Case IH Focuses on Sugar Cane Business in High-Growth Markets

LUGANO, Switzerland (June 3, 2008) - Case IH, a leading company in the agricultural equipment business and part of CNH (NYSE:CNH), a majority-owned subsidiary of the Fiat Group (FIA.MI), is solidifying its role as a leader in the sugar cane business in high-growth markets. The Case IH marketing department recently organized a trip for some of its main African customers and distributors involved in developing and strengthening their businesses in the expanding sugar cane market.

Case IH is the best-in-class company in this business and the global leader in the industry. Brazil, where Case IH manufactures its sugar cane harvesters, represents the first market in the world in terms of total industry volumes, and this business is expanding throughout Asia and all across the African continent. Many countries, such as India and South Africa, are actively looking to move toward mechanized harvesting systems to replace the heavy dependence on manual cutting. In addition, mechanized harvesting systems foster a more environmentally compatible practice, avoiding field burning to pick the sugar cane. Sugar cane can not only meet human nutritional demands but also produce renewable fuel and green power from the remaining biomass. The productivity of sugar cane harvesters and balers is crucial for the industry to take advantage of the potential growth.

In order to witness first hand Case IH's proven expertise in this business, customers were invited to the Case IH facilities in Piracicaba, Brazil. They visited the Piracicaba plant, where CNH has recently made substantial investments to introduce new products, production technologies. The group also visited the largest dealer in Brazil for sugar cane harvesters, Tracan, the Sao Martinho sugar mill, and the Case IH Curitiba tractor and combine plant.

Some customers and distributors who participated in the visit were particularly impressed with the Case IH Austoft 7000 series sugar cane harvesters, which they will incorporate in their fleets to expand their business. This product embodies technological innovations that provide excellent cane quality to the mill, while ensuring low cost and high productivity. The superior cleaning system, featuring the revolutionary antivortex system, is unique to Case IH Austoft harvesters. This system reduces extraneous matter, cane losses, and operating costs of the machine, while improving transport efficiencies because of higher cane density in the bin.

CNH International, which is responsible for the Case IH operations in Asia and Africa, plans to increase its sales of sugar cane harvesters in those areas over 50% in the next two years.
