Enclosure: A press release dated February 20, 2004 announcing Pechiney's fourth quarter and full year results for the year ended December 31, 2003.

PRESS RELEASE

Friday, February 20, 2004

Pechiney announces earnings from operations in the fourth quarter of 2003 of 66 million, down 5 million from the fourth quarter of 2002, and up 8 million from the third quarter of 2003. Net result for the fourth quarter was a loss of 443 million as a result principally of impairment charges and other one-off charges. The 2003 full year earnings from operations stands at 262 million, down 145 million (or 36%) from 2002, essentially due to the weakness in the U.S. dollar. The 2003 net result is a loss of 508 million compared to a loss of 50 million a year earlier.

2003 Highlights

Earnings from operations:

- The decline in the Group's 2003 earnings from operations was mainly attributable to the **Primary Aluminum** sector, which reported earnings from operations of 156 million in 2003, down 126 million from 2002. This decrease is due to the worsening of external factors, notably the depreciation of the U.S. dollar vis-à-vis the euro and to a lesser extent higher energy costs. These negative factors were only partially offset by the slight rise in the average price of aluminum realized by Pechiney on the LME, which increased from 1,358 U.S.\$/metric ton in 2002 to 1,395 U.S.\$/metric ton in 2003, as well as by significant continuous improvement related volume increases.
- The **Aluminum Conversion** sector reported earnings from operations of 49 million in 2003 versus 13 million in 2002. This strong growth reflected primarily the good performance of European activities, which benefited from the upturn in shipments to the aerospace industry in 2003. American activities also benefited from enhanced cost control and marked operational improvement at the Ravenswood plant following the restructuring plan launched at the end of 2002.
- The **Packaging** sector reported earnings from operations of 93 million in 2003 versus 129 million in 2002. This decline was due to lower sales volumes, a negative price/raw material cost squeeze and the depreciation of the U.S. dollar. These negative factors were only partially offset by cost reductions secured through the Pechiney Continuous Improvement System.
- During the year, the Group pursued successfully its implementation of the **Pechiney Continuous Improvement System**, with benefits estimated at 119 million for 2003, representing the cumulated sum of 249 million since January 1, 2002.
- In the fourth quarter, earnings from operations appear to have stabilized, compared to the strong year on year declines experienced in the previous periods. Earnings from operations stood at 7% (5 million) below the fourth quarter of 2002, and at 14% (8 million) above the third quarter of 2003. The realized LME price rose to 1,430 U.S.\$/metric ton during this fourth quarter.

Net result:

The 2003 negative result is due to long-lived asset writedowns, other income (expense) and restructuring expense for a total of 743 million, out of which 525 million with no impact on cash flow. These charges reflect mostly the impact of the use of new economic assumptions in particular with regard to currency forecasts, the write down of the capitalized costs of the AP50 Coega project, and the potential capital loss associated with planned divestitures.

Earnings from Operations (Millions of euros)

Recent developments 2003 fourth quarter and beginning of 2004

- ◆ On December 16, **modification of the Board of Directors of Pechiney**, following Alcan's acquisition of more than 92% of Pechiney's share capital in the initial offer period. Travis Engen, Alcan President & CEO, was appointed as the new Chairman & CEO of Pechiney.
- ◆ On December 30, **Pechiney became the sole owner of Aluminium Dunkerque**. The acquisition by Pechiney of the remaining 65% stake in the Aluminium Dunkerque smelter, from the smelter's financial partners, represented 248 million. The transaction also resulted in the consolidation of an additional 117 million of debt.
- ◆ On January 8, **the French Autorité des marchés financiers released the definitive results** of Alcan's re-opened offer for Pechiney securities. Taking into account the Pechiney securities tendered during both offer periods, **more than 95% of the share capital of Pechiney** on a fully diluted basis was tendered to the offer. Therefore, Alcan will pay the specified additional consideration to the holders of Pechiney securities who tendered to the offer.
- ◆ On January 20, **Pechiney American Depositary Shares were de-listed** from the New York Stock Exchange.
- ◆ On January 23, **the withdrawal offer** for all remaining Pechiney securities **was opened** for a ten French trading days period.

- ◆ On February 6, **Alcan acquired all remaining Pechiney shares, bonus allocation rights and OCEANEs** it did not already own. Pechiney shares were de-listed from Euronext Paris stock exchange on same date.

Main trends in 2003

Pechiney Continuous Improvement System in 2003

To cumulated benefits, gross of inflation, of 228 million reported at the end of September 2003, 21 million can be added for the fourth quarter of 2003 (the rate of inflation used to compute Continuous Improvement benefits was updated during the third quarter; this amount therefore includes a 2.3 million adjustment to first half benefits). Cumulated benefits since January 1, 2002, thus total 249 million.

Cumulated Continuous Improvement Benefits at the end of December 2003

Market environment

In the **primary aluminum market**, the average price of aluminum on the LME increased by 4.6% during the year, from 1,365 U.S.\$/metric ton in 2002 to 1,428 U.S.\$/metric ton in 2003. In particular, it rose significantly during the fourth quarter from 1,359 U.S.\$/metric ton in the fourth quarter of 2002 (and from 1,421 U.S.\$/metric ton in the third quarter of 2003) to 1,521 U.S.\$/metric ton in the fourth quarter of 2003, representing an increase of 12%. The U.S. dollar declined vis-à-vis other currencies, in particular vis-à-vis the euro. The average price of aluminum on the LME in euros decreased from 1,452 /metric ton in 2002 to 1,264 /metric ton in 2003, and from 1,359 /metric ton in the fourth quarter of 2002 to 1,278 /metric ton in the fourth quarter of 2003.

In **aluminum conversion markets**, European activities benefited from a sharp upturn in shipments to the aerospace industry, and consumer markets (can stock, aluminum rolled products for automotive applications) remained robust. Conversely, there was no increase in demand in the most cyclical end markets (linked to investment, construction). In the United States, most of the aluminum conversion markets remained lackluster, in particular standard rolled products, transport (still at the low end of the cycle) and industry.

In **packaging**, except for certain food markets in the United States that showed some signs of recovery at the end of the year, the markets remained generally sluggish. The beauty and deluxe market, which was especially depressed in volume in both the United States and Europe except for personal care items, showed no signs of recovery in 2003.

Segment breakdown Fourth quarter 2003

For the Group as a whole, earnings from operations in the fourth quarter of 2003 declined slightly (down 5 million) from the fourth quarter of 2002, and increased by 8 million from the third quarter of 2003. After 5 successive declining quarters, this stabilization is mainly linked to the recovery on the LME, which offset the depreciation of the dollar more than in previous quarters, as well as to satisfying operating performance.

Primary Aluminum (Aluminum Metal, Bauxite Alumina and Ferroalloys)

The sector's good performance in terms of sales volume and the increase in the price of aluminum on the LME were masked by the persistent negative impact of the depreciation of the U.S. dollar vis-à-vis the euro.

At 44 million, earnings from operations in the fourth quarter of 2003 stopped the decline that started mid-2002, which was linked to the depreciation of the U.S. dollar: this result is up 11 million from the third quarter of 2003. In this respect, the year on year fourth quarter decline, at 6 million, compares favorably with the 120 million decline accumulated for the first three quarters of 2003.

The decline in earnings from operations from the fourth quarter of 2002 was mainly linked to the continued depreciation of the U.S. dollar vis-à-vis the euro. The euro/dollar parity realized worsened, from 0.98 in the fourth quarter of 2002 to 1.16 in the fourth quarter of 2003. The options owned by Pechiney had a limited impact on the results of the sector. On the other hand, the rise in the average price of aluminum realized on the LME - from 1,334 U.S.\$/metric ton in the fourth quarter of 2002 to 1,430 U.S.\$/metric ton in the fourth quarter of 2003, had a significant positive impact but only partially offset the negative impact of the euro/dollar parity.

During the quarter, the sector reported good operating performance at its plants, in particular in terms of volume, including the PNL smelter in the Netherlands, which sharply increased its sales volume since the weather related incident that occurred in the fourth quarter of 2002. It benefited from an insurance reimbursement linked to this incident. The sector continued to be affected by a strong increase in energy costs.

Aluminum Conversion

Good operating performance in Europe, further reduction of losses in the United States and enhanced cost control through the Pechiney Continuous Improvement System.

The Aluminum Conversion result in the fourth quarter of 2003 confirms the good performance recorded in the last quarters: earnings from operations, which totaled 10 million, is close to that of the third quarter of 2003, and up 10 million from the fourth quarter of 2002. This reflected again the good performance of the year 2003, which improved both in Europe and in the United States compared with 2002.

Earnings from operations reported by **European activities** stood at 18 million in the fourth quarter of 2003 versus 15 million in the same period in 2002.

In the aerospace business, favorable margins did offset a limited slowdown in sales volume from a high fourth quarter in 2002. Meanwhile, the strong improvement in delivery performance at Issoire contributed to an increase in orders of 13.7% between the fourth quarter of 2002 and 2003.

Sales volume in the beverage can and automotive markets remained satisfactory during the fourth quarter and started to recover for extruded products. Declines were noted in casting alloys, while foil and strip was affected by weaker pricing.

In the United States (Ravenswood, Vernon and Aluminium Lithium), the operating loss totaled 8 million in the fourth quarter, a major improvement over the 15 million loss reported in the fourth quarter of 2002. American activities benefited from enhanced cost control linked to the restructuring plan launched at the end of 2002 in Ravenswood, West Virginia. Similarly to other quarters, this plant continued to benefit from a favorable mix effect, which stemmed from the planned rebalancing of its product portfolio. American activities also benefited from the reorganization of the Aluminum Lithium business.

Packaging

Decline in sales volume and elimination of the price/cost raw materials squeeze

In Packaging, earnings from operations totaled 18 million, down 6 million from the fourth quarter of 2002 and 5 million from the previous quarter.

During the fourth quarter, the sector continued to be affected by a drop in sales volume in laminated tubes in the United States and, to a lesser degree, in the make-up and promotional segments. The improved product mix in flexible packaging in the United States enabled to more than offset the decrease in sales volume in this market. The price/cost raw material squeeze, strongly negative during the first half of the year, almost disappeared in the fourth quarter, baring in mind that it had already been considerably reduced during the third quarter.

The acquisitions realized during the year 2003 (Envaril, Danaflex, Novacel, APS) had a slightly favorable impact during the fourth quarter but were masked by the adverse impact from the declining euro/dollar parity.

International Trade

In International Trade, earnings from operations totaled 19 million in the fourth quarter of 2003, down slightly from the 20 million achieved in the fourth quarter of 2002. Good performances in alumina, aluminum and copper trading enabled to offset the negative impact of the euro/dollar parity.

Segment breakdown Year 2003

The Group's earnings from operations fell by € 145 million, from 407 million in 2002 to € 262 million in 2003. This decrease is essentially linked to Primary Aluminum, which declined by 126 million between 2002 and 2003 mainly because of the depreciation of the dollar and the increase in energy cost. The increase in the average realized price of aluminum on the LME and the good performance of Aluminum Conversion enabled to partially offset these negative impacts, whereas Packaging recorded a decline in its results.

Primary Aluminum (Aluminum Metal, Bauxite Alumina and Ferroalloys)

Unfavorable trend in external factors (weakness of the U.S. dollar vis-à-vis the euro and rise in energy costs) could not be offset by the good operating performance of the plants and the slight rise in aluminum price on the LME

At 156 million, earnings from operations for the year 2003 were down 126 million from 2002.

This decline was mainly linked to the depreciation of the U.S. dollar vis-à-vis the euro. The euro/dollar parity realized fell by 16.4% in 2003 versus 2002, from 0.93 to 1.11. The slight rise in the average price of aluminum on the LME realized by Pechiney, which climbed from 1,358 U.S.\$/metric ton in 2002 to 1,395 U.S.\$/metric ton in 2003, only offset the negative impact of the euro/dollar parity to a very limited extent.

In 2003, the sector reported satisfactory operating performance at its plants, with a significant increase in production volumes, except for the PNL smelter in the Netherlands, which was particularly affected by energy costs overruns. Meanwhile, the whole sector was impacted by higher energy costs in 2003.

Aluminum Conversion

Good performance of European activities and reduction of losses in the United States

Earnings from operations in the Aluminum Conversion sector totaled 49 million in 2003, compared with 13 million in 2002.

Earnings from operations reported by **European activities** stood at 81 million in 2003 versus 66 million in 2002.

European aerospace activities, whose earnings from operations increased by 63.5% between 2002 and 2003, benefited from the upturn in shipments to this sector after the end of inventory depletion which had occurred in 2002, and from the first shipments for the new Airbus 380 aircraft.

While sales volume in the beverage can, automotive and foil and strip markets was satisfactory in 2003, and started to recover in extruded products towards the end of the year, casting alloys volumes remained weak.

In the United States (Ravenswood, Vernon and Aluminium Lithium), the operating loss totaled € 32 million in 2003, a major improvement over the €53 million loss reported in 2002. American activities benefited from enhanced cost control linked to the restructuring plan launched at the end of 2002 at the Ravenswood plant in West Virginia, together with the reorganization of the Aluminum Lithium business.

Packaging

Decline in sales volume, negative price/cost raw materials squeeze and depreciation of the U.S. dollar vis-à-vis the euro only partially offset by improved cost control

In Packaging, earnings from operations totaled 93 million in 2003, down 36 million from 2002.

The sector was affected, in comparison with 2002, by a worsening of external factors, notably the rise in the price of plastic resins causing a negative price/cost raw materials squeeze and the depreciation of the U.S. dollar vis-à-vis the euro. It was also impacted by a strong decrease in sales volume in laminated tubes in the United States, while other segments were not showing any significant upturn following the market deterioration of 2002. The impact of these factors on earnings from operations was partially offset by improved cost control, in particular in plastic packaging and in beauty, and by the acquisitions realized during the year 2003 (mainly Envaril, Danaflex, Novacel, APS).

International Trade

In International Trade, earnings from operations totaled 61 million in 2003, down 12 million from a record year in 2002.

The division was strongly impacted by the depreciation of the U.S. dollar vis-à-vis the euro, which was partially offset by the good performance in alumina, aluminum and copper trading.

Other statement of income items

In 2003, **restructuring expense, long-lived asset writedowns and other income (expense)** represented a charge of 699 million, compared to 243 million in 2002. In the fourth quarter of 2003, it totaled 508 million, versus 126 million in the same period of 2002. These charges reflect mostly the impact of the use of new economic assumptions in particular with regard to currency forecasts, the write down of the capitalized costs of the AP50 Coega project and the potential capital loss associated with planned divestitures.

In 2003, the **loss from operations** totaled 437 million, compared with an income from operations of 164 million in 2002. In the fourth quarter of 2003, the loss represented 442 million versus 55 million in the fourth quarter of 2002. This increased loss is linked to the strong increase in restructuring expense and other expense in the fourth quarter of 2003.

Net financial expense totaled 47 million in 2003, slightly down from 49 million in 2002. It totaled 10 million in the fourth quarter of 2003, versus € 11 million in the fourth quarter of 2002.

Current and deferred income taxes represented an income of 8 million in 2003, versus a charge of 39 million in 2002. This difference reflects mainly the difference in pre-tax income (loss) between 2002 and 2003.

Minority interests represented an income of 27 million in 2003 (31 million in the fourth quarter), compared with zero in 2002 (3 million in the fourth quarter of 2002).

Amortization of goodwill

A charge of 72 million was recorded in 2003 (out of which 32 million in the fourth quarter), versus 129 million in 2002 (57 million in the fourth quarter). It includes exceptional goodwill amortization for a total amount of 44 million in 2003 (25 million in the fourth quarter), and 28 million for the recurring goodwill amortization in French GAAP.

Cash flow

The cash flow generated by operations totaled 448 million for 2003 to be compared with 629 million in 2002. Net of investments and divestitures, including notably the purchase of 65% of Aluminium Dunkerque for 248 million excluding the consolidation of the debt, the Group's financing needs stood at 365 million, before the payment of dividends in the amount of 110 million.

Financial structure

As of December 31, 2003, net indebtedness totaled 1,913 million, up 476 million from December 31, 2002. Compared with shareholders' equity and minority interests of 2,561 million, the debt-to-equity ratio was 0.75, compared with 0.45 as of December 31, 2002.

Pursuant to article 7 of the COB Rule book no. 2002-04, this press release was disclosed to the French Autorité des marchés financiers before its release.
