**TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d)
OF THE SECURITIES EXCHANGE ACT OF 1934**

For the transition period from _____ to _____

Commission file number 001-16189

NiSource Inc.

(Exact name of registrant as specified in its charter)

Delaware

35-2108964

(State or other jurisdiction of
incorporation or organization)

(I.R.S. Employer
Identification No.)

801 East 86th Avenue
Merrillville, Indiana

46410

(Address of principal executive offices)

(Zip Code)

(877) 647-5990

(Registrant's telephone number, including area code)

Indicate by check mark whether the registrant: (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days.

Yes No

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files.)

Yes No

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See the definitions of "large accelerated filer," "accelerated filer" and "smaller reporting company" in Rule 12b-2 of the Exchange Act. (Check one):

Large accelerated filer Accelerated filer Non-accelerated filer Smaller Reporting Company
(Do not check if a smaller reporting company)

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act).

Yes No

Indicate the number of shares outstanding of each of the issuer's classes of common stock, as of the latest practicable date:

Edgar Filing: NISOURCE INC/DE - Form 10-Q

Common Stock, \$0.01 Par Value: 274,592,165 shares outstanding at April 30, 2009.

Table of Contents

ITEM 1. FINANCIAL STATEMENTS (continued)

NiSource Inc.

Notes to Condensed Consolidated Financial Statements (unaudited)

1. Basis of Accounting Presentation

The accompanying unaudited condensed consolidated financial statements for NiSource reflect all normal recurring adjustments that are necessary, in the opinion of management, to present fairly the results of operations in accordance with GAAP in the United States of America.

The accompanying financial statements should be read in conjunction with the consolidated financial statements and notes thereto included in NiSource's Annual Report on Form 10-K for the fiscal year ended December 31, 2008. Income for interim periods may not be indicative of results for the calendar year due to weather variations and other factors.

The following unaudited condensed consolidated financial statements have been prepared pursuant to the rules and regulations of the SEC. Certain information and note disclosures normally included in annual financial statements prepared in accordance with GAAP have been condensed or omitted pursuant to those rules and regulations, although NiSource believes that the disclosures made are adequate to make the information not misleading.

2. Recent Accounting Pronouncements

Recently Adopted Accounting Pronouncements

SFAS No. 161 *Disclosures about Derivative Instruments and Hedging – an amendment of SFAS No. 133.* In March 2008, the FASB issued SFAS No. 161 to amend and expand the disclosure requirements of SFAS No. 133 with the intent to provide users of the financial statement with an enhanced understanding of how and why an entity uses derivative instruments, how these derivatives are accounted for and how the respective reporting entity's financial statements are affected. SFAS No. 161 is effective for fiscal years and interim periods beginning after November 15, 2008, and earlier application is encouraged. NiSource adopted this standard on January 1, 2009. Refer to Note 9, Risk Management Activities, in the Notes to Condensed Consolidated Financial Statements (unaudited) for additional information.

SFAS No. 160 *Noncontrolling Interests in Consolidated Financial Statements – an amendment of ARB No. 51.* In December 2007, the FASB issued SFAS No. 160 to improve the relevance, comparability, and transparency of the financial information that a reporting entity provides in its consolidated financial statements regarding non-controlling ownership interests in a business and for the deconsolidation of a subsidiary. This Statement is effective for fiscal years, and interim periods within those fiscal years, beginning on or after December 15, 2008 and earlier adoption is prohibited. The adoption of this standard on January 1, 2009 did not have a material impact on the Condensed Consolidated Financial Statements (unaudited).

SFAS No. 157 *Fair Value Measurements.* In September 2006, the FASB issued SFAS No. 157 to define fair value, establish a framework for measuring fair value and to expand disclosures about fair value measurements. SFAS No. 157 does not change the requirements to apply fair value in existing accounting standards.

Under SFAS No. 157, fair value refers to the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants in the market in which the reporting entity transacts. The standard clarifies that fair value should be based on the assumptions market participants would use when pricing the asset or liability.

To increase consistency and comparability in fair value measurements, SFAS No. 157 establishes a fair value hierarchy that prioritizes the inputs to valuation techniques used to measure fair value into three levels. The level in the fair value hierarchy disclosed is based on the lowest level of input that is significant to the fair value measurement. The three levels of the fair value hierarchy defined by SFAS No. 157 are as follows:

Level 1 inputs are quoted prices (unadjusted) in active markets for identical asset or liabilities that the company has the ability to access as of the reporting date.

Table of Contents**ITEM 1. FINANCIAL STATEMENTS (continued)****NiSource Inc.****Notes to Condensed Consolidated Financial Statements (unaudited) (continued)**

Level 2 inputs are inputs other than quoted prices included within Level 1 that are observable for the asset or liability, either directly or indirectly through corroboration with observable market data.

Level 3 inputs are unobservable inputs, such as internally developed pricing models for the asset or liability due to little or no market activity for the asset or liability.

SFAS No. 157 became effective for NiSource as of January 1, 2008. The provisions of SFAS No. 157 were applied prospectively, except for the initial impact on the following three items, which were required to be recorded as an adjustment to the opening balance of retained earnings in the year of adoption: (1) changes in fair value measurements of existing derivative financial instruments measured initially using the transaction price under EITF No. 02-3, (2) existing hybrid financial instruments measured initially at fair value using the transaction price and (3) blockage factor discounts. The adoption of SFAS No. 157 did not have an impact on NiSource's January 1, 2008 balance of retained earnings.

In February 2008, the FASB issued FSP FAS 157-2, which delayed the effective date of SFAS No. 157 for all nonrecurring fair value measurements of non-financial assets and liabilities until fiscal years beginning after November 15, 2008.

In October 2008, the FASB issued FSP FAS 157-3, which clarified the application of SFAS No. 157 in a market that is not active and provides an example to illustrate key considerations in determining the fair value of a financial asset when the market for that financial asset is not active. The FSP was effective upon issuance, including prior periods for which financial statements have not been issued.

Refer to Note 10, Fair Value Assets and Liabilities, in the Notes to Condensed Consolidated Financial Statements (unaudited) for additional information regarding the adoption of SFAS No. 157.

SFAS No. 141R Business Combinations. In December 2007, the FASB issued SFAS No. 141R to improve the relevance, representational faithfulness, and comparability of information that a reporting entity provides in its financial reports regarding business combinations and its effects, including recognition of assets and liabilities, the measurement of goodwill and required disclosures. This Statement is effective for fiscal years, and interim periods within those fiscal years, beginning on or after December 15, 2008 and earlier adoption is prohibited. The adoption of this standard on January 1, 2009 did not have a material impact on the Condensed Consolidated Financial Statements (unaudited).

In April 2009, the FASB issued FSP FAS 141(R)-1, which amends and clarifies SFAS No. 141 to address application issues on initial recognition and measurement, subsequent measurement and accounting, and disclosure of assets and liabilities arising from contingencies in a business combination. This FSP is effective for fiscal years, and interim periods within those fiscal years, beginning on or after December 15, 2008.

FSP FAS 140-4 and FIN 46(R)-8- FASB Staff Position Amendment of FASB Statement No. 140 and FASB Interpretation No. 46(R). In December 2008, the FASB issued FSP FAS 140-4 and FIN 46(R)-8 to require public entities to provide additional disclosures about transfers of financial assets and to provide additional disclosures related to an entities involvement with variable interest entities. This FSP is effective for the first reporting period ending after December 15, 2008, with early application encouraged. The adoption of this FSP on January 1, 2009 did not have a material impact on the Condensed Consolidated Financial Statements (unaudited).

Recently Issued Accounting Pronouncements

FSP FAS 107-1 and APB 28-1 FASB Staff Position Amendment of FASB Statement No. 107 and APB Opinion No. 28. In April 2009, the FASB issued FSP FAS 107-1 and APB 28-1 to require disclosures about fair value of financial instruments for interim reporting periods of publicly traded companies as well as annual financial statements. This FSP is effective for interim reporting periods ending after June 15, 2009, with early adoption permitted. NiSource is currently reviewing the additional disclosure requirements to determine the impact on the

Table of Contents**ITEM 1. FINANCIAL STATEMENTS (continued)****NiSource Inc.****Notes to Condensed Consolidated Financial Statements (unaudited) (continued)**

Condensed Consolidated Financial Statements (unaudited) and Notes to Condensed Consolidated Financial Statements.

FSP FAS 115-2 and FAS 124-2 FASB Staff Position Amendment of FASB Statement No. 115 and FASB Statement No. 124. In April 2009, the FASB issued FSP FAS 115-2 and FAS 124-2 to amend the other-than-temporary impairment guidance in GAAP for debt securities to make the guidance more operational and to improve the presentation and disclosure of other-than-temporary impairments on debt and equity securities in the financial statements. This FSP is effective for interim reporting periods ending after June 15, 2009, with early adoption permitted. NiSource is currently reviewing the additional disclosure requirements to determine the impact on the Condensed Consolidated Financial Statements (unaudited) and Notes to Condensed Consolidated Financial Statements.

FSP FAS 132(R)-1 FASB Staff Position Amendment of FASB Statement No. 132(R)-1. In December 2008, the FASB issued FSP FAS 132(R)-1 to amend SFAS No. 132(R), to provide guidance on an employer's disclosures about plan assets of a defined benefit pension or other postretirement plan. FSP FAS 132(R)-1 is effective for fiscal years ending after December 15, 2009 with earlier adoption permitted. NiSource is currently reviewing the additional disclosure requirements to determine the impact on the Condensed Consolidated Financial Statements (unaudited) and Notes to Condensed Consolidated Financial Statements.

FSP FAS 157-4 FASB Staff Position Amendment of FASB Statement No. 157. In April 2009, the FASB issued FSP FAS 157-4 to provide additional guidance for estimating fair value when the volume and level of activity for the asset or liability have significantly decreased. This FSP is effective for interim reporting periods ending after June 15, 2009, with early adoption permitted. NiSource is currently reviewing the additional guidance to determine the impact on the Condensed Consolidated Financial Statements (unaudited) and Notes to Condensed Consolidated Financial Statements.

3. Earnings Per Share

Basic EPS is computed by dividing income available to common stockholders by the weighted-average number of shares of common stock outstanding for the period. The weighted average shares outstanding for diluted EPS include the incremental effects of the various long-term incentive compensation plans. The numerator in calculating both basic and diluted EPS for each period is reported net income. The computation of diluted average common shares follows:

Three Months Ended March 31, (<i>in thousands</i>)	2009	2008
Denominator		
Basic average common shares outstanding	274,196	273,922
Dilutive potential common shares		
Shares contingently issuable under employee stock plans	2,413	1,271
Shares restricted under employee stock plans	108	174
Diluted Average Common Shares	276,717	275,367

4. Restructuring Activities

In response to the current economic conditions, on February 27, 2009, NiSource announced an organizational restructuring of the Gas Transmission and Storage Operations segment. NiSource is eliminating positions across the 16 state operating territory of Gas Transmission and Storage. The reductions will occur through voluntary programs and involuntary separations. In addition to employee reductions, the Gas Transmission and Storage Operations segment will take steps to achieve additional cost savings by efficiently managing its various business locations, reducing its fleet operations, creating alliances with third party service providers, and implementing other changes in

line with its strategic plan for growth and maximizing value of existing assets. During the first quarter of 2009,

Table of Contents**ITEM 1. FINANCIAL STATEMENTS (continued)****NiSource Inc.****Notes to Condensed Consolidated Financial Statements (unaudited) (continued)**

NiSource recorded a pre-tax restructuring charge of \$19.8 million to Operation and maintenance expense on the Condensed Statement of Consolidated Income (unaudited), which primarily includes costs related to severance and other employee related costs for approximately 350 employees. NiSource expects this restructuring initiative to be substantially complete by the end of 2009.

Restructuring reserve by restructuring initiative:

<i>(in millions)</i>	Balance at December 31, 2008	Additions	Benefits Paid	Balance at March 31, 2009
Gas Transmission and Storage initiative		19.8	(0.8)	19.0
Total	\$	\$ 19.8	\$ (0.8)	\$ 19.0

5. Gas in Storage

Gas Distribution Operations price natural gas storage injections at the average of the costs of natural gas supply purchased during the year. For interim periods, the difference between current projected replacement cost and the LIFO cost for quantities of gas temporarily withdrawn from storage is recorded as a temporary LIFO liquidation credit or debit within the Condensed Consolidated Balance Sheets (unaudited). Due to seasonality requirements, NiSource expects interim variances in LIFO layers to be replenished by year-end. Changes between the temporary LIFO liquidation credits in the amounts of \$111.3 million and \$472.3 million during the first quarter of 2009 and 2008, respectively, are considered a non-cash activity for the Condensed Statements of Consolidated Cash Flow (unaudited). In addition to the temporary LIFO liquidation credit described above NiSource also has a temporary LIFO liquidation debit of \$34.3 million recorded for the first quarter of 2009 for certain gas distribution companies recorded within, Prepayments and other, on the Condensed Consolidated Balance Sheets (unaudited).

6. Discontinued Operations and Assets and Liabilities Held for Sale

The assets and liabilities of discontinued operations and held for sale on the Condensed Consolidated Balance Sheet (unaudited) at March 31, 2009 were:

(in millions)

Assets of discontinued operations and held for sale:	Property, plant and equipment, net	Accounts receivable, net	Other assets	Total
Bay State Gas Company	\$ 21.6	\$	\$	\$21.6
Lake Erie Land	11.9			11.9
NiSource Corporate Services	6.2			6.2
NDC Douglas Properties	4.0		1.2	5.2
Columbia Transmission	2.6			2.6
NiSource Retail Service Corp	0.3	1.0		1.3
Total	\$ 46.6	\$ 1.0	\$ 1.2	\$48.8
Liabilities of discontinued operations and held for sale:	Debt	Accounts payable	Other liabilities	Total

Edgar Filing: NISOURCE INC/DE - Form 10-Q

NDC Douglas Properties	\$ 4.9	\$ 0.4	\$ 0.3	\$ 5.6
NiSource Retail Service Corp		0.9		0.9
Total	\$ 4.9	\$ 1.3	\$ 0.3	\$ 6.5

14

Table of Contents**ITEM 1. FINANCIAL STATEMENTS (continued)****NiSource Inc.****Notes to Condensed Consolidated Financial Statements (unaudited) (continued)**

The assets and liabilities of discontinued operations and held for sale on the Consolidated Balance Sheet at December 31, 2008 were:

(in millions)

Assets of discontinued operations and held for sale:	Property, plant and equipment, net	Accounts receivable, net	Other assets	Total
Bay State Gas Company	\$ 20.8	\$	\$	\$20.8
Lake Erie Land	11.9			11.9
NiSource Corporate Services	6.2			6.2
NDC Douglas Properties	4.1		1.0	5.1
Columbia Transmission	2.6			2.6
NiSource Retail Service Corp	0.3	0.9		1.2
Total	\$ 45.9	\$ 0.9	\$ 1.0	\$47.8
Liabilities of discontinued operations and held for sale:	Debt	Accounts payable	Other liabilities	Total
NDC Douglas Properties	\$ 4.9	\$ 0.2	\$ 0.2	\$ 5.3
NiSource Retail Service Corp		0.6		0.6
Total	\$ 4.9	\$ 0.8	\$ 0.2	\$ 5.9

Assets classified as discontinued operations or held for sale are no longer depreciated.

On June 30, 2008, NiSource sold Whiting Clean Energy to BPAE for \$216.7 million, which included \$16.1 million in working capital. In the first quarter of 2008, NiSource began accounting for the operations of Whiting Clean Energy as discontinued operations. For the three months ended March 31, 2008, an after tax loss of \$32.5 million was included in Loss on Disposition of Discontinued Operations in the Statements of Consolidated Income.

On December 1, 2008, NiSource sold NiSource subsidiaries Northern Utilities and Granite State to Unitil Corporation. The final sale amount was \$209.1 million which included \$49.1 million in working capital. Under the terms of the transaction, Unitil Corporation acquired Northern Utilities, a local gas distribution company serving 52 thousand customers in 44 communities in Maine and New Hampshire and Granite State Gas, an 86-mile FERC regulated gas transmission pipeline primarily located in Maine and New Hampshire. For the three months ended March 31, 2008, an after tax loss of \$63.5 million was included in Gain (Loss) on Disposition of Discontinued Operations in the Condensed Statements of Consolidated Income (unaudited). A loss of \$0.7 million and income of \$6.0 million is included as net income or loss from discontinued operations for the three months ended March 31, 2009 and 2008, respectively.

NDC Douglas Properties, a subsidiary of NiSource Development Company, is in the process of exiting some of its low income housing investments. NiSource has accounted for the investments to be sold as assets and liabilities of discontinued operations and held for sale.

NiSource Corporate Services is continuing to work with several potential buyers to sell its Marble Cliff facility. A third party appraisal was performed in December 2008 with an estimated market value of the property of \$6.2 million, which equals the book value. NiSource has accounted for this facility as assets held for sale.

Lake Erie Land, which is wholly-owned by NiSource, is in the process of selling real estate over a 10-year period with a private real estate development group extending through 2016. NiSource estimates the property to be sold to the private developer during the next twelve months and accounts for these assets as assets held for sale.

During the second quarter of 2008, Bay State signed a letter of intent to sell certain assets, including water heater rentals and other service agreements. During April 2009, negotiations with a potential buyer were terminated.

NiSource still estimates that the property will be sold within twelve months and therefore, continues to account for these assets as assets held for sale.

Table of Contents**ITEM 1. FINANCIAL STATEMENTS (continued)****NiSource Inc.****Notes to Condensed Consolidated Financial Statements (unaudited) (continued)**

NiSource Retail Services, a wholly-owned subsidiary of NiSource, is engaged in a process to sell certain assets. During April 2009 negotiations with a potential buyer were terminated. NiSource still estimates the property to be sold within twelve months and therefore continues to account for these assets as assets held for sale.

Results from discontinued operations from Whiting Clean Energy, Granite State Gas, Northern Utilities, NDC Douglas Properties low income housing investments, NiSource Retail Services, and reserve changes for NiSource's former exploration and production subsidiary, CER, are provided in the following table:

Three Months Ended March 31, <i>(in millions)</i>	2009	2008
Revenues from Discontinued Operations	\$ 2.3	\$ 102.3
(Loss) Income from discontinued operations	(17.4)	10.1
Income tax (benefit) expense	(6.7)	4.1
(Loss) Income from Discontinued Operations net of taxes	\$(10.7)	\$ 6.0
Loss on Disposition of Discontinued Operations - net of taxes	\$ (0.2)	\$ (96.2)

The loss on disposition of discontinued operations for the three months ended March 31, 2008 include the after tax loss on disposition related to the sales of Whiting Clean Energy, Northern Utilities and Granite State Gas of \$32.5 million, \$48.8 million and \$14.8 million, respectively.

7. Asset Retirement Obligations

NiSource accounts for its asset retirement obligations in accordance with SFAS No. 143 and FIN 47. Certain costs of removal that have been, and continue to be, included in depreciation rates and collected in the service rates of the rate-regulated subsidiaries are classified as regulatory liabilities and other removal costs on the Condensed Consolidated Balance Sheets (unaudited).

Changes in NiSource's liability for asset retirement obligations for the first quarters of 2009 and 2008 are presented in the table below:

Three Months Ended March 31, <i>(in millions)</i>	2009	2008
Balance as of January 1, 2009	\$ 126.0	\$ 128.2
Accretion expense	0.2	0.2
Accretion recorded as a regulatory asset	1.7	1.2
Settlements	(2.2)	
Balance as of March 31, 2009	\$ 125.7	\$ 129.6

8. Regulatory Matters**Gas Distribution Operations Regulatory Matters**

Significant Rate Developments. Columbia of Ohio filed a base rate case with the PUCO on March 3, 2008, and a settlement agreement was filed on October 24, 2008. In the base rate case, Columbia of Ohio sought recovery of increased infrastructure rehabilitation costs, as well as the stabilization of revenues and cost recovery through rate

design. The agreement included an annual revenue increase of \$47.1 million, and also provides for recovery of costs associated with Columbia of Ohio's infrastructure rehabilitation program. On December 3, 2008, the PUCO approved the settlement agreement in all material respects, and approved Columbia of Ohio's proposed rate design. On February 27, 2009, Columbia of Ohio filed an application to adjust its Infrastructure Replacement Program Rider by approximately \$15 million covering increased costs for risers and accelerated main replacements. This matter is currently pending.

Table of Contents**ITEM 1. FINANCIAL STATEMENTS (continued)****NiSource Inc.****Notes to Condensed Consolidated Financial Statements (unaudited) (continued)**

On January 15, 2009, Columbia of Ohio filed an application with the PUCO requesting authority to increase Columbia of Ohio's PIPP rider rate in order to collect \$82.2 million in PIPP arrearages. On March 3, 2009, Columbia of Ohio's proposal was approved and became effective.

On January 28, 2008, Columbia of Pennsylvania filed a base rate case with the PPUC seeking recovery of costs associated with its significant infrastructure rehabilitation program, as well as stabilization of revenues through modifications to rate design. On July 2, 2008, Columbia of Pennsylvania and all interested parties filed a unanimous settlement and on October 23, 2008, the PPUC issued an Order approving the settlement as filed, increasing annual revenues by \$41.5 million.

On April 16, 2009, Bay State filed a base rate case with the Massachusetts Department of Public Utilities, requesting an increase of \$34.6 million. In its filing, Bay State is seeking revenue decoupling, as well as an expedited mechanism for the recovery of costs associated with the rehabilitation of the company's infrastructure. This matter is currently pending and expected to be resolved with new rates taking effect in the fourth quarter 2009.

On May 1, 2009, Columbia of Kentucky filed a base rate case with the Kentucky PSC, requesting an annual increase of \$11.6 million. In its initial filing, Columbia of Kentucky is seeking enhancements to rate design, as well as an expedited mechanism for the recovery of costs associated with the rehabilitation of the company's infrastructure. This matter is currently pending.

On October 1, 2008, Columbia of Maryland filed a base rate case with the Maryland PSC. On February 20, 2009, Columbia of Maryland and all interested parties filed a unanimous settlement in the case, recommending an annual revenue increase of \$1.2 million. On March 27, 2009, the settlement was approved as filed.

On November 24, 2008 Northern Indiana filed Supplemental Testimony in its annual gas cost recovery proceeding (GCA 10-Cause No. 41338) seeking a cost recovery mechanism for Unaccounted for Gas at current gas prices. Historically, in Indiana, Unaccounted for Gas recovery mechanisms are determined within a base rate proceeding. Intervenors have filed testimony, opposing recovery of Unaccounted for Gas in the gas cost adjustment proceeding and disputing the calculation of Unaccounted for Gas. Evidentiary hearings were held on April 20 and 21, 2009. An order is expected in the third quarter of 2009.

In March 2009, Indiana Governor Daniels signed Senate Bill 423 into law giving the Indiana Finance Authority the authority to contract, on behalf of gas customers in the state of Indiana, with developers capable of building facilities that manufacture Substitute Natural Gas from coal. The Indiana Finance Authority is seeking bids to initiate a Substitute Natural Gas plant in Southern Indiana under a 30 year contract. It is expected that all Indiana gas utilities including Northern Indiana will be delivering a portion of Substitute Natural Gas from this facility. The IURC must approve the final contract.

Cost Recovery and Trackers. A significant portion of the distribution companies' revenue is related to the recovery of gas costs, the review and recovery of which occurs via standard regulatory proceedings. All states require periodic review of actual gas procurement activity to determine prudence and to permit the recovery of prudently incurred costs related to the supply of gas for customers. NiSource distribution companies have historically been found prudent in the procurement of gas supplies to serve customers.

Certain operating costs of the NiSource distribution companies are significant, recurring in nature, and generally outside the control of the distribution companies. Some states allow the recovery of such costs via cost tracking mechanisms. Such tracking mechanisms allow for abbreviated regulatory proceedings in order for the distribution companies to implement charges and recover appropriate costs. Tracking mechanisms allow for more timely recovery of such costs as compared with more traditional cost recovery mechanisms. Examples of such mechanisms include gas cost recovery adjustment mechanisms, tax riders, and bad debt recovery mechanisms.

Comparability of Gas Distribution Operations line item operating results is impacted by these regulatory trackers that allow for the recovery in rates of certain costs such as bad debt expenses. Increases in the expenses that are the subject of trackers result in a corresponding increase in net revenues and therefore have essentially no impact on total operating income results.

Table of Contents**ITEM 1. FINANCIAL STATEMENTS (continued)****NiSource Inc.****Notes to Condensed Consolidated Financial Statements (unaudited) (continued)**

Certain of the NiSource distribution companies have completed rate proceedings involving infrastructure replacement or are embarking upon regulatory initiatives to replace significant portions of their operating systems that are nearing the end of their useful lives. Columbia of Ohio and Columbia of Pennsylvania completed rate cases in 2008 incorporating significant infrastructure replacement programs and other NiSource gas distribution utilities are currently evaluating requests for increases in rates in order to allow recovery of the additional capital expenditures required for such initiatives. Each LDC's approach to cost recovery may be unique, given the different laws, regulations and precedent that exist in each jurisdiction.

On April 9, 2008, the PUCO issued an order approving, in all material respects, a joint stipulation submitted on behalf of Columbia of Ohio. This stipulation is a result of a process that began on April 13, 2005 with a PUCO ordered investigation into the type of gas risers installed in the state, the conditions of installation and overall performance.

The stipulation provides for: establishment of accounting for and recovery of costs resulting from the Staff's investigation; Columbia of Ohio's performance of a survey to identify those customer-owned risers on its system prone to failure; and related customer education and other program related expenses. In addition this stipulation provides for: Columbia of Ohio's assumption of financial responsibility for the replacement of all risers identified as prone to failure; repair or replacement of hazardous customer owned service lines; and capitalization of this investment with recovery to be addressed in future rate proceedings. As of March 31, 2009, Columbia of Ohio has approximately \$62.1 million in costs associated with the gas riser and customer service line programs recorded as either a regulatory asset or capitalized plant.

On December 28, 2007, Columbia of Ohio entered into a stipulation with the Ohio Consumers' Counsel and PUCO Staff and other stakeholders resolving litigation concerning a pending Gas Cost Recovery audit of Columbia of Ohio. The stipulation calls for an accelerated pass back to customers of \$36.6 million, occurring from January 31, 2008 through January 31, 2009, generated through off-system sales and capacity release programs, the development of new energy efficiency programs for introduction in 2009, and the development of a wholesale auction process for customer supply to take effect in 2010. The entire requirement of the stipulation was passed back through January 31, 2009. The stipulation also resolves issues related to pending and future Gas Cost Recovery Management Performance audits through 2008. The PUCO approved this agreement on January 23, 2008.

On April 23, 2009, Columbia of Kentucky filed an application with the Kentucky PSC to defer pension and other postretirement benefits expenses above those currently subject to collection in rates. If approved, the amount deferred would be approximately \$1.2 million for 2009. This matter is currently pending.

On April 30, 2009, Columbia of Ohio filed an application with the PUCO to defer pension and other postretirement benefits expenses above those currently subject to collection in rates. If approved, the amount deferred would be approximately \$14.6 million for 2009. This matter is currently pending.

Gas Transmission and Storage Operations Regulatory Matters

Eastern Market Expansion Project. On January 14, 2008, the FERC issued an order which granted a certificate to construct the project. The project allows Columbia Transmission to expand its facilities to provide additional storage and transportation services and to replace certain existing facilities. The Eastern Market Expansion is projected to add 97,000 Dth per day of storage and transportation deliverability and is fully subscribed on a 15-year contracted firm basis. Construction of the facilities is complete and the project was placed in service April 1, 2009.

Appalachian Expansion Project. On August 22, 2008, the FERC issued an order to Columbia Transmission, which granted a certificate to construct the project. The project includes building a new 9,470 hp compressor station in West Virginia. The Appalachian Expansion Project will add 100,000 Dth per day of transportation capacity and is fully subscribed on a 15-year contracted firm basis. Construction is in progress and the project is expected to be in service by the second half of 2009.

Ohio Storage Project. On June 24, 2008, Columbia Transmission filed an application before the FERC for approval to expand two of its Ohio storage fields for additional capacity of nearly 7 Bcf and 103,400 Dth per day of daily deliverability. Approval was granted in March 2009 and construction of the facilities began in April 2009. Partial

service related to this expansion is expected to be available by May 1, 2009 and the remainder will be

Table of Contents**ITEM 1. FINANCIAL STATEMENTS (continued)****NiSource Inc.****Notes to Condensed Consolidated Financial Statements (unaudited) (continued)**

available no later than the fourth quarter of 2009. The expansion capacity is 58% contracted on a long-term, firm basis with revenue based on market-based rates recently approved by the FERC.

Electric Operations Regulatory Matters

Significant Rate Developments. Northern Indiana filed a petition for new electric base rates and charges on June 27, 2008. The case-in-chief was originally filed on August 29, 2008, and amended on December 19, 2008 after the Sugar Creek facility was successfully dispatched into MISO. The filing requests an increase in base rates calculated to produce additional annual gross margin of \$85.7 million annually. Evidentiary hearings on Northern Indiana's direct case commenced on January 12, 2009 and concluded on February 6, 2009. Several stakeholder groups have intervened in the case, representing customer groups and various counties and towns within Northern Indiana's electric service territory. A field hearing to record customer testimony was held on March 3, 2009. The OUCC and intervenors are scheduled to file their cases-in-chief in May 2009. Northern Indiana is scheduled to file its rebuttal testimony in June 2009, and final hearings are planned to begin July 27, 2009. If a settlement agreement is not reached, and the full procedural schedule takes place, it is anticipated that new rates would take effect in early 2010.

During 2002, Northern Indiana settled certain regulatory matters related to an electric rate review. On September 23, 2002, the IURC issued an order adopting most aspects of the settlement. The order approving the settlement provides that electric customers of Northern Indiana will receive bill credits of approximately \$55.1 million each year. The credits will continue at approximately the same annual level and per the same methodology, until the IURC enters a base rate order that approves revised Northern Indiana electric rates. The order included a rate moratorium that expired on July 31, 2006. The order also provides that 60% of any future earnings beyond a specified earnings level will be retained by Northern Indiana. The revenue credit is calculated based on electric usage; therefore, in times of high usage the credit may be more than \$55.1 million. Credits amounting to \$13.2 million and \$12.5 million were recognized for electric customers for the first quarters of 2009 and 2008, respectively.

MISO. As part of Northern Indiana's participation in the MISO transmission service and wholesale energy market, certain administrative fees and non-fuel costs have been incurred. IURC orders have been issued authorizing the deferral for consideration in a future rate case proceeding of the administrative fees and certain non-fuel related costs incurred after Northern Indiana's rate moratorium, which expired on July 31, 2006. During the first quarter of 2009, non-fuel costs credits of \$3.0 million were deferred in accordance with the aforementioned orders. In addition, administrative, FERC and other fees of \$2.1 million were deferred. In total, for the first quarter of 2009 and 2008, net MISO credits of \$0.9 million and costs of \$0.9 million, respectively, were deferred. In the base rate case filed in August 2008, Northern Indiana proposed recovery over a three year amortization period of the cumulative amount of charges that will have been deferred by the time a rate order is issued, and a tracker for recovery of these charges on an ongoing basis. As noted below, as part of MISO's initiation of an ASM, Northern Indiana will also incur non-fuel administrative costs associated with this market. The IURC authorized Northern Indiana to defer the costs associated with participating in the ASM subject to a final determination in a subsequent phase of the same proceeding. The IURC has not yet ruled in the subsequent phase of the ASM proceeding.

Northern Indiana is an active stakeholder in the process used in designing, testing and implementing the ASM and in developing the surrounding business practices. On January 18, 2008, Northern Indiana as part of a Joint Petition among several other Indiana utilities, Joint Petitioners, filed a request to the IURC to participate in ASM and seek approval of timely cost recovery for the associated costs of participating. On August 13, 2008, the IURC issued a Phase I order, authorizing the Joint Petitioners authority to transfer additional balancing authority functions and to implement the operational changes necessary to participate in the ASM and to seek recovery of modified MISO charge-types via the FAC and to defer certain other MISO charge-types, pending a final determination on the issue of cost recovery in Phase II. This order also created a subdocket for the purpose of further consideration of whether a cost-benefit analysis of participation in MISO or the MISO ASM should be required. Phase II of this proceeding deals with how the Joint Petitioners will approach the ASM, specifically related to cost recovery. The evidentiary hearing for Phase II concluded on February 9, 2009. The market began on January 6, 2009. At this time, Northern Indiana is

not yet able to determine what impact the ASM will have on its cash flows.

On November 7, 2008, the FERC issued an order regarding the clarification of a rate mismatch as it pertains to the RSG First Pass calculation. On November 10, 2008, the FERC issued an order indicating that the RSG rates in

Table of Contents**ITEM 1. FINANCIAL STATEMENTS (continued)****NiSource Inc.****Notes to Condensed Consolidated Financial Statements (unaudited) (continued)**

effect were unjust and unreasonable based on a Section 206 filing that Northern Indiana and Ameren Services Company jointly filed on August, 10, 2007. MISO determined that resettlements are required for all periods from market start to the Section 206 Refund effective date to remedy the rate mismatch. The FERC ordered refunds with interest after August 10, 2007. MISO, in its compliance filing, indicated it will perform another resettlement to recalculate the RSG First Pass Distribution Rate. These resettlements began on March 6, 2009 and will conclude by the first quarter of 2010. As the result of these resettlements, Northern Indiana will see a shift from RSG Second Pass, which is a non fuel charge, as determined from a previous IURC order, to the RSG First Pass Distribution, which is included as part of the fuel cost mechanism. The interim RSG allocation is still subject to rehearing. Northern Indiana does not expect a material impact on the financial statements.

Cost Recovery and Trackers. A significant portion of Northern Indiana's revenue is related to the recovery of fuel costs to generate power and the fuel costs related to purchased power. These costs are recovered through a FAC, a standard, quarterly, summary regulatory proceeding in Indiana. Various intervenors, including the OUCC, have taken issue with the allocation of costs included in Northern Indiana's FAC-80, FAC-81 and FAC-82, which cover the reconciliation of April - December 2008. The IURC has granted a sub-docket to consider such issues in those filings. The intervening parties and Northern Indiana are discussing procedures to eliminate these concerns and to resolve them for the historical periods. There is no procedural schedule established for this sub-docket.

The IURC issued an order on May 28, 2008 approving the purchase of Sugar Creek, and on May 30, 2008 Northern Indiana purchased the 535 mw CCGT for \$330 million in order to help meet capacity needs. The IURC, on February 18, 2009, issued an order approving a settlement agreement filed in this proceeding allowing Northern Indiana to begin deferring carrying costs and depreciation on Sugar Creek effective on December 1, 2008, when Sugar Creek was dispatched into MISO, at the agreed to carrying cost rate of 6.5%. The terms of recovery of the deferral will be resolved in Northern Indiana's current rate proceeding. On March 19, 2009, LaPorte County filed a notice of appeal regarding the IURC's decision.

As part of a settlement agreement which resolved issues surrounding purchased power costs, Northern Indiana implemented a new benchmarking standard, that became effective in October 2007, which defines the price above which purchased power costs must be absorbed by Northern Indiana and are not permitted to be passed on to ratepayers. The benchmark is based upon the costs of power generated by a hypothetical natural gas fired unit using gas purchased and delivered to Northern Indiana and a set sharing mechanism. During the first quarter of 2009 and 2008, the amount of purchased power costs exceeding the benchmark amounted to \$0.8 million and \$3.8 million, respectively, which was recognized as a net reduction of revenues. The agreement also contemplated Northern Indiana adding generating capacity to its existing portfolio by providing for the benchmark to be adjusted as new capacity is added. The dispatch of Sugar Creek into MISO on December 1, 2008 triggered a change in the benchmark, whereby the first 500 mw tier of the benchmark provision was eliminated.

Northern Indiana has approval from the IURC to recover certain environmental related costs through an ECT. Under the ECT, Northern Indiana is permitted to recover (1) AFUDC and a return on the capital investment expended by Northern Indiana to implement IDEM's NOx SIP through an ECRM and (2) related operation and maintenance and depreciation expenses once the environmental facilities become operational through an EERM. Under the IURC's November 26, 2002 order, Northern Indiana is permitted to submit filings on a semi-annual basis for the ECRM and on an annual basis for the EERM. In addition, Northern Indiana received an IURC order issuing a CPCN for the CAIR and CAMR Phase I Compliance Plan Projects, estimated to cost approximately \$23 million. Northern Indiana includes the CAIR and CAMR Phase I Compliance Plan costs to be recovered in the semi-annual ECRM and annual EERM filing six months after construction costs begin. On October 23, 2008, Northern Indiana filed for approval of a revised cost estimate to meet the NOx and SO2 and mercury emissions environmental standards. Northern Indiana anticipates a total capital investment of approximately \$368 million. This revised cost estimate was approved by the IURC on January 14, 2009. On October 1, 2008, the IURC approved ECR-12 for capital expenditures (net of accumulated depreciation) of \$267.7 million. Northern Indiana filed ECR-13 and EER-6 in February 2009, for net capital

expenditures and expense of \$268.1 million and \$18.7 million, respectively. In the electric base rate case, Northern Indiana has proposed that the frequency of the EERM be changed from annual to semi-annual, consistent with the filing of the ECRM. In addition, Northern Indiana proposed that the EERM be used to pass through to ratepayers the cost of any emission allowance purchases and the proceeds of any emission allowance sales.

Table of Contents**ITEM 1. FINANCIAL STATEMENTS (continued)****NiSource Inc.****Notes to Condensed Consolidated Financial Statements (unaudited) (continued)****9. Risk Management Activities**

NiSource is exposed to certain risks relating to its ongoing business operations. The primary risks managed by using derivative instruments are commodity price risk and interest rate risk. Derivative natural gas contracts are entered into to manage the price risk associated with natural gas price volatility and to secure forward natural gas prices. Interest rate swaps are entered into to manage interest rate risk associated with NiSource's fixed-rate borrowings. In accordance with SFAS No. 133, NiSource designates many of its commodity forward contracts as cash flow hedges of forecasted purchases of commodities and designates its interest rate swaps as fair value hedges of fixed-rate borrowings. Additionally, certain NiSource subsidiaries enter into forward physical contracts with various third parties to procure natural gas or power for its operational needs. These forward physical contracts are derivatives which qualify for the normal purchase normal sales exception under SFAS No. 133 and do not require mark-to-market accounting. NiSource adopted SFAS No. 161 on January 1, 2009, an amendment to SFAS No. 133, and the disclosures contained in this note regarding NiSource's use of derivatives are pursuant to the requirement of SFAS No. 133, as amended.

Accounting Policy for Derivative Instruments. SFAS No. 133, as amended, establishes accounting and reporting standards for derivative instruments, including certain derivative instruments embedded in other contracts (collectively referred to as derivatives) and for hedging activities. SFAS No. 133 requires an entity to recognize all derivatives as either assets or liabilities on the Consolidated Balance Sheets at fair value, unless such contracts are exempted such as a normal purchase normal sale contract under the provisions of the standard. The accounting for changes in the fair value of a derivative depends on the intended use of the derivative and resulting designation. NiSource uses a variety of derivative instruments (exchange traded futures and options, physical forwards and options, basis contracts, financial commodity swaps, and interest rate swaps) to effectively manage its commodity price risk and interest rate risk exposure. If certain conditions are met, a derivative may be specifically designated as (a) a hedge of the exposure to changes in the fair value of a recognized asset or liability or an unrecognized firm commitment, or (b) a hedge of the exposure to variable cash flows of a forecasted transaction. In order for a derivative contract to be designated as a hedge, the relationship between the hedging instrument and the hedged item or transaction must be highly effective. The effectiveness test is performed at the inception of the hedge and each reporting period thereafter, throughout the period that the hedge is designated. Any amounts determined to be ineffective are recognized currently in earnings. For derivative contracts that qualify for the normal purchase normal sale exemption under SFAS No. 133, a contract's fair value is not recognized in the Consolidated Financial Statements until the contract is settled. Unrealized and realized gains and losses are recognized each period as components of accumulated other comprehensive income (loss), regulatory assets and liabilities or earnings depending on the designation of the derivative instrument. For subsidiaries that utilize derivatives for cash flow hedges, the effective portions of the gains and losses are recorded to accumulated other comprehensive income (loss) and are recognized in earnings concurrent with the disposition of the hedged risks. If a forecasted transaction corresponding to a cash flow hedge is no longer probable to occur, the accumulated gains or losses on the derivative are recognized currently in earnings. For fair value hedges, the gains and losses are recorded in earnings each period together with the change in the fair value of the hedged item. As a result of the rate-making process, the rate-regulated subsidiaries generally record gains and losses as regulatory liabilities or assets and recognize such gains or losses in earnings when both the contracts settle and the physical commodity flows. These gains and losses recognized in earnings are then subsequently recovered or passed back to customers in revenues through rates. When gains and losses are recognized in earnings, they are recognized in cost of sales for derivatives that correspond to commodity risk activities and are recognized in interest expense for derivatives that correspond to interest-rate risk activities.

Commodity Price Risk Programs. NiSource and NiSource's utility customers are exposed to variability in cash flows associated with natural gas purchases and volatility in natural gas prices. NiSource purchases natural gas for sale and delivery to its retail, commercial and industrial customers, and for most customers the variability in the market price of gas is passed through in their rates. Some of NiSource's utility subsidiaries offer programs where variability in the

market price of gas is assumed by the respective utility. The objective of NiSource's commodity price risk programs is to mitigate this gas cost variability, for NiSource or on behalf of its customers, associated with natural gas purchases by economically hedging the various gas cost components by using a combination of futures,

Table of Contents**ITEM 1. FINANCIAL STATEMENTS (continued)****NiSource Inc.****Notes to Condensed Consolidated Financial Statements (unaudited) (continued)**

options, forward physical contracts, basis swap contracts or other derivative contract. Northern Indiana also uses derivative contracts to minimize risk associated with power price volatility. These commodity price risk programs and their respective accounting treatment are described below.

Northern Indiana, Northern Indiana Fuel and Light, Kokomo Gas, Columbia of Pennsylvania, Columbia of Kentucky, Columbia of Maryland and Columbia of Virginia use NYMEX derivative contracts to minimize risk associated with gas price volatility. These derivative programs must be marked to fair value, but because these derivatives are used within the framework of the companies' gas cost recovery mechanism, regulatory assets or liabilities are recorded to offset the change in the fair value of these derivatives.

Northern Indiana, Columbia of Virginia and Columbia of Pennsylvania offer a fixed price program as an alternative to the standard gas cost recovery mechanism. These services provide customers with the opportunity to either lock in their gas cost or place a cap on the gas costs that would be charged in future months. In order to hedge the anticipated physical purchases associated with these obligations, forward physical contracts, NYMEX futures and NYMEX options are used to secure forward gas prices. The accounting treatment elected for these contracts is varied whereby certain of these contracts are accounted for as cash flow hedges while some contracts are not. The normal purchase normal sale exemption under SFAS No. 133 is elected for forward physical contracts associated with these programs whereby delivery of the commodity is probable to occur.

Northern Indiana also offers a Depend-a-Bill program to its customers as an alternative to the standard tariff rate that is charged to residential customers. The program allows Northern Indiana customers to fix their total monthly bill in future months at a flat rate regardless of gas usage or commodity cost. In order to hedge the anticipated physical purchases associated with these obligations, forward physical contracts, NYMEX futures and NYMEX options are used to secure forward gas prices. The accounting treatment elected for these contracts is varied whereby certain of these contracts are accounted for as cash flow hedges while some contracts are not. The normal purchase normal sale exemption under SFAS No. 133 is elected for forward physical contracts associated with these programs whereby delivery of the commodity is probable to occur.

For regulatory incentive purposes, Northern Indiana enters into gas purchase contracts at first of the month prices that give counterparties the daily option to either sell an additional package of gas at first of the month prices or recall the original volume to be delivered. Northern Indiana charges a fee for this option. The changes in the fair value of these options are primarily due to the changing expectations of the future intra-month volatility of gas prices. These written options are derivative instruments, must be marked to fair value and do not meet the requirement for hedge accounting treatment. However, in accordance with SFAS No. 71, Northern Indiana records the related gains and losses associated with these transactions as a regulatory asset or liability.

For regulatory incentive purposes, Columbia of Kentucky, Columbia of Ohio, Columbia of Pennsylvania, and Columbia of Maryland (collectively, the Columbia LDCs) enter into contracts that allow counterparties the option to sell gas to Columbia LDCs at first of the month prices for a particular month of delivery. Columbia LDCs charge the counterparties a fee for this option. The changes in the fair value of the options are primarily due to the changing expectations of the future intra-month volatility of gas prices. These Columbia LDCs defer a portion of the change in the fair value of the options as either a regulatory asset or liability in accordance with SFAS No. 71 based on the regulatory customer sharing mechanisms in place, with the remaining changes in fair value recognized currently in earnings.

The operations of TPC primarily involve commercial and industrial gas sales, whereby TPC utilizes gas derivatives to hedge its expected future gas purchases. These derivatives associated with commercial and industrial gas sales are accounted for as cash flow hedges. TPC enters into forward physical sales contracts of natural gas with customers. These forward physical sales contracts are derivatives which qualify for, and for which TPC has elected, the normal purchase normal sales exception under SFAS No. 133 and do not require mark-to-market accounting.

As part of the MISO Day 2 initiative, Northern Indiana was allocated and has purchased FTRs. These FTRs help Northern Indiana offset congestion costs due to the MISO Day 2 activity. The FTRs are marked to fair value and do

not qualify for hedge accounting treatment, but since congestion costs are recoverable through the fuel cost recovery mechanism, the related gains and losses associated with marking these derivatives to market are recorded as a

22

Table of Contents**ITEM 1. FINANCIAL STATEMENTS (continued)****NiSource Inc.****Notes to Condensed Consolidated Financial Statements (unaudited) (continued)**

regulatory asset or liability, in accordance with SFAS No. 71. In the second quarter of 2008, MISO changed its allocation procedures from an allocation of FTRs to an allocation of ARR, whereby Northern Indiana was allocated ARRs based on its historical use of the MISO administered transmission system. ARRs entitle the holder to a stream of revenues or charges based on the price of the associated FTR in the FTR auction. Northern Indiana converted the ARRs that were received in the second quarter of 2008 into FTRs.

Commodity price risk program derivative contracted gross volumes are as follows:

	March 31,	
	2009	December 31, 2008
Commodity Price Risk Program:		
Gas price volatility program derivatives (MMDth)	23.3	31.2
PPS program derivatives (MMDth)	2.0	1.9
DependaBill program derivatives (MMDth)	0.2	0.3
Regulatory incentive program derivatives (MMDth)	7.6	2.9
Gas marketing program derivatives (MMDth) (a)	78.3	84.4
Electric energy program FTR derivatives (mw)	4,408	8,068

(a) Basis contract volumes were 80.3 (MMDth) and 83.5 (MMDth) as of March 31, 2009 and December 31, 2008, respectively.

Interest Rate Risk Activities. NiSource recognizes that the prudent and selective use of derivatives may help it to lower its cost of debt capital and manage its interest rate exposure. NiSource Finance Corp. has entered into various receive fixed and pay floating interest rate swap agreements which modify the interest rate characteristics of its outstanding long-term debt from fixed to variable rate. These interest rate swaps also serve to hedge the fair market value of NiSource Finance's outstanding debt portfolio. As of March 31, 2009, NiSource had \$6.9 billion of outstanding debt, of which \$1.1 billion is subject to fluctuations in interest rates as a result of the fixed-to-variable interest rate swap transactions. These interest rate swaps are designated as fair value hedges. The effectiveness of the interest rate swaps in offsetting the exposure to changes in the debt's fair value is measured pursuant to SFAS No. 133. NiSource had no net gain or loss recognized in earnings due to hedging ineffectiveness from prior years.

On May 12, 2004, NiSource Finance entered into fixed-to-variable interest rate swap agreements in a notional amount of \$660 million with six counterparties having a 6 1/2-year term. NiSource Finance will receive payments based upon a fixed 7.875% interest rate and pay a floating interest amount based on U.S. 6-month BBA LIBOR plus an average of 3.08% per annum. There was no exchange of premium at the initial date of the swaps. In addition, each party has the right to cancel the swaps on May 15, 2009. On September 15, 2008, NiSource Finance terminated a fixed-to-variable interest rate swap agreement with Lehman Brothers having a notional amount of \$110 million.

On July 22, 2003, NiSource Finance entered into fixed-to-variable interest rate swap agreements in a notional amount of \$500 million with four counterparties with an 11-year term. NiSource Finance will receive payments based upon a fixed 5.40% interest rate and pay a floating interest amount based on U.S. 6-month BBA LIBOR plus an average of 0.78% per annum. There was no exchange of premium at the initial date of the swaps. In addition, each party has the right to cancel the swaps on July 15, 2013.

As stated above, on September 15, 2008, NiSource Finance terminated a fixed-to-variable interest rate swap agreement with Lehman Brothers having a notional amount of \$110 million. NiSource Finance elected to terminate the swap when Lehman Holdings Inc., guarantor under the applicable International Swaps and Derivatives Association agreement, filed for Chapter 11 bankruptcy protection on September 14, 2008, which constituted an event of default under the swap agreement between NiSource Finance and Lehman Brothers Special Financing Inc. The mark-to-market close-out value of this swap at the September 15, 2008 termination date was determined to be \$4.8 million and was fully reserved in the third quarter of 2008. The termination of this swap did not impact NiSource's ability to assert hedge accounting for its remaining fixed-to-variable interest rate swap agreements.

Table of Contents**ITEM 1. FINANCIAL STATEMENTS (continued)****NiSource Inc.****Notes to Condensed Consolidated Financial Statements (unaudited) (continued)**

Contemporaneously with the issuance on September 16, 2005 of the 5.25% and 5.45% notes, NiSource Finance settled \$900 million of forward starting interest rate swap agreements with six counterparties. NiSource paid an aggregate settlement payment of \$35.5 million which is being amortized from accumulated other comprehensive loss to interest expense over the term of the underlying debt, resulting in an effective interest rate of 5.67% and 5.88%, respectively. As of March 31, 2009, \$15.6 million is in accumulated other comprehensive loss related to forward starting interest rate swap settlement.

During first quarter of 2009 and 2008, NiSource did not reclassify any amounts related to its cash flow hedges from accumulated other comprehensive loss to earnings due to the probability that certain forecasted transactions would not occur. It is anticipated that during the next twelve months the expiration and settlement of cash flow hedge contracts will result in income statement recognition of amounts currently classified in accumulated other comprehensive loss of approximately \$79.3 million of loss, net of taxes.

NiSource's derivative instruments measured at fair value under SFAS No. 133 as of March 31, 2009 do not contain any credit-risk-related contingent features.

Certain NiSource affiliates have physical commodity purchase agreements that meet the definition of a derivative for which NiSource has elected the normal purchase normal sale exemption. These agreements are exempt from the requirement of SFAS No. 133 and are not measured at fair value. Certain of these agreements do contain ratings triggers that require increases in collateral if the credit rating of NiSource or certain of its affiliates are rated below BBB- by Standard and Poor's or below Baa3 by Moody's. The collateral requirement from a downgrade for these normal purchase normal sale agreements below the ratings trigger levels would amount to approximately \$1.9 million as of March 31, 2009.

NiSource had approximately \$316.2 million and \$285.5 million of cash on deposit with brokers for margin requirements associated with open derivative positions reflected within, Restricted cash, on the Condensed Consolidated Balance Sheets (unaudited) as of March 31, 2009 and December 31, 2008, respectively.

10. Fair Value Assets and Liabilities

Fair Value Measurements. NiSource adopted the provisions of SFAS No. 157 for financial assets and liabilities on January 1, 2008 and the effective date provision for non-financial assets and liabilities delayed by the issuance of FSP FAS 157-2 on January 1, 2009. There was no impact on retained earnings as a result of the adoption.

Table of Contents**ITEM 1. FINANCIAL STATEMENTS (continued)****NiSource Inc.****Notes to Condensed Consolidated Financial Statements (unaudited) (continued)**

Recurring Fair Value Measurements. The following table presents financial assets and liabilities measured and recorded at fair value on NiSource's Condensed Consolidated Balance Sheet (unaudited) on a recurring basis and their level within the fair value hierarchy as of March 31, 2009:

	Quoted Prices in Active Markets for Identical	Significant Other Observable	Significant Unobservable	Balance as of March 31, 2009
Recurring Fair Value Measurements <i>(in millions)</i>	Assets (Level 1)	Inputs (Level 2)	Inputs (Level 3)	
Assets				
Price risk management assets	\$ 274.4	\$ 102.3	\$ 1.0	\$ 377.7
Available-for-sale securities	28.6	39.6		68.2
Total	\$ 303.0	\$ 141.9	\$ 1.0	\$ 445.9
Liabilities				
Price risk management liabilities	\$ 505.8	\$ 25.3	\$ 0.3	\$ 531.4
Total	\$ 505.8	\$ 25.3	\$ 0.3	\$ 531.4

Price risk management assets and liabilities include commodity exchange-traded and non-exchange-based derivative contracts. Exchange-traded derivative contracts are generally based on unadjusted quoted prices in active markets and are classified within Level 1. These financial assets and liabilities are secured with cash on deposit with the exchange; therefore nonperformance risk has not been incorporated into these valuations. Certain non-exchange-traded derivatives are valued using broker or over-the-counter, on-line exchanges. In such cases, these non-exchange-traded derivatives are classified within Level 2. Non-exchange-based derivative instruments include swaps, forwards, and options. In certain instances, these instruments may utilize models to measure fair value. The company uses a similar model to value similar instruments. Valuation models utilize various inputs that include quoted prices for similar assets or liabilities in active markets, quoted prices for identical or similar assets or liabilities in markets that are not active, other observable inputs for the asset or liability, and market-corroborated inputs, i.e., inputs derived principally from or corroborated by observable market data by correlation or other means. Where observable inputs are available for substantially the full term of the asset or liability, the instrument is categorized in Level 2. Certain derivatives trade in less active markets with a lower availability of pricing information and models may be utilized in the valuation. When such inputs have a significant impact on the measurement of fair value, the instrument is categorized in Level 3. Credit risk is considered in the fair value calculation of derivative instruments that are not exchange-traded. Credit exposures are adjusted to reflect collateral agreements which reduce exposures.

Price risk management assets also include fixed-to-floating interest-rate swaps, which are designated as fair value hedges, as a means to achieve its targeted level of variable-rate debt as a percent of total debt. NiSource uses a calculation of future cash inflows and estimated future outflows related to the swap agreements, which are discounted and netted to determine the current fair value. Additional inputs to the present value calculation include the contract terms, as well as market parameters such as current and projected interest rates and volatility. As they are based on

observable data and valuations of similar instruments, the interest-rate swaps are categorized in Level 2 in the fair value hierarchy. Credit risk is considered in the fair value calculation of the interest rate swap.

Available-for-sale securities are investments pledged as collateral for trust accounts related to NiSource's wholly-owned insurance company. Available-for-sale securities are included within Other investments in the Condensed Consolidated Balance Sheets (unaudited). Securities classified within Level 1 include U.S. Treasury debt securities which are highly liquid and are actively traded in over-the-counter markets. NiSource values corporate and mortgage-backed debt securities using a matrix pricing model that incorporates market-based information. These securities trade less frequently and are classified within Level 2. Unrealized gains and losses from available-for-sale securities are included in other comprehensive income.

Table of Contents**ITEM 1. FINANCIAL STATEMENTS (continued)****NiSource Inc.****Notes to Condensed Consolidated Financial Statements (unaudited) (continued)**

The following tables present the fair value reconciliation of Level 3 assets and liabilities measured at fair value on a recurring basis for the period ended March 31, 2009:

<i>(in millions)</i>	Financial Transmission Rights	Other Derivatives	Total
Balance as of January 1, 2009	\$ 2.6	\$ 1.6	\$ 4.2
Total gains or losses (unrealized/realized)			
Included in regulatory assets/liabilities		0.2	0.2
Purchases, issuances and settlements (net)	(1.7)	(2.0)	(3.7)
Balance as of March 31, 2009	\$ 0.9	\$ (0.2)	\$ 0.7
Change in unrealized gains/(losses) relating to instruments still held as of March 31, 2009	\$	\$ 0.2	\$ 0.2

As part of the MISO Day 2 initiative, Northern Indiana was allocated and has purchased FTRs. These rights help Northern Indiana offset congestion costs due to the MISO Day 2 activity. These instruments are considered derivatives and are valued utilizing forecasted congestion source and sink prices in the Day Ahead market. They are classified as Level 3 and reflected in the table above. The FTRs do not qualify for hedge accounting treatment, but since congestion costs are recoverable through the fuel cost recovery mechanism, the related gains and losses associated with marking these derivatives to market are recorded as a regulatory asset or liability, in accordance with SFAS No. 71. Northern Indiana also writes options for regulatory incentive purposes which are also considered Level 3 valuations and accounted for in accordance with SFAS No. 71. Realized gains and losses for these Level 3 recurring items are included in income within Cost of Sales on the Condensed Statements of Consolidated Income (unaudited). Unrealized gains and losses from Level 3 recurring items are included within, Regulatory assets or Regulatory liabilities, on the Condensed Consolidated Balance Sheets (unaudited).

Non-recurring Fair Value Measurements. There were no non-recurring fair value measurements in the quarter ended March 31, 2009.

11. Goodwill

NiSource's goodwill at March 31, 2009 was \$3,677.3 million pertaining primarily to the acquisition of Columbia on November 1, 2000. The goodwill balance also includes \$13.3 million for Northern Indiana Fuel and Light and \$5.5 million for Kokomo Gas.

NiSource's last goodwill impairment test occurred at June 30, 2008 which indicated no impairment charge was required. NiSource continually monitors potential indicators of impairment to determine if any triggering events are present that would require an impairment test more frequently than the annual test. As of March 31, 2009, NiSource's market capitalization was approximately \$2.7 billion, while NiSource's net assets, inclusive of goodwill, were \$4.7 billion. NiSource's market capitalization at June 30, 2008 of approximately \$4.9 billion was above NiSource's net asset value when the annual impairment test was performed. In accordance with paragraph 28 of SFAS No. 142, NiSource considered whether there were any events or changes in circumstances during the first quarter of 2009 that would reduce the fair value of any of the reporting units below their carrying amounts and necessitate another goodwill impairment test. No such indicators were noted which would require goodwill impairment testing during the first quarter.

NiSource attributes the decline in its market capitalization primarily to the overall stock market decline resulting from the credit crisis taking place in the United States and globally, and not any fundamental change in NiSource's regulated

gas distribution and gas transmission and storage businesses that comprise the reporting units for which goodwill is attributable. NiSource's stock price declined 10.7% at March 31, 2009 as compared to December 31, 2008, performing slightly better than the Dow Jones Industrial Average and Dow Jones Utility Average which declined 13.3% and 11.2%, respectively, during the three-month period. Given the lack of fundamental changes in

Table of Contents**ITEM 1. FINANCIAL STATEMENTS (continued)****NiSource Inc.****Notes to Condensed Consolidated Financial Statements (unaudited) (continued)**

the underlying businesses that carry goodwill, NiSource does not believe the decline in its stock price and the reasons for that decline are indicative of an actual decline in the company's fair value of the assets.

NiSource's reportable entities with goodwill consist of regulated companies. Regulated recovery rates and approved rate of returns allow for more predictable and steady streams of revenues and cash flows which help mitigate the impacts that might otherwise be felt from the recessionary trends seen in other industries and also adds more reliability to the cash flow forecasts used to calculate fair value. It should also be noted that NiSource has demonstrated the ability to obtain credit. In the first quarter of 2009, NiSource was able to issue debt and address most of its liquidity needs for the current year, further indicating there is no fundamental issue with the underlying businesses. Refer to Note 14, Long-Term Debt, for discussion on the issuance of long-term debt during the quarter.

12. Income Taxes

NiSource's interim effective tax rates reflect the estimated annual effective tax rates for 2009 and 2008, respectively, adjusted for tax expense associated with certain discrete items. The effective tax rates for the quarter ended March 31, 2009 and March 31, 2008 were 38.0% and 37.2%, respectively. These effective tax rates differ from the federal tax rate of 35% primarily due to the effects of tax credits, state income taxes, utility rate-making, and other permanent book-to-tax differences such as the electric production tax deduction provided under Internal Revenue Code Section 199.

The 0.8% increase in the effective tax rate in the first quarter of 2009 versus the first quarter of 2008 is due primarily to a reduction in estimated Section 199 deductions as a result of lower projected taxable income for 2009, and an increase in tax expense related to AFUDC-Equity and certain depreciation differences. Both periods included adjustments for discrete items which increased tax expense by \$1.9 million in the first quarter of 2009 and \$2.2 million in the first quarter of 2008.

On March 31, 2008, the governor of West Virginia signed legislation that phases in a reduction in income tax rates from the then current rate of 8.75% to 6.5% over the years 2009 through 2014. The 8.5% West Virginia tax rate that became effective on January 1, 2009 is reflected in current period income tax expense.

On July 3, 2008, the Governor of Massachusetts signed into law a bill that significantly changed the Massachusetts corporate income tax regime. Under the new law, which became effective for tax years beginning on or after January 1, 2009, NiSource calculates its Massachusetts income tax liability on a unitary basis, meaning that the income tax obligation to the Commonwealth of Massachusetts is determined based on an apportioned share of all of NiSource's income, rather than just the income of NiSource's subsidiaries doing business in Massachusetts. Because of NiSource's substantial operations outside of Massachusetts, the new law had the impact of reducing the deferred income tax liability to Massachusetts. In accordance with SFAS No. 109, NiSource recognized the impact of this tax law change in the third quarter of 2008. First quarter 2009 income tax expense reflects the impact of the new law on a going forward basis.

There have been no material changes in 2009 to NiSource's FIN 48 liabilities since December 31, 2008.

13. Pension and Other Postretirement Benefits

NiSource provides defined contribution plans and noncontributory defined benefit retirement plans that cover its employees. Benefits under the defined benefit retirement plans reflect the employees' compensation, years of service and age at retirement. Additionally, NiSource provides health care and life insurance benefits for certain retired employees. The majority of employees may become eligible for these benefits if they reach retirement age while working for NiSource. The expected cost of such benefits is accrued during the employees' years of service. Current rates of rate-regulated companies include postretirement benefit costs, including amortization of the regulatory assets that arose prior to inclusion of these costs in rates. For most plans, cash contributions are remitted to grantor trusts.

Table of Contents**ITEM 1. FINANCIAL STATEMENTS (continued)****NiSource Inc.****Notes to Condensed Consolidated Financial Statements (unaudited) (continued)**

NiSource expects to make contributions of approximately \$104.2 million to its pension plans and approximately \$52.9 million to its postretirement medical and life plans in 2009, which could change depending on market conditions. Through March 31, 2009, NiSource has contributed \$4.9 million to its pension plans and \$11.9 million to its other postretirement benefit plans.

The following table provides the components of the plans' net periodic benefits cost for the first quarter of 2009 and 2008:

Three Months Ended March 31, <i>(in millions)</i>	Pension Benefits		Other Postretirement Benefits	
	2009	2008	2009	2008
Components of Net Periodic Benefit Cost				
Service cost	\$ 9.0	\$ 9.3	\$ 2.2	\$ 2.4
Interest cost	35.8	33.1	11.9	11.9
Expected return on assets	(30.5)	(48.5)	(4.2)	(6.3)
Amortization of transitional obligation			2.0	2.0
Amortization of prior service cost	1.0	1.1	0.3	0.2
Recognized actuarial loss	16.4	0.3	1.9	1.0
Total Net Periodic Benefits Cost	\$ 31.7	\$ (4.7)	\$ 14.1	\$ 11.2

The significant increase in pension cost for 2009 is due to a \$797.7 million, or 35.6%, reduction in pension plan assets in 2008 due to a 30.3% negative return on assets for the year resulting from the overall market decline and benefit payments of \$165.9 million made during 2008. For the quarters ended March 31, 2009 and 2008, pension and other postretirement benefit cost of approximately \$12.3 million and income of \$1.1 million, respectively, was capitalized as a component of plant or recognized as a regulatory asset or liability consistent with regulatory orders for certain of NiSource's regulated businesses.

14. Long-Term Debt

On March 31, 2009, NiSource Finance announced that it was commencing a cash tender offer for up to \$300 million aggregate principal amount of its outstanding 7.875% Notes due 2010. The aggregate principal amount of notes tendered on April 28, 2009 was approximately \$250.6 million.

On March 9, 2009, NiSource Finance issued \$600.0 million of 10.75% unsecured notes that mature March 15, 2016. During February 2009, NiSource negotiated a two-year bank term loan with a syndicate of banks maturing in February 2011. Borrowings under the term loan have an effective cost of LIBOR plus 538 basis points. The initial closing occurred on February 13, 2009 under which NiSource received bank commitments of \$265 million. The final closing occurred on April 9, 2009 with aggregate funding totaling \$385 million. The new term loan matures on February 11, 2011.

During January 2009, NiSource repurchased \$32.4 million of the \$450.0 million floating rate notes scheduled to mature in November 2009 and \$67.6 million of the \$1.0 billion 7.875% unsecured notes scheduled to mature in November 2010.

15. Share-Based Compensation

NiSource currently issues long-term incentive grants to key management employees under a long-term incentive plan approved by stockholders on April 13, 1994 (1994 Plan). The 1994 Plan, as amended and restated, permits the following types of grants, separately or in combination: nonqualified stock options, incentive stock options, restricted stock awards, stock appreciation rights, restricted stock units, contingent stock units and dividend equivalents payable on grants of options, performance units and contingent stock awards.

Table of Contents**ITEM 1. FINANCIAL STATEMENTS (continued)****NiSource Inc.****Notes to Condensed Consolidated Financial Statements (unaudited) (continued)**

At March 31, 2009, there were 27,207,605 shares reserved for future awards under the amended and restated 1994 Plan.

NiSource recognized stock-based employee compensation expense of \$1.6 million and related tax benefits of \$0.6 million during the first three months of both 2009 and 2008.

As of March 31, 2009, the total remaining unrecognized compensation cost related to nonvested awards amounted to \$19.9 million, which will be amortized over the weighted-average remaining requisite service period of 2.3 years.

Stock Options. As of March 31, 2009, approximately 4.7 million options were outstanding and exercisable with a weighted average option price of \$22.62.

Restricted Awards. On March 24, 2009, 308,496 restricted stock units subject to service conditions were granted. The grant date fair-value of the restricted units was \$3.0 million, based on the average market price of NiSource's common stock at the date of grant of \$10.15, which will be expensed net of forfeitures ratably over the three year requisite service period. The service conditions lapse on January 31, 2012 when 100% of the shares vest. If the employee terminates employment before January 31, 2012 (1) due to retirement, having attained age 55 and completed ten years of service, or (2) due to death or disability, the employment conditions will lapse with respect to a pro rata portion of the restricted units on the date of termination. Termination due to any other reason will result in all restricted units awarded being forfeited effective the employee's date of termination. Employees will be entitled to receive dividends upon vesting. As of March 31, 2009, 541,304 nonvested restricted stock units were granted and outstanding.

Contingent Stock Units. On March 24, 2009, 925,490 contingent stock units subject to performance conditions were granted. The grant date fair-value of the award was \$9.1 million, based on the average market price of NiSource's common stock at the date of grant of \$10.15 which will be expensed net of forfeitures over the three year requisite service period. The performance conditions are based on achievement of non-GAAP financial measures: cumulative net operating earnings, that NiSource defines as income from continuing operations adjusted for certain items; cumulative funds from operations that NiSource defines as net operating cash flows provided by continuing operations; and total debt that NiSource defines as total debt adjusted for significant movement in natural gas prices and other adjustments determined by the Board. The service conditions lapse on January 31, 2012 when 100% of the shares vest. If the employee terminates employment before January 31, 2012 (1) due to retirement, having attained age 55 and completed ten years of service, or (2) due to death or disability, the employment conditions will lapse with respect to a pro rata portion of the contingent units on the date of termination. Termination due to any other reason will result in all contingent units awarded being forfeited effective the employee's date of termination. Employees will be entitled to receive dividends upon vesting. As of March 31, 2009, 1,700,485 nonvested contingent stock units were granted and outstanding.

Time-accelerated Awards. NiSource awarded restricted shares and restricted stock units that contain provisions for time-accelerated vesting to key executives under the 1994 Plan in January 2004. The total shareholder return measures established were not met; therefore these grants do not have an accelerated vesting period. At March 31, 2009, NiSource had 276,614 awards outstanding which contained the time-accelerated provisions.

Non-employee Director Awards. The Amended and Restated Non-employee Director Stock Incentive Plan provides for awards of restricted stock, stock options and restricted stock units, which vest in 20% increments per year, with full vesting after five years. Effective March 25, 2008, the Board approved an amendment to the vesting provisions of the plan such that all outstanding grants and future grants of restricted stock units will vest immediately. The plan requires that restricted stock units be distributed to the directors after their separation from the Board. As of March 31, 2009, 89,860 restricted shares and 251,992 restricted stock units had been issued under the Plan.

16. Other Commitments and Contingencies

A. Guarantees and Indemnities. As a part of normal business, NiSource and certain subsidiaries enter into various agreements providing financial or performance assurance to third parties on behalf of certain subsidiaries.

Table of Contents**ITEM 1. FINANCIAL STATEMENTS (continued)****NiSource Inc.****Notes to Condensed Consolidated Financial Statements (unaudited) (continued)**

Such agreements include guarantees and stand-by letters of credit. These agreements are entered into primarily to support or enhance the creditworthiness otherwise attributed to a subsidiary on a stand-alone basis, thereby facilitating the extension of sufficient credit to accomplish the subsidiaries' intended commercial purposes. The total commercial commitments in existence at March 31, 2009 and the years in which they expire were:

<i>(in millions)</i>	Total	2009	2010	2011	2012	2013	After
Guarantees of subsidiaries debt	\$ 6,314.0	\$ 427.6	\$ 932.4	\$	\$ 315.0	\$ 545.0	\$ 4,094.0
Guarantees supporting commodity transactions of subsidiaries	460.9	280.2	176.3				4.4
Letters of credit	290.3	11.0	263.9	14.4			1.0
Other guarantees	841.6	61.7	2.9		15.6	225.4	536.0
Total commercial commitments	\$ 7,906.8	\$ 780.5	\$ 1,375.5	\$ 14.4	\$ 330.6	\$ 770.4	\$ 4,635.4

Guarantees of Subsidiaries Debt. NiSource has guaranteed the payment of \$6.3 billion of debt for various wholly-owned subsidiaries including NiSource Finance, and through a support agreement, Capital Markets, which is reflected on NiSource's Condensed Consolidated Balance Sheet (unaudited) as of March 31, 2009. The subsidiaries are required to comply with certain financial covenants under the debt instruments and in the event of default, NiSource would be obligated to pay the debt's principal and related interest. NiSource does not anticipate its subsidiaries will have any difficulty maintaining compliance.

Guarantees Supporting Commodity Transactions of Subsidiaries. NiSource has issued guarantees, which support up to approximately \$460.9 million of commodity-related payments for its current subsidiaries involved in energy marketing and trading and those satisfying requirements under forward gas sales agreements of current and former subsidiaries. These guarantees were provided to counterparties in order to facilitate physical and financial transactions involving natural gas and electricity. To the extent liabilities exist under the commodity-related contracts subject to these guarantees, such liabilities are included in the Condensed Consolidated Balance Sheets (unaudited).

Lines and Letters of Credit. NiSource Finance maintains a \$1.5 billion five-year revolving credit facility with a syndicate of banks which has a termination date of July 7, 2011. This facility provides a reasonable cushion of short-term liquidity for general corporate purposes including meeting cash requirements driven by volatility in natural gas prices, as well as provides for the issuance of letters of credit. During September 2008, NiSource Finance entered into a new \$500 million six-month revolving credit agreement with a syndicate of banks led by Barclays Capital that was originally due to expire on March 23, 2009. However, on February 13, 2009, the six-month credit facility was terminated in conjunction with the closing of a new two-year bank term loan. At March 31, 2009, NiSource had no short-term borrowings outstanding under its credit facility and has issued stand-by letters of credit of approximately \$290.3 million for the benefit of third parties.

Other Guarantees or Obligations. On June 30, 2008, NiSource sold Whiting Clean Energy to BPAE for \$216.7 million which included \$16.1 million in working capital. The agreement with BPAE contains representations, warranties, covenants and closing conditions. NiSource has executed purchase and sales agreement guarantees totaling \$220 million which guarantee performance of PEI's covenants, agreements, obligations, liabilities, representations and warranties under the agreement with BPAE. No amounts related to the purchase and sales agreement guarantees are reflected in the Condensed Consolidated Balance Sheet (unaudited) as of March 31, 2009.

NiSource has additional purchase and sales agreement guarantees totaling \$77.5 million, which guarantee performance of the seller's covenants, agreements, obligations, liabilities, representations and warranties under the agreements. No amounts related to the purchase and sales agreement guarantees are reflected in the Consolidated Balance Sheets. Management believes that the likelihood NiSource would be required to perform or otherwise incur any significant losses associated with any of the aforementioned guarantees is remote.

On August 29, 2007, Millennium entered into a bank credit agreement to finance the construction of the Millennium pipeline project. As a condition precedent to the credit agreement, NiSource issued a guarantee securing payment for 47.5%, its indirect ownership interest percentage, of amounts borrowed under the credit agreement up until such time as the amounts payable under the agreement are paid in full. As of March 31, 2009, Millennium owed \$798.9

Table of Contents**ITEM 1. FINANCIAL STATEMENTS (continued)****NiSource Inc.****Notes to Condensed Consolidated Financial Statements (unaudited) (continued)**

million under the financing agreements, of which NiSource guaranteed \$379.5 million. NiSource recorded an accrued liability of approximately \$7.6 million related to the fair value of this guarantee. The permanent financing for Millennium is expected to be completed when debt capital market conditions improve. In the interim, Millennium will continue to be funded by the \$800 million credit agreement, which extends through August 2010.

On June 29, 2006, Columbia Transmission, Piedmont, and Hardy Storage entered into multiple agreements to finance the construction of the Hardy Storage project, which is accounted for by NiSource as an equity investment. Under the financing agreement, Columbia Transmission issued guarantees securing payment for 50% of any amounts issued in connection with Hardy Storage up until such time as the project is placed in service and operated within certain specified parameters. As of March 31, 2009, Hardy Storage owed \$123.4 million under the financing agreement, for which Columbia Transmission recorded an accrued liability of approximately \$1.2 million related to the fair value of its guarantee securing payment for \$61.7 million which is 50% of the amount borrowed.

NiSource has issued other guarantees supporting derivative related payments associated with interest rate swap agreements issued by NiSource Finance, operating leases for many of its subsidiaries and for other agreements entered into by its current and former subsidiaries.

B. Other Legal Proceedings. In the normal course of its business, NiSource and its subsidiaries have been named as defendants in various legal proceedings. In the opinion of management, the ultimate disposition of these currently asserted claims will not have a material adverse impact on NiSource's consolidated financial position.

In the case of Tawney, et al. v. Columbia Natural Resources, Inc., the Plaintiffs, who are West Virginia landowners, filed a lawsuit in early 2003 against CNR alleging that CNR underpaid royalties on gas produced on their land by improperly deducting post-production costs and not paying a fair value for the gas. In December 2004, the court granted plaintiffs' motion to add NiSource and Columbia as defendants. Plaintiffs also claimed that the defendants fraudulently concealed the deduction of post-production charges. The court certified the case as a class action that includes any person who, after July 31, 1990, received or is due royalties from CNR (and its predecessors or successors) on lands lying within the boundary of the state of West Virginia. All claims by the government of the United States are excluded from the class. Although NiSource sold CNR in 2003, NiSource remains obligated to manage this litigation and for the majority of any damages ultimately awarded to the plaintiffs. On January 27, 2007, the jury hearing the case returned a verdict against all defendants in the amount of \$404.3 million; this is comprised of \$134.3 million in compensatory damages and \$270 million in punitive damages. In January 2008, the Defendants filed their petition for appeal, and on March 24, 2008, the Defendants filed their amended petition for appeal with the West Virginia Supreme Court of Appeals. On May 22, 2008, the West Virginia Supreme Court of Appeals refused the defendants' petition for appeal. On August 22, 2008, Defendants filed their petitions to the United States Supreme Court for writ of certiorari. The Plaintiffs filed their response on September 22, 2008. On September 19, 2008, the West Virginia Supreme Court issued an order extending the stay of the judgment until proceedings before the United States Supreme Court are fully concluded. Given the West Virginia Court's refusal of the appeal, NiSource adjusted its reserve in the second quarter of 2008 to reflect the portion of the trial court judgment for which NiSource would be responsible, inclusive of interest. This amount was included in Legal and environmental reserves, on the Consolidated Balance Sheet as of December 31, 2008. On October 24, 2008, the West Virginia Circuit Court for Roane County, West Virginia, preliminarily approved a settlement agreement with a total settlement amount of \$380 million. The settlement received final approval by the Court on November 22, 2008. NiSource's share of the settlement liability is up to \$338.8 million. NiSource has complied with its obligations under the settlement agreement to fund \$85.5 million in the qualified settlement fund by January 13, 2009. Additionally, NiSource provided a letter of credit on January 13, 2009 in the amount of \$254 million and thereby complied with its obligation to secure the unpaid portion of the settlement. The trial court entered its order discharging the judgment on January 20, 2009. The Court is supervising the administration of the settlement proceeds. NiSource will be required to make additional payments, pursuant to the settlement, upon notice from the Class Administrator.

Table of Contents**ITEM 1. FINANCIAL STATEMENTS (continued)****NiSource Inc.****Notes to Condensed Consolidated Financial Statements (unaudited) (continued)****C. Environmental Matters.**

General. The operations of NiSource are subject to extensive and evolving federal, state and local environmental laws and regulations intended to protect the public health and the environment. Such environmental laws and regulations affect operations as they relate to impacts on air, water and land.

A reserve of \$81.6 million and \$73.1 million has been recorded as of March 31, 2009 and December 31, 2008, respectively, to cover probable corrective actions at sites where NiSource has environmental remediation liability. Regulatory assets have been recorded to the extent environmental expenditures are expected to be recovered in rates. NiSource accrues for costs associated with environmental remediation obligations when the incurrence of such costs is probable and the amounts can be reasonably estimated, regardless of when the expenditures are actually made. The undiscounted estimated future expenditures are based on many factors including currently enacted laws and regulations, existing technology and estimated site-specific costs whereby assumptions may be made about the nature and extent of site contamination, the extent of cleanup efforts, costs of alternative cleanup methods and other variables. NiSource's estimated environmental remediation liability will be refined as events in the remediation process occur. Actual remediation costs may differ materially from NiSource's estimates due to the dependence on the factors listed above.

Proposals for voluntary initiatives and mandatory controls are being discussed both in the United States and worldwide to reduce so-called greenhouse gases such as carbon dioxide, a by-product of burning fossil fuels, and methane, a component of natural gas. Certain NiSource affiliates engage in efforts to voluntarily report and reduce their greenhouse gas emissions. On April 2, 2007, in *Massachusetts v. EPA*, the Supreme Court ruled that the EPA does have authority under the CAA to regulate emissions of greenhouse gases if it is determined that greenhouse gases have a negative impact on human health or the environment. On April 17, 2009, the EPA issued a proposed rule, which would make the following findings: (a) that greenhouse gases in the atmosphere endanger the public health and welfare within the meaning of the CAA and (b) that emissions of carbon dioxide and other greenhouse gases from new motor vehicles contribute to the mix of greenhouse gases in the atmosphere. The EPA is soliciting public comments on this new rule, which could become final in 2009. Although the EPA's proposed findings deal only with new motor vehicles, the proposed rule could be a precursor for the regulation of other greenhouse gas sources by the EPA under the CAA. In addition, draft legislation has been developed in both the U.S. House of Representatives and the U.S. Senate. NiSource will continue to monitor and participate in developments related to efforts to potentially regulate greenhouse gas emissions.

The EPA proposed a mandatory greenhouse gas reporting rule on March 10, 2009, that would require reporting of greenhouse gas emissions from large sources. The emission information collected would be used by the EPA to develop comprehensive and accurate data relevant to future climate policy decisions, including potential future regulation of greenhouse gases. According to the proposal, data collection would begin January 1, 2010, with first reports due to the EPA on March 31, 2011. NiSource will continue to monitor development of this rule.

On February 25, 2009, the EPA proposed national emission standards for hazardous air pollutants for stationary reciprocating internal combustion engines that are not already covered by earlier EPA regulation. The proposed rule would impact smaller engines and impose a variety of additional requirements depending on the size and type of engine. In accordance with a consent decree, the proposed rule is scheduled to be finalized by February 10, 2010, with compliance generally required three years later. NiSource will continue to closely monitor developments in this matter and cannot estimate the cost of compliance at this time.

Implementation of the ozone and fine particulate matter NAAQS may require imposition of additional controls on boilers, engines and turbines. On April 15, 2004, the EPA finalized the eight-hour ozone nonattainment area designations under the 1997 eight-hour ozone NAAQS. After designation, the CAA provides for a process for promulgation of rules specifying compliance level, compliance deadline, and necessary controls to be implemented within designated areas over the next few years. In addition, on March 12, 2008, the EPA announced the tightening of the eight-hour ozone NAAQS. The number of areas that do not meet the new standard could significantly increase

across the country, thus requiring additional federal and state attainment planning and rulemaking. Resulting federal and state rules could require additional reductions in NOx emissions from facilities owned by electric generation and gas transmission and storage operations.

Table of Contents**ITEM 1. FINANCIAL STATEMENTS (continued)****NiSource Inc.****Notes to Condensed Consolidated Financial Statements (unaudited) (continued)**

On March 29, 2007, the EPA signed a rule to govern implementation of the NAAQS for particulate matter (PM-2.5) that the EPA promulgated in 1997. The rule addresses a wide range of issues, including state rulemaking requirements as well as attainment demonstration requirements and deadlines. States must evaluate potential reduction measures for the emission of particulate matter and its precursors such as SO₂ and NO_x. The rule includes a conditional presumption that, for power plants subject to the CAIR, compliance with CAIR would satisfy Reasonably Available Control Measures and Reasonably Available Control Technology requirements for SO₂ and NO_x. States were required to submit attainment SIPs in April 2008. Also, on September 21, 2006, the EPA issued revisions to the NAAQS for particulate matter. The final rule increased the stringency of the current fine particulate (PM_{2.5}) standard, added a new standard for inhalable coarse particulate (particulate matter between 10 and 2.5 microns in diameter), and revoked the annual PM₁₀ standards while retaining the 24-hour PM₁₀ standards. The EPA rule designating areas not meeting the new fine particulate matter standards was signed December 22, 2008, and expected to be effective in 2009. The SIPs detailing how states will reduce emissions to meet the NAAQS will be due three years later in order to meet attainment by 2014 with a possible five year extension to 2019. On February 24, 2009, the D.C. Circuit struck down the primary annual and secondary PM_{2.5} NAAQS promulgated by the EPA in 2006 (*American Farm Bureau Federation, et al. v. EPA*). These standards have been remanded to the EPA for reconsideration. The court denied the petitions to review the primary daily and annual standards for PM₁₀. These standards are not vacated (i.e., they are still in effect, but must be reconsidered by the EPA). These actions could require further reductions in NO_x emissions from various emission sources in and near nonattainment areas, including reductions from Gas Transmission and Storage Operations. NiSource will continue to closely monitor developments in these matters and cannot estimate the timing or cost of emission controls at this time.

Gas Distribution Operations. Several Gas Distribution Operations subsidiaries are potentially responsible parties at waste disposal sites under the CERCLA (commonly known as Superfund) and similar state laws, as well as at MGP sites, which such subsidiaries, or their corporate predecessors, own or previously owned or operated. Gas Distribution Operations subsidiaries may be required to share in the cost of cleanup of such sites. In addition, some Gas Distribution Operations subsidiaries have responsibility for corrective action under the RCRA for closure and cleanup costs associated with underground storage tanks and under the Toxic Substances Control Act for cleanup of PCBs. The final costs of cleanup have not yet been determined. As site investigations and cleanup proceed and as additional information becomes available reserves are adjusted.

A program has been instituted to identify and investigate former MGP sites where Gas Distribution Operations subsidiaries or predecessors are the current or former owner. The program has identified up to 84 such sites and initial investigations have been conducted at 52 sites. Additional investigation activities have been completed or are in progress at 50 sites and remedial measures have been implemented or completed at 30 sites. This effort includes the sites contained in the January 2004 Indiana Voluntary Remediation Program agreements between the IDEM and Northern Indiana, Kokomo Gas, and other Indiana utilities. Only those site investigation, characterization and remediation costs currently known and determinable can be considered probable and reasonably estimable under SFAS No. 5. As costs become probable and reasonably estimable, reserves will be adjusted. As reserves are recorded, regulatory assets are recorded to the extent environmental expenditures are expected to be recovered through rates. NiSource is unable, at this time, to estimate the time frame and potential costs of the entire program. Management expects that, as characterization is completed, additional remediation work is performed and more facts become available, NiSource will be able to develop a probable and reasonable estimate for the entire program or a major portion thereof consistent with the SEC's SAB No. 92, SFAS No. 5 and SOP 96-1.

Gas Transmission and Storage Operations. Columbia Transmission continues to conduct characterization and remediation activities at specific sites under a 1995 EPA AOC. The 1995 AOC covered 245 facilities, approximately 13,000 liquid removal points, approximately 2,200 mercury measurement stations and about 3,700 storage well locations. Field characterization has been performed at all sites. Site characterization reports and remediation plans, which must be submitted to the EPA for approval, are in various stages of development and completion. Remediation

has been completed at the mercury measurement stations, liquid removal point sites, storage well locations and all but 48 of the 245 facilities. The AOC was amended in 2008 to facilitate payment of EPA oversight costs and to remove all but the remaining 48 facilities from the AOC.

Columbia Transmission and Columbia Gulf are potentially responsible parties at several waste disposal sites under CERCLA and similar state laws. The potential liability is believed to be de minimis. However, the final allocation

Table of Contents**ITEM 1. FINANCIAL STATEMENTS (continued)****NiSource Inc.****Notes to Condensed Consolidated Financial Statements (unaudited) (continued)**

of cleanup costs has yet to be determined. As site investigations and cleanups proceed and as additional information becomes available reserves will be adjusted.

On February 21, 2007, PADEP provided representatives of Columbia Transmission with a proposed Consent Order and Agreement covering an unmanned equipment storage site located in rural southwest Pennsylvania. PADEP's proposed order alleges that Columbia Transmission has violated the state's Clean Streams Act and Solid Waste Management Act by discharging petroleum products onto the property and into the waters of the state. In addition to requiring remediation and monitoring activities at the site, the state has proposed penalties for these violations. The site was remediated via an EPA approved Remedial Action Work Plan in the summer of 2008. The PADEP had provided written notification that it would not attempt to stop the EPA approved work and would seek the aforementioned Order after the remedy is completed. On January 6, 2009, PADEP provided Columbia Transmission with a Consent Assessment of Civil Penalty seeking a civil penalty of \$700 thousand for alleged violations of the Clean Streams Law. On April 23, 2009, PADEP sent Columbia Transmission an NOV. This NOV alleged the same violations as the January 6, 2009 Consent Assessment of Civil Penalty, but it also included violations of the Clean Streams Law that had allegedly been observed during a February 16, 2009 site inspection. The NOV increased the amount of PADEP's settlement demand to \$1 million. Columbia intends to seek clarification from PADEP regarding the proposed penalty.

Electric Operations.

Air. In December 2001, the EPA approved regulations developed by the State of Indiana to comply with the EPA's NOx SIP call. The NOx SIP call requires certain states, including Indiana, to reduce NOx levels from several sources, including industrial and utility boilers, to lower regional transport of ozone. Compliance with the NOx limits contained in these rules was required by May 31, 2004. To comply with the rule, Northern Indiana developed a NOx compliance plan, which included the installation of Selective Catalytic Reduction and combustion control NOx reduction technology at its active generating stations and is currently in compliance with the NOx requirements. In implementing the NOx compliance plan, Northern Indiana has expended approximately \$315.3 million as of March 31, 2009.

Implementation of the fine particulate matter and ozone NAAQS has the potential to require imposition of additional controls on coal-fired boilers. On April 15, 2004, the EPA finalized the eight-hour ozone nonattainment area designations for the 1997 eight-hour ozone NAAQS and designated Lake, Porter, and LaPorte counties as nonattainment of the standard. This triggered a multi-year process for development of rules specifying compliance level, compliance deadline, and necessary controls to be implemented within nonattainment areas. Local ozone air quality improved in these three counties, and LaPorte County was redesignated to attainment of the eight-hour ozone NAAQS effective January 28, 2008. IDEM is also recommending Lake and Porter counties be redesignated to attainment with the 1997 standard because of improved air quality during the most recent averaging period. However, the March 12, 2008 EPA tightening of the eight-hour ozone NAAQS may result in Lake, Porter and LaPorte counties again being designated as nonattainment of the new 2008 ozone NAAQS. As discussed above under General, the EPA ozone NAAQS revision could lead to additional emission reductions of NOx, an ozone precursor, from facilities owned by Northern Indiana. Northern Indiana will closely monitor developments in these matters and cannot at this time estimate the timing or cost of emission controls that may eventually be required.

Also, in 2005 Lake and Porter counties were designated nonattainment for fine particulate matter. Similar to ozone, local particulate matter air quality improved and IDEM submitted an attainment SIP that is awaiting EPA approval. Northern Indiana will continue to closely monitor developments in these matters and cannot predict the outcome or impact of the EPA action at this time.

On September 21, 2006, the EPA issued revisions to the NAAQS for particulate matter. The EPA rule designating areas not meeting the new (2006) fine particulate matter standards was signed December 22, 2008, and expected to be effective in 2009. The SIPs detailing how states will reduce emissions to meet the NAAQS in these areas will be due three years later with attainment due by 2014 and a possible five year extension to 2019. The SIPs developed to meet

this standard could impact the emission control requirements for coal-fired boilers including Northern Indiana's electric generating stations. Northern Indiana will continue to closely monitor developments in these matters and cannot estimate the impact, timing or cost of emission controls at this time.

Table of Contents**ITEM 1. FINANCIAL STATEMENTS (continued)****NiSource Inc.****Notes to Condensed Consolidated Financial Statements (unaudited) (continued)**

On October 15, 2008, the EPA announced its first strengthening of the NAAQS for lead in 30 years by tightening the standards from the current 1.5 micrograms per cubic meter to 0.15 micrograms per cubic meter and changing both the calculation method and averaging time. Also included are provisions for the EPA to improve the existing lead monitoring network by requiring placement of monitors in areas with industrial facilities that emit one or more tons per year of lead. Designations of whether or not areas meet the standards are to be finalized by January 2012 with the state plans for reducing emissions to meet the standards due in June 2013 and compliance by January 2017. Northern Indiana is unable to predict the outcome of this action at this time.

On March 10, 2005, the EPA issued the CAIR final regulations. The rule establishes phased reductions of NO_x and SO₂ from 28 Eastern states, including electric utilities in Indiana, by establishing an annual emissions cap for NO_x and SO₂ and an additional cap on NO_x emissions during the ozone control season. On March 15, 2006, the EPA signed three related rulemakings providing final regulatory decisions on implementing the CAIR. The EPA, in one of the rulings, denied several petitions for reconsideration of various aspects of the CAIR, including requests by Northern Indiana to reconsider SO₂ and NO_x allocations. As an affected state, Indiana structured, and preliminarily adopted in June 2006, a draft rule to meet the EPA abbreviated CAIR SIP requirements and adopted the final rules on November 1, 2006. The CAIR rules became effective in Indiana on February 25, 2007. In a petition filed with the IURC in December 2006, Northern Indiana provided plans for the first phase of the emission control construction required to address the Phase I CAIR requirements and a request for appropriate cost treatment and recovery. Northern Indiana's plan includes the upgrade of existing emission controls on three generating units for an estimated cost of \$45.4 million and anticipates that these expenses are recoverable.

On July 11, 2008, the court vacated the CAIR in its entirety, and remanded the rule back to the EPA to develop a rule consistent with the court's opinion. On September 24, 2008, four petitions were submitted seeking rehearing by the original panel and the full panel (en banc). Among the petitioners were the EPA as well as industry and environmental groups. On December 23, 2008, the court decided to remand the CAIR without vacatur to EPA in order to remedy the CAIR's flaws in accordance with the court's July 11, 2008 opinion in this case. Consequently, the federal CAIR remains in effect. Northern Indiana will continue to monitor this matter and can not predict the outcome or impact of EPA action at this time.

In anticipation of the issuance of the Court's mandate to vacate CAIR upon the conclusion of legal proceedings, on October 23, 2008, the IDEM took the initial step to develop a new state rule to replace CAIR and obtain the emission reductions it would have achieved. As a result of the court's December 23, 2008 action, the Indiana CAIR remains in effect and the IDEM suspended its replacement rulemaking activity. Northern Indiana will continue to monitor IDEM activity in this matter.

On October 3, 2007, the Indiana Air Pollution Control Board adopted, with minor changes from the EPA CAMR, the state rule to implement EPA's CAMR. The rule became effective on February 3, 2008, with compliance required in 2010. On February 8, 2008, the United States Court of Appeals for the District of Columbia Circuit vacated two EPA rules addressing utility mercury emissions that are the stimulus for the Indiana Air Pollution Control Board's CAMR. The first is the EPA's rule delisting coal and oil-fired electric generating units from the list of sources whose emissions are regulated under section 112 of the CAA, 42 U.S.C. § 7412. *Revision of December 2000 Regulatory Finding* (Delisting Rule), 70 Fed. Reg. 15,994 (March 29, 2005). The second is the EPA's rule that set performance standards for new coal-fired electric generating units and established total mercury emission limits for states along with a cap-and-trade program for new and existing coal-fired electric generating units. *Standards of Performance for New and Existing Stationary Sources: Electric Utility Steam Generating Units* (CAMR), 70 Fed. Reg. 28,606 (May 18, 2005). In response to the vacatur, the EPA is pursuing a new Section 112 rulemaking to establish Maximum Achievable Control Technology standards for electric utilities. The EPA's response to this decision will affect the implementation and timing of the installation of controls to address potential reduction obligations for mercury and other pollutants subject to the section 112 rulemaking. Northern Indiana will closely monitor developments regarding any further action by the EPA and subsequent regulatory developments from the EPA and/or the Indiana Air Pollution

Control Board in this matter.

On October 3, 2007, the Indiana Air Pollution Control Board adopted, with some minor modifications, a rule to implement the EPA BART requirements for reduction of regional haze. The rule became effective February 22, 2008, with compliance with any required BART controls within five years (2013). The language of the final rule

Table of Contents**ITEM 1. FINANCIAL STATEMENTS (continued)****NiSource Inc.****Notes to Condensed Consolidated Financial Statements (unaudited) (continued)**

relies upon the provisions of the Indiana CAIR to meet requirements for NO_x and SO₂ and does not impose any additional control requirements on coal-fired generation emissions, including those of Northern Indiana. As part of the BART analysis process, the IDEM evaluated the potential impact of particulate matter from electric generating units and found no significant impacts on Class I areas.

In late 1999, the EPA initiated a New Source Review enforcement action against several industries, including the electric utility industry, concerning rule interpretations that have been the subject of recent (prospective) reform regulations. Northern Indiana has received and responded to the EPA information requests on this subject, most recently in June 2002. The EPA issued an NOV to Northern Indiana on September 29, 2004, for alleged violations of the CAA and the SIP. Specifically, the NOV alleges that modifications were made to certain boiler units at the Michigan City, Schahfer, and Bailly Generating Stations between the years of 1985 and 1995 without obtaining appropriate air permits for the modifications. An adverse outcome in this matter could require capital expenditures beyond the EPA requirements that cannot be determined at this time and could require payment of substantial penalties.

Water. The Great Lakes Water Quality Initiative program added new water quality standards for facilities that discharge into the Great Lakes watershed, including Northern Indiana's three electric generating stations located on Lake Michigan. The State of Indiana has promulgated its regulations for this water discharge permit program and has received final EPA approval. The NPDES water discharge permit for Michigan City Generating Station has been issued and became effective on April 1, 2006. Engineering studies have begun to determine specific compliance costs for this facility. The permit for the Bailly Generating Station was issued on June 26, 2006, and became effective on August 1, 2006. Northern Indiana appealed the Bailly Generating Station NPDES permit, due to an unacceptable internal outfall monitoring permit condition. On February 18, 2008, the Bailly Generating Station NPDES permit was modified to resolve the monitoring issue and to address the 316(b) rule status due to the remand mentioned below. On February 16, 2004, the EPA Administrator signed the Phase II Rule of the Clean Water Act Section 316(b) which requires all large existing steam electric generating stations meet certain performance standards to reduce the effects on aquatic organisms at their cooling water intake structures. The rule became effective on September 7, 2004. Under this rule, stations will either have to demonstrate that the performance of their existing fish protection systems meet the new standards or develop new systems, such as a closed-cycle cooling tower. On January 25, 2007, the Second Circuit in a court decision on the Phase II 316(b) Rule, remanded for EPA reconsideration the options providing flexibility for meeting the requirements of the rule. On March 20, 2007, the EPA issued a guidance memo advising its Regional Administrators that the Agency considers the Phase II 316(b) Rule governing cooling water withdrawals suspended. On July 5, 2007, the Second Circuit Court of appeals denied the petitions for rehearing that had asked the court to reconsider its remand of the Phase II 316(b) Rule. On July 9, 2007, the EPA published a notice in the Federal Register suspending the Phase II Rule. The notice explained that the EPA is not accepting comments on the suspension and notes that "best professional judgment" is to be used in making 316(b) decisions.

Various parties submitted petitions for a *writ of certiorari* to the U.S. Supreme Court in early November 2007 seeking to reverse the Second Circuit Court's decision. On April 1, 2009, the Supreme Court issued their ruling reversing and remanding the Second Circuit's ruling. The case, *Entergy Corp. v. Riverkeeper, Inc.*, determined that the EPA did not overstep its authority when it adopted national performance standards utilizing cost-benefit analyses. The matter will go back to the 2nd Circuit U.S. Court of Appeals for further proceedings. The EPA will propose a revised 316(b) rule or provide guidance to address the impact of the court decision. Northern Indiana will continue to closely monitor this activity and cannot estimate the costs associated with the ultimate outcome at this time.

The IDEM issued a renewed NPDES Permit for Northern Indiana's Michigan City Generating Station in 2006. The permit requires that the facility meet the Great Lakes Initiative discharge limits for copper. The Michigan City Generating Station originally had a four year compliance schedule to meet these limits, but on December 20, 2008, was granted a one year extension due to challenges with meeting the new limit. The new date of compliance with the new copper limits ends on April 2011 with the expiration of the current NPDES permit. Northern Indiana

Table of Contents**ITEM 1. FINANCIAL STATEMENTS (continued)****NiSource Inc.****Notes to Condensed Consolidated Financial Statements (unaudited) (continued)**

currently is evaluating and implementing various alternatives for treating copper in wastewater at the Michigan City Generating Station.

Great Lakes Initiative-based discharge limits for mercury have also been set for both the Bailly and the Michigan City Generating Stations. Northern Indiana will collect data, develop and implement pollution reduction program plans, to demonstrate progress in reducing mercury discharge. Streamlined Mercury Variance applications will be submitted for both stations in 2009.

Remediation. Northern Indiana is a potentially responsible party under the CERCLA and similar state laws at two waste disposal sites and shares in the cost of their cleanup with other potentially responsible parties. At one site, the Remedial Investigation and Feasibility Study was submitted to the EPA in 2007. The EPA issued a Record of Decision in 2008 to conduct additional remedial activities at the site. At the second site, Northern Indiana has agreed to conduct a Remedial Investigation and Feasibility Study in the vicinity of the third party, state-permitted landfill where Northern Indiana contracted for fly ash disposal. In addition, Northern Indiana has corrective action liability under the RCRA for three facilities that historically stored hazardous waste.

On March 31, 2005, the EPA and Northern Indiana entered into an AOC under the authority of Section 3008(h) of the RCRA for the Bailly Station. The order requires Northern Indiana to identify the nature and extent of releases of hazardous waste and hazardous constituents from the facility. Northern Indiana must also remediate any release of hazardous constituents that present an unacceptable risk to human health or the environment. The process to complete investigation and select appropriate remediation activities is ongoing. A reserve has been established to fund the remedial measures proposed to the EPA. The final costs of cleanup could change based on EPA review.

On September 13, 2006, IDEM advised Northern Indiana that further investigation of historic releases from two previously removed underground storage tanks at the Schahfer Generating Station would need to be investigated. Northern Indiana completed an investigation of potentially impacted soils and groundwater and submitted results to the IDEM Leaking Underground Storage Tank section.

Coal Combustion Products. The Federal government continues to show interest in developing regulations covering coal combustion waste products. Subsequent to the December 22, 2008 dike collapse at a Tennessee Valley Authority ash pond, congressional hearings were held on the issue. Legislation regulating coal ash pursuant to the Surface Mining Control and Reclamation Act was introduced and the EPA is reviewing its previous determination that federal regulation of coal ash as a RCRA Subtitle C hazardous waste is not appropriate. Northern Indiana will monitor future regulatory actions and cannot estimate the potential financial impact at this time.

Renewable Portfolio Legislation. In 2009, the two Houses of the Indiana General Assembly passed different versions of a bill requiring electric utilities to implement a renewable portfolio standard. The versions are currently before a conference committee. If enacted, the renewable portfolio legislation would require Northern Indiana to obtain specified portions of its power from renewable sources by targeted dates. In addition to the Indiana legislation, Congress is considering legislation to create a Federal renewable portfolio standard. Either the Indiana or the Federal legislation could result in additional expense or compliance costs that may not be fully recoverable from customers and, as such, could materially impact Northern Indiana's financial results. The cost impact of any new or amended legislation would depend upon the specific requirements enacted and cannot be determined at this time.

Table of Contents**ITEM 1. FINANCIAL STATEMENTS (continued)****NiSource Inc.****Notes to Condensed Consolidated Financial Statements (unaudited) (continued)****17. Accumulated Other Comprehensive Loss**

The following table displays the components of Accumulated Other Comprehensive Loss, which is included in Common Stockholders' Equity, on the Condensed Consolidated Balance Sheets (unaudited).

<i>(in millions)</i>	March 31, 2009	December 31, 2008
Other comprehensive loss, before taxes:		
Unrealized (losses) gains on securities	\$ (1.7)	0.4
Tax benefit on unrealized gains on securities	0.8	
Unrealized losses on cash flow hedges	(256.8)	(232.1)
Tax benefit on unrealized gains on cash flow hedges	102.5	92.3
Unrecognized pension benefit and OPEB costs	(51.8)	(52.7)
Tax benefit on unrecognized pension benefit and OPEB costs	19.8	20.1
Total Accumulated Other Comprehensive Loss, net of taxes	\$ (187.2)	\$ (172.0)

Millennium, in which Columbia Transmission has an equity investment, entered into three interest rate swap agreements with a notional amount totaling \$420 million with seven counterparties. In accordance with paragraph 121 of SFAS No. 130, Columbia Transmission recorded an unrecognized loss of \$24.8 million as a decrease in its investment in Millennium and a corresponding decrease in accumulated other comprehensive income, representing its ownership portion of the fair value of these swaps as of March 31, 2009.

18. Business Segment Information

Operating segments are components of an enterprise for which separate financial information is available that is evaluated regularly by the chief operating decision maker in deciding how to allocate resources and in assessing performance. The NiSource Chief Executive Officer is the chief operating decision maker.

NiSource's operations are divided into four primary business segments. The Gas Distribution Operations segment provides natural gas service and transportation for residential, commercial and industrial customers in Ohio, Pennsylvania, Virginia, Kentucky, Maryland, Indiana and Massachusetts. The Gas Transmission and Storage Operations segment offers gas transportation and storage services for LDCs, marketers and industrial and commercial customers located in northeastern, mid-Atlantic, midwestern and southern states and the District of Columbia. The Electric Operations segment provides electric service in 20 counties in the northern part of Indiana. The Other Operations segment primarily includes gas marketing, and ventures focused on distributed power generation technologies, including fuel cells and storage systems.

The following table provides information about business segments. NiSource uses operating income as its primary measurement for each of the reported segments and makes decisions on finance, dividends and taxes at the corporate level on a consolidated basis. Segment revenues include intersegment sales to affiliated subsidiaries, which are eliminated in consolidation. Affiliated sales are recognized on the basis of prevailing market, regulated prices or at levels provided for under contractual agreements. Operating income is derived from revenues and expenses directly associated with each segment.

Table of Contents**ITEM 1. FINANCIAL STATEMENTS (continued)****NiSource Inc.****Notes to Condensed Consolidated Financial Statements (unaudited) (continued)**

Three Months Ended March 31, (<i>in millions</i>)	2009	2008
REVENUES

Cash paid for interest	113.0	104.5
Interest capitalized	1.1	5.5
Cash paid for income taxes		2.0

Table of Contents**ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITIONS AND RESULTS OF OPERATIONS****NiSource Inc.*****Note regarding forward-looking statements***

The Management's Discussion and Analysis, including statements regarding market risk sensitive instruments, contains forward-looking statements, within the meaning of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended. Investors and prospective investors should understand that many factors govern whether any forward-looking statement contained herein will be or can be realized. Any one of those factors could cause actual results to differ materially from those projected. These forward-looking statements include, but are not limited to, statements concerning NiSource's plans, objectives, expected performance, expenditures and recovery of expenditures through rates, stated on either a consolidated or segment basis, and any and all underlying assumptions and other statements that are other than statements of historical fact. From time to time, NiSource may publish or otherwise make available forward-looking statements of this nature. All such subsequent forward-looking statements, whether written or oral and whether made by or on behalf of NiSource, are also expressly qualified by these cautionary statements. All forward-looking statements are based on assumptions that management believes to be reasonable; however, there can be no assurance that actual results will not differ materially.

Realization of NiSource's objectives and expected performance is subject to a wide range of risks and can be adversely affected by, among other things, weather, fluctuations in supply and demand for energy commodities, growth opportunities for NiSource's businesses, increased competition in deregulated energy markets, the success of regulatory and commercial initiatives, dealings with third parties over whom NiSource has no control, the effectiveness of NiSource's restructured outsourcing agreement, actual operating experience of NiSource's assets, the regulatory process, regulatory and legislative changes, changes in general economic, capital and commodity market conditions, and counterparty credit risk, many of which risks are beyond the control of NiSource. In addition, the relative contributions to profitability by each segment, and the assumptions underlying the forward-looking statements relating thereto, may change over time. NiSource expressly disclaims a duty to update any of the forward-looking statements contained in this report.

The following Management's Discussion and Analysis should be read in conjunction with NiSource's Annual Report on Form 10-K for the fiscal year ended December 31, 2008.

CONSOLIDATED REVIEW**Executive Summary**

NiSource is an energy holding company under the Public Utility Holding Company Act of 2005 whose subsidiaries are engaged in the transmission, storage and distribution of natural gas in the high-demand energy corridor stretching from the Gulf Coast through the Midwest to New England and the generation, transmission and distribution of electricity in Indiana. NiSource generates virtually 100% of its operating income through these rate-regulated businesses. A significant portion of NiSource's operations is subject to seasonal fluctuations in sales. During the heating season, which is primarily from November through March, net revenues from gas are more significant, and during the cooling season, which is primarily from June through September, net revenues from electric sales and transportation services are more significant than in other months.

For the three months ended March 31, 2009, NiSource reported income from continuing operations of \$159.3 million, or \$0.58 per basic share, a decrease of \$30.2 million, or \$0.11 per basic share reported for the same period in 2008.

Decreases in income from continuing operations were due primarily to the following items:

Employee and administrative expenses increased \$31.7 million across NiSource's business segments resulting from increased pension expense of approximately \$25 million. The increase in pension expense for 2009 is primarily due to a \$797.7 million reduction in pension plan assets in 2008. Pension plan assets declined as a result of a 30.3% negative return on assets for the year due to the overall market decline and benefit payments of \$165.9 million made during 2008.

Table of Contents

ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITIONS AND RESULTS OF OPERATIONS (continued)

NiSource Inc.

NiSource's Gas Transmission and Storage Operations segment recorded a \$19.8 million restructuring charge.

Depreciation and amortization expense increased \$8.2 million partially due to the purchase of Sugar Creek within Electric Operations and changes in depreciation rates and capital plant additions for certain gas distribution businesses.

Electric Operations net revenues were \$5.0 million lower primarily due to lower industrial usage. Industrial volumes are down approximately 21% in the first quarter 2009 when compared to the first quarter 2008.

Decreases in income from continuing operations were partially offset due primarily to the following items:

Gas Distribution Operations net revenues increased by \$21.1 million due primarily to increased revenues of \$18.9 million from regulatory initiatives including impacts from rate proceedings.

Gas Transmission and Storage Operations net revenues increased by \$11.0 million due primarily to greater subscriptions for firm transportation services related to new interconnects along the Columbia Gulf pipeline system and incremental demand revenues on the Columbia Transmission system.

Income tax expense decreased \$14.6 million due to lower pre-tax book income partially offset by a higher effective tax rate for the three months ended March 31, 2009 versus the comparable period in 2008. Refer to Note 12, Income Taxes, in the Notes to Condensed Consolidated Financial Statements (unaudited) for additional detail.

These factors and other impacts to the financial results are discussed in more detail within the following discussions of Results of Operations and Results and Discussion of Segment Operations.

Four-Point Platform for Growth

NiSource's four-part business plan will continue to center on commercial and regulatory initiatives; commercial growth and expansion of the gas transmission and storage business; financial management of the balance sheet; and process and expense management.

Commercial and Regulatory Initiatives

Rate Development and Other Regulatory Matters. NiSource is moving forward on regulatory initiatives across several distribution company markets and progress continues with Northern Indiana's electric base rate case. Whether through full rate case filings or other approaches, NiSource's goal is to develop strategies that benefit all stakeholders as it addresses changing customer conservation patterns, develops more contemporary pricing structures, and embarks on long-term investment programs to enhance its infrastructure.

Northern Indiana filed a petition for new electric base rates and charges on June 27, 2008. The case-in-chief was originally filed on August 29, 2008, and amended on December 19, 2008 after the Sugar Creek facility was successfully dispatched into MISO. The filing requests an increase in base rates calculated to produce additional annual gross margin of \$85.7 million annually. Evidentiary hearings on Northern Indiana's direct case commenced on January 12, 2009 and concluded on February 6, 2009. Several stakeholder groups have intervened in the case, representing customer groups and various counties and towns within Northern Indiana's electric service territory. A field hearing to record customer testimony was held on March 3, 2009. The OUCC and intervenors are scheduled to file their cases-in-chief in May 2009. Northern Indiana is scheduled to file its rebuttal testimony in June 2009, and final hearings are planned to begin July 27, 2009. If a settlement agreement is not reached, and the full procedural schedule takes place, it is anticipated that new rates would take effect in early 2010.

Northern Indiana received a favorable regulatory order on February 18, 2009 related to its actions to increase its electric generating capacity and advance its electric rate case. Acting on a settlement reached among Northern Indiana and its regulatory stakeholders, the IURC ruled that Northern Indiana's Sugar Creek electric generating plant was in service for ratemaking purposes as of December 1, 2008. The IURC also approved the deferral of depreciation expenses and carrying costs associated with the \$330 million Sugar Creek investment. Northern

Table of Contents**ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITIONS AND RESULTS OF OPERATIONS (continued)****NiSource Inc.**

Indiana purchased Sugar Creek on May 30, 2008 and effective December 1, 2008, Sugar Creek was accepted as an internal designated network resource within the MISO.

On January 15, 2009, Columbia of Ohio filed an application with the PUCO requesting authority to increase Columbia of Ohio's PIPP rider rate in order to collect \$82.2 million in PIPP arrearages. On March 3, 2009, Columbia of Ohio's proposal was deemed approved and became effective.

On April 16, 2009, Bay State filed a base rate case with the Massachusetts Department of Public Utilities, requesting an increase of \$34.6 million. In its initial filing, Bay State is seeking revenue decoupling, as well as an expedited mechanism for the recovery of costs associated with the rehabilitation of the company's infrastructure. This matter is currently pending and expected to be resolved with new rates taking effect in the fourth quarter 2009.

On May 1, 2009, Columbia of Kentucky filed a base rate case with the Kentucky PSC, requesting an annual increase of \$11.6 million. In its initial filing, Columbia of Kentucky is seeking enhancements to rate design, as well as an expedited mechanism for the recovery of costs associated with the rehabilitation of the company's infrastructure. This matter is currently pending.

On October 1, 2008, Columbia of Maryland filed a base rate case with the Maryland PSC. On February 20, 2009, Columbia of Maryland and all interested parties filed a unanimous settlement in the case, recommending an annual revenue increase of \$1.2 million. On March 27, 2009, the settlement was approved as filed.

Refer to the Results and Discussion of Segment Operations for a complete discussion of regulatory matters.

Bear Garden Station. Columbia of Virginia has entered into an agreement with Dominion Virginia Power to install facilities to serve a 585 mw combined cycle generating station in Buckingham County, VA, known as the Bear Garden station. The project requires approximately 13.3 miles of 24-inch steel pipeline and associated facilities to serve the station. In March 2009, the Virginia State Corporation Commission approved Dominion Virginia Power Company's planned Bear Garden station with service expected to begin by the summer of 2011. The total estimated cost for Columbia of Virginia's facilities is \$51.0 million.

Commercial Growth and Expansion of the Gas Transmission and Storage Business

Hardy Storage Project. The first two phases of Hardy Storage are in service, receiving customer injections and withdrawing natural gas from its new underground natural gas storage facility in West Virginia. When the third and final Phase is fully operational in 2009, the field will have a working storage capacity of 12 Bcf, and the ability to deliver 176,000 Dth of natural gas per day. Hardy Storage is a joint venture of subsidiaries of Columbia Transmission and Piedmont.

Florida Gas Transmission Project. In conjunction with a March 2009 open season, Columbia Gulf completed the addition of 95,000 Dth per day of contracted capacity for delivery to the Florida Gas Transmission system near Lafayette, LA. The new capacity is in addition to 145,000 Dth per day of capacity already subscribed to Florida Gas Transmission.

Line 1570 Project. In October 2008, Columbia Transmission entered into a Precedent Agreement to gather and transport phased in volumes of up to 150,000 Dth per day of gas in the Waynesburg, PA area along Line 1570. Capacity will be created by taking certain existing Points of Delivery off the system and modifying certain facilities at the Waynesburg Compressor Station. The first two phases of volumes were able to be implemented prior to construction in October 2008 and March 2009. Additional volumes will be phased in later in 2009 and during 2010. Facilities are expected to be completed in fourth quarter of 2009.

Table of Contents**ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITIONS AND RESULTS OF OPERATIONS (continued)****NiSource Inc.**

Millennium Pipeline Project. The Millennium pipeline was substantially completed in the fourth quarter of 2008 and the pipeline commenced service on December 22, 2008, with the capability to transport up to 525,400 Dth per day of natural gas to markets along its route, as well as to the New York City markets through its pipeline interconnections. The Millennium partnership is currently comprised of interest from Columbia Transmission (47.5%), DTE Millennium Company (26.25%), and National Grid Millennium LLC (26.25%) with Columbia Transmission acting as operator.

Columbia Penn Project. In September 2008, Columbia Transmission announced its intention to develop additional natural gas transmission, gathering and processing services along and around its existing pipeline corridor between Waynesburg, PA and Renovo, PA, referred to as the Columbia Penn corridor. This two-phased development will accelerate access to pipeline capacity in conjunction with production increases in the Marcellus Shale formation which underlies Columbia Transmission's transmission and storage network in the region. Phase I was placed into service in February 2009 and Phase II should be available by the end of 2009.

Eastern Market Expansion Project. The project allows Columbia Transmission to expand its facilities to provide additional storage and transportation services and to replace certain existing facilities. The Eastern Market Expansion is projected to add 97,000 Dth per day of storage and transportation deliverability and is fully subscribed on a 15-year contracted firm basis. Construction of the facilities is complete and the project was placed in service April 1, 2009.

Ohio Storage Project. On June 24, 2008, Columbia Transmission filed an application before the FERC for approval to expand two of its Ohio storage fields for additional capacity of nearly 7 Bcf and 103,400 Dth per day of daily deliverability. Approval was granted in March 2009 and construction of the facilities began in April 2009. Partial service related to this expansion is expected to be available by May 1, 2009 and the remainder will be available no later than the fourth quarter of 2009. The expansion capacity is 58% contracted on a long-term, firm basis with revenue based on market-based rates recently approved by the FERC.

Appalachian Expansion Project. On August 22, 2008, the FERC issued an order to Columbia Transmission, which granted a certificate to construct the project. The project includes building a new 9,470 hp compressor station in West Virginia. The Appalachian Expansion Project will add 100,000 Dth per day of transportation capacity and is fully subscribed on a 15-year contracted firm basis. Construction is in progress and the project is expected to be in service by the second half of 2009.

Easton Compressor Station. On March 30, 2009, Columbia Transmission announced a binding open season for capacity into premium East Coast markets resulting from modifications made to the company's Easton Compressor Station. The modifications will increase delivery capacity from the Wagoner interconnection point between the Columbia Transmission and Millennium pipeline systems. Through the open season, which closed on April 3, 2009, Columbia Transmission received 30,000 Dth per day of binding bids.

Centerville Expansion Project. An open season to solicit interest and receive bids for expanded capacity on Columbia Gulf's system for delivery to Southern Natural Gas and the Louisiana intrastate pipeline market was held during the first quarter of 2008, and bids for 60,000 Dth per day of capacity were submitted. The remaining 175,000 Dth per day of capacity is being reviewed in conjunction with other market opportunities on the East Lateral in South Louisiana. The project is expected to be placed into service in late 2010.

Financial Management of the Balance Sheet

NiSource has been closely monitoring developments relative to the financial crisis and has executed on its plan to effectively manage through this period. During the past several months, NiSource has successfully executed against its financing and liquidity plan through the following actions:

On April 9, 2009 NiSource Finance closed on a senior unsecured term loan with an effective cost of LIBOR plus 538 basis points with a syndicate of lenders. The initial February, 2009 closing of the term loan was at the level of \$265 million, and the company was successful in expanding the loan to a total of \$385 million at final closing under an accordion feature in the financing agreement.

Table of Contents**ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITIONS AND RESULTS OF OPERATIONS (continued)****NiSource Inc.**

On March 9, 2009 NiSource Finance issued \$600 million of senior unsecured notes in an underwritten offering. NiSource will use the proceeds from the issuance to complete the refinancing of outstanding debt scheduled to mature in November 2009 and for general corporate purposes, including refinancing a portion of outstanding debt scheduled to mature in November 2010.

On April 28, 2009 NiSource Finance announced results of a tender offer for up to \$300 million aggregate principal amount of its outstanding notes due in 2010. The aggregate principal amount of notes tendered was approximately \$250.6 million.

NiSource's overall liquidity strategy, including the recent financial and optimization initiatives, not only fully addresses the company's 2009 debt refinancing requirements but also places the company well on the way toward meeting the 2010 refinancing needs of approximately \$690 million. NiSource will continue to closely monitor events in the credit markets, as well as overall economic conditions in the nation and the markets it serves. Maintaining financial flexibility will remain a key priority for NiSource.

Credit Ratings. On March 5, 2009, Standard and Poor's affirmed its senior unsecured ratings for NiSource and its subsidiaries at BBB-, and revised the outlook to stable from negative. On February 4, 2009, Moody's Investors Service affirmed the senior unsecured ratings for NiSource at Baa3, and the existing ratings of all other subsidiaries. Moody's outlook for NiSource and its subsidiaries is negative. On February 4, 2009, Fitch lowered its senior unsecured ratings for NiSource to BBB- and for Northern Indiana to BBB. Fitch's outlook for NiSource and all of its subsidiaries is stable. Although all ratings continue to be investment grade, an additional downgrade by Standard and Poor's, Moody's or Fitch would result in a rating that is below investment grade.

Process and Expense Management

On February 27, 2009, NiSource announced an organizational restructuring of the Gas Transmission and Storage Operations segment. NiSource is eliminating positions across the 16 state operating territory of Gas Transmission and Storage Operations. The reductions will occur through normal attrition as well as through voluntary programs and involuntary separations. In addition to employee reductions, the Gas Transmission and Storage Operations segment will take steps to achieve additional cost savings by efficiently managing its various business locations, reducing its fleet operations, creating alliances with third party service providers, and implementing other changes in line with its strategic plan for growth and in response to current economic conditions. During the first quarter of 2009, NiSource recorded a pre-tax restructuring charge of \$19.8 million to Operation and maintenance expense on the Condensed Statement of Consolidated Income (unaudited), which primarily includes costs related to severance and other employee related costs for approximately 350 employees. NiSource expects this restructuring initiative to be substantially complete by the end of 2009. Refer to Note 4, Restructuring Activities, in the Notes to Condensed Consolidated Financial Statements (unaudited) for additional information regarding restructuring initiatives.

On April 8, 2009, Northern Indiana and representatives of the United Steelworkers union reached tentative five-year collective bargaining agreements covering approximately 1,900 Northern Indiana employees. The parties' prior labor agreements are scheduled to expire on May 31, 2009. The labor agreements are subject to a ratification process which is expected to be concluded in early May 2009.

Ethics and Controls

NiSource has had a long term commitment to providing accurate and complete financial reporting as well as high standards for ethical behavior by its employees. NiSource's senior management takes an active role in the development of this Form 10-Q and the monitoring of the company's internal control structure and performance. In addition, NiSource will continue its mandatory ethics training program in which employees at every level throughout the organization participate.

Refer to Controls and Procedures included in Item 4.

Table of Contents**ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITIONS AND RESULTS OF OPERATIONS (continued)****NiSource Inc.****Results of Operations****Quarter Ended March 31, 2009****Net Income**

NiSource reported net income of \$148.4 million, or \$0.54 per basic share, for the three months ended March 31, 2009, compared to net income of \$99.3 million, or \$0.36 per basic share, for the first quarter 2008. Income from continuing operations was \$159.3 million, or \$0.58 per basic share, for the three months ended March 31, 2009, compared to \$189.5 million, or \$0.69 per basic share, for the first quarter 2008. Operating income was \$348.3 million, a decrease of \$46.6 million from the same period in 2008. All per share amounts are basic earnings per share. Basic average shares of common stock outstanding at March 31, 2009 were 274.2 million compared to 273.9 million at March 31, 2008.

Comparability of line item operating results was impacted by regulatory and tax trackers that allow for the recovery in rates of certain costs such as bad debt expenses. Therefore, increases in these tracked operating expenses are offset by increases in net revenues and had essentially no impact on income from continuing operations. A net increase in operating expenses of \$12.5 million for the first quarter of 2009 was offset by a corresponding net increase to net revenues reflecting recovery of these tracked costs.

Net Revenues

Total consolidated net revenues (gross revenues less cost of sales) for the three months ended March 31, 2009, were \$1,065.4 million, a \$24.7 million increase from the same period last year. This increase in net revenues was primarily due to increased Gas Distribution Operations net revenues of \$21.1 million and increased Gas Transmission and Storage Operations net revenues of \$11.0 million, partially offset by lower Electric Operations net revenues of \$5.0 million. Gas Distribution Operations net revenues increased due primarily to increased revenues of \$18.9 million from regulatory initiatives including impacts from rate proceedings, increased net regulatory and tax trackers of \$8.6 million offset in expense and colder weather of approximately \$7 million, partially offset by decreased customer usage of \$9.3 million and a \$7.0 million decrease in off-system sales. Within Gas Transmission and Storage Operations, net revenues increased due primarily to greater subscriptions for firm transportation services related to new interconnects along the Columbia Gulf pipeline system and incremental demand revenues on the Columbia Transmission system. Electric Operations net revenues decreased due to lower industrial usage, which was significantly impacted by steel and steel-related companies. The major steel companies were operating at close to full capacity in early 2008 and are now operating at about half capacity.

Expenses

Operating expenses for the first quarter 2009 were \$723.5 million, an increase of \$75.7 million from the 2008 period. This increase was primarily due to higher employee and administrative expenses of \$31.7 million across NiSource's business segments due mainly to higher pension expense of approximately \$25 million, a restructuring charge in Gas Transmission and Storage Operations of \$19.8 million, higher regulatory and tax trackers of \$8.6 million offset in net revenues described above, and an \$8.1 million increase in depreciation and amortization expense. The increase in pension expense for 2009 is due to a \$797.7 million reduction in pension plan assets in 2008 from a 30.3% negative return on assets for the year due to the overall market decline and benefit payments of \$165.9 million made during 2008.

Other Income (Deductions)

Interest expense, net was \$90.5 million for the quarter, a decrease of \$1.3 million compared to the first quarter 2008. This decrease was due primarily to lower short-term interest rates and savings from the \$100 million of open market debt repurchases in January 2009 partially offset by incremental interest expense associated with the \$700 million debt issued in May 2008 and a partial month of interest expense associated with the \$600 million of debt issued in March 2009. Other, net was a loss of \$4.2 million for the current quarter compared to a loss of \$1.5 million for the comparable 2008 period due to lower interest income.

Income Taxes

Edgar Filing: NISOURCE INC/DE - Form 10-Q

Income taxes for the first quarter of 2009 were \$97.5 million, a decrease of \$14.6 million compared to the first quarter of 2008 due primarily to lower pretax book income partially offset by a higher effective tax rate. The effective tax rate for the quarter ended March 31, 2009 was 38.0% compared to 37.2% for the comparable period

47

Table of Contents**ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITIONS AND RESULTS OF OPERATIONS (continued)****NiSource Inc.**

last year. The 0.8% increase in the effective tax rate in the first quarter of 2009 versus the first quarter of 2008 is due primarily to a reduction in estimated Section 199 deductions as a result of lower projected taxable income for 2009, and an increase in tax expense related to AFUDC-Equity and certain depreciation differences. Both periods included adjustments for discrete items which increased tax expense by \$1.9 million in the first quarter of 2009 and \$2.2 million in the first quarter of 2008.

Discontinued Operations

Discontinued operations reflected a loss of \$10.9 million, or \$0.04 loss per basic share, in the first quarter of 2009, compared to a loss of \$90.2 million, or \$0.33 loss per basic share, in the first quarter of 2008. The loss in 2009 is primarily attributable to an adjustment to the reserve for litigation and adjustments from businesses disposed of during 2008. The loss in 2008 is primarily attributable to an estimated after-tax loss of \$96.1 million recorded for the dispositions of Northern Utilities, Granite State Gas and Whiting Clean Energy, and \$6.0 million of income recorded as discontinued operations for these businesses.

Liquidity and Capital Resources

A significant portion of NiSource's operations, most notably in the gas distribution, gas transportation and electric distribution businesses, are subject to seasonal fluctuations in cash flow. During the heating season, which is primarily from November through March, cash receipts from gas sales and transportation services typically exceed cash requirements. During the summer months, cash on hand, together with the seasonal increase in cash flows from the electric business during the summer cooling season and external short-term and long-term financing, is used to purchase gas to place in storage for heating season deliveries and perform necessary maintenance of facilities.

Operating Activities

Net cash from operating activities for the three months ended March 31, 2009 was \$1,057.9 million, an increase of \$211.9 million compared to the first three months of 2008. Gas price changes significantly impacted working capital when comparing the two periods. During the first three months of 2009 gas prices dropped dramatically resulting in a \$446.3 million over-recovery of gas cost. During the first three months of 2008 gas prices actually increased resulting in a \$93.1 million under recovery of gas costs. The impact of these gas cost trends also resulted in lower inventory storage rates and therefore a lower value for withdrawals, decreasing the source of cash from inventory activity from \$847.3 million in the first quarter of 2008 to \$487.7 million in the first quarter of 2009. In addition, a large payment was made in the first quarter of 2009 as part of the Tawney settlement and reported as cash flows of discontinued operations.

Tawney Settlement. In the first quarter of 2009, NiSource funded \$60.5 million in compliance with the settlement agreement in addition to \$25.0 million that was funded in the fourth quarter of 2008. No additional payments were made through March 31, 2009. NiSource expects to make the remaining payments in 2009 up to the total settlement amount of \$338.8 million. A letter of credit of \$254 million was issued on January 13, 2009 to cover these remaining payments. Refer to Part II, Item 2, *Legal Proceedings*, for additional information.

Pension and Other Postretirement Plan Funding. NiSource expects to make contributions of approximately \$104.2 million to its pension plans and approximately \$52.9 million to its postretirement medical and life plans in 2009, which could change depending on market conditions. Through March 31, 2009, NiSource has contributed \$4.9 million to its pension plans and \$11.9 million to its other postretirement benefit plans.

Investing Activities

NiSource's capital expenditures for the quarter ended March 31, 2009 were \$206.9 million, compared to \$196.9 million for the first quarter of 2008. NiSource continues to project capital expenditures for the year to be approximately \$800 million.

Restricted cash was \$316.8 million and \$286.6 million as of March 31, 2009 and December 31, 2008, respectively. The increase in restricted cash was due primarily to the change in forward gas prices which resulted in increased net

Table of Contents

ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITIONS AND RESULTS OF OPERATIONS (continued)

NiSource Inc.

margin deposits on open derivative contracts used within NiSource's risk management and energy marketing activities. NiSource received insurance proceeds for capital repairs of \$52.0 million in the first quarter of 2009 related to hurricanes and other items.

Financing Activities

Long-term Debt. NiSource's 2009 financing requirement includes the refinancing of outstanding debt scheduled to mature in November 2009, as well as payments associated with the Tawney settlement. During the past several months, NiSource has successfully executed against its previously announced financing and liquidity plan through the following activities

During January 2009, NiSource repurchased \$32.4 million of the \$450.0 million floating rate notes scheduled to mature in November 2009 and \$67.6 million of the \$1.0 billion 7.875% unsecured notes scheduled to mature in November 2010.

During February 2009, NiSource negotiated a two-year bank term loan with a syndicate of banks maturing in February 2011. Borrowings under the term loan have an effective cost of LIBOR plus 538 basis points. The initial closing occurred on February 13, 2009 under which NiSource received bank commitments of \$265 million. The final closing occurred on April 9, 2009 with aggregate funding totaling \$385 million. The new term loan matures on February 11, 2011.

On March 9, 2009, NiSource Finance issued \$600.0 million of 10.75% unsecured notes that mature March 15, 2016.

On March 31, 2009, NiSource Finance announced that it was commencing a cash tender offer for up to \$300 million aggregate principal amount of its outstanding 7.875% Notes due 2010. On April 28, 2009 NiSource Finance announced that \$250.6 million of these notes were tendered.

In addition to the items listed above, NiSource is also working towards expanding its financing capacity of secured or unsecured debt at several of its subsidiary companies during 2009.

During July 2008, Northern Indiana redeemed \$24.0 million of its medium-term notes, with an average interest rate of 6.80%.

On May 15, 2008, NiSource Finance issued \$500.0 million of 6.80% unsecured notes that mature January 15, 2019 and \$200.0 million of 6.15% unsecured notes that mature on March 1, 2013. The notes due in 2013 constitute a further issuance of the \$345.0 million 6.15% notes issued February 19, 2003, and will form a single series having an aggregate principal amount outstanding of \$545.0 million.

Jasper County Pollution Control Bonds. Northern Indiana has seven series of Jasper County Pollution Control Bonds with a total principal value of \$254 million currently outstanding. Prior to March 25, 2008, each of the series bore interest at rates established through auctions that took place at either 7, 28, or 35 day intervals. Between February 13, 2008 and March 5, 2008, Northern Indiana received notice that six separate market auctions of four series of the Jasper County Pollution Control Bonds had failed. As a result, those series representing an aggregate principal amount of \$112 million of the Jasper County Pollution Control Bonds bore interest at default rates equal to 15% or 18% per annum. Subsequent auctions were successful, but resulted in interest rates between 5.13% and 11.0%, which were in excess of historical market rates. These auction failures were attributable to the lack of liquidity in the auction rate securities market, largely driven by the turmoil in the bond insurance market. The Jasper County Pollution Control Bonds are insured by either Ambac Assurance Corporation or MBIA Insurance Corporation.

Northern Indiana converted all seven series of Jasper County Pollution Control Bonds from the auction rate mode to a variable rate demand bond mode between March 25, 2008 and April 11, 2008 and repurchased the bonds as part of the conversion process, of which \$199.0 million had been repurchased as of March 31, 2008. Between April 11,

Table of Contents**ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITIONS AND RESULTS OF OPERATIONS (continued)****NiSource Inc.**

2008 and August 24, 2008, all of the Jasper County Pollution Control Bonds were held in Northern Indiana's treasury. On August 25, 2008, Northern Indiana converted all of the Jasper County Pollution Control Bonds from a variable rate demand mode to a fixed rate mode, and reoffered the bonds to external investors. As a result of the fixed rate conversion and reoffering process, the weighted average interest rate is now fixed at 5.58%.

Northern Indiana reflected the Jasper County Pollution Control Bonds held in treasury as an offset to long-term debt within the Condensed Consolidated Balance Sheet (unaudited) as of March 31, 2008 and June 30, 2008 upon repurchase and the debt was considered extinguished per SFAS No. 140. As such, unamortized debt expense of \$4.6 million previously recorded under deferred charges and other was reclassified to a regulatory asset. The Consolidated Balance Sheet as of December 31, 2008 reflects the reissuance of the long term debt. The repurchase of these bonds are included under, Financing Activities, in the Condensed Statement of Consolidated Cash Flow (unaudited).

Credit Facilities. NiSource Finance maintains a \$1.5 billion five-year revolving credit facility with a syndicate of banks which has a termination date of July 7, 2011. This facility provides a reasonable cushion of short-term liquidity for general corporate purposes including meeting cash requirements driven by volatility in natural gas prices, as well as provides for the issuance of letters of credit. During September 2008, NiSource Finance entered into a new \$500 million six-month revolving credit agreement with a syndicate of banks led by Barclays Capital that was originally due to expire on March 23, 2009. However, on February 13, 2009, the six-month credit facility was terminated in conjunction with the closing of a new two-year bank term loan.

NiSource Finance had no outstanding credit facility borrowings at March 31, 2009, and had borrowings of \$1,163.5 million at December 31, 2008, at a weighted average interest rate of 1.09%.

As of March 31, 2009 and December 31, 2008, NiSource Finance had \$290.3 million and \$87.3 million of stand-by letters of credit outstanding, respectively. A letter of credit of \$254 million was issued on January 13, 2009 to cover the remaining payments related to the Tawney settlement.

As of March 31, 2009, an aggregate of \$1,212.5 million of credit was available under the credit facility.

Sale of Trade Accounts Receivables. On May 14, 2004, Columbia of Ohio entered into an agreement to sell, without recourse, substantially all of its trade receivables, as they originate, to CORC, a wholly-owned subsidiary of Columbia of Ohio. CORC, in turn, is party to an agreement with Dresdner Bank AG, also dated May 14, 2004, under the terms of which it sells an undivided percentage ownership interest in the accounts receivable to a commercial paper conduit. On July 1, 2006, the agreement was amended to increase the program limit from \$300 million to \$350 million. The agreement currently expires on June 26, 2009. As of March 31, 2009, \$350.0 million of accounts receivable had been sold by CORC compared to \$236.5 million as of December 31, 2008.

Under the agreement, Columbia of Ohio acts as administrative agent, by performing record keeping and cash collection functions for the accounts receivable sold by CORC. Columbia of Ohio receives a fee, which provides adequate compensation, for such services.

On December 30, 2003, Northern Indiana entered into an agreement to sell, without recourse, all of its trade receivables, as they originate, to NRC, a wholly-owned subsidiary of Northern Indiana. NRC, in turn, is party to an agreement with Citibank, N.A. under the terms of which it sells an undivided percentage ownership interest in the accounts receivable to a commercial paper conduit. The conduit can purchase up to \$200 million of accounts receivable under the agreement. NRC's agreement with the commercial paper conduit has a scheduled expiration date of December 18, 2009, and can be renewed if mutually agreed to by both parties. As of March 31, 2009, NRC had sold \$200.0 million of accounts receivable compared to \$119.0 million as of December 31, 2008. Under the arrangement, Northern Indiana may not sell any new receivables if Northern Indiana's debt rating falls below BBB- or Baa3 by Standard and Poor's or Moody's, respectively.

Under the agreement, Northern Indiana acts as administrative agent, performing record keeping and cash collection functions for the accounts receivable sold. Northern Indiana receives a fee, which provides adequate compensation, for such services.

Table of Contents**ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITIONS AND RESULTS OF OPERATIONS (continued)****NiSource Inc.**

Credit Ratings. On March 5, 2009, Standard and Poor's affirmed its senior unsecured ratings for NiSource and its subsidiaries at BBB-, and revised the outlook to stable from negative. On February 4, 2009, Moody's Investors Services affirmed the senior unsecured ratings for NiSource at Baa3, and the existing ratings of all other subsidiaries. Moody's outlook for NiSource and its subsidiaries is negative. On February 4, 2009, Fitch lowered its senior unsecured ratings for NiSource to BBB- and for Northern Indiana to BBB. Fitch's outlook for NiSource and all of its subsidiaries is stable. Although all ratings continue to be investment grade, an additional downgrade by Standard and Poor's, Moody's or Fitch would result in a rating that is below investment grade. Certain NiSource affiliates have agreements that contain ratings triggers that require increased collateral if the credit ratings of NiSource or certain of its subsidiaries are rated below BBB- by Standard and Poor's or Baa3 by Moody's. These agreements are primarily for insurance purposes and for the physical purchase or sale of natural gas. The collateral requirement from a downgrade below the ratings trigger levels would amount to approximately \$25 million. In addition to agreements with ratings triggers, there are other agreements that contain adequate assurance or material adverse change provisions that could result in additional credit support such as letters of credit and cash collateral to transact business. Also, under Northern Indiana's trade receivables sales program, Northern Indiana may not sell any new receivables if Northern Indiana's debt rating falls below BBB- or Baa3 by Standard and Poor's or Moody's, respectively.

Contractual Obligations. As of March 31, 2009, NiSource has \$3.9 million of estimated federal and state income tax liabilities, including interest, recorded on its books in accordance with FIN 48. If or when such amounts may be settled is uncertain and cannot be estimated at this time. NiSource does not anticipate any significant changes to its liability for unrecognized tax benefits over the next twelve months.

Market Risk Disclosures

Risk is an inherent part of NiSource's energy businesses. The extent to which NiSource properly and effectively identifies, assesses, monitors and manages each of the various types of risk involved in its businesses is critical to its profitability. NiSource seeks to identify, assess, monitor and manage, in accordance with defined policies and procedures, the following principal risks that are involved in NiSource's energy businesses: commodity market risk, interest rate risk and credit risk. Risk management at NiSource is a multi-faceted process with oversight by the Risk Management Committee that requires constant communication, judgment and knowledge of specialized products and markets. NiSource's senior management takes an active role in the risk management process and has developed policies and procedures that require specific administrative and business functions to assist in the identification, assessment and control of various risks. In recognition of the increasingly varied and complex nature of the energy business, NiSource's risk management policies and procedures continue to evolve and are subject to ongoing review and modification.

Various analytical techniques are employed to measure and monitor NiSource's market and credit risks, including VaR. VaR represents the potential loss or gain for an instrument or portfolio from changes in market factors, for a specified time period and at a specified confidence level.

Commodity Price Risk

NiSource is exposed to commodity price risk as a result of its subsidiaries' operations involving natural gas and power. To manage this market risk, NiSource's subsidiaries use derivatives, including commodity futures contracts, swaps and options. NiSource is not involved in speculative energy trading activity.

Commodity price risk resulting from derivative activities at NiSource's rate-regulated subsidiaries is limited, since regulations allow recovery of prudently incurred purchased power, fuel and gas costs through the rate-making process, including gains or losses on these derivative instruments. If states should explore additional regulatory reform, these subsidiaries may begin providing services without the benefit of the traditional rate-making process and may be more exposed to commodity price risk. Some of NiSource's rate-regulated utility subsidiaries offer commodity price risk products to its customers for which derivatives are used to hedge forecasted customer usage under such products. These subsidiaries do not have regulatory recovery orders for these products and are subject to gains and losses

recognized in earnings due to hedge ineffectiveness.

Table of Contents**ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITIONS AND RESULTS OF OPERATIONS (continued)****NiSource Inc.****Interest Rate Risk**

NiSource is exposed to interest rate risk as a result of changes in interest rates on borrowings under its revolving credit agreement and floating rate notes, which have interest rates that are indexed to short-term market interest rates. NiSource is also exposed to interest rate risk due to changes in interest rates on fixed-to-variable interest rate swaps that hedge the fair value of long-term debt. Based upon average borrowings and debt obligations subject to fluctuations in short-term market interest rates, an increase (or decrease) in short-term interest rates of 100 basis points (1%) would have increased (or decreased) interest expense by \$5.5 million and \$6.3 million for the first quarter of 2009 and 2008, respectively.

Credit Risk

Due to the nature of the industry, credit risk is embedded in many of NiSource's business activities. NiSource's extension of credit is governed by a Corporate Credit Risk Policy. In addition, Risk Management Committee guidelines are in place which document management approval levels for credit limits, evaluation of creditworthiness, and credit risk mitigation efforts. Exposures to credit risks are monitored by the Corporate Credit Risk function which is independent of commercial operations. Credit risk arises due to the possibility that a customer, supplier or counterparty will not be able or willing to fulfill its obligations on a transaction on or before the settlement date. For derivative related contracts, credit risk arises when counterparties are obligated to deliver or purchase defined commodity units of gas or power to NiSource at a future date per execution of contractual terms and conditions. Exposure to credit risk is measured in terms of both current obligations and the market value of forward positions net of any posted collateral such as cash, letters of credit and qualified guarantees of support.

As a result of the ongoing credit crisis in the financial markets, NiSource has been closely monitoring the financial status of its banking credit providers and interest rate swap counterparties. NiSource continues to evaluate the financial status of its banking partners through the use of market-based metrics such as credit default swap pricing levels, and also through traditional credit ratings provided by the major credit rating agencies.

The parent company of one of NiSource's interest rate swap counterparties, Lehman Brothers Holdings Inc., filed for Chapter 11 bankruptcy protection on September 14, 2008, which constituted an event of default under the swap agreement between NiSource Finance and Lehman Brothers Special Financing Inc. As a result, on September 15, 2008, NiSource Finance terminated the fixed-to-variable interest rate swap agreement with Lehman Brothers having a notional value of \$110 million. The mark-to-market close-out value of this swap at the September 15, 2008 termination date was determined to be \$4.8 million and was fully reserved in the third quarter of 2008.

NiSource also reviewed its exposure to all other counterparties including the other interest rate swap counterparties and concluded there was no significant risk associated with these counterparties. NiSource will continue to closely monitor events in the credit markets, as well as overall economic conditions in the nation and the markets it serves.

Fair Value Measurement

NiSource measures fair value in accordance with SFAS No. 157 for its financial assets and liabilities. The level of the fair value hierarchy disclosed is based on the lowest level of input that is significant to the fair value measurement. NiSource's financial assets and liabilities include price risk assets and liabilities, available-for-sale securities and a deferred compensation plan obligation.

Exchange-traded derivative contracts are generally based on unadjusted quoted prices in active markets and are classified within Level 1. These financial assets and liabilities are secured with cash on deposit with the exchange; therefore nonperformance risk has not been incorporated into these valuations. Certain non-exchange-traded derivatives are valued using broker or over-the-counter, on-line exchanges. In such cases, these non-exchange-traded derivatives are classified within Level 2. Non-exchange-based derivative instruments include swaps, forwards, and options. In certain instances, these instruments may utilize models to measure fair value. The company uses a similar model to value similar instruments. Valuation models utilize various inputs that include quoted prices for similar assets or liabilities in active markets, quoted prices for identical or similar assets or liabilities in markets that are not active, other observable inputs for the asset or liability, and market-corroborated inputs, i.e., inputs derived principally

from or corroborated by observable market data by correlation or other means. Where observable inputs are available for substantially the full term of the asset or liability, the instrument is categorized in Level 2. Certain derivatives trade in less active markets with a lower availability of pricing

Table of Contents**ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITIONS AND RESULTS OF OPERATIONS (continued)****NiSource Inc.**

information and models may be utilized in the valuation. When such inputs have a significant impact on the measurement of fair value, the instrument is categorized in Level 3. Credit risk is considered in the fair value calculation of derivative instruments that are not exchange-traded. Credit exposures are adjusted to reflect collateral agreements which reduce exposures.

Price risk management assets also include fixed-to-floating interest-rate swaps, which are designated as fair value hedges, as a means to achieve its targeted level of variable-rate debt as a percent of total debt. NiSource uses a calculation of future cash inflows and estimated future outflows related to the swap agreements, which are discounted and netted to determine the current fair value. Additional inputs to the present value calculation include the contract terms, as well as market parameters such as current and projected interest rates and volatility. As they are based on observable data and valuations of similar instruments, the interest-rate swaps are categorized in Level 2 in the fair value hierarchy. Credit risk is considered in the fair value calculation of the interest rate swap.

Refer to Note 10, Fair Value Assets and Liabilities, in the Notes to the Condensed Consolidated Financial Statements for additional information on NiSource's fair value measurements.

Market Risk Measurement

Market risk refers to the risk that a change in the level of one or more market prices, rates, indices, volatilities, correlations or other market factors, such as liquidity, will result in losses for a specified position or portfolio. NiSource calculates a one-day VaR at a 95% confidence level for the gas marketing group that utilizes a variance/covariance methodology. The daily market exposure for the gas marketing portfolio on an average, high and low basis was \$0.3 million, \$0.5 million and \$0.1 million for the first quarter of 2009, respectively. Prospectively, management has set the VaR limit at \$0.8 million for gas marketing. Exceeding this limit would result in management actions to reduce portfolio risk.

Refer to Critical Accounting Policies included in this Item 7 and Note 9, Risk Management Activities, in the Notes to Condensed Consolidated Financial Statements for further discussion of NiSource's risk management.

Off Balance Sheet Arrangements

As a part of normal business, NiSource and certain subsidiaries enter into various agreements providing financial or performance assurance to third parties on behalf of certain subsidiaries. Such agreements include guarantees and stand-by letters of credit.

NiSource has issued guarantees that support up to approximately \$460.9 million of commodity-related payments for its current subsidiaries involved in energy commodity contracts and to satisfy requirements under forward gas sales agreements of current and former subsidiaries. These guarantees were provided to counterparties in order to facilitate physical and financial transactions involving natural gas and electricity. To the extent liabilities exist under the commodity-related contracts subject to these guarantees, such liabilities are included in the Consolidated Balance Sheets.

NiSource has purchase and sales agreement guarantees totaling \$297.5 million, which guarantee performance of the seller's covenants, agreements, obligations, liabilities, representations and warranties under the agreements. No amounts related to the purchase and sales agreement guarantees are reflected in the Consolidated Balance Sheets. Management believes that the likelihood NiSource would be required to perform or otherwise incur any significant losses associated with any of the aforementioned guarantees is remote.

NiSource has other guarantees outstanding. Refer to Note 16-A, Guarantees and Indemnities, in the Notes to Condensed Consolidated Financial Statements for additional information about NiSource's off balance sheet arrangements.

Table of Contents**ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITIONS AND RESULTS OF OPERATIONS (continued)****NiSource Inc.****Other Information****Critical Accounting Policies**

Goodwill Assets. NiSource's goodwill assets at March 31, 2009 were \$3,677.3 million pertaining primarily to the acquisition of Columbia on November 1, 2000. The goodwill balance also includes \$13.3 million for Northern Indiana Fuel and Light and \$5.5 million for Kokomo Gas.

NiSource's last goodwill impairment test occurred at June 30, 2008 which indicated no impairment charge was required. NiSource continually monitors potential indicators of impairment to determine if any triggering events are present that would require an impairment test more frequently than the annual test. As of March 31, 2009, NiSource's market capitalization was approximately \$2.7 billion, while NiSource's net assets, inclusive of goodwill, were \$4.7 billion. NiSource's market capitalization at June 30, 2008 of approximately \$4.9 billion was above NiSource's net asset value when the annual impairment test was performed. In accordance with paragraph 28 of SFAS No. 142, NiSource considered whether there were any events or changes in circumstances during the first quarter of 2009 that would reduce the fair value of any of the reporting units below their carrying amounts and necessitate another goodwill impairment test. No such indicators were noted which would require goodwill impairment testing during the first quarter.

NiSource attributes the decline in its market capitalization primarily to the overall stock market decline resulting from the credit crisis taking place in the United States and globally, and not any fundamental change in NiSource's regulated gas distribution and gas transmission and storage businesses that comprise the reporting units for which goodwill is attributable. NiSource's stock price declined 10.7% at March 31, 2009 as compared to December 31, 2008, performing slightly better than the Dow Jones Industrial Average and Dow Jones Utility Average which declined 13.3% and 11.2%, respectively, during the three-month period. Given the lack of fundamental changes in the underlying businesses that carry goodwill, NiSource does not believe the decline in its stock price and the reasons for that decline are indicative of an actual decline in the company's fair value of the assets.

NiSource's reportable entities with goodwill consist of regulated companies. Regulated recovery rates and approved rate of returns allow for more predictable and steady streams of revenues and cash flows which help mitigate the impacts that might otherwise be felt from the recessionary trends seen in other industries and also adds more reliability to the cash flow forecasts used to calculate fair value. It should also be noted that NiSource has demonstrated the ability to obtain credit. In the first quarter of 2009, NiSource was able to issue debt and address most of its liquidity needs for the current year, further indicating there is no fundamental issue with the underlying businesses.

Refer to Note 11, Goodwill, in the Notes to Condensed Consolidated Financial Statements (unaudited) for additional information.

Recently Adopted Accounting Pronouncements

SFAS No. 161 *Disclosures about Derivative Instruments and Hedging* an amendment of SFAS No. 133. In March 2008, the FASB issued SFAS No. 161 to amend and expand the disclosure requirements of SFAS No. 133 with the intent to provide users of the financial statements with an enhanced understanding of how and why an entity uses derivative instruments, how these derivatives are accounted for and how the respective reporting entity's financial statements are affected. SFAS No. 161 is effective for fiscal years and interim periods beginning after November 15, 2008, and earlier application is encouraged. NiSource adopted this standard on January 1, 2009. Refer to Note 9, Risk Management Activities, in the Notes to Condensed Consolidated Financial Statements (unaudited) for additional information.

SFAS No. 160 *Noncontrolling Interests in Consolidated Financial Statements* an amendment of ARB No. 51. In December 2007, the FASB issued SFAS No. 160 to improve the relevance, comparability, and transparency of the financial information that a reporting entity provides in its consolidated financial statements regarding non-controlling ownership interests in a business and for the deconsolidation of a subsidiary. This Statement is effective for fiscal years, and interim periods within those fiscal years, beginning on or after December 15, 2008 and earlier

Table of Contents**ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITIONS AND RESULTS OF OPERATIONS (continued)****NiSource Inc.**

adoption is prohibited. The adoption of this standard on January 1, 2009 did not have a material impact on the Condensed Consolidated Financial Statements (unaudited).

SFAS No. 157 Fair Value Measurements. In September 2006, the FASB issued SFAS No. 157 to define fair value, establish a framework for measuring fair value and to expand disclosures about fair value measurements. SFAS No. 157 does not change the requirements to apply fair value in existing accounting standards.

Under SFAS No. 157, fair value refers to the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants in the market in which the reporting entity transacts. The standard clarifies that fair value should be based on the assumptions market participants would use when pricing the asset or liability.

To increase consistency and comparability in fair value measurements, SFAS No. 157 establishes a fair value hierarchy that prioritizes the inputs to valuation techniques used to measure fair value into three levels. The level in the fair value hierarchy disclosed is based on the lowest level of input that is significant to the fair value measurement.

The three levels of the fair value hierarchy defined by SFAS No. 157 are as follows:

Level 1 inputs are quoted prices (unadjusted) in active markets for identical assets or liabilities that the company has the ability to access as of the reporting date.

Level 2 inputs are inputs other than quoted prices included within Level 1 that are observable for the asset or liability, either directly or indirectly through corroboration with observable market data.

Level 3 inputs are unobservable inputs, such as internally developed pricing models for the asset or liability due to little or no market activity for the asset or liability.

SFAS No. 157 became effective for NiSource as of January 1, 2008. The provisions of SFAS No. 157 were applied prospectively, except for the initial impact on the following three items, which were required to be recorded as an adjustment to the opening balance of retained earnings in the year of adoption: (1) changes in fair value measurements of existing derivative financial instruments measured initially using the transaction price under EITF No. 02-3, (2) existing hybrid financial instruments measured initially at fair value using the transaction price and (3) blockage factor discounts. The adoption of SFAS No. 157 did not have an impact on NiSource's January 1, 2008 balance of retained earnings.

In February 2008, the FASB issued FSP FAS 157-2, which delayed the effective date of SFAS No. 157 for all nonrecurring fair value measurements of non-financial assets and liabilities until fiscal years beginning after November 15, 2008.

In October 2008, the FASB issued FSP FAS 157-3, which clarified the application of SFAS No. 157 in a market that is not active and provides an example to illustrate key considerations in determining the fair value of a financial asset when the market for that financial asset is not active. The FSP was effective upon issuance, including prior periods for which financial statements have not been issued.

Refer to Note 10, Fair Value Assets and Liabilities, in the Notes to Condensed Consolidated Financial Statements (unaudited) for additional information regarding the adoption of SFAS No. 157.

SFAS No. 141R Business Combinations. In December 2007, the FASB issued SFAS No. 141R to improve the relevance, representational faithfulness, and comparability of information that a reporting entity provides in its financial reports regarding business combinations and its effects, including recognition of assets and liabilities, the measurement of goodwill and required disclosures. This Statement is effective for fiscal years, and interim periods within those fiscal years, beginning on or after December 15, 2008 and earlier adoption is prohibited. The adoption of this standard on January 1, 2009 did not have a material impact on the Condensed Consolidated Financial Statements (unaudited).

Table of Contents**ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITIONS AND RESULTS OF OPERATIONS (continued)****NiSource Inc.**

In April 2009, the FASB issued FSP FAS 141(R)-1, which amends and clarifies SFAS No. 141 to address application issues on initial recognition and measurement, subsequent measurement and accounting, and disclosure of assets and liabilities arising from contingencies in a business combination. This FSP is effective for fiscal years, and interim periods within those fiscal years, beginning on or after December 15, 2008.

FSP FAS 140-4 and FIN 46(R)-8- FASB Staff Position Amendment of FASB Statement No. 140 and FASB Interpretation No. 46(R). In December 2008, the FASB issued FSP FAS 140-4 and FIN 46(R)-8 to require public entities to provide additional disclosures about transfers of financial assets and to provide additional disclosures related to an entity's involvement with variable interest entities. This FSP is effective for the first reporting period ending after December 15, 2008, with early application encouraged. The adoption of this FSP on January 1, 2009 did not have a material impact on the Condensed Consolidated Financial Statements (unaudited).

Recently Issued Accounting Pronouncements

FSP FAS 107-1 and APB 28-1 FASB Staff Position Amendment of FASB Statement No. 107 and APB Opinion No. 28. In April 2009, the FASB issued FSP FAS 107-1 and APB 28-1 to require disclosures about fair value of financial instruments for interim reporting periods of publicly traded companies as well as annual financial statements. This FSP is effective for interim reporting periods ending after June 15, 2009, with early adoption permitted. NiSource is currently reviewing the additional disclosure requirements to determine the impact on the Condensed Consolidated Financial Statements (unaudited) and Notes to Condensed Consolidated Financial Statements.

FSP FAS 115-2 and FAS 124-2 FASB Staff Position Amendment of FASB Statement No. 115 and FASB Statement No. 124. In April 2009, the FASB issued FSP FAS 115-2 and FAS 124-2 to amend the other-than-temporary impairment guidance in GAAP for debt securities to make the guidance more operational and to improve the presentation and disclosure of other-than-temporary impairments on debt and equity securities in the financial statements. This FSP is effective for interim reporting periods ending after June 15, 2009, with early adoption permitted. NiSource is currently reviewing the additional disclosure requirements to determine the impact on the Condensed Consolidated Financial Statements (unaudited) and Notes to Condensed Consolidated Financial Statements.

FSP FAS 132(R)-1 FASB Staff Position Amendment of FASB Statement No. 132(R)-1. In December 2008, the FASB issued FSP FAS 132(R)-1 to amend SFAS No. 132(R), to provide guidance on an employer's disclosures about plan assets of a defined benefit pension or other postretirement plan. FSP FAS 132(R)-1 is effective for fiscal years ending after December 15, 2009 with earlier adoption permitted. NiSource is currently reviewing the additional disclosure requirements to determine the impact on the Condensed Consolidated Financial Statements (unaudited) and Notes to Condensed Consolidated Financial Statements.

FSP FAS 157-4 FASB Staff Position Amendment of FASB Statement No. 157. In April 2009, the FASB issued FSP FAS 157-4 to provide additional guidance for estimating fair value when the volume and level of activity for the asset or liability have significantly decreased. This FSP is effective for interim reporting periods ending after June 15, 2009, with early adoption permitted. NiSource is currently reviewing the additional guidance to determine the impact on the Condensed Consolidated Financial Statements (unaudited) and Notes to Condensed Consolidated Financial Statements.

NiSource's natural gas distribution operations serve approximately 3.3 million customers in seven states: Ohio, Indiana, Pennsylvania, Massachusetts, Virginia, Kentucky and Maryland. The regulated subsidiaries offer both traditional bundled services as well as transportation only for customers that purchase gas from alternative suppliers. The operating results reflect the temperature-sensitive nature of customer demand with 73% of annual residential and commercial throughput affected by seasonality. As a result, segment operating income is higher in the first and fourth quarters reflecting the heating demand during the winter season.

Table of Contents**ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (continued)****NiSource Inc.****Gas Distribution Operations (continued)****Bear Garden Station**

Columbia of Virginia has entered into an agreement with Dominion Virginia Power to install facilities to serve a 585 mw combined cycle generating station in Buckingham County, VA, known as the Bear Garden station. The project requires approximately 13.3 miles of 24-inch steel pipeline and associated facilities to serve the station. In March 2009, the Virginia State Corporation Commission approved Dominion Virginia Power Company's planned Bear Garden station with service expected to begin by the summer of 2011. The total estimated cost for Columbia of Virginia's facilities is \$51.0 million.

Regulatory Matters

Significant Rate Developments. Columbia of Ohio filed a base rate case with the PUCO on March 3, 2008, and a settlement agreement was filed on October 24, 2008. In the base rate case, Columbia of Ohio sought recovery of increased infrastructure rehabilitation costs, as well as the stabilization of revenues and cost recovery through rate design. The agreement included an annual revenue increase of \$47.1 million, and also provides for recovery of costs associated with Columbia of Ohio's infrastructure rehabilitation program. On December 3, 2008, the PUCO approved the settlement agreement in all material respects, and approved Columbia of Ohio's proposed rate design. On February 27, 2009, Columbia of Ohio filed an application to adjust its Infrastructure Replacement Program Rider by approximately \$15 million covering increased costs for risers and accelerated main replacements. This matter is currently pending.

On January 15, 2009, Columbia of Ohio filed an application with the PUCO requesting authority to increase Columbia of Ohio's PIPP rider rate in order to collect \$82.2 million in PIPP arrearages. On March 3, 2009, Columbia of Ohio's proposal was approved and became effective.

On January 28, 2008, Columbia of Pennsylvania filed a base rate case with the PPUC seeking recovery of costs associated with its significant infrastructure rehabilitation program, as well as stabilization of revenues through modifications to rate design. On July 2, 2008, Columbia of Pennsylvania and all interested parties filed a unanimous settlement and on October 23, 2008, the PPUC issued an Order approving the settlement as filed, increasing annual revenues by \$41.5 million.

On April 16, 2009, Bay State filed a base rate case with the Massachusetts Department of Public Utilities, requesting an increase of \$34.6 million. In its filing, Bay State is seeking revenue decoupling, as well as an expedited mechanism for the recovery of costs associated with the rehabilitation of the company's infrastructure. This matter is currently pending and expected to be resolved with new rates taking effect in the fourth quarter 2009.

On May 1, 2009, Columbia of Kentucky filed a base rate case with the Kentucky PSC, requesting an annual increase of \$11.6 million. In its initial filing, Columbia of Kentucky is seeking enhancements to rate design, as well as an expedited mechanism for the recovery of costs associated with the rehabilitation of the company's infrastructure. This matter is currently pending.

On October 1, 2008, Columbia of Maryland filed a base rate case with the Maryland PSC. On February 20, 2009, Columbia of Maryland and all interested parties filed a unanimous settlement in the case, recommending an annual revenue increase of \$1.2 million. On March 27, 2009, the settlement was approved as filed.

On November 24, 2008 Northern Indiana filed Supplemental Testimony in its annual gas cost recovery proceeding (GCA 10-Cause No. 41338) seeking a cost recovery mechanism for Unaccounted for Gas at current gas prices. Historically, in Indiana, Unaccounted for Gas recovery mechanisms are determined within a base rate proceeding. Intervenors have filed testimony, opposing recovery of Unaccounted for Gas in the gas cost adjustment proceeding and disputing the calculation of Unaccounted for Gas. Evidentiary hearings were held on April 20 and 21, 2009. An order is expected in the third quarter of 2009.

In March 2009, Indiana Governor Daniels signed Senate Bill 423 into law giving the Indiana Finance Authority the authority to contract, on behalf of gas customers in the state of Indiana, with developers capable of building facilities that manufacture Substitute Natural Gas from coal. The Indiana Finance Authority is seeking bids to initiate a

Substitute Natural Gas plant in Southern Indiana under a 30 year contract. It is expected that all Indiana gas utilities

Table of Contents**ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (continued)****NiSource Inc.****Gas Distribution Operations (continued)**

including Northern Indiana will be delivering a portion of Substitute Natural Gas from this facility. The IURC must approve the final contract.

Cost Recovery and Trackers. A significant portion of the distribution companies' revenue is related to the recovery of gas costs, the review and recovery of which occurs via standard regulatory proceedings. All states require periodic review of actual gas procurement activity to determine prudence and to permit the recovery of prudently incurred costs related to the supply of gas for customers. NiSource distribution companies have historically been found prudent in the procurement of gas supplies to serve customers.

Certain operating costs of the NiSource distribution companies are significant, recurring in nature, and generally outside the control of the distribution companies. Some states allow the recovery of such costs via cost tracking mechanisms. Such tracking mechanisms allow for abbreviated regulatory proceedings in order for the distribution companies to implement charges and recover appropriate costs. Tracking mechanisms allow for more timely recovery of such costs as compared with more traditional cost recovery mechanisms. Examples of such mechanisms include gas cost recovery adjustment mechanisms, tax riders, and bad debt recovery mechanisms.

Comparability of Gas Distribution Operations line item operating results is impacted by these regulatory trackers that allow for the recovery in rates of certain costs such as bad debt expenses. Increases in the expenses that are the subject of trackers result in a corresponding increase in net revenues and therefore have essentially no impact on total operating income results.

Certain of the NiSource distribution companies have completed rate proceedings involving infrastructure replacement or are embarking upon regulatory initiatives to replace significant portions of their operating systems that are nearing the end of their useful lives. Columbia of Ohio and Columbia of Pennsylvania completed rate cases in 2008 incorporating significant infrastructure replacement programs and other NiSource gas distribution utilities are currently evaluating requests for increases in rates in order to allow recovery of the additional capital expenditures required for such initiatives. Each LDC's approach to cost recovery may be unique, given the different laws, regulations and precedent that exist in each jurisdiction.

On April 9, 2008, the PUCO issued an order approving, in all material respects, a joint stipulation submitted on behalf of Columbia of Ohio. This stipulation is a result of a process that began on April 13, 2005 with a PUCO ordered investigation into the type of gas risers installed in the state, the conditions of installation and overall performance. The stipulation provides for: establishment of accounting for and recovery of costs resulting from the Staff's investigation; Columbia of Ohio's performance of a survey to identify those customer-owned risers on its system prone to failure; and related customer education and other program related expenses. In addition this stipulation provides for: Columbia of Ohio's assumption of financial responsibility for the replacement of all risers identified as prone to failure; repair or replacement of hazardous customer owned service lines; and capitalization of this investment with recovery to be addressed in future rate proceedings. As of March 31, 2009, Columbia of Ohio has approximately \$62.1 million in costs associated with the gas riser and customer service line programs recorded as either a regulatory asset or capitalized plant.

On December 28, 2007, Columbia of Ohio entered into a stipulation with the Ohio Consumers' Counsel and PUCO Staff and other stakeholders resolving litigation concerning a pending Gas Cost Recovery audit of Columbia of Ohio. The stipulation calls for an accelerated pass back to customers of \$36.6 million, occurring from January 31, 2008 through January 31, 2009, generated through off-system sales and capacity release programs, the development of new energy efficiency programs for introduction in 2009, and the development of a wholesale auction process for customer supply to take effect in 2010. The entire requirement of the stipulation was passed back through January 31, 2009. The stipulation also resolves issues related to pending and future Gas Cost Recovery Management Performance audits through 2008. The PUCO approved this agreement on January 23, 2008.

On April 23, 2009, Columbia of Kentucky filed an application with the Kentucky PSC to defer pension and other postretirement benefits expenses above those currently subject to collection in rates. If approved, the amount deferred

would be approximately \$1.2 million for 2009. This matter is currently pending.

Table of Contents**ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (continued)****NiSource Inc.****Gas Distribution Operations (continued)**

On April 30, 2009, Columbia of Ohio filed an application with the PUCO to defer pension and other postretirement benefits expenses above those currently subject to collection in rates. If approved, the amount deferred would be approximately \$14.6 million for 2009. This matter is currently pending.

Customer Usage. The NiSource distribution companies have experienced declining usage by customers, due in large part to the sensitivity of sales to increases in commodity prices, as well as general economic conditions. A significant portion of the LDCs' operating costs are fixed in nature. Historically, rate design at the distribution level has been structured such that a large portion of cost recovery is based upon throughput, rather than in a fixed charge. Columbia of Ohio has restructured its rate mechanisms through rate proceedings and have moved towards a de-coupled rate design which more closely links the recovery of fixed costs with fixed charges. Each of the states in which the NiSource LDCs operate have different requirements regarding the procedure for establishing such changes and NiSource plans to seek similar changes with its other gas distribution utilities.

Environmental Matters

Various environmental matters occasionally impact the Gas Distribution Operations segment. As of March 31, 2009, a reserve has been recorded to cover probable environmental response actions. Refer to Note 16-C, Environmental Matters, in the Notes to Condensed Consolidated Financial Statements (unaudited) for additional information regarding environmental matters for the Gas Distribution Operations segment.

Weather

In general, NiSource calculates the weather related revenue variance based on changing customer demand driven by weather variance from normal heating degree-days. Normal is evaluated using heating degree days across the NiSource distribution region. While the temperature base for measuring heating degree-days (i.e. the estimated average daily temperature at which heating load begins) varies slightly across the region, the NiSource composite measurement is based on 62 degrees. NiSource composite heating degree-days reported do not directly correlate to the weather related dollar impact on the results of Gas Distribution operations. Heating degree-days experienced during different times of the year or in different operating locations may have more or less impact on volume and dollars depending on when and where they occur. When the detailed results are combined for reporting, there may be weather related dollar impacts on operations when there is not an apparent or significant change in the aggregated NiSource composite heating degree-day comparison.

Weather in the Gas Distribution Operation's territories for the first quarter of 2009 was 2% colder than normal and slightly colder compared to the first quarter in 2008.

Throughput

Total volumes sold and transported of 323.7 MMDth for the first quarter of 2009 decreased by 32.8 MMDth from the same period last year. This decrease was due to lower off-system sales volumes resulting primarily from decreased market opportunity, and lower customer usage. The continuous decrease in gas prices in first quarter of 2009 presented less of an opportunity to sell gas to non-traditional customers.

Net Revenues

Net revenues for the first quarter of 2009 were \$639.1 million, an increase of \$21.1 million from the same period in 2008, due primarily to increased revenues of \$18.9 million from regulatory initiatives including impacts from rate proceedings, increased net regulatory and tax trackers of \$8.6 million offset in expense and colder weather of approximately \$7 million, partially offset by decreased customer usage of \$9.3 million and an \$7.0 million decrease in off-system sales.

At Northern Indiana, sales revenues and customer billings are adjusted for amounts related to under and over-recovered purchased gas costs from prior periods per regulatory order. These amounts are primarily reflected in the Other gross revenues statistic provided at the beginning of this segment discussion. The adjustment to Other gross revenues for the three months ended March 31, 2009 was a revenue reduction of \$182.4 million compared to an increase of \$23.8 million for the three months ended March 31, 2008 primarily due to the significant decline in gas

prices experienced over the past twelve months.

Table of Contents

ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (continued)

NiSource Inc.

Gas Distribution Operations (continued)

Operating Income

For the first quarter of 2009, Gas Distribution Operations reported operating income of \$243.2 million, a decrease of \$11.8 million compared to the same period in 2008. The decrease in operating income was attributable to higher operating expenses of \$32.9 million, including an increase in net regulatory and tax tracker expenses of \$8.6 million offset in revenues, partially offset by the increase in net revenues discussed above. Operating expenses increased due to higher employee and administrative costs of \$16.0 million, primarily from \$10.3 million of increased pension expense, increased depreciation expense of \$3.7 million, higher uncollectible accounts of \$3.5 million and increased outside service expense of \$2.8 million.

Total	509.7	499.4

NiSource's Gas Transmission and Storage Operations segment consists of the operations of Columbia Transmission, Columbia Gulf, Columbia Deep Water, Crossroads Pipeline, and Central Kentucky Transmission. In total, NiSource owns a pipeline network of approximately 16 thousand miles extending from offshore in the Gulf of Mexico to New York and the eastern seaboard. The pipeline network serves customers in 16 northeastern, mid-Atlantic, midwestern and southern states, as well as the District of Columbia. In addition, the NiSource Gas Transmission and Storage Operations segment operates one of the nation's largest underground natural gas storage systems.

Hardy Storage Project

The first two phases of Hardy Storage are in service, receiving customer injections and withdrawing natural gas from its new underground natural gas storage facility in West Virginia. When the third and final Phase is fully operational later in 2009, the field will have a working storage capacity of 12 Bcf, and the ability to deliver 176,000 Dth of natural gas per day. Hardy Storage is a joint venture of subsidiaries of Columbia Transmission and Piedmont.

Florida Gas Transmission Project

In conjunction with a March 2009 open season, Columbia Gulf completed the addition of 95,000 Dth per day of contracted capacity for delivery to the Florida Gas Transmission system near Lafayette, LA. The new capacity is in addition to 145,000 Dth per day of capacity already subscribed to Florida Gas Transmission.

Line 1570 Project

In October 2008, Columbia Transmission entered into a Precedent Agreement to gather and transport phased in volumes of up to 150,000 Dth per day of gas in the Waynesburg, PA area along Line 1570. Capacity will be created by taking certain existing Points of Delivery off the system and modifying certain facilities at the Waynesburg Compressor Station. The first two phases of volumes were able to be implemented prior to construction in October 2008 and March 2009. Additional volumes will be phased in later in 2009 and during 2010. Facilities are expected to be completed in fourth quarter of 2009.

Table of Contents**ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (continued)****NiSource Inc.****Gas Transmission and Storage Operations (continued)****Millennium Pipeline Project**

The Millennium pipeline was substantially completed in the fourth quarter of 2008 and the pipeline commenced service on December 22, 2008, with the capability to transport up to 525,400 Dth per day of natural gas to markets along its route, as well as to the New York City markets through its pipeline interconnections. On August 29, 2007, Millennium entered into a bank credit agreement to finance the construction of the Millennium pipeline project. As a condition precedent to the credit agreement, NiSource issued a guarantee securing payment for its indirect ownership interest percentage of amounts borrowed under the financing agreement up until such time as the amounts payable under the agreement are paid in full. The permanent financing for Millennium is expected to be completed when debt capital market conditions improve. As of March 31, 2009, Millennium borrowed \$798.9 million under the interim bank credit agreement, which extends through August 2010. The Millennium partnership is currently comprised of interest from Columbia Transmission (47.5%), DTE Millennium Company (26.25%), and National Grid Millennium LLC (26.25%) with Columbia Transmission acting as operator. Additional information on this guarantee is provided in Note 16-A, Guarantees and Indemnities, in the Notes to Condensed Consolidated Financial Statements (unaudited).

Columbia Penn Project

In September 2008, Columbia Transmission announced its intention to develop additional natural gas transmission, gathering and processing services along and around its existing pipeline corridor between Waynesburg, PA and Renovo, PA, referred to as the Columbia Penn corridor. This two-phased development will accelerate access to pipeline capacity in conjunction with production increases in the Marcellus Shale formation which underlies Columbia Transmission's transmission and storage network in the region. Phase I was placed into service in February 2009 and Phase II should be available by the end of 2009.

Eastern Market Expansion Project

On January 14, 2008, the FERC issued an order which granted a certificate to construct the project. The project allows Columbia Transmission to expand its facilities to provide additional storage and transportation services and to replace certain existing facilities. The Eastern Market Expansion is projected to add 97,000 Dth per day of storage and transportation deliverability and is fully subscribed on a 15-year contracted firm basis. Construction of the facilities is complete and the project was placed in service April 1, 2009.

Ohio Storage Project

On June 24, 2008, Columbia Transmission filed an application before the FERC for approval to expand two of its Ohio storage fields for additional capacity of nearly 7 Bcf and 103,400 Dth per day of daily deliverability. Approval was granted in March 2009 and construction of the facilities began in April 2009. Partial service related to this expansion is expected to be available by May 1, 2009 and the remainder will be available no later than the fourth quarter of 2009. The expansion capacity is 58% contracted on a long-term, firm basis with revenue based on market-based rates recently approved by the FERC.

Appalachian Expansion Project

On August 22, 2008, the FERC issued an order to Columbia Transmission, which granted a certificate to construct the project. The project includes building a new 9,470 hp compressor station in West Virginia. The Appalachian Expansion Project will add 100,000 Dth per day of transportation capacity and is fully subscribed on a 15-year contracted firm basis. Construction is in progress and the project is expected to be in service by the second half of 2009.

Easton Compressor Station Project

On March 30, 2009, Columbia Transmission announced a binding open season for capacity into premium East Coast markets resulting from modifications made to the company's Easton Compressor Station. The modifications will increase delivery capacity from the Wagoner interconnection point between the Columbia Transmission and Millennium pipeline systems. Through the open season, which closed on April 3, 2009, Columbia Transmission received 30,000 Dth per day of binding bids.

Centerville Expansion Project

An open season to solicit interest and receive bids for expanded capacity on Columbia Gulf's system for delivery to Southern Natural Gas and the Louisiana intrastate pipeline market was held during the first quarter of 2008, and bids

Table of Contents**ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (continued)****NiSource Inc.****Gas Transmission and Storage Operations (continued)**

for 60,000 Dth per day of capacity were submitted. The remaining 175,000 Dth per day of capacity is being reviewed in conjunction with other market opportunities on the East Lateral in South Louisiana. The project is expected to be placed into service in late 2010.

Sales and Percentage of Physical Capacity Sold

Columbia Transmission and Columbia Gulf compete for transportation customers based on the type of service a customer needs, operating flexibility, available capacity and price. Columbia Gulf and Columbia Transmission provide a significant portion of total transportation services under firm contracts and derive a smaller portion of revenues through interruptible contracts, with management seeking to maximize the portion of physical capacity sold under firm contracts.

Firm service contracts require pipeline capacity to be reserved for a given customer between certain receipt and delivery points. Firm customers generally pay a capacity reservation fee based on the amount of capacity being reserved regardless of whether the capacity is used, plus an incremental usage fee when the capacity is used. Annual capacity reservation revenues derived from firm service contracts generally remain constant over the life of the contract because the revenues are based upon capacity reserved and not whether the capacity is actually used. The high percentage of revenue derived from capacity reservation fees mitigates the risk of revenue fluctuations within the Gas Transmission and Storage Operations segment due to changes in near-term supply and demand conditions. For the three months ended March 31, 2009 approximately 90.2% of the transportation revenues were derived from capacity reservation fees paid under firm contracts and 6.2% of the transportation revenues were derived from usage fees under firm contracts. This is compared to approximately 90.7% of the transportation revenues derived from capacity reservation fees paid under firm contracts and 4.4% of transportation revenues derived from usage fees under firm contracts for the three months ended March 31, 2008.

Interruptible transportation service is typically short term in nature and is generally used by customers that either do not need firm service or have been unable to contract for firm service. These customers pay a usage fee only for the volume of gas actually transported. The ability to provide this service is limited to available capacity not otherwise used by firm customers, and customers receiving services under interruptible contracts are not assured capacity in the pipeline facilities. Gas Transmission and Storage Operations provides interruptible service at competitive prices in order to capture short term market opportunities as they occur and interruptible service is viewed by management as an important strategy to optimize revenues from the gas transmission assets. For the three months ended March 31, 2009 and 2008, approximately 3.6% and 4.9%, respectively, of the transportation revenues were derived from interruptible contracts.

Hartsville and Delhi Compressor Stations

On February 5, 2008, tornados struck Columbia Gulf's Hartsville Compressor Station in Macon County, Tennessee. The damage to the facility forced Columbia Gulf to declare force majeure because no gas was flowing through this portion of the pipeline system while a facility assessment was being performed and the current contractual transportation agreements of 2.156 Bcf per day could not be met. Since that time, Columbia Gulf has constructed both temporary and permanent facilities at Hartsville. On July 19, 2008, the station completed the installation of temporary horsepower and restored capacity to flow up to 2.156 Bcf per day. During the next eight to ten months, the temporary facilities that were constructed to restore system capabilities will be replaced with a permanent solution.

On December 14, 2007, Columbia Gulf's Line 100 ruptured approximately two miles north of its Delhi Compressor Station in Louisiana. The damage to the pipeline forced Columbia Gulf to declare force majeure because no gas was flowing through this portion of the pipeline system on Lines 100, 200 and 300 while a facility assessment was performed. One day later, Lines 200 and 300 were returned to service and gas flow was restored on December 16, 2007. On December 19, 2007, the DOT issued a Corrective Action Order. The Order required Columbia Gulf to develop a remedial work plan to restore Line 100 pipeline's pressure and capacity. Between December 22, 2007 and June 30, 2008, the Line 100 pipeline operated at less than full pressure and full capacity. On July 1, 2008, Columbia

Gulf received permission from the DOT to restore full pressure and full capacity on the Line 100 pipeline. Columbia Gulf continues to operate under this Order.

Table of Contents**ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (continued)****NiSource Inc.****Gas Transmission and Storage Operations (continued)**

During the first quarter, NiSource settled its receivables for insurance claims. NiSource received claim proceeds of \$52.0 million for capital losses, \$4.3 million for operation and maintenance losses and \$2.7 million for business interruption and fuel costs.

In April 2009, NiSource settled remaining insurance claims on the Line 100 rupture for a total of \$2.6 million, net of all deductibles. This remaining insurance claim involves recovery for excess fuel and other losses.

Environmental Matters

Various environmental matters occasionally impact the Gas Transmission and Storage Operations segment. As of March 31, 2009, a reserve has been recorded to cover probable environmental response actions. Refer to Note 16-C,

Environmental Matters, in the Notes to Condensed Consolidated Financial Statements (unaudited) for additional information regarding environmental matters for the Gas Transmission and Storage Operations segment.

Restructuring

In response to the current economic conditions, on February 27, 2009, NiSource announced an organizational restructuring of the Gas Transmission and Storage Operations segment. NiSource is eliminating positions across the 16 state operating territory of Gas Transmission and Storage. The reductions will occur through voluntary programs and involuntary separations. In addition to employee reductions, the Gas Transmission and Storage Operations segment will take steps to achieve additional cost savings by efficiently managing its various business locations, reducing its fleet operations, creating alliances with third party service providers, and implementing other changes in line with its strategic plan for growth and maximizing value of existing assets. During the first quarter of 2009, NiSource recorded a pre-tax restructuring charge of \$19.8 million to Operation and maintenance expense on the Condensed Statement of Consolidated Income (unaudited), which primarily includes costs related to severance and other employee related costs for approximately 350 employees. NiSource expects this restructuring initiative to be substantially complete by the end of 2009. Refer to Note 4, Restructuring Activities, in the Notes to Condensed Consolidated Financial Statements (unaudited) for additional information regarding restructuring initiatives.

Throughput

Throughput for the Gas Transmission and Storage Operations segment totaled 509.7 MMDth for the first quarter of 2009, compared to 499.4 MMDth for the same period in 2008. The increase of 10.3 MMDth for the three-month period was primarily due to incremental volumes from new interconnects along the Columbia Gulf and Columbia Transmission pipeline systems.

Net Revenues

Net revenues were \$242.3 million for the first quarter of 2009, an increase of \$11.0 million from the same period in 2008, primarily due to increased subscriptions for firm transportation services of \$5.0 million related to new interconnects along the Columbia Gulf pipeline system, Hardy Storage field and incremental demand revenues on the Columbia Transmission system, increased revenues from regulatory trackers of \$3.9 million primarily offset in expense, and \$2.0 million attributable to a new contract for the subleasing of production rights to storage fields in Ohio.

Operating Income

Operating income was \$92.9 million for the first quarter of 2009, a decrease of \$11.9 million from the first quarter of 2008, primarily due to higher operating expenses of \$27.3 million, partially offset by higher net revenues described above and a \$4.4 million increase in equity earning in unconsolidated affiliates. Operating expenses increased mainly due to a \$19.8 million restructuring charge, increased regulatory trackers of \$3.9 million offset in net revenues, and higher employee and administrative costs of \$3.7 million mainly due to higher pension expense of \$2.6 million.

Equity earnings increased largely as a result of higher earnings on Millennium, which went into service late in 2008.

-------	----------------	---------

NiSource generates and distributes electricity, through its subsidiary Northern Indiana, to approximately 456 thousand customers in 20 counties in the northern part of Indiana. The operating results reflect the temperature-sensitive nature of customer demand with annual sales affected by temperatures in the northern part of Indiana. As a result, segment operating income is generally higher in the second and third quarters, reflecting cooling demand during the summer season.

Electric Supply

On October 24, 2008, Northern Indiana issued two requests for proposals to secure additional new sources of electric power to meet the future needs of its residential, commercial and industrial customers. The first request seeks capacity and energy proposals for up to 300 mw of electricity to address Northern Indiana's projected electricity supply needs during the 2011 to 2016 time period. The second request seeks up to 300 mw of electricity generated from renewable sources and/or DSM technologies to address Northern Indiana's projected electricity supply needs beginning in 2011.

Table of Contents**ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (continued)****NiSource Inc.****Electric Operations (continued)**

On July 24, 2008, the IURC issued an order approving Northern Indiana's proposed purchase power agreements with subsidiaries of Iberdrola Renewables for wind-generated power from Iowa and South Dakota. Under these agreements Northern Indiana purchases up to approximately 100 mw of wind power. Northern Indiana began purchasing wind power in April of 2009. Although a state or federal renewable portfolio standard is not yet established, Northern Indiana expects that its wind power purchase agreements would qualify as eligible purchases under any such standard.

Regulatory Matters

Significant Rate Developments. Northern Indiana filed a petition for new electric base rates and charges on June 27, 2008. The case-in-chief was originally filed on August 29, 2008, and amended on December 19, 2008 after the Sugar Creek facility was successfully dispatched into MISO. The filing requests an increase in base rates calculated to produce additional annual gross margin of \$85.7 million annually. Evidentiary hearings on Northern Indiana's direct case commenced on January 12, 2009 and concluded on February 6, 2009. Several stakeholder groups have intervened in the case, representing customer groups and various counties and towns within Northern Indiana's electric service territory. A field hearing to record customer testimony was held on March 3, 2009. The OUCC and intervenors are scheduled to file their cases-in-chief in May 2009. Northern Indiana is scheduled to file its rebuttal testimony in June 2009, and final hearings are planned to begin July 27, 2009. If a settlement agreement is not reached, and the full procedural schedule takes place, it is anticipated that new rates would take effect in early 2010.

During 2002, Northern Indiana settled certain regulatory matters related to an electric rate review. On September 23, 2002, the IURC issued an order adopting most aspects of the settlement. The order approving the settlement provides that electric customers of Northern Indiana will receive bill credits of approximately \$55.1 million each year. The credits will continue at approximately the same annual level and per the same methodology, until the IURC enters a base rate order that approves revised Northern Indiana electric rates. The order included a rate moratorium that expired on July 31, 2006. The order also provides that 60% of any future earnings beyond a specified earnings level will be retained by Northern Indiana. The revenue credit is calculated based on electric usage; therefore, in times of high usage the credit may be more than \$55.1 million. Credits amounting to \$13.2 million and \$12.5 million were recognized for electric customers for the first quarters of 2009 and 2008, respectively.

MISO. As part of Northern Indiana's participation in the MISO transmission service and wholesale energy market, certain administrative fees and non-fuel costs have been incurred. IURC orders have been issued authorizing the deferral for consideration in a future rate case proceeding of the administrative fees and certain non-fuel related costs incurred after Northern Indiana's rate moratorium, which expired on July 31, 2006. During the first quarter of 2009, non-fuel costs credits of \$3.0 million were deferred in accordance with the aforementioned orders. In addition, administrative, FERC and other fees of \$2.1 million were deferred. In total, for the first quarter of 2009 and 2008, net MISO credits of \$0.9 million and costs of \$0.9 million, respectively, were deferred. In the base rate case filed in August 2008, Northern Indiana proposed recovery over a three year amortization period of the cumulative amount of charges that will have been deferred by the time a rate order is issued, and a tracker for recovery of these charges on an ongoing basis. As noted below, as part of MISO's initiation of an ASM, Northern Indiana will also incur non-fuel administrative costs associated with this market. The IURC authorized Northern Indiana to defer the costs associated with participating in the ASM subject to a final determination in a subsequent phase of the same proceeding. The IURC has not yet ruled in the subsequent phase of the ASM proceeding.

Northern Indiana is an active stakeholder in the process used in designing, testing and implementing the ASM and in developing the surrounding business practices. On January 18, 2008, Northern Indiana as part of a Joint Petition among several other Indiana utilities, Joint Petitioners, filed a request to the IURC to participate in ASM and seek approval of timely cost recovery for the associated costs of participating. On August 13, 2008, the IURC issued a Phase I order, authorizing the Joint Petitioners authority to transfer additional balancing authority functions and to implement the operational changes necessary to participate in the ASM and to seek recovery of modified MISO charge-types via the FAC and to defer certain other MISO charge-types, pending a final determination on the issue of

cost recovery in Phase II. This order also created a subdocket for the purpose of further consideration of whether a cost-benefit analysis of participation in MISO or the MISO ASM should be required. Phase II of this proceeding deals with how the Joint Petitioners will approach the ASM, specifically related to cost recovery. The evidentiary

Table of Contents**ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (continued)****NiSource Inc.****Electric Operations (continued)**

hearing for Phase II concluded on February 9, 2009. The market began on January 6, 2009. At this time, Northern Indiana is not yet able to determine what impact the ASM will have on its cash flows.

On November 7, 2008, the FERC issued an order regarding the clarification of a rate mismatch as it pertains to the RSG First Pass calculation. On November 10, 2008, the FERC issued an order indicating that the RSG rates in effect were unjust and unreasonable based on a Section 206 filing that Northern Indiana and Ameren Services Company jointly filed on August 10, 2007. MISO determined that resettlements are required for all periods from market start to the Section 206 Refund effective date to remedy the rate mismatch. The FERC ordered refunds with interest after August 10, 2007. MISO, in its compliance filing, indicated it will perform another resettlement to recalculate the RSG First Pass Distribution Rate. These resettlements began on March 6, 2009 and will conclude by the first quarter of 2010. As the result of these resettlements, Northern Indiana will see a shift from RSG Second Pass, which is a non fuel charge, as determined from a previous IURC order, to the RSG First Pass Distribution, which is included as part of the fuel cost mechanism. The interim RSG allocation is still subject to rehearing. Northern Indiana does not expect a material impact on the financial statements.

Cost Recovery and Trackers. A significant portion of Northern Indiana's revenue is related to the recovery of fuel costs to generate power and the fuel costs related to purchased power. These costs are recovered through a FAC, a standard, quarterly, summary regulatory proceeding in Indiana. Various intervenors, including the OUCC, have taken issue with the allocation of costs included in Northern Indiana's FAC-80, FAC-81 and FAC-82, which cover the reconciliation of April - December 2008. The IURC has granted a sub-docket to consider such issues in those filings. The intervening parties and Northern Indiana are discussing procedures to eliminate these concerns and to resolve them for the historical periods. There is no procedural schedule established for this sub-docket.

The IURC issued an order on May 28, 2008 approving the purchase of Sugar Creek, and on May 30, 2008 Northern Indiana purchased the 535 mw CCGT for \$330 million in order to help meet capacity needs. The IURC, on February 18, 2009, issued an order approving a settlement agreement filed in this proceeding allowing Northern Indiana to begin deferring carrying costs and depreciation on Sugar Creek effective on December 1, 2008, when Sugar Creek was dispatched into MISO, at the agreed to carrying cost rate of 6.5%. The terms of recovery of the deferral will be resolved in Northern Indiana's current rate proceeding. On March 19, 2009, LaPorte County filed a notice of appeal regarding the IURC's decision.

As part of a settlement agreement which resolved issues surrounding purchased power costs, Northern Indiana implemented a new benchmarking standard, that became effective in October 2007, which defines the price above which purchased power costs must be absorbed by Northern Indiana and are not permitted to be passed on to ratepayers. The benchmark is based upon the costs of power generated by a hypothetical natural gas fired unit using gas purchased and delivered to Northern Indiana and a set sharing mechanism. During the first quarter of 2009 and 2008, the amount of purchased power costs exceeding the benchmark amounted to \$0.8 million and \$3.8 million, respectively, which was recognized as a net reduction of revenues. The agreement also contemplated Northern Indiana adding generating capacity to its existing portfolio by providing for the benchmark to be adjusted as new capacity is added. The dispatch of Sugar Creek into MISO on December 1, 2008 triggered a change in the benchmark, whereby the first 500 mw tier of the benchmark provision was eliminated.

Northern Indiana has approval from the IURC to recover certain environmental related costs through an ECT. Under the ECT, Northern Indiana is permitted to recover (1) AFUDC and a return on the capital investment expended by Northern Indiana to implement IDEM's NOx SIP through an ECRM and (2) related operation and maintenance and depreciation expenses once the environmental facilities become operational through an EERM. Under the IURC's November 26, 2002 order, Northern Indiana is permitted to submit filings on a semi-annual basis for the ECRM and on an annual basis for the EERM. In addition, Northern Indiana received an IURC order issuing a CPCN for the CAIR and CAMR Phase I Compliance Plan Projects, estimated to cost approximately \$23 million. Northern Indiana includes the CAIR and CAMR Phase I Compliance Plan costs to be recovered in the semi-annual ECRM and annual EERM

filing six months after construction costs begin. On October 23, 2008, Northern Indiana filed for approval of a revised cost estimate to meet the NOx and SO2 and mercury emissions environmental standards. Northern Indiana anticipates a total capital investment of approximately \$368 million. This revised cost estimate was approved by the IURC on January 14, 2009. On October 1, 2008, the IURC approved ECR-12 for capital expenditures (net of accumulated depreciation) of \$267.7 million. Northern Indiana filed ECR-13 and EER-

Table of Contents**ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (continued)****NiSource Inc.****Electric Operations (continued)**

6 in February 2009, for net capital expenditures and expense of \$268.1 million and \$18.7 million, respectively. In the electric base rate case, Northern Indiana has proposed that the frequency of the EERM be changed from annual to semi-annual, consistent with the filing of the ECRM. In addition, Northern Indiana proposed that the EERM be used to pass through to ratepayers the cost of any emission allowance purchases and the proceeds of any emission allowance sales.

Environmental Matters

Various environmental matters occasionally impact the Electric Operations segment. As of March 31, 2009, a reserve has been recorded to cover probable environmental response actions. Refer to Note 16-C, Environmental Matters, in the Notes to Condensed Consolidated Financial Statements (unaudited) for additional information regarding environmental matters for the Electric Operations segment.

Sales

Electric Operations sales quantities for the first quarter of 2009 were 3,893.1 gwh, a decrease of 551.2 gwh compared to in the first quarter of 2008. The decrease was primarily due to lower industrial and wholesale volumes compared to the same period last year. The lower volumes in these areas were primarily the result of the economic downturn and the impact to the major steel companies, which were operating at close to full capacity in early 2008 and are now operating at about half capacity.

Net Revenues

In the first quarter of 2009, Electric Operations net revenues of \$178.4 million decreased by \$5.0 million from the comparable 2008 period. This decrease was primarily due to reduced off system sales, including an adjustment to off-system sales revenues, which total \$13.6 million, and lower industrial usage of \$11.6 million, partially offset by increased residential and commercial sales volumes and margins of \$12.3 million and the impact of a FAC settlement that reduced 2008 first quarter net revenues by \$7.6 million.

At Northern Indiana, sales revenues and customer billings are adjusted for amounts related to under and over-recovered purchased fuel costs from prior periods per regulatory order. These amounts are primarily reflected in the Other gross revenues statistic provided at the beginning of this segment discussion. The adjustment to Other gross revenues for the three months ended March 31, 2009 was a revenue reduction of \$12.9 million compared to a reduction of \$6.3 million for the three months ended March 31, 2008 due to a decline in the average cost of purchased and produced power subsequent to the establishment of estimated rates and volumes used for setting recovery factors.

Operating Income

Operating income for the first quarter of 2009 was \$17.3 million, a decrease of \$21.1 million from the same period in 2008. The decrease in operating income was due to increased operating expenses of \$16.1 million and lower net revenues described above. Operating expenses increased primarily due to higher employee and administrative costs of \$10.9 million, resulting primarily from \$10.5 million in higher pension expense, increased depreciation expense of \$3.0 million and higher property and other taxes of \$1.2 million, partially offset by lower environmental expenses of \$4.2 million resulting from an insurance settlement.

Table of Contents**ITEM 2. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS (continued)****NiSource Inc.****Other Operations**

Three Months Ended March 31, (<i>in millions</i>)	2009	2008
Net Revenues		
Products and services revenue	\$ 299.3	\$ 359.3
Less: Cost of products purchased (excluding depreciation and amortization)	293.6	352.1
Net Revenues	5.7	7.2
Operating Expenses		
Operation and maintenance	4.9	5.4
Depreciation and amortization	0.6	0.7
Other taxes	1.6	1.6
Total Operating Expenses	7.1	7.7
Operating Loss	\$ (1.4)	\$ (0.5)

The Other Operations segment participates in energy-related services including gas marketing, gas risk management and ventures focused on distributed power generation technologies, including fuel cells and storage systems. Additionally, the Other Operations segment is involved in real estate and other businesses.

Lake Erie Land Company, Inc.

Lake Erie Land, which is wholly-owned by NiSource, is in the process of selling real estate over a 10-year period with a private real estate development group extending through 2016. NiSource estimates the property to be sold to the private developer during the next twelve months and classifies these assets as assets of discontinued operations and held for sale.

NDC Douglas Properties, Inc.

NDC Douglas Properties, a subsidiary of NiSource Development Company, is in the process of exiting some of its low income housing investments. NiSource has accounted for the investments to be sold as assets and liabilities of discontinued operations and held for sale.

Net Revenues

Net revenues of \$5.7 million for the first quarter of 2009 decreased by \$1.5 million from the first quarter of 2008 as a result of lower commercial and industrial gas marketing revenues.

Operating Loss

Other Operations reported an operating loss of \$1.4 million for the first quarter of 2009, versus an operating loss of \$0.5 million for the comparable 2008 period. The decrease in operating income resulted primarily from lower net revenues described above. Operating expenses decreased \$0.6 million primarily due to lower employee and administrative expense.

ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

NiSource Inc.

For a discussion regarding quantitative and qualitative disclosures about market risk see Management's Discussion and Analysis of Financial Condition and Results of Operations - Market Risk Disclosures.

ITEM 4. CONTROLS AND PROCEDURES

Evaluation of Disclosure Controls and Procedures

NiSource's chief executive officer and its principal financial officer, after evaluating the effectiveness of NiSource's disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)), have concluded based on the evaluation required by paragraph (b) of Exchange Act Rules 13a-15 and 15d-15 that, as of the end of the period covered by this report, NiSource's disclosure controls and procedures are considered effective.

Changes in Internal Controls

There have been no changes in NiSource's internal control over financial reporting during the fiscal period covered by this report that has materially affected, or is reasonably likely to affect, NiSource's internal control over financial reporting.

Table of Contents**PART II****ITEM 1. LEGAL PROCEEDINGS****NiSource Inc.****1. Stand Energy Corporation, et al. v. Columbia Gas Transmission Corporation, et al., Kanawha County Court, West Virginia**

On July 14, 2004, Stand Energy Corporation filed a complaint in Kanawha County Court in West Virginia. The complaint contains allegations against various NiSource companies, including Columbia Transmission and Columbia Gulf, and asserts that those companies and certain select shippers engaged in an illegal gas scheme that constituted a breach of contract and violated state law. The illegal gas scheme complained of by the plaintiffs relates to the Columbia Transmission and Columbia Gulf gas imbalance transactions that were the subject of the FERC enforcement staff investigation and subsequent settlement approved in October 2000. Columbia Transmission and Columbia Gulf filed a Motion to Dismiss on September 10, 2004. In October 2004, however, the plaintiffs filed their Second Amended Complaint, which clarified the identity of some of the select shipper defendants and added a federal antitrust cause of action. To address the issues raised in the Second Amended Complaint, the Columbia companies revised their briefs in support of the previously filed motions to dismiss. In June 2005, the Court granted in part and denied in part the Columbia companies motion to dismiss the Second Amended Complaint. The Columbia companies have filed an answer to the Second Amended Complaint. On December 1, 2005, Plaintiffs filed a motion to certify this case as a class action. The Columbia companies filed their opposition to this motion in March 2008. On August 19, 2008, the Court denied the Motion for Class Certification. In late December 2008, the lead plaintiff, Stand Energy Corporation, reached a settlement agreement of all claims with all Defendants. Stand Energy Corporation was dismissed from the case on December 31, 2008. On April 3, 2009, the Court denied all pending motions with the exception of Columbia's motion to dismiss the unjust enrichment claims of the four remaining plaintiffs.

2. United States of America ex rel. Jack J. Grynberg v. Columbia Gas Transmission Corporation, et al., U.S. District Court, Wyoming

The plaintiff filed a complaint in 1995, under the False Claims Act, on behalf of the United States of America, against approximately seventy pipelines, including Columbia Gulf and Columbia Transmission. The plaintiff claimed that the defendants had submitted false royalty reports to the government by mismeasuring natural gas produced on Federal land and Indian lands. The Plaintiff's original complaint was dismissed without prejudice for misjoinder of parties and for failing to plead fraud with specificity. In 1997, the plaintiff filed over sixty-five new False Claims Act complaints against over 330 defendants in numerous Federal courts. One of those complaints was filed in the Federal District Court for the Eastern District of Louisiana against Columbia and thirteen affiliated entities (collectively, the Columbia defendants). This complaint repeats the mismeasurement claims previously made and adds valuation claims alleging that the defendants undervalued natural gas for royalty purposes in various ways, including sales to affiliated entities at artificially low prices. This case was transferred, along with most of the other new Grynberg cases, to Federal District Court in Wyoming in 1999.

On October 20, 2006, the Federal District Court issued an Order granting the Columbia defendants motion to dismiss for lack of subject matter jurisdiction. Plaintiff appealed the dismissal of the Columbia defendants to the United States Court of Appeals for the Tenth Circuit, but the Court affirmed the dismissal in March 2009. Plaintiff has filed a motion to reconsider with the Court of Appeals. If necessary, the Columbia defendants will oppose the motion to reconsider.

3. Tawney, et al. v. Columbia Natural Resources, Inc., Roane County, WV Circuit Court

The Plaintiffs, who are West Virginia landowners, filed a lawsuit in early 2003 against CNR alleging that CNR underpaid royalties on gas produced on their land by improperly deducting post-production costs and not paying a fair value for the gas. In December 2004, the court granted plaintiffs motion to add NiSource and Columbia as defendants. Plaintiffs also claimed that the defendants fraudulently concealed the deduction of post-production charges. The court certified the case as a class action that includes any person who, after July 31, 1990, received or is due royalties from CNR (and its predecessors or successors) on lands lying within the boundary of the state of West Virginia. All claims by the government of the United States are excluded from the class. Although NiSource

Table of Contents**ITEM 1. LEGAL PROCEEDINGS (continued)****NiSource Inc.**

sold CNR in 2003, NiSource remains obligated to manage this litigation and for the majority of any damages ultimately awarded to the plaintiffs. On January 27, 2007, the jury hearing the case returned a verdict against all defendants in the amount of \$404.3 million; this is comprised of \$134.3 million in compensatory damages and \$270 million in punitive damages. In January 2008, the Defendants filed their petition for appeal, and on March 24, 2008, the Defendants filed their amended petition for appeal with the West Virginia Supreme Court of Appeals. On May 22, 2008, the West Virginia Supreme Court of Appeals refused the defendants petition for appeal. On August 22, 2008, Defendants filed their petitions to the United States Supreme Court for writ of certiorari. The Plaintiffs filed their response on September 22, 2008. On September 19, 2008, the West Virginia Supreme Court issued an order extending the stay of the judgment until proceedings before the United States Supreme Court are fully concluded. Given the West Virginia Court's refusal of the appeal, NiSource adjusted its reserve in the second quarter of 2008 to reflect the portion of the trial court judgment for which NiSource would be responsible, inclusive of interest. This amount was included in Legal and environmental reserves, on the Consolidated Balance Sheet as of December 31, 2008. On October 24, 2008, the West Virginia Circuit Court for Roane County, West Virginia, preliminarily approved a settlement agreement with a total settlement amount of \$380 million. The settlement received final approval by the Court on November 22, 2008. NiSource's share of the settlement liability is up to \$338.8 million. NiSource has complied with its obligations under the settlement agreement to fund \$85.5 million in the qualified settlement fund by January 13, 2009. Additionally, NiSource provided a letter of credit on January 13, 2009 in the amount of \$254 million and thereby complied with its obligation to secure the unpaid portion of the settlement. The trial court entered its order discharging the judgment on January 20, 2009. The Court is supervising the administration of the settlement proceeds. NiSource will be required to make additional payments, pursuant to the settlement, upon notice from the Class Administrator.

4. John Thacker, et al. v. Chesapeake Appalachia, L.L.C., U.S. District Court, E.D. Kentucky Poplar Creek Development Company v. Chesapeake Appalachia, L.L.C., U.S. District Court, E.D. Kentucky

On February 8, 2007, Plaintiff filed the Thacker case, a purported class action alleging that Chesapeake has failed to pay royalty owners the correct amounts pursuant to the provisions of their oil and gas leases covering real property located within the state of Kentucky. Columbia has assumed the defense of Chesapeake in this matter pursuant to the provisions of the Stock Purchase Agreement dated July 3, 2003, among Columbia, NiSource, and Triana Energy Holding, Inc., Chesapeake's predecessor in interest ("Stock Purchase Agreement"). Plaintiffs filed an amended complaint on March 19, 2007, which, among other things, added NiSource and Columbia as defendants. On March 31, 2008, the Court denied the Defendants' Motions to Dismiss; the Defendants filed their answers to the complaint on April 25, 2008. On June 3, 2008, the Plaintiffs moved to certify a class consisting of all persons entitled to payment of royalty by Chesapeake under leases operated by Chesapeake at any point after February 5, 1992, on real property in Kentucky. The motion for class certification has been fully briefed, but has not yet been decided.

On October 9, 2008, Chesapeake tendered the Poplar Creek case to Columbia and Columbia subsequently assumed the defense of this matter pursuant to the provisions of the Stock Purchase Agreement. Poplar Creek also purports to be a class action covering royalty owners in the state of Kentucky and alleges that Chesapeake has improperly deducted costs from the royalty payments; there is thus some overlap of parties and issues between the Poplar Creek and Thacker cases. Plaintiffs filed an amended complaint on October 12, 2008. Chesapeake filed a motion to dismiss in December 2008 which is currently pending before the Court.

5. Environmental Protection Agency Notice of Violation

On September 29, 2004, the EPA issued an NOV to Northern Indiana for alleged violations of the CAA and the Indiana SIP. The NOV alleges that modifications were made to certain boiler units at three of Northern Indiana's generating stations between the years of 1985 and 1995 without obtaining appropriate air permits for the modifications. The ultimate resolution could require additional capital expenditures and operations and maintenance costs as well as payment of substantial penalties and require development of supplemental environmental projects. Northern Indiana is currently in discussions with the EPA regarding possible resolutions to this NOV.

NiSource Inc.

6. Pennsylvania Department of Environmental Protection Proposed Consent Order and Agreement

On February 21, 2007, PADEP provided representatives of Columbia Transmission with a proposed Consent Order and Agreement covering an unmanned equipment storage site located in rural southwest Pennsylvania. The site in question is also subject to the EPA's AOC (Refer to Note 16-C, Environmental Matters, in the Notes to Condensed Consolidated Financial Statements for additional information regarding the AOC). PADEP's proposed order alleges that Columbia Transmission has violated the state's Clean Streams Act and Solid Waste Management Act by discharging petroleum products onto the property and into the waters of the state. In addition to requiring remediation and monitoring activities at the site, the state has proposed penalties for these violations. The site was remediated via an EPA approved Remedial Action Work Plan in the summer of 2008. The PADEP had provided written notification that it would not attempt to stop the EPA approved work and would seek the aforementioned Order after the remedy is completed. On January 6, 2009, PADEP provided Columbia Transmission with a Consent Assessment of Civil Penalty seeking a civil penalty of \$700 thousand for alleged violations of the Clean Streams Law. On April 23, 2009, PADEP sent Columbia Transmission an NOV. This NOV alleged the same violations as the January 6, 2009 Consent Assessment of Civil Penalty, but it also included violations of the Clean Streams Law that had allegedly been observed during a February 16, 2009 site inspection. The NOV increased the amount of PADEP's settlement demand to \$1 million. Columbia intends to seek clarification from PADEP regarding the proposed penalty.

ITEM 1A. RISK FACTORS

There were no material changes from the risk factors disclosed in NiSource's 2008 Form 10-K filed on February 27, 2009.
