as the actual premiums, losses and expenses that were previously estimated are recognized. Each period such items are reflected in our financial statements as earned premium, losses incurred and expenses. The difference between the amount and timing of actual earned premiums, losses incurred and expenses and our previous estimates used to establish the premium deficiency reserves has an effect (either positive or negative) on that period's results. Second, the premium deficiency reserve changes as our assumptions relating to the present value of expected future premiums, losses and expenses on the remaining Wall Street bulk insurance in force change. Changes to these assumptions also have an effect on that period's results.

Underwriting and other expenses

The majority of our operating expenses are fixed, with some variability due to contract underwriting volume. Contract underwriting generates fee income included in Other revenue.

Income (loss) from joint ventures

Our results of operations are also affected by the results of our joint ventures, which are accounted for under the equity method. Historically, joint venture income principally consisted of the aggregate results of our investment in two less than majority owned joint ventures, Credit-Based Asset Servicing and Securitization LLC, C-BASS, and Sherman Financial Group LLC. In 2007, joint venture losses included an impairment charge equal to our entire equity interest in C-BASS, as well as equity losses incurred by C-BASS in the fourth quarter that reduced the carrying value of our \$50 million note

from C-BASS to zero. As a result, beginning in the first quarter of 2008, our joint venture income principally consists of income from Sherman.

We are currently negotiating a transaction with Sherman under which Sherman could acquire our entire interest in Sherman. There can be no assurances that we will enter into a definitive agreement on this sale of interest to Sherman or if we do that the transaction will close.

Sherman: Sherman is principally engaged in purchasing and collecting for its own account delinquent consumer receivables, which are primarily unsecured, and in originating and servicing subprime credit card receivables. The borrowings used to finance these activities are included in Sherman's balance sheet. During the second and third quarters of 2007 Sherman acquired several portfolios of performing subprime second mortgages for an approximate aggregate purchase price of \$415 million.

Sherman's consolidated results of operations are primarily affected by:

Revenues from delinquent receivable portfolios

These revenues are the cash collections on the portfolios, and depend on the aggregate amount of delinquent receivables owned by Sherman, the type of receivable and the length of time that the receivable has been owned by Sherman.

Amortization of delinquent receivable portfolios

Amortization is the recovery of the cost to purchase the receivable portfolios. Amortization expense is a function of estimated collections from the portfolios over their estimated lives. If estimated collections cannot be reasonably predicted, cost is fully recovered before any net revenue, calculated as the difference between revenues from a receivable portfolio and that portfolio's amortization, is recognized.

Credit card interest and fees, along with the related provision for losses for uncollectible amounts.

Costs of collection, which include servicing fees paid to third parties to collect receivables.

C-BASS: In 2007, C-BASS ceased its operations and is managing its portfolio pursuant to a consensual, non-bankruptcy restructuring, under which its assets are to be paid out over time to its secured and unsecured creditors.

Mortgage Insurance Earnings and Cash Flow Cycle

In our industry, a book is the group of loans that a mortgage insurer insures in a particular calendar year. In general, the majority of any underwriting profit (premium

revenue minus losses) that a book generates occurs in the early years of the book, with the largest portion of any underwriting profit realized in the first year. Subsequent years of a book generally result in modest underwriting profit or underwriting losses. This pattern of results typically occurs because relatively few of the claims that a book will ultimately experience typically occur in the first few years of the book, when premium revenue is highest, while subsequent years are affected by declining premium revenues, as persistency decreases (primarily due to loan prepayments), and losses increase.

We expect our 2008 book will be smaller, perhaps materially, than the average books we have written during the past three years. The portion of the 2005 book that we wrote in the second half of 2005 and the 2006 and 2007 books have generated delinquencies and incurred losses that are materially higher than previous books we have written since the mid-1990s at comparable times in the lives of those books. At this point, we cannot determine whether the losses on the portion of the 2005 book that we wrote in the second half of 2005 and the 2006 and 2007 books will ultimately follow the typical loss pattern or if this early loss development represents an acceleration to some extent of the total losses that they will ultimately generate. Regardless of ultimate claim pattern of these full or half-year books, we expect they will generate material incurred and paid losses in 2008 and that given their size and the lower new insurance written we expect in 2008, they will materially negatively affect our 2008 results.

2008 First Quarter Results

Our results of operations in the first quarter of 2008 were principally affected by:

Premiums written and earned

Premiums written and earned during the first quarter of 2008 increased compared to the same period in 2007. The average insurance in force was higher in 2008 than in 2007, but the effect of the higher in force has been somewhat offset by lower average premium yields due to a higher proportion of insurance in force that was written through the flow channel in 2008, compared to 2007.

Investment income

Investment income in the first quarter of 2008 was higher when compared to the same period in 2007 due to an increase in the average amortized cost of invested assets, offset by a decrease in the pre-tax yield.

Losses incurred

Losses incurred for the first quarter of 2008 significantly increased compared to the same period in 2007 primarily due to increases in the default inventory and estimates regarding how many delinquencies will result in a claim, or claim rate, and how much will be paid on claims, or severity, when each of these items is compared to the same

period in 2007. The default inventory increased by approximately 6,500 delinquencies in the first quarter of 2008, compared to a decrease of approximately 2,500 in the first quarter of 2007. The increase in estimated severity was primarily the result of the default inventory containing higher loan exposures with expected higher average claim payments as well as our inability to mitigate losses through the sale of properties due to slowing home price appreciation or home price declines in some areas. The increase in the estimated claim rate was due to recent increases in the claim rates across the country. Certain markets such as California, Florida, Nevada and Arizona have experienced more significant increases in claim rates.

Premium deficiency

During the first quarter of 2008 the premium deficiency reserve on Wall Street bulk transactions declined by \$264 million from \$1,211 million, as of December 31, 2007, to \$947 million as of March 31, 2008. The \$947 million premium deficiency reserve as of March 31, 2008 reflects the present value of expected future losses and expenses that exceeded the present value of expected future premium and already established loss reserves.

Underwriting and other expenses

Underwriting and other expenses for the first quarter of 2008 increased when compared to the same period in 2007. Underwriting and other expenses for the first quarter of 2008 included \$3.3 million of one-time consulting fees associated with the common stock offering and private placement of the junior subordinated convertible debentures.

Income from joint ventures

Income from joint ventures decreased in the first quarter of 2008 compared to the same period in 2007. This decrease was primarily due to a decrease in equity earnings from Sherman, resulting from lower earnings from Sherman and a decrease in our ownership percentage from approximately 41% during the first quarter of 2007 to approximately 24% during the first quarter of 2008.

Results of Consolidated Operations

As discussed under *Forward Looking Statements and Risk Factors* below, actual results may differ materially from the results contemplated by forward looking statements. We are not undertaking any obligation to update any forward looking statements or other statements we may make in the following discussion or elsewhere in this document even though these statements may be affected by events or circumstances occurring after the forward looking statements or other statements were made. Therefore no reader of this document should rely on these statements being accurate as of any time other than the time at which this document was filed with the Securities and Exchange Commission.

New insurance written

The amount of our primary new insurance written during the three months ended March 31, 2008 and 2007 was as follows:

	Three Months Ended March 31,	
	2008	2007
	(\$ billions)	
NIW Flow Channel	\$ 18.1	\$ 10.4
NIW Bulk Channel	1.0	2.3
 Total Primary NIW	 \$ 19.1	 \$ 12.7

Refinance volume as a % of primary flow NIW 35% 27%

The increase in new insurance written on a flow basis in the first quarter of 2008, compared to the same period in 2007, was primarily due to decreased interest in alternatives to mortgage insurance, which we believe was affected by slowing property appreciation and, in some markets, declines in property values, along with changes in interest rates. For a discussion of new insurance written through the bulk channel, see *Bulk transactions* below.

Despite the increased volume of new insurance written in the first quarter, we anticipate our flow new insurance written for the full year 2008 to be significantly below the level written in 2007, due to changes in our underwriting guidelines discussed below. Our level of new insurance written could also be affected by other items, as noted in our *Risk Factors*, which are an integral part of this *Management's Discussion and Analysis*.

As we have disclosed for some time in our *Risk Factors* the percentage of our volume written on a flow basis that includes segments we view as having a higher probability of claim continued to increase through 2007. In particular, the percentage of our flow new insurance written with loan-to-value ratios greater than 95% grew to 42% in 2007, compared to 34% in 2006. For the first quarter of 2008 the percentage of our

flow new insurance written with loan-to-value ratios greater than 95% declined to 30%, compared to 40% for the same period a year ago.

We have implemented a series of changes to our underwriting guidelines that are designed to improve the credit risk profile of our new insurance written. The changes will primarily affect borrowers who have multiple risk factors such as a high loan-to-value ratio, a lower FICO score and limited documentation or are financing a home in a market we categorize as higher risk. We have also implemented premium rate increases. Several of these underwriting changes went into effect for loans submitted to us beginning on January 14, 2008, the remainder, along with the premium rate changes, were effective for loans submitted to us beginning on March 3, 2008.

Cancellations and insurance in force

New insurance written and cancellations of primary insurance in force during the three months ended March 31, 2008 and 2007 were as follows:

	Three Months Ended March 31, 2008 2007 (\$ billions)	
NIW	\$ 19.1	\$ 12.7
Cancellations	(9.4)	(10.9)
Change in primary insurance in force	\$ 9.7	\$ 1.8
Direct primary insurance in force as of March 31,	\$ 221.4	\$ 178.3

As shown in the table above, in the first quarter of 2008, insurance in force increased \$9.7 billion. This was the eighth consecutive quarter of growth, which was preceded by a period of 13 consecutive quarters, during 2003 through the first quarter of 2006, in which our insurance in force declined.

Cancellation activity has historically been affected by the level of mortgage interest rates and the level of home price appreciation. Cancellations generally move inversely to the change in the direction of interest rates, although they generally lag a change in direction. Our persistency rate (percentage of insurance remaining in force from one year prior) was 77.5% at March 31, 2008, an increase from 76.4% at December 31, 2007 and 70.3% at March 31, 2007. These persistency rate improvements reflect the more restrictive credit policies of lenders, as well as the declining rate of home price appreciation in some markets and declines in housing values in other markets.

Bulk transactions

Historically, our writings of bulk insurance have been, in part, sensitive to the volume of home equity securitization transactions and more recently to purchases by the GSEs of loans having higher credit risk than their standard business. Our writings of bulk insurance have been, in part, also sensitive to competition from other methods of providing credit enhancement in a home equity securitization, including an execution in which the subordinate tranches in the securitization rather than mortgage insurance bear the first loss from mortgage defaults. The competitiveness of the mortgage insurance execution in the bulk channel has also been impacted by changes in our view of the risk of the business, which is affected by the historical performance of previously insured pools and our expectations regarding likely changes in regional and local real estate values. As a result of the sensitivities discussed above, bulk volume has varied materially from period to period.

New insurance written for bulk transactions was \$1.0 billion in the first quarter of 2008 compared to \$2.3 billion in the same period in 2007. The decrease in bulk writings was primarily due to our decision in the fourth quarter of 2007 to stop insuring Wall Street bulk transactions. The majority of the bulk business in the first quarter of 2008 was lender paid transactions that included high quality prime loans and the remainder was bulk business with the GSEs, which also included prime loans. We expect new insurance written for bulk transactions in 2008 and forward to be significantly lower than the \$16.0 billion average volume written through the bulk channel during the last three years. Wall Street bulk transactions represented approximately 41%, 66% and 89% of our new insurance written for bulk transactions during 2007, 2006 and 2005, respectively, and at March 31, 2008 included approximately 137,000 loans with insurance in force of approximately \$23.3 billion and risk in force of approximately \$6.9 billion, which is approximately 71% of our bulk risk in force.

Pool insurance

In addition to providing primary insurance coverage, we also insure pools of mortgage loans. New pool risk written during the three months ended March 31, 2008 and 2007 was \$57 million and \$39 million, respectively. Our direct pool risk in force was \$2.7 billion, \$2.8 billion and \$3.0 billion at March 31, 2008, December 31, 2007 and March 31, 2007, respectively. These risk amounts represent pools of loans with contractual aggregate loss limits and in some cases those without these limits. For pools of loans without these limits, risk is estimated based on the amount that would credit enhance the loans in the pool to a AA level based on a rating agency model. Under this model, at March 31, 2008, December 31, 2007 and March 31, 2007, for \$4.0 billion, \$4.1 billion and \$4.4 billion, respectively, of risk without these limits, risk in force is calculated at \$475 million, \$475 million and \$473 million, respectively.

Net premiums written and earned

Net premiums written and earned during the first quarter of 2008 increased compared to the same period in 2007. The average insurance in force continued to increase, but was partially offset by lower average premium yields due to a higher proportion of insurance in force that was written through the flow channel compared to

2007. We expect our average insurance in force to continue to be higher in 2008, compared to 2007, with our insurance in force balance to begin to stabilize through the remainder of 2008. We believe the anticipated decrease in the total mortgage origination market will be partially offset by our expectation that private mortgage insurance will be used on a greater percentage of mortgage originations, although mortgage insurance penetration could be negatively impacted by usage of FHA insurance programs.

Despite our premium rate increases, we expect our premium yields to continue to be lower in 2008, compared to 2007, due to the fact that we are no longer insuring Wall Street Bulk transactions and, as a result of our underwriting changes, we will be insuring fewer loans with loan-to-value ratios greater than 95%, loans classified as A-minus and reduced documentation loans, which carry higher premium rates.

Risk sharing arrangements

For the three months ended December 31, 2007, approximately 47.6% of our flow new insurance written was subject to arrangements with captives or risk sharing arrangements with the GSEs compared to 47.7% for the year ended December 31, 2007 and 45.6% for the three months ended March 31, 2007. The percentage of new insurance written covered by these arrangements is shown only for the periods ended December 31, 2007 because this percentage normally increases after the end of a quarter. Such increases can be caused by, among other things, the transfer of a loan in the secondary market, which can result in a mortgage insured during a quarter becoming part of a risk sharing arrangement in a subsequent quarter. New insurance written through the bulk channel is not subject to risk sharing arrangements. Premiums ceded in these arrangements are reported in the period in which they are ceded regardless of when the mortgage was insured.

On February 14, 2008 Freddie Mac announced that effective on and after June 1, 2008, Freddie Mac-approved private mortgage insurers, including MGIC, may not cede new risk if the gross risk or gross premium ceded to captive reinsurers is greater than 25%. Freddie Mac stated that it made this change to allow mortgage insurers to retain more insurance premiums to pay current claims and rebuild their capital bases. Fannie Mae informed us on February 26, 2008 that it was making similar changes to its requirements. We have continued discussions with our customers whose captive arrangements would be affected by these new requirements.

A number of lenders have recently either terminated their captive arrangements with us or placed them into run-off. Together, they represented 14.6% of our flow new insurance written that was subject to captive arrangements in 2007.

See discussion under -Losses regarding losses assumed by captives.

Investment income

Investment income for the first quarter of 2008 increased when compared to the same period in 2007 due to an increase in the average amortized cost of invested assets, offset by a decrease in the average investment yield. The portfolio's average pre-tax investment yield was 4.28% at March 31, 2008 and 4.54% at March 31, 2007.

The portfolio's average after-tax investment yield was 3.77% at March 31, 2008 and 4.06% at March 31, 2007.

Other revenue

Other revenue for the first quarter of 2008 decreased when compared to the same period in 2007. The decrease in other revenue was primarily the result of other non-insurance operations.

Losses

As discussed in *Critical Accounting Policies* in the 10-K MD&A, and consistent with industry practices, we establish loss reserves for future claims only for loans that are currently delinquent. The terms *delinquent* and *default* are used interchangeably by us and are defined as an insured loan with a mortgage payment that is 45 days or more past due. Loss reserves are established by our estimate of the number of loans in our inventory of delinquent loans that will not cure their delinquency and thus result in a claim, which is referred to as the claim rate (historically, a substantial majority of delinquent loans have eventually cured, see discussion below regarding the current increase in the rate at which delinquent loans go to claim), and further estimating the amount that we will pay in claims on the loans that do not cure, which is referred to as claim severity. Estimation of losses that we will pay in the future is inherently judgmental. The conditions that affect the claim rate and claim severity include the current and future state of the domestic economy and the current and future strength of local housing markets. Current conditions in the housing and mortgage industries make these assumptions more volatile than they would otherwise be.

Losses incurred

Losses incurred for the first quarter of 2008 significantly increased compared to the same period in 2007 primarily due to increases in the default inventory and estimates regarding how many delinquencies will result in a claim, or claim rate, and how much will be paid on claims, or severity, when each of these items is compared to the same period in 2007. The default inventory increased by approximately 6,500 delinquencies in the first quarter of 2008, compared to a decrease of approximately 2,500 in the first quarter of 2007.

Our loss estimates are established based upon historical experience. The increase in estimated severity in the first quarter of 2008 was primarily the result of the default inventory containing higher loan exposures with expected higher average claim payments as well as our inability to mitigate losses through the sale of properties in some geographical areas due to slowing home price appreciation or declines in home values. We continue to experience increases in delinquencies in certain markets with higher than average loan balances, such as Florida and California. In California we have experienced an increase in delinquencies, from 6,900 as of December 31, 2007 to 8,500 as of March 31, 2008. Our Florida delinquencies increased from 12,500 as of December 31, 2007 to 15,600 as of March 31, 2008. The average claim paid on

California loans was more than twice as high as the average claim paid for the remainder of the country. The increase in the estimated claim rate is due to increases in the claim rates across the country. Certain markets such as California, Florida, Nevada and Arizona have experienced more significant increases in claim rates.

We believe that these trends will continue throughout 2008, resulting in a higher level of incurred losses in 2008, compared to 2007.

As discussed under Risk Sharing Arrangements a portion of our flow new insurance written is subject to reinsurance arrangements with captives. The majority of these reinsurance arrangements are aggregate excess of loss reinsurance agreements, and the remainder are quota share agreements. Under the aggregate excess of loss agreements, we are responsible for the first aggregate layer of loss, which is typically 4% or 5%, the captives are responsible for the second aggregate layer of loss, which is typically 5% or 10%, and we are responsible for any remaining loss. The layers are typically expressed as a percentage of the original risk on an annual book of business reinsured by the captive. The premium cessions on these agreements typically range from 25% to 40% of the direct premium. Under a quota share arrangement premiums and losses are shared on a pro-rata basis between us and the captives, with the captives portion of both premiums and losses typically ranging from 25% to 50%. As noted under

Risk Sharing Arrangements based on changes to the GSE requirements, beginning June 1, 2008 our captive arrangements, both aggregate excess of loss and quota share, will be limited to a 25% cede rate.

Under these agreements the captives are required to maintain a separate trust account, of which we are the sole beneficiary. Premiums ceded to a captive are deposited in the applicable trust account to support the captive's layer of insured risk. These amounts are held in the trust account and are available to pay reinsured losses. The captive's ultimate liability is limited to the assets in the trust account. When specific time periods are met and the individual trust account balance has reached a required level, then the individual captive may make authorized withdrawals from its applicable trust account. The total fair value of the trust fund assets under these agreements at March 31, 2008 exceeded \$680 million.

In the first quarter of 2008 the captive arrangements reduced our losses incurred by approximately \$58 million. We anticipate that the reduction in losses incurred will continue at this level or higher in the second quarter of 2008.

Information about the composition of the primary insurance default inventory at March 31, 2008, December 31, 2007 and March 31, 2007 appears in the table below.

	March 31, 2008	December 31, 2007	March 31, 2007
Total loans delinquent (1)	113,589	107,120	76,122
Percentage of loans delinquent (default rate)	7.68%	7.45%	5.92%
Prime loans delinquent (2)	52,571	49,333	35,436
Percentage of prime loans delinquent (default rate)	4.44%	4.33%	3.56%
A-minus loans delinquent (2)	22,748	22,863	17,047
Percentage of A-minus loans delinquent (default rate)	19.22%	19.20%	15.77%
Subprime credit loans delinquent (2)	12,267	12,915	11,246
Percentage of subprime credit loans delinquent (default rate)	34.33%	34.08%	25.86%
Reduced documentation loans delinquent	26,003	22,009	12,393
Percentage of reduced doc loans delinquent (default rate)	18.54%	15.48%	8.92%

(1) At March 31, 2008 and December 31, 2007, 40,200 and 39,704 loans in default, respectively, related to Wall Street bulk transactions.

(2) We define prime loans as those having FICO credit scores of 620 or greater, A-minus loans as those having FICO credit scores of 575-619, and subprime credit loans as those having FICO credit scores of less than 575, all as reported to us at the time a commitment to insure is issued.

Most A-minus
and subprime
credit loans
were written
through the bulk
channel.

In April 2008 a large servicer changed their methodology for reporting delinquencies to us and the industry for loans greater than 12 months old. Under the new methodology this servicer is now reporting delinquencies to us sooner than they had historically and is now reporting consistent with substantially all other servicers. As a result of this change the servicer reported approximately 3,500 more delinquencies and 380 fewer cures to us in April; the net increase represents approximately 19% of all delinquent loans they reported to us and 3% of total delinquencies reported to us from all servicers. Because our reserves for estimated losses include loans that are delinquent but not yet reported to us by servicers within our incurred but not reported, or IBNR reserves, this change by the servicer does not have any effect on our overall loss reserves.

The pool notice inventory increased from 25,224 at December 31, 2007 to 25,638 at March 31, 2008; the pool notice inventory was 20,665 at March 31, 2007.

The average primary claim paid for the first quarter of 2008 was \$51,193 compared to \$30,841 for the same period in 2007. We expect the average primary claim paid to continue to increase in 2008 and beyond. We expect these increases will be driven by our higher average insured loan sizes as well as decreases in our ability to mitigate losses through the sale of properties in some geographical regions, as certain housing markets, like California and Florida, become less favorable.

The average claim paid for the top 5 states (based on 2008 losses paid) for the three months ended March 31, 2008 and 2007 appears in the table below.

Average claim paid for the top 5 states (\$ thousands)

	Three months ended March 31,	
	2008	2007
California	\$ 115,917	\$ 61,326
Florida	70,398	31,373
Michigan	37,158	33,171
Ohio	34,521	30,828
Minnesota	60,542	48,269
Other states	42,464	28,974
All states	\$ 51,193	\$ 30,841

The average loan size of our insurance in force at March 31, 2008, December 31, 2007 and March 31, 2007 appears in the table below.

	March 31, 2008	December 31, 2007	March 31, 2007
Average loan size			
Total insurance in force	\$ 149,794	\$ 147,308	\$ 138,736
Prime (FICO 620 & >)	145,050	141,690	131,070
A-Minus (FICO 575-619)	133,890	133,460	129,720
Subprime (FICO < 575)	123,570	124,530	126,290
Reduced doc (All FICOs)	209,540	209,990	204,580

The average loan size of our insurance in force at March 31, 2008, December 31, 2007 and March 31, 2007 for the top 5 states (based on 2008 losses paid) appears in the table below.

	March 31, 2008	December 31, 2007	March 31, 2007
Average loan size			
California	\$ 293,421	\$ 291,578	\$ 278,618
Florida	179,574	178,063	166,984
Michigan	120,025	119,428	117,372
Ohio	114,149	113,276	110,546
Minnesota	158,133	156,954	151,592
All other states	144,618	142,076	132,959

Information about net losses paid during the three months ended March 31, 2008 and 2007 appears in the table below.

Net paid claims (\$ millions)	Three months ended March 31,	
	2008	2007
Prime (FICO 620 & >)	\$ 137	\$ 67
A-Minus (FICO 575-619)	68	34
Subprime (FICO < 575)	39	19
Reduced doc (All FICOs)	107	26
Other	20	20
	\$ 371	\$ 166

Primary losses paid for the top 15 states (based on 2008 losses paid) and all other states for the three months ended March 31, 2008 and 2007 appear in the table below.

Paid claims by state (\$ millions)	Three months ended March 31,	
	2008	2007
California	\$ 82.0	\$ 3.9
Florida	30.0	2.0
Michigan	28.9	21.0
Ohio	18.3	18.6
Minnesota	14.5	7.2
Texas	14.4	14.2
Georgia	14.2	8.3
Arizona	12.7	0.1
Illinois	12.6	6.5
Colorado	10.5	7.2
Nevada	10.4	1.0
Massachusetts	8.8	2.5
Indiana	7.6	8.0
Virginia	6.6	1.2
New York	6.4	2.4
Other states	73.1	41.9
	351.0	146.0
Other (Pool, LAE, other)	20.0	20.0
	\$ 371.0	\$ 166.0

The default inventory in those same states at March 31, 2008, December 31, 2007 and March 31, 2007 appears in the table below.

Default inventory by state

	March 31, 2008	December 31, 2007	March 31, 2007
California	8,479	6,925	3,447
Florida	15,626	12,548	5,000
Michigan	7,166	7,304	6,220
Ohio	6,701	6,901	6,022
Minnesota	2,605	2,478	1,834
Texas	6,789	7,103	5,847
Georgia	4,726	4,623	3,281
Arizona	2,796	2,170	907
Illinois	5,597	5,435	3,889
Colorado	1,632	1,534	1,328
Nevada	1,762	1,338	599
Massachusetts	1,730	1,596	1,124
Indiana	3,711	3,763	3,125
Virginia	2,025	1,760	1,021
New York	3,206	3,155	2,451
Other states	39,038	38,487	30,027
	113,589	107,120	76,122

We anticipate that net paid claims for the full year 2008 will approximate \$1.8 billion to \$2.0 billion.

As of March 31, 2008, 74% of our primary insurance in force was written subsequent to December 31, 2004. On our flow business, the highest claim frequency years have typically been the third and fourth year after the year of loan origination. However, the pattern of claims frequency can be affected by many factors, including low persistency and deteriorating economic conditions. Low persistency can have the effect of accelerating the period in the life of a book during which the highest claim frequency occurs. Deteriorating economic conditions can result in increasing claims following a period of declining claims. On our bulk business, the period of highest claims frequency has generally occurred earlier than in the historical pattern on our flow business.

Premium deficiency

During the first quarter of 2008 the premium deficiency reserve on Wall Street bulk transactions declined by \$264 million from \$1,211 million, as of December 31, 2007, to \$947 million as of March 31, 2008. The \$947 million premium deficiency reserve as of March 31, 2008 reflects the present value of expected future losses and expenses that exceeded the present value of expected future premium and already established loss reserves. Within the premium deficiency calculation, our expected present value of expected future paid losses and expenses was \$3,397 million, offset by the present value of expected future premium of \$874 million and already established loss reserves

of \$1,576 million. The premium deficiency reserves as of December 31, 2007 reflected expected present value of expected future paid losses and expenses of \$3,561 million, offset by the present value of expected future premium of \$901 million and already established loss reserves of \$1,449 million. As of March 31, 2008 there was no premium deficiency related to the remainder of our in force business.

The change in premium deficiency reserve from December 31, 2007 to March 31, 2008 appears in the table below. (\$ millions)

	At December 31, 2007	At March 31, 2008	Increase (decrease) in deficiency
Present value of expected future premium	\$ 901	\$ 874	\$ 27
Present value of expected future paid losses and expenses	(3,561)	(3,397)	(164)
Net present value of future cash flows	(2,660)	(2,523)	(137)
Established loss and lae reserves	1,449	1,576	(127)
Net deficiency	\$ (1,211)	\$ (947)	\$ (264)

Each quarter, we recalculate the premium deficiency reserve on the remaining Wall Street bulk insurance in force. The premium deficiency reserve primarily changes from quarter to quarter as a result of two factors. First, it changes as the actual premiums, losses and expenses that were previously estimated are recognized. Each period such items are reflected in our financial statements as earned premium, losses incurred and expenses. The difference between the amount and timing of actual earned premiums, losses incurred and expenses and our previous estimates used to establish the premium deficiency reserves has an effect (either positive or negative) on that period's results. Second, the premium deficiency reserve changes as our assumptions relating to the present value of expected future premiums, losses and expenses on the remaining Wall Street bulk insurance in force change. Changes to these assumptions also have an effect on that period's results. During the first quarter of 2008 there were no significant changes to the assumptions used in calculating the premium deficiency reserve, when compared to December 31, 2007.

The calculation of premium deficiency reserves requires the use of significant judgments and estimates to determine the present value of future premium and present value of expected losses and expenses on our business. The present value of future premium relies on, among other things, assumptions about persistency and repayment patterns on underlying loans. The present value of expected losses and expenses depends on assumptions relating to severity of claims and claim rates on current defaults, and expected defaults in future periods. Assumptions used in calculating the deficiency reserves can be affected by volatility in the current housing and mortgage lending industries. To the extent premium patterns and actual loss experience differ from the assumptions used in calculating the premium deficiency reserves, the differences between the actual results and our estimate will affect future period earnings.

Underwriting and other expenses

Underwriting and other expenses for the first quarter of 2008 increased when compared to the same period in 2007. Underwriting and other expenses for the first quarter of 2008 included \$3.3 million of one-time consulting fees associated with the common stock offering and private placement of the junior subordinated convertible debentures.

Ratios

The table below presents our loss, expense and combined ratios for our combined insurance operations for the three months ended March 31, 2008 and 2007.

	Three months ended March 31,	
	2008	2007
Combined Insurance Operations:		
Loss ratio	200.2%	60.8%
Expense ratio	16.0%	17.8%
Combined ratio	216.2%	78.6%

The loss ratio is the ratio, expressed as a percentage, of the sum of incurred losses and loss adjustment expenses to net premiums earned. The increase in the loss ratio in the first quarter of 2008, compared to the same period in 2007, is due to an increase in losses incurred, partially offset by an increase in premiums earned. The expense ratio is the ratio, expressed as a percentage, of underwriting expenses to net premiums written. The decrease in the first quarter of 2008, compared to the same period in 2007, is due to an increase in premiums written, partially offset by the increase in underwriting and other expenses. The combined ratio is the sum of the loss ratio and the expense ratio.

Income taxes

The effective tax rate on our pre-tax loss was 51.7% in the first quarter of 2008, compared to an effective tax rate on our pre-tax income of 23.1% in the first quarter of 2007. During those periods, the rate reflected the benefits recognized from tax-preferenced investments. Our tax-preferenced investments that impact the effective tax rate consist almost entirely of tax-exempt municipal bonds. The difference in the rate was primarily the result of a pre-tax loss during the first quarter of 2008, compared to pre-tax income during the first quarter of 2007.

Joint ventures

Our equity in the earnings from Sherman and C-BASS and certain other joint ventures and investments, accounted for in accordance with the equity method of accounting, is shown separately, net of tax, on our consolidated statement of

operations. Income from joint ventures decreased in the first quarter of 2008 compared to the same period in 2007. This decrease was primarily due to a decrease in equity earnings from Sherman, resulting from lower earnings from Sherman and a decrease in our ownership percentage from approximately 41% during the first quarter of 2007 to approximately 24% during the first quarter of 2008.

C-BASS

Beginning in February 2007 and continuing through approximately the end of March 2007, the subprime mortgage market experienced significant turmoil. After a period of relative stability that persisted during April, May and through approximately late June, market dislocations recurred and then accelerated to unprecedented levels beginning in approximately mid-July 2007. As noted in the section titled C-BASS Impairment in our 10-K MD&A, in the third quarter of 2007, we concluded that our total equity interest in C-BASS was impaired. In addition, during the fourth quarter of 2007 due to additional losses incurred by C-BASS, we reduced the carrying value of our \$50 million note from C-BASS to zero under equity method accounting.

Sherman

Summary Sherman income statements for the periods indicated appear below. We do not consolidate Sherman with us for financial reporting purposes, and we do not control Sherman. Sherman's internal controls over its financial reporting are not part of our internal controls over our financial reporting. However, our internal controls over our financial reporting include processes to assess the effectiveness of our financial reporting as it pertains to Sherman. We believe those processes are effective in the context of our overall internal controls.

Sherman Summary Income Statement:

	Three months ended March 31,	
	2008	2007
	(\$ millions)	
Revenues from receivable portfolios	\$ 289.8	\$ 267.1
Portfolio amortization	123.3	122.1
Revenues, net of amortization	166.5	145.0
Credit card interest income and fees	217.5	132.5
Other revenue	17.9	7.8
Total revenues	401.9	285.3
Total expenses	336.3	203.1
Income before tax	\$ 65.6	\$ 82.2
Company's income from Sherman	\$ 13.8	\$ 27.7

In the first quarter of 2008, compared to the same period in 2007, Sherman experienced increased collection revenues from portfolios owned and continued growth in the banking segment. These increases were offset by higher loan loss provisions, interest expense and operating expenses related to growth in the banking segment.

In September 2007 we sold a portion of our interest in Sherman to an entity owned by Sherman's senior management. The interest sold by us represented approximately 16% of Sherman's equity. We received a cash payment of \$240.8 million in the sale and are entitled to a contingent payment if the management entity's after-tax return on the interests it purchased exceeds approximately 16% annually over a period that can end as late as December 31, 2013. We recorded a \$162.9 million pre-tax gain on this sale, which is reflected in our results of operations for 2007 as a realized gain. After the sale, we own approximately 24.25% of Sherman's interest and Sherman's management owns approximately 54.0%. Radian, which also sold interests in Sherman to the management entity, owns the balance of Sherman. We will continue to account for this investment under the equity method of accounting.

The Company's income from Sherman line item in the table above includes \$1.7 million and \$5.4 million of additional amortization expense the first three months of 2008 and 2007, respectively, above Sherman's actual amortization expense, related to additional interests in Sherman that we purchased during the third quarter of 2006 at a price in excess of book value. As noted above, after the sale of equity interest in September 2007 we now own approximately 24.25% interest in Sherman, which is the lowest interest held since the original investment.

We are currently negotiating a transaction with Sherman under which Sherman could acquire our entire interest in Sherman. There can be no assurances that we will enter into a definitive agreement on this sale of interest to Sherman or if we do that the transaction will close.

Financial Condition

As of March 31, 2008, 74% of our investment portfolio was invested in tax-preferenced securities. In addition, at March 31, 2008, based on book value, approximately 96% of our fixed income securities were invested in A rated and above, readily marketable securities, concentrated in maturities of less than 15 years. Approximately 29% of our investment portfolio is covered by the financial guaranty industry. We evaluate the credit risk of securities through analysis of the underlying fundamentals of each issuer. A breakdown of the portion of our investment portfolio covered by the financial guaranty industry by credit rating, including the rating without the guarantee is shown below.

(\$ millions)

Underlying Rating	Guarantor Rating			
	AAA	A-	BBB-	All
AAA	\$ 52	\$ 2	\$ 2	\$ 54
AA	656	2	240	898
A	567	15	133	715
BBB	62		38	100
	\$1,337	\$17	\$413	\$1,767

If all of the companies in the financial guaranty industry lose their AAA ratings, the percentage of our fixed income portfolio rated A or better will decline by 2% to 94% A or better. No individual guarantor is responsible for the guarantee of more than 10% of our portfolio.

At March 31, 2008, derivative financial instruments in our investment portfolio were immaterial. We primarily place our investments in instruments that meet high credit quality standards, as specified in our investment policy guidelines. The policy also limits the amount of our credit exposure to any one issue, issuer and type of instrument. At March 31, 2008, the modified duration of our fixed income investment portfolio was 4.4 years, which means that an instantaneous parallel shift in the yield curve of 100 basis points would result in a change of 4.4% in the market value of our fixed income portfolio. For an upward shift in the yield curve, the market value of our portfolio would decrease and for a downward shift in the yield curve, the market value would increase.

At March 31, 2008, our total assets included \$1.1 billion of cash and cash equivalents as shown on our consolidated balance sheet. In addition, included in Other assets on our consolidated balance sheet at March 31, 2008 is \$111 million in real estate acquired as part of the claim settlement process. The properties, which are held for sale, are carried at fair value. Also included in Other assets is \$64 million representing the overfunded status of our pension plan.

At March 31, 2008 we had \$200 million, 5.625% Senior Notes due in September 2011 and \$300 million, 5.375% Senior Notes due in November 2015, as well as \$300 million outstanding under a credit facility, with a total market value of \$714.0 million. The

\$300 million outstanding under the credit facility is scheduled to mature in March 2010. This credit facility is discussed under *Liquidity and Capital Resources* below.

At March 31, 2008, we also had \$365 million principal amount of 9% Convertible Junior Subordinated Debentures due in 2063. This amount reflects the partial exercise by the initial purchasers of their option to purchase additional debentures. In April 2008, the initial purchasers exercised the remainder of their option and purchased an additional \$25 million aggregate principal amount of debentures. Within the \$365 million principal amount is a derivative with a value of \$9.3 million, which is included within Other Liabilities on the Consolidated Balance Sheet. The fair value of the convertible debentures and related derivative was approximately \$357.9 million at March 31, 2008.

The total amount of unrecognized tax benefits as of March 31, 2008 is \$86.6 million. Included in that total are \$75.2 million in benefits that would affect the effective tax rate. We recognize interest accrued and penalties related to unrecognized tax benefits in income taxes. We have accrued \$20.6 million for the payment of interest as of March 31, 2008.

The establishment of this liability required estimates of potential outcomes of various issues and required significant judgment. Although the resolutions of these issues are uncertain, we believe that sufficient provisions for income taxes have been made for potential liabilities that may result. If the resolutions of these matters differ materially from these estimates, it could have a material impact on our effective tax rate, results of operations and cash flows.

On June 1, 2007, as a result of an examination by the Internal Revenue Service (IRS) for taxable years 2000 through 2004, we received a Revenue Agent Report (RAR). The adjustments reported on the RAR substantially increase taxable income for those tax years and resulted in the issuance of an assessment for unpaid taxes totaling \$189.5 million in taxes and accuracy-related penalties, plus applicable interest. We have agreed with the IRS on certain issues and paid \$10.5 million in additional taxes and interest. The remaining open issue relates to our treatment of the flow through income and loss from an investment in a portfolio of residual interests of Real Estate Mortgage Investment Conduits (REMICS). The IRS has indicated that it does not believe that, for various reasons, we have established sufficient tax basis in the REMIC residual interests to deduct the losses from taxable income. We disagree with this conclusion and believe that the flow through income and loss from these investments was properly reported on our federal income tax returns in accordance with applicable tax laws and regulations in effect during the periods involved and have appealed these adjustments. The appeals process may take some time and a final resolution may not be reached until a date many months or years into the future. On July 2, 2007, we made a payment of \$65.2 million with the United States Department of the Treasury to eliminate the further accrual of interest. Although the resolution of this issue is uncertain, we believe that sufficient provisions for income taxes have been made for potential liabilities that may result. If the resolution of this matter differs materially from our estimates, it could have a material impact on our effective tax rate, results of operations and cash flows.

Our principal exposure to loss is our obligation to pay claims under MGIC's mortgage guaranty insurance policies. At March 31, 2008, MGIC's direct (before any reinsurance)

primary and pool risk in force, which is the unpaid principal balance of insured loans as reflected in our records multiplied by the coverage percentage, and taking account of any loss limit, was approximately \$64.2 billion. In addition, as part of our contract underwriting activities, we are responsible for the quality of our underwriting decisions in accordance with the terms of the contract underwriting agreements with customers. Through March 31, 2008, the cost of remedies provided by us to customers for failing to meet the standards of the contracts has not been material. However, a generally positive economic environment for residential real estate that continued until 2007 may have mitigated the effect of some of these costs, the claims for which may lag deterioration in the economic environment for residential real estate. There can be no assurance that contract underwriting remedies will not be material in the future.

Sherman

Summary Sherman balance sheets at the dates indicated appear below. We do not consolidate Sherman with us for financial reporting purposes, and we do not control Sherman. Sherman's internal controls over its financial reporting are not part of our internal controls over our financial reporting. However, our internal controls over our financial reporting include processes to assess the effectiveness of our financial reporting as it pertains to Sherman. We believe those processes are effective in the context of our overall internal controls.

Sherman Summary Balance Sheet:

	March 31, 2008	December 31, 2007
	(\$ millions)	
Total Assets	\$2,383	\$ 2,242
Debt	\$1,669	\$ 1,611
Total Liabilities	\$1,898	\$ 1,821
Members' Equity	\$ 485	\$ 421

Our investment in Sherman on an equity basis at March 31, 2008 was \$129.2 million. We received \$51.5 million of distributions from Sherman during 2007 and \$103.7 million of distributions from Sherman in 2006.

Liquidity and Capital Resources

Our consolidated sources of funds consist primarily of premiums written and investment income. We invest positive cash flows pending future payments of claims and other expenses. Historically cash inflows from premiums have been sufficient to meet claim payments, however, we anticipate that in 2008 claim payments will exceed premiums received. Also, see Losses Premium deficiency for a discussion regarding the future cash flow shortfalls of the Wall Street bulk transactions. We can fund cash flow shortfalls through sales of short-term investments and other investment portfolio securities, subject to insurance regulatory requirements regarding the payment of dividends to the extent funds were required by an entity other than the seller. Substantially all of the investment portfolio securities are held by our insurance subsidiaries.

To increase our capital position, in the first quarter of 2008, we raised proceeds of approximately \$815 million through the sale of our common stock and junior convertible debentures. We also raised an additional approximately \$25 million in April 2008 through the sale of additional debentures.

We have a commercial paper program, which is rated A-3 by Standard & Poor's and P-2 by Moody's. The amount available under this program is \$300 million less any amounts drawn under the credit facility discussed below. At March 31, 2008 we had no commercial paper outstanding because, as noted below, in 2007 we drew the entire amount of our revolving credit facility and repaid the amount then-outstanding under this program.

We have a \$300 million, five year revolving credit facility that is scheduled to mature in March 2010. The credit facility requires us to maintain shareholders' equity of at least \$2.25 billion and MGIC to maintain a statutory risk-to-capital ratio of not more than 22:1 and maintain policyholders' position, which includes MGIC's statutory surplus and its contingency reserve, of not less than the amount required by Wisconsin insurance regulation. However, the credit facility was amended on March 14, 2008 to modify the shareholders' equity requirement to require us to maintain a consolidated shareholders' equity balance of no less than \$2.25 billion at any time prior to March 31, 2008 and after July 1, 2008, and no less than \$1.85 billion during the period between March 31, 2008 through and including July 1, 2008. At March 31, 2008, these requirements were met. Our shareholders' equity, as reported on the consolidated balance sheet, was \$2.99 billion and \$2.59 billion at March 31, 2008 and December 31, 2007, respectively. In August 2007 we drew the entire \$300 million on the credit facility. These funds, in part, were utilized to repay the outstanding commercial paper, which approximated \$177 million immediately prior to the credit facility draw. We drew the portion of the revolving credit facility equal to our outstanding commercial paper because we believed that funding with a long-term maturity was superior to funding that required frequent renewal on a short-term basis. We drew the remainder of the credit facility to provide us with greater financial flexibility at the holding company level. At March 31, 2008 we continued to have \$300 million outstanding under this facility.

The credit facility discussed above has a provision whereby we can increase the capacity by \$200 million under the same terms and conditions, if agreed upon by us and

the lenders or any other lenders willing to provide the additional capacity at existing terms.

The commercial paper, credit facility, senior notes and convertible debentures are obligations of MGIC Investment Corporation and not of its subsidiaries. We are a holding company and the payment of dividends from our insurance subsidiaries is restricted by insurance regulation. MGIC is the principal source of dividend-paying capacity. During the first quarter of 2008, MGIC paid a dividend of \$15 million to our holding company. As has been the case for the past several years, as a result of extraordinary dividends paid, MGIC cannot currently pay any dividends without regulatory approval. We anticipate that in the remainder of 2008 we will seek approval to pay an additional \$45 million in dividends from MGIC, \$15 million each quarter.

As of March 31, 2008, we had a total of approximately \$448 million in cash, cash equivalents and liquid investments at the holding company (MGIC Investment). Our use of funds at the holding company includes interest payments on our Senior Notes, credit facility and junior convertible debentures, and dividends on our common stock. On an annual basis, in aggregate, these uses total approximately \$85 million, based on the current rate in effect on our credit facility, our current dividend rate and assuming a full year of interest on the entire \$390 million of debentures. At March 31, 2008 we believe we have adequate liquidity at our holding company to service our holding company obligations in the ordinary course. You should review our Risk Factor titled Our shareholders equity could fall below the minimum amount required under our bank debt.

Risk-to-Capital

We consider our risk-to-capital ratio an important indicator of our financial strength and our ability to write new business. This ratio is computed on a statutory basis for our combined insurance operations and is our net risk in force divided by our policyholders position. Policyholders position consists primarily of statutory policyholders surplus (which increases as a result of statutory net income and decreases as a result of statutory net loss and dividends paid), plus the statutory contingency reserve. The statutory contingency reserve is reported as a liability on the statutory balance sheet. A mortgage insurance company is required to make annual contributions to the contingency reserve of approximately 50% of net earned premiums. These contributions must generally be maintained for a period of ten years. However, with regulatory approval a mortgage insurance company may make early withdrawals from the contingency reserve when incurred losses exceed 35% of net earned premium in a calendar year.

The premium deficiency reserve discussed under Results of Operations Losses Premium deficiency above is not recorded as a liability on the statutory balance sheet and is not a component of statutory net income. The present value of expected future premiums and already established loss reserves and statutory contingency reserves, exceeds the present value of expected future losses and expenses, so no deficiency is recorded on a statutory basis.

Our combined insurance companies risk-to-capital calculation appears in the table below.

	March 31, 2008	December 31, 2007
	(\$ in millions)	
Risk in force net of reinsurance	\$ 59,683	\$ 57,527
Statutory policyholders surplus	\$ 1,861	\$ 1,351
Statutory contingency reserve	3,244	3,464
Statutory policyholders position	\$ 5,105	\$ 4,815
Risk-to-capital:	11.7:1	11.9:1

The decrease in risk-to-capital during the first quarter of 2008 is the result of an increase in statutory policyholders position, offset by an increase in net risk in force. Statutory policyholders position increased during the first quarter of 2008, primarily due to a capital contribution to our subsidiary, MGIC, from the proceeds raised by the sale of our common stock and the convertible debentures. If our insurance in force continues to grow, our risk in force would also grow. To the extent our statutory policyholders position does not increase at the same rate as our growth in risk in force, our risk-to-capital ratio will increase. Similarly, if our statutory policyholders position decreases at a greater rate than our risk in force, then our risk-to-capital ratio will increase.

We believe we have more than adequate resources to pay claims on our insurance in force, even in very high loss scenarios. However, we expect our policyholders position to decline throughout 2008, as risk in force (the numerator in the calculation) increases and our statutory policyholders position (the denominator) declines. We expect risk in force to grow as we continue to write new business and the persistency rate of the current risk in force remains at or above recent levels. We expect statutory policyholders position to decline as losses are recognized, particularly on Wall Street bulk transactions, which have no premium deficiency reserve for statutory purposes. As a result we expect that our risk-to-capital ratio will increase above its level at March 31, 2008.

Recent Ratings Actions

On April 8, 2008 Standard and Poor's (S&P) lowered its financial strength rating of MGIC to A from AA- with a negative outlook. The rating was removed from CreditWatch (We understand that being on CreditWatch with negative implications means there is a greater than 50% chance of a downgrade.) In its statement, S&P said that MGIC has the equivalent of AAA capital as measured by a capital adequacy ratio of 110% as of December 31, 2007. S&P's capital adequacy ratio is the claims paying resources divided by claims under S&P's stress test claims scenario over a ten-year period. MGIC's capital adequacy ratio at December 31, 2006 was 111%. The minimum ratio required for S&P's AAA insurer financial strength rating is 100%. S&P also said that MGIC's flow delinquency rate is below the industry median, and that MGIC has superior profitability relative to the industry due to less utilization of captive reinsurance.

The financial strength of MGIC is rated AA by Fitch Ratings. In late February 2008 Fitch announced that it was placing MGIC's rating on rating watch negative. Fitch said the present stressful mortgage environment has resulted in a modeled capital shortfall for [MGIC] at the AA rating threshold. If within the next several months, MGIC is able to obtain additional capital resources to address this shortfall, Fitch would expect to affirm MGIC's ratings, with a Negative Rating Outlook, reflecting the financial stress associated with the present mortgage environment.

The financial strength of MGIC is rated Aa2 by Moody's Investors Service. Moody's has announced that they are reviewing MGIC's rating for possible downgrade. MGIC could be downgraded below Aa3 when the review is concluded. For further information about the importance of MGIC's ratings, see our Risk Factor titled Our financial strength rating has been downgraded below Aa3/AA-, which could reduce the volume of our new business writings in Item 1A.

Contractual Obligations

At March 31, 2008, the approximate future payments under our contractual obligations of the type described in the table below are as follows:

Contractual Obligations (\$ millions):	Total	Less			More
		than	1 year	1-3 years	3-5 years
					5 years
Long-term debt obligations	\$ 3,165	\$ 70	\$ 435	\$ 307	\$ 2,353
Operating lease obligations	20	7	10	3	
Purchase obligations					
Pension, SERP and other post-retirement benefit plans	131	6	16	22	87
Other long-term liabilities	3,017	2,022	935	60	
Total	\$ 6,333	\$ 2,105	\$ 1,396	\$ 392	\$ 2,440

Our long-term debt obligations include our \$300 million of 5.375% Senior Notes due in November 2015, \$200 million of 5.625% Senior Notes due in 2011, \$300 million outstanding under a credit facility expiring in 2010 and \$365 million in convertible debentures, including related interest, as discussed in Note 2. Short- and long-term debt and Note 3. Convertible debentures and related derivative to our consolidated financial statements and under Liquidity and Capital Resources above. For discussions related to our debt covenants see -Liquidity and Capital Resources and our Risk Factor titled Our shareholders equity could fall below the minimum required under our bank debt. Our operating lease obligations include operating leases on certain office space, data processing equipment and autos, as discussed in Note 12 to our consolidated financial statements in our Annual Report on Form 10-K for the year ended December 31, 2007. See Note 9 to our consolidated financial statement in our Annual Report on Form 10-K for the year ended December 31, 2007 for discussion of expected benefit payments under our benefit plans.

Our other long-term liabilities represent the loss reserves established to recognize the liability for losses and loss adjustment expenses related to defaults on insured mortgage loans. The establishment of loss reserves is subject to inherent uncertainty and requires significant judgment by management. The future loss payment periods are estimated based on historical experience, and could emerge significantly different than this estimate. See Note 6. Loss reserves to our consolidated financial statements and -Critical Accounting Policies , both in our Annual Report on Form 10-K for the year ended December 31, 2007.

The table above does not reflect the liability for unrecognized tax benefits due to uncertainties in the timing of the effective settlement of tax positions. We can not make a reasonably reliable estimate of the timing of payment for the liability for unrecognized tax benefits, net of payments on account, of \$18.4 million. See Note 10 to our consolidated financial statement in our Annual Report on Form 10-K for the year ended December 31, 2007 for additional discussion on unrecognized tax benefits.

Forward-Looking Statements and Risk Factors

General: Our revenues and losses could be affected by the risk factors referred to under Location of Risk Factors below that are applicable to us, and our income from joint ventures could be affected by the risk factors referred to under Location of Risk Factors that are applicable to Sherman. These risk factors are an integral part of Management's Discussion and Analysis.

These factors may also cause actual results to differ materially from the results contemplated by forward looking statements that we may make. Forward looking statements consist of statements which relate to matters other than historical fact. Among others, statements that include words such as we believe, anticipate or expect, or words of similar import, are forward looking statements. We are not undertaking any obligation to update any forward looking statements we may make even though these statements may be affected by events or circumstances occurring after the forward looking statements were made.

Location of Risk Factors: The risk factors are in Item 1 A of our Annual Report on Form 10-K for the year ended December 31, 2007, as supplemented by Part II, Item 1 A of this Quarterly Report on Form 10-Q. The risk factors in the 10-K, as supplemented by this 10-Q and through updating of various statistical and other information, are reproduced in Exhibit 99 to this Quarterly Report on Form 10-Q.

ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

At March 31, 2008, the derivative financial instruments in our investment portfolio were immaterial. We place our investments in instruments that meet high credit quality standards, as specified in our investment policy guidelines; the policy also limits the amount of credit exposure to any one issue, issuer and type of instrument. At March 31, 2008, the modified duration of our fixed income investment portfolio was 4.4 years, which means that an instantaneous parallel shift in the yield curve of 100 basis points would result in a change of 4.4% in the market value of our fixed income portfolio. For an upward shift in the yield curve, the market value of our portfolio would decrease and for a downward shift in the yield curve, the market value would increase.

The interest rate on our \$300 million credit facility is variable and is based on, at our option, LIBOR plus a margin that varies with MGIC's financial strength rating or a base rate specified in the credit agreement. For each 100 basis point change in LIBOR or the base rate, our interest cost, expressed on an annual basis, would change by \$3 million.

ITEM 4. CONTROLS AND PROCEDURES

Our management, with the participation of our principal executive officer and principal financial officer, has evaluated our disclosure controls and procedures (as defined in Rule 13a-15(e) under the Securities Exchange Act of 1934, as amended), as of the end of the period covered by this Quarterly Report on Form 10-Q. Based on such evaluation, our principal executive officer and principal financial officer concluded that such controls and procedures were effective as of the end of such period. There was no change in our internal control over financial reporting that occurred during the first quarter of 2008 that materially affected, or is reasonably likely to materially affect, our internal control over financial reporting.

PART II. OTHER INFORMATION

Item 1 A. Risk Factors

With the possible exception of the changes described and set forth below, there have been no material changes in our risk factors from the risk factors disclosed in the Company's Annual Report on Form 10-K for the year ended December 31, 2007. The risk factors in the 10-K, as supplemented by this 10-Q and through updating of various statistical and other information, are reproduced in their entirety in Exhibit 99 to this Quarterly Report on Form 10-Q.

As a result of the issuance of common stock referred to in Note 9 above and Convertible Junior Subordinated Debentures referred to in Item 2 of Part II below, we have eliminated the risk factor titled Additional capital that we raise could dilute your ownership in our company and may cause the market price of our common shares to

fall that was included in our Annual Report on Form 10-K for the year ended December 31, 2007.

Our shareholders equity could fall below the minimum amount required under our bank debt.

We have drawn the entire \$300 million available under our bank revolving credit facility which matures in March 2010. This facility requires that we maintain shareholders equity of \$2.250 billion, except that under a March 2008 amendment to the facility we need only maintain shareholders equity of \$1.850 billion during the period March 31, 2008 through July 1, 2008. At March 31, 2008, our shareholders equity was \$2.99 billion. We expect we will have a net loss in 2008, with the result that we expect our shareholders equity to decline. Our current forecast of our 2008 net loss would not reduce our forecasted shareholders equity below \$2.250 billion. There can be no assurance that our actual results will not be materially worse than our forecast or that losses in future years, if they occur, will not reduce our shareholders equity below the minimum amount required under our bank revolving credit facility.

In addition, regardless of our results of operations, our shareholders equity would be reduced to the extent the carrying value of our investment portfolio declines from its carrying value at March 31, 2008 due to market value adjustments and to the extent we pay dividends to our shareholders. At March 31, 2008, the modified duration of our fixed income portfolio was 4.4 years, which means that an instantaneous parallel shift in the yield curve of 100 basis points would result in a change of 4.4% (approximately \$270 million) in the market value of this portfolio. For an upward shift in the yield curve, the market value of this portfolio would decrease, and for a downward shift in the yield curve, the market value would increase. Recent volatility in the bond market, particularly the municipal bond market, has increased the likelihood that changes in fair values of our portfolio, which flow through our other comprehensive income, could materially reduce shareholders equity. Market value adjustments could also occur as a result of changes in credit spreads. At our current annual dividend rate, approximately \$9.4 million would be paid in dividends in the remainder of 2008.

If we did not meet the minimum shareholders equity requirement and are not successful obtaining an agreement from banks holding a majority of the debt outstanding under the facility to change (or waive) this requirement, banks holding a majority of the debt outstanding under the facility would have the right to declare the entire amount of the outstanding debt due and payable. If the debt under our bank facility were accelerated in this manner, the holders of 25% or more of our publicly traded \$200 million 5.625% senior notes due in September 2011, and the holders of 25% or more of our publicly traded \$300 million 5.375% senior notes due in November 2015, each would have the right to accelerate the maturity of that debt. In addition, the trustee of these two issues of senior notes, which is also a lender under our bank credit facility, could, independent of any action by holders of senior notes, accelerate the maturity of the senior notes. In the event the amounts owing under our revolving credit facility or any series of our outstanding senior notes are accelerated, we may not have sufficient funds to repay any such amounts.

Our financial strength rating has been downgraded below Aa3/AA-, which could reduce the volume of our new business writings.

On April 8, 2008, Standard & Poor's Rating Services lowered the insurer financial strength rating of MGIC, our principal mortgage insurance subsidiary, from AA- to A with a negative outlook. The financial strength of MGIC is rated Aa2 by Moody's Investors Service, which is reviewing MGIC's rating for possible downgrade. The financial strength of MGIC is rated AA by Fitch Ratings. In late February 2008 Fitch announced that it was placing MGIC's rating on rating watch negative.

The mortgage insurance industry has historically viewed a financial strength rating of Aa3/AA- as critical to writing new business. In part this view has resulted from the mortgage insurer eligibility requirements of the GSEs, which each year purchase the majority of loans insured by us and the rest of the mortgage insurance industry. The eligibility requirements define the standards under which the GSEs will accept mortgage insurance as a credit enhancement on mortgages they acquire. These standards impose additional restrictions on insurers that do not have a financial strength rating of at least Aa3/AA-. These restrictions include not permitting such insurers to engage in captive reinsurance transactions with lenders. For many years, captive reinsurance has been an important means through which mortgage insurers compete for business from lenders, including lenders who sell a large volume of mortgages to the GSEs. In February 2008 Freddie Mac announced that it was temporarily suspending the portion of its eligibility requirements that impose additional restrictions on a mortgage insurer that is downgraded below Aa3/AA- if the affected insurer commits to submitting a complete remediation plan for its approval. In February 2008 Fannie Mae advised us that it would not automatically impose additional restrictions on a mortgage insurer that is downgraded below Aa3/AA- if the affected insurer submits a written remediation plan.

Because MGIC was downgraded to A by Standard & Poor's Rating Services on April 8, 2008, we are in the process of submitting written remediation plans to both Freddie Mac and Fannie Mae. There can be no assurance that we will be able to submit acceptable remediation plans to them in a timely manner. In addition, there can be no assurance that Freddie Mac and Fannie Mae will continue the positions described above with respect to mortgage insurers that have been downgraded below Aa3/AA-.

Apart from the effect of the eligibility requirements of the GSEs, we believe lenders who hold mortgages in portfolio and choose to obtain mortgage insurance on the loans assess a mortgage insurer's financial strength rating as one element of the process through which they select mortgage insurers. As a result of these considerations, a mortgage insurer such as MGIC that is rated less than Aa3/AA- may be competitively disadvantaged.

We are subject to the risk of private litigation and regulatory proceedings.

Consumers are bringing a growing number of lawsuits against home mortgage lenders and settlement service providers. In recent years, seven mortgage insurers, including MGIC, have been involved in litigation alleging violations of the anti-referral fee provisions of the Real Estate Settlement Procedures Act, which is commonly known as

RESPA, and the notice provisions of the Fair Credit Reporting Act, which is commonly known as FCRA. MGIC's settlement of class action litigation against it under RESPA became final in October 2003. MGIC settled the named plaintiffs' claims in litigation against it under FCRA in late December 2004 following denial of class certification in June 2004. Since December 2006, class action litigation was separately brought against a number of large lenders alleging that their captive mortgage reinsurance arrangements violated RESPA. While we are not a defendant in any of these cases, there can be no assurance that we will not be subject to future litigation under RESPA or FCRA or that the outcome of any such litigation would not have a material adverse effect on us.

In June 2005, in response to a letter from the New York Insurance Department, we provided information regarding captive mortgage reinsurance arrangements and other types of arrangements in which lenders receive compensation. In February 2006, the New York Insurance Department requested MGIC to review its premium rates in New York and to file adjusted rates based on recent years' experience or to explain why such experience would not alter rates. In March 2006, MGIC advised the New York Insurance Department that it believes its premium rates are reasonable and that, given the nature of mortgage insurance risk, premium rates should not be determined only by the experience of recent years. In February 2006, in response to an administrative subpoena from the Minnesota Department of Commerce, which regulates insurance, we provided the Department with information about captive mortgage reinsurance and certain other matters. We subsequently provided additional information to the Minnesota Department of Commerce, and on March 6, 2008 that Department sought additional information as well as answers to interrogatories regarding captive mortgage reinsurance. We understand from conversations with the Minnesota Department of Commerce that the Department of Housing and Urban Development, commonly referred to as HUD, will also be seeking information about captive mortgage reinsurance. Other insurance departments or other officials, including attorneys general, may also seek information about or investigate captive mortgage reinsurance.

The anti-referral fee provisions of RESPA provide that the Department of Housing and Urban Development as well as the insurance commissioner or attorney general of any state may bring an action to enjoin violations of these provisions of RESPA. The insurance law provisions of many states prohibit paying for the referral of insurance business and provide various mechanisms to enforce this prohibition. While we believe our captive reinsurance arrangements are in conformity with applicable laws and regulations, it is not possible to predict the outcome of any such reviews or investigations nor is it possible to predict their effect on us or the mortgage insurance industry.

In October 2007, the Division of Enforcement of the Securities and Exchange Commission requested that we voluntarily furnish documents and information primarily relating to C-BASS, the now-terminated merger with Radian and the subprime mortgage assets in the Company's various lines of business. We are in the process of providing responsive documents and information to the Securities and Exchange Commission.

We understand that two law firms have recently issued press releases to the effect that they are investigating whether the fiduciaries of our 401(k) plan breached their fiduciary duties regarding the plan's investment or holding of our common stock. With

limited exceptions, our bylaws provide that the plan fiduciaries are entitled to indemnification from us for claims against them. We intend to defend vigorously any proceedings that may result from these investigations.

ITEM 2. UNREGISTERED SALE OF EQUITY SECURITIES & USE OF PROCEEDS

On March 25, 2008, we entered into a purchase agreement with Banc of America Securities LLC, which executed the purchase agreement on behalf of itself, Deutsche Bank Securities Inc., Fox-Pitt Kelton Cochran Caronia Waller (USA) LLC, Keefe Bruyette & Woods, Inc. and Piper Jaffray & Co., or the initial purchasers. Pursuant to the purchase agreement, we agreed to sell, and the initial purchasers agreed to purchase, subject to the terms and conditions set forth therein, \$325,000,000 aggregate principal amount of our 9% Convertible Junior Subordinated Debentures due 2063. Pursuant to the purchase agreement, we granted the initial purchasers an option to purchase, from time to time, in whole or in part, up to an additional \$65,000,000 aggregate principal amount of the debentures on the same terms and conditions. On March 28, 2008, following the partial exercise of the initial purchasers' option, we sold \$365,000,000 aggregate principal amount of the debentures in a private placement pursuant to exemptions from the registration requirements of the Securities Act of 1933, as amended. We agreed to pay underwriting discounts or commissions of 3% of the aggregate principal amount of the debentures sold in the transaction. As a result, we paid an aggregate of \$10.95 million of discounts and commissions at the time of issuance on March 28, 2008.

On April 3, 2008, the initial purchasers exercised in full their remaining option to purchase up to \$25,000,000 aggregate principal amount of debentures. On April 8, 2008, we sold the \$25,000,000 aggregate principal amount of debentures to the initial purchasers in a private placement pursuant to exemptions from the registration requirements of the Securities Act of 1933, as amended. At the time of issuance we paid an aggregate of \$750,000 in discounts to the initial purchasers. The initial purchasers have no further option or other right to purchase, and we have no further obligation to sell, debentures under the purchase agreement.

The offer and sale of the debentures to the initial purchasers was in reliance on the exemption from registration provided by Section 4(2) of the Securities Act. The initial purchasers are initially offering the debentures to qualified institutional buyers pursuant to the exemption from registration provided by Rule 144A under the Securities Act. We relied on these exemptions from registration based in part on representations made by the initial purchasers.

Holder may convert their debentures into shares of our common stock at any time prior to 5:00 p.m., New York City time, on the business day immediately preceding the maturity date of the debentures. The initial conversion rate, which is subject to adjustment, is 74.0741 shares of common stock per \$1,000 principal amount of debentures. This represents an initial conversion price of approximately \$13.50 per share. A holder that surrenders debentures for conversion in connection with a make-whole fundamental change (defined as certain transfers of all or substantially all of our assets or common stock) that occurs on or prior to April 1, 2063 may in certain circumstances be entitled to an increased conversion rate. In addition, upon the

occurrence of a fundamental change (defined to occur if there is a change in control of us or if our stock is not listed on a United States national securities exchange), if the market value per share of our common stock multiplied by the conversion rate then in effect is less than \$1,000, holders will have the option to convert all or a portion of their debentures into common stock at an adjusted conversion rate equal to the lesser of (1) \$1,000 divided by the market value per share of our common stock as of the effective date of the fundamental change and (2) 250.0000 shares. Until we have obtained any necessary shareholder approval as required under the listing rules of the New York Stock Exchange, the shares issuable upon conversion of the debentures will in no event exceed 19.99% of our common stock outstanding immediately before the issuance of the debentures and, if an event occurs that would otherwise result in an increase in the conversion rate above such limit, and we have not previously obtained such shareholder approval, we will either obtain shareholder approval of any shares issuable upon conversion of the debentures or, with respect only to those shares that would exceed such limit, deliver cash in lieu of any shares otherwise deliverable upon conversion in excess of such limitation.

The debentures and common stock issuable upon conversion of the debentures have not been registered under the Securities Act and may not be offered or sold in the United States absent registration or an applicable exemption from registration requirements.

The net proceeds from the sale of the debentures were used to increase the capital of MGIC, our principal insurance subsidiary, in order to enable us to expand the volume of our new business and will also be used for our general corporate purposes.

ITEM 6. EXHIBITS

The accompanying Index to Exhibits is incorporated by reference in answer to this portion of this Item, and except as otherwise indicated in the next sentence, the Exhibits listed in such Index are filed as part of this Form 10-Q. Exhibit 32 is not filed as part of this Form 10-Q but accompanies this Form 10-Q.

SIGNATURES

Pursuant to the requirements of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the undersigned thereunto duly authorized, on May 12, 2008.
