Jump Securities with Auto-Callable Feature due August 31, 2022

All Payments on the Securities Based on the Worst Performing of the STOXX[®] Europe 600 Banks Index, the SPDR[®] S&P[®] Oil & Gas Exploration & Production ETF and the iShares[®] MSCI Emerging Markets ETF

Fully and Unconditionally Guaranteed by Morgan Stanley

Principal at Risk Securities

The securities offered are unsecured obligations of Morgan Stanley Finance LLC (“MSFL”), fully and unconditionally guaranteed by Morgan Stanley, and have the terms described in the accompanying product supplement, index supplement and prospectus, as supplemented or modified by this document. The securities do not guarantee the repayment of principal and do not provide for the regular payment of interest. The securities will be automatically redeemed if the closing level of **each** of the STOXX[®] Europe 600 Banks Index, the SPDR[®] S&P[®] Oil & Gas Exploration & Production ETF and the iShares[®] MSCI Emerging Markets ETF, which we refer to as the underlyings, on any of the annual determination dates is greater than or equal to its respective initial level, for an early redemption payment that will increase over the term of the securities, as described below. No further payments will be made on the securities once they have been redeemed. At maturity, if the securities have not previously been redeemed and the final level of each underlying is **greater than or equal to** 60% of its respective initial level, which we refer to as the respective downside threshold level, investors will receive a payment at maturity of \$1,548 per \$1,000 security. However, if the securities are not redeemed prior to maturity and the final level of **any underlying is** less than its respective downside threshold level, investors will be exposed to the decline in the worst performing underlying on a 1-to-1 basis, and will receive a payment at maturity that is less than 60% of the stated principal amount of the securities and could be zero. **Accordingly, investors in the securities must be willing to accept the risk of losing their entire initial investment.** The securities are for investors who are willing to forgo current income and participation in the appreciation of any underlying in exchange for the possibility of receiving an early redemption payment or payment at maturity greater than the stated principal amount if each underlying closes at or above the respective initial level on an annual determination date or if each underlying closes at or above the downside threshold level on the final determination date. Because all payments on the securities are based on the worst performing of the

underlyings, a decline beyond the respective downside threshold level of any underlying will result in a significant loss of your investment, even if one or both of the other underlyings have appreciated or have not declined as much. Investors will not participate in any appreciation of any underlying. The securities are notes issued as part of MSFL's Series A Global Medium-Term Notes program.

All payments are subject to our credit risk. If we default on our obligations, you could lose some or all of your investment. These securities are not secured obligations and you will not have any security interest in, or otherwise have any access to, any underlying reference asset or assets.

SUMMARY TERMS

Issuer: Morgan Stanley Finance LLC
Guarantor: Morgan Stanley
 STOXX® Europe 600 Banks Index (the "SX7P Index"), SPDR® S&P® Oil & Gas Exploration & Production ETF (the "XOP Shares") and iShare® MSCI Emerging Markets ETF (the "EEM Shares")
Underlyings:
Aggregate principal amount: \$
Stated principal amount: \$1,000 per security
Issue price: \$1,000 per security
Pricing date: August 24, 2018
Original issue date: August 31, 2018 (5 business days after the pricing date)
Maturity date: August 31, 2022

If, on any annual determination date, beginning on August 27, 2019, the closing level of **each** underlying is **greater than or equal to** its respective initial level, the securities will be automatically redeemed for the applicable early redemption payment on the related early redemption date.

Early redemption:

The securities will not be redeemed early on any early redemption date if the closing level of any underlying is below its respective initial level on the related determination date.

The early redemption payment will be an amount in cash per stated principal amount (corresponding to a return of 13.70% *per annum*) for each annual determination date, as set forth under "Determination Dates and Early Redemption Payments" below.

Early redemption payment:

No further payments will be made on the securities once they have been redeemed.

Annually. See "Determination Dates and Early Redemption Payments" below.

Determination dates:

The determination dates are subject to postponement for non-index business days, non-trading days and certain market disruption events.

Early redemption dates:

The fifth business day after the relevant determination date

Downside threshold level:

With respect to the SX7P Index, _____, which is 60% of its initial level

With respect to the XOP Shares, \$ _____, which is 60% of the initial level

With respect to the EEM Shares, \$ _____, which is 60% of the initial level

If the securities have not previously been redeemed, you will receive at maturity a cash payment per security as follows:

- If the final level of **each underlying is greater than or equal to** its respective downside threshold level:

\$1,548

Payment at maturity:

- If the final level of **any underlying is less than** its respective downside threshold level:

\$1,000 × underlying performance factor of the worst performing underlying

Under these circumstances, you will lose more than 40%, and possibly all, of your investment.

Terms continued on the following page

Morgan Stanley & Co. LLC (“MS & Co.”), an affiliate of MSFL and a wholly owned subsidiary of Morgan Stanley. See “Supplemental information regarding plan of distribution; conflicts of interest.”

Agent:

Estimated value on the pricing date:

Approximately \$976.90 per security, or within \$22.50 of that estimate. See “Investment Summary” beginning on page 3.

Commissions and issue price:

	Price to public	Agent’s commissions and fees⁽¹⁾	Proceeds to us⁽²⁾
Per security	\$1,000	\$4	\$996
Total	\$	\$	\$

Selected dealers and their financial advisors will collectively receive commissions or fees of \$4 for each security. (1) See “Supplemental information regarding plan of distribution; conflicts of interest.” For additional information, see “Plan of Distribution (Conflicts of Interest)” in the accompanying product supplement.

(2) See “Use of proceeds and hedging” on page 26.

The securities involve risks not associated with an investment in ordinary debt securities. See “Risk Factors” beginning on page 9.

The Securities and Exchange Commission and state securities regulators have not approved or disapproved these securities, or determined if this document or the accompanying product supplement, index supplement and prospectus is truthful or complete. Any representation to the contrary is a criminal offense.

The securities are not deposits or savings accounts and are not insured by the Federal Deposit Insurance Corporation or any other governmental agency or instrumentality, nor are they obligations of, or guaranteed by, a bank.

You should read this document together with the related product supplement, index supplement and prospectus, each of which can be accessed via the hyperlinks below. Please also see “Additional Information About the Securities” at the end of this document.

Investment Summary

Jump Securities with Auto-Callable Feature

Principal at Risk Securities

The Jump Securities with Auto-Callable Feature due August 31, 2022 All Payments on the Securities Based on the Worst Performing of the STOXX® Europe 600 Banks Index, the SPDR® S&P® Oil & Gas Exploration & Production ETF and the iShares® MSCI Emerging Markets ETF (the “securities”) do not provide for the regular payment of interest. Instead, the securities will be automatically redeemed if the closing level of **each of** the STOXX® Europe 600 Banks Index, SPDR® S&P® Oil & Gas Exploration & Production ETF and the iShares® MSCI Emerging Markets ETF on any annual determination date is greater than or equal to its respective initial level, for an early redemption payment that will increase over the term of the securities, as described below. No further payments will be made on the securities once they have been redeemed. At maturity, if the securities have not previously been redeemed and the final level of each underlying is **greater than or equal to 60%** of its respective initial level, which we refer to as the respective downside threshold level, investors will receive a payment at maturity of \$1,548 per \$1,000 security. However, if the securities are not redeemed prior to maturity and the final level of **any underlying is** less than its respective downside threshold level, investors will be exposed to the decline in the worst performing underlying on a 1-to-1 basis, and will receive a payment at maturity that is less than 60% of the stated principal amount of the securities and could be zero. **Accordingly, investors in the securities must be willing to accept the risk of losing their entire initial investment.** Investors will not participate in any appreciation in any underlying.

Maturity: 4 years

Automatic early redemption: If, on any annual determination date, the closing level of each underlying is greater than or equal to its respective initial level, the securities will be automatically redeemed for the applicable early redemption payment on the related early redemption date.

Early redemption payment: The early redemption payment will be an amount in cash per stated principal amount (corresponding to a return of 13.70% *per annum*) for each annual determination date, as follows:

·Ist determination date: \$1,137

·Jnd determination date: \$1,274

·Krd determination date: \$1,411

No further payments will be made on the securities once they have been redeemed.

If the securities have not previously been redeemed, you will receive at maturity a cash payment per security as follows:

- If the final level of **each underlying** is **greater than or equal to** its respective downside threshold level:

\$1,548

Payment at maturity:

- If the final level of **any underlying** is **less than** its respective downside threshold level:

$\$1,000 \times$ underlying performance factor of the worst performing underlying

Under these circumstances, investors will lose a significant portion or all of their investment. Accordingly, investors in the securities must be willing to accept the risk of losing their entire initial investment.

The original issue price of each security is \$1,000. This price includes costs associated with issuing, selling, structuring and hedging the securities, which are borne by you, and, consequently, the estimated value of the securities on the pricing date will be less than \$1,000. We estimate that the value of each security on the pricing date will be approximately \$976.90, or

Principal at Risk Securities

within \$22.50 of that estimate. Our estimate of the value of the securities as determined on the pricing date will be set forth in the final pricing supplement.

What goes into the estimated value on the pricing date?

In valuing the securities on the pricing date, we take into account that the securities comprise both a debt component and a performance-based component linked to the underlyings. The estimated value of the securities is determined using our own pricing and valuation models, market inputs and assumptions relating to the underlyings, instruments based on the underlyings, volatility and other factors including current and expected interest rates, as well as an interest rate related to our secondary market credit spread, which is the implied interest rate at which our conventional fixed rate debt trades in the secondary market.

What determines the economic terms of the securities?

In determining the economic terms of the securities, including the early redemption payment amounts and the downside threshold levels, we use an internal funding rate, which is likely to be lower than our secondary market credit spreads and therefore advantageous to us. If the issuing, selling, structuring and hedging costs borne by you were lower or if the internal funding rate were higher, one or more of the economic terms of the securities would be more favorable to you.

What is the relationship between the estimated value on the pricing date and the secondary market price of the securities?

The price at which MS & Co. purchases the securities in the secondary market, absent changes in market conditions, including those related to the underlyings, may vary from, and be lower than, the estimated value on the pricing date, because the secondary market price takes into account our secondary market credit spread as well as the bid-offer spread that MS & Co. would charge in a secondary market transaction of this type and other factors. However, because the costs associated with issuing, selling, structuring and hedging the securities are not fully deducted upon issuance, for a period of up to 6 months following the issue date, to the extent that MS & Co. may buy or sell the securities in the secondary market, absent changes in market conditions, including those related to the underlyings,

and to our secondary market credit spreads, it would do so based on values higher than the estimated value. We expect that those higher values will also be reflected in your brokerage account statements.

MS & Co. may, but is not obligated to, make a market in the securities, and, if it once chooses to make a market, may cease doing so at any time.

Principal at Risk Securities

Key Investment Rationale

The securities do not provide for the regular payment of interest. Instead, the securities will be automatically redeemed if the closing level of **each of** the STOXX® Europe 600 Banks Index, the SPDR® S&P® Oil & Gas Exploration & Production ETF and the iShares® MSCI Emerging Markets ETF on any annual determination date is greater than or equal to its respective initial level.

The following scenarios are for illustrative purposes only to demonstrate how an automatic early redemption payment or the payment at maturity (if the securities have not previously been redeemed) are calculated, and do not attempt to demonstrate every situation that may occur. Accordingly, the securities may or may not be redeemed prior to maturity and the payment at maturity may be less than 60% of the stated principal amount of the securities and may be zero.

Scenario 1: The securities are redeemed prior to maturity

When each underlying closes at or above its respective initial level on any annual determination date, the securities will be automatically redeemed for the applicable early redemption payment on the related early redemption date. Investors do not participate in any appreciation in any underlying.

Scenario 2: The securities are not redeemed prior to maturity, and investors receive a fixed positive return at maturity

This scenario assumes that at least one underlying closes below its respective initial level on each of the annual determination dates. Consequently, the securities are not redeemed prior to maturity. On the final determination date, each underlying closes at or above its respective downside threshold level. At maturity, investors will receive a cash payment equal to \$1,548 per stated principal amount. Investors do not participate in any appreciation in any underlying.

Scenario 3: The securities are not redeemed prior to maturity, and investors suffer a substantial loss of principal at maturity

This scenario assumes that at least one underlying closes below its respective initial level on each of the annual determination dates. Consequently, the securities are not redeemed prior to maturity. On the final determination date, at least one underlying closes below its respective downside threshold level. At maturity, investors will receive an amount equal to the stated principal amount multiplied by the underlying performance factor of the worst performing underlying. Under these circumstances, the payment at maturity will be significantly less than the stated principal amount and could be zero.

Principal at Risk Securities

Hypothetical Examples

The following hypothetical examples are for illustrative purposes only. Whether the securities are redeemed prior to maturity will be determined by reference to the closing level of each underlying on each of the annual determination dates, and the payment at maturity, if any, will be determined by reference to the closing level of each underlying on the final determination date. The actual initial levels and downside threshold levels will be determined on the pricing date. Some numbers appearing in the examples below have been rounded for ease of analysis. All payments on the securities are subject to our credit risk. The below examples are based on the following terms:

The early redemption payment will be an amount in cash per stated principal amount (corresponding to a return of approximately 13.70% *per annum*) for each annual determination date, as follows:

Early Redemption
Payment:

· Ist determination date: \$1,137

· Jnd determination date: \$1,274

· Krd determination date: \$1,411

Payment at Maturity

No further payments will be made on the securities once they have been redeemed. If the securities have not previously been redeemed, you will receive at maturity a cash payment per security as follows:

· If the final level of **each** underlying is **greater than or equal to** its respective downside threshold level:

\$1,548

- If the final level of **any underlying** is **less than** its respective downside threshold level:

\$1,000 × underlying performance factor of the worst performing underlying.

Under these circumstances, you will lose a significant portion or all of your investment.

Stated Principal
Amount:

\$1,000

With respect to the SX7P Index: 160

Hypothetical Initial
Level:

With respect to the XOP Shares: \$40

With respect to the EEM Shares: \$45

With respect to the SX7P Index: 96, which is 60% of its hypothetical initial level

Hypothetical Downside
Threshold Level:

With respect to the XOP Shares: \$24, which is 60% of the hypothetical initial level

With respect to the EEM Shares: \$27, which is 60% of the hypothetical initial level

All Payments on the Securities Based on the Worst Performing of the STOXX® Europe 600 Banks Index, the SPDR® S&P® Oil & Gas Exploration & Production ETF and the iShares® MSCI Emerging Markets ETF

Principal at Risk Securities

Automatic Call:

Example 1 — the securities are redeemed following the second determination date

Date	SX7P Index Closing Level	XOP Shares Closing Level	EEM Shares Closing Level	Payment (per Security)
1 st Determination Date	150 (below the initial level)	\$50 (at or above the initial level)	\$65 (at or above the initial level)	--
2 nd Determination Date	180 (at or above the initial level)	\$65 (at or above the initial level)	\$78 (at or above the initial level)	\$1,274

In this example, on the first determination date, the closing levels of two of the underlyings are at or above their respective initial levels, but the closing level of the other underlying is below its respective initial level. Therefore, the securities are not redeemed. On the second determination date, the closing level of each underlying is at or above the respective initial level. Therefore, the securities are automatically redeemed on the second early redemption date. Investors will receive a payment of \$1,274 per security on the related early redemption date. No further payments will be made on the securities once they have been redeemed, and investors do not participate in the appreciation in any underlying.

How to calculate the payment at maturity:

In the following examples, one or more of the underlyings close below the respective initial level(s) on each of the annual determination dates, and, consequently, the securities are not automatically redeemed prior to, and remain outstanding until, maturity.

	SX7P Index Final Level	XOP Shares Final Level	EEM Shares Final Level	Payment at Maturity (per Security)
Example 1:	180 (at or above its downside threshold level)	\$45 (at or above its downside threshold level)	\$50 (at or above its downside threshold level)	\$1,548
Example 2:	200 (at or above its downside threshold level)	\$48 (at or above its downside threshold level)	\$18 (below its downside threshold level)	\$1,000 x (\$18 / \$45) = \$400

Edgar Filing: MORGAN STANLEY - Form FWP

Example 32	(below its downside threshold level)	\$50 (at or above its downside threshold level)	\$33.75 (at or above its downside threshold level)	$\$1,000 \times (32 / 160) =$
3:				\$200
Example 32	(below its downside threshold level)	\$20 (below its downside threshold level)	\$18 (below its downside threshold level)	$\$1,000 \times (32 / 160) =$
4:				\$200

In example 1, the final level of each underlying is at or above its respective downside threshold level. Therefore, investors receive \$1,548 per security at maturity. Investors do not participate in any appreciation in any underlying.

In example 2, the final levels of two of the underlyings are at or above their respective downside threshold levels, but the final level of the other underlying is below its respective downside threshold level. Therefore, investors are exposed to the downside performance of the worst performing underlying at maturity. The SX7P Index has increased 25% from its initial level to its final level, the XOP Shares have increased 20% from the respective initial level to the respective final level and the EEM Shares have declined 60% from the respective initial level to the respective final level. Therefore, investors receive at maturity an amount equal to the stated principal amount times the underlying performance factor of the EEM Shares, which represent the worst performing underlying in this example.

In example 3, the final levels of two of the underlyings are at or above their respective downside threshold levels, but the final level of the other underlying is below its respective downside threshold level. Therefore, investors are exposed to the downside performance of the worst performing underlying at maturity. The EEM Shares have declined 25% from the respective initial level to

Morgan Stanley Finance LLC

Principal at Risk Securities

the respective final level, the XOP Shares have increased 25% from the respective initial level to the respective final level and the SX7P Index has declined 80% from its initial level to its final level. Therefore, investors receive at maturity an amount equal to the stated principal amount times the underlying performance factor of the SX7P Index, which is the worst performing underlying in this example.

In example 4, the final level of each underlying is below its respective downside threshold level, and so investors receive at maturity an amount equal to the stated principal amount *times* the underlying performance factor of the worst performing underlying. The SX7P Index has declined 80% from its initial level to its final level, the XOP Shares have declined 50% from the respective initial level to the respective final level and the EEM Shares have declined 60% from the respective initial level to the respective final level. Therefore, the payment at maturity equals the stated principal amount *times* the underlying performance factor of the SX7P Index, which is the worst performing underlying in this example.

If the securities are not redeemed prior to maturity and the final level of any underlying is below its respective downside threshold level, you will be exposed to the downside performance of the worst performing underlying at maturity, and your payment at maturity will be less than 60% of the stated principal amount per security and could be zero.

Risk Factors

The following is a list of certain key risk factors for investors in the securities. For further discussion of these and other risks, you should read the section entitled “Risk Factors” in the accompanying product supplement, index supplement and prospectus. We also urge you to consult with your investment, legal, tax, accounting and other advisers in connection with your investment in the securities.

The securities do not pay interest or guarantee the return of any principal. The terms of the securities differ from those of ordinary debt securities in that they do not pay interest or guarantee the return of any of the principal amount at maturity. If the securities have not been automatically redeemed prior to maturity and the final level of **any underlying** is less than its respective downside threshold level of 60% of its initial level, you will be exposed to the decline in the value of the worst performing underlying, as compared to its initial level, on a 1-to-1 basis, and you will receive for each security that you hold at maturity an amount equal to the stated principal amount *times* the underlying performance factor of the worst performing underlying. In this case, the payment at maturity will be less than 60% of the stated principal amount and could be zero.

The appreciation potential of the securities is limited by the fixed early redemption payment or payment at maturity specified for each determination date. The appreciation potential of the securities is limited to the fixed early redemption payment specified for each determination date if each underlying closes at or above its respective initial level on any annual determination date, or to the fixed upside payment at maturity if the securities have not been redeemed and the final level of each underlying is at or above its downside threshold level. In all cases, you will not participate in any appreciation of any underlying, which could be significant.

You are exposed to the price risk of each underlying. Your return on the securities is not linked to a basket consisting of each underlying. Rather, it will be contingent upon the independent performance of each underlying. Unlike an instrument with a return linked to a basket of underlying assets, in which risk is mitigated and diversified among all the components of the basket, you will be exposed to the risks related to each underlying. Poor performance by **any underlying** over the term of the securities may negatively affect your return and will not be offset or mitigated by any positive performance by any of the other underlyings. To receive an early redemption payment, **each underlying** must close at or above its respective initial level on the applicable determination date. In addition, if the securities have not been redeemed and **at least one underlying** has declined to below its respective downside threshold level as of the final determination date, you will be **fully exposed** to the decline in the worst performing underlying over the term of the securities on a 1-to-1 basis, even if one or more of the other underlyings have appreciated or have not declined as much. Under this scenario, the value of any such payment at maturity will be less than 60% of the stated principal amount and could be zero. Accordingly, your investment is subject to the price risk of each underlying.

The securities are subject to our credit risk, and any actual or anticipated changes to our credit ratings or credit spreads may adversely affect the market value of the securities. You are dependent on our ability to pay all amounts due on the securities upon an early redemption or at maturity and therefore you are subject to our credit risk. If we default on our obligations under the securities, your investment would be at risk and you could lose some or all of your investment. As a result, the market value of the securities prior to maturity will be affected by changes in the market's view of our creditworthiness. Any actual or anticipated decline in our credit ratings or increase in the credit spreads charged by the market for taking our credit risk is likely to adversely affect the market value of the securities.

As a finance subsidiary, MSFL has no independent operations and will have no independent assets. As a finance subsidiary, MSFL has no independent operations beyond the issuance and administration of its securities and will have no independent assets available for distributions to holders of MSFL securities if they make claims in respect of such securities in a bankruptcy, resolution or similar proceeding. Accordingly, any recoveries by such holders will be limited to those available under the related guarantee by Morgan Stanley and that guarantee will rank *pari passu* with all other unsecured, unsubordinated obligations of Morgan Stanley. Holders will have recourse only to a single claim against Morgan Stanley and its assets under the guarantee. Holders of securities issued by MSFL should accordingly assume that in any such proceedings they would not have any priority over and should be treated *pari passu* with the

Principal at Risk Securities

claims of other unsecured, unsubordinated creditors of Morgan Stanley, including holders of Morgan Stanley-issued securities.

The securities are linked to the STOXX® Europe 600 Banks Index and the iShares® MSCI Emerging Markets ETF and are subject to risks associated with investments in securities linked to the value of foreign (and emerging markets) equity securities. As the STOXX® Europe 600 Banks Index and the iShares® MSCI Emerging Markets ETF are underlyings, the securities are linked to the value of foreign equity securities. In addition, the price of the EEM Shares tracks the performance of the MSCI Emerging Markets IndexSM, which measures the value of emerging markets equity securities. Investments in securities linked to the value of foreign equity securities involve risks associated with the securities markets in those countries, including risks of volatility in those markets, governmental intervention in those markets and cross-shareholdings in companies in certain countries. Also, there is generally less publicly available information about foreign companies than about U.S. companies that are subject to the reporting requirements of the United States Securities and Exchange Commission, and foreign companies are subject to accounting, auditing and financial reporting standards and requirements different from those applicable to U.S. reporting companies. The prices of securities issued in foreign markets may be affected by political, economic, financial and social factors in those countries, or global regions, including changes in government, economic and § fiscal policies and currency exchange laws. In addition, the stocks included in the MSCI Emerging Markets IndexSM and that are generally tracked by the EEM Shares have been issued by companies in various emerging markets countries, which pose further risks in addition to the risks associated with investing in foreign equity markets generally. Countries with emerging markets may have relatively unstable governments, may present the risks of nationalization of businesses, restrictions on foreign ownership and prohibitions on the repatriation of assets, and may have less protection of property rights than more developed countries. The economies of countries with emerging markets may be based on only a few industries, may be highly vulnerable to changes in local or global trade conditions, and may suffer from extreme and volatile debt burdens or inflation rates. Local securities markets may trade a small number of securities and may be unable to respond effectively to increases in trading volume, potentially making prompt liquidation of holdings difficult or impossible at times. Moreover, the economies in such countries may differ favorably or unfavorably from the economy in the United States in such respects as growth of gross national product, rate of inflation, capital reinvestment, resources, self-sufficiency and balance of payment positions between countries.

§ Investing in the securities exposes investors to risks associated with investments in securities with a concentration in the banking sector. The stocks included in the STOXX® Europe 600 Banks Index are stocks of companies whose primary business is directly associated with the banking sector. As a result, the value of the securities may be subject to greater volatility and may be more adversely affected by a single economic, political or regulatory occurrence affecting this industry than a different investment linked to securities of a more broadly diversified group of issuers or issuers in a less volatile industry. The performance of bank stocks may be affected by governmental regulation that may, among other things, limit the amount and types of loans and other financial commitments that banks can make, the interest rates and fees they can charge and the amount of capital they must maintain. Profitability is largely dependent on the availability and cost of capital funds, and can fluctuate

significantly when interest rates change. Credit losses resulting from financial difficulties of borrowers can negatively impact the banking sector. Banks may also be subject to severe price competition. These or other factors or the absence of such factors could cause the value of some or all of the component stocks included in the SX7P Index to decline during the term of the securities

Investing in the securities exposes investors to risks associated with investments in securities with a concentration in the oil and gas exploration and production industry. The stocks included in the S&P[®] Oil & Gas Exploration & Production Select Industry Index[®] (together with the MSCI Emerging Markets IndexSM, the “share underlying indices”) and that are generally tracked by the XOP Shares are stocks of companies whose primary business is associated with the exploration and production of oil and gas. As a result, the value of the securities may be subject to greater volatility and may be more adversely affected by a single economic, political or regulatory occurrence affecting this industry than a different investment linked to securities of a more broadly diversified group of issuers or issuers in a less volatile industry. The oil and gas industry is significantly affected by a number of factors that influence worldwide economic conditions and oil and gas prices, such as natural disasters, supply disruptions, geopolitical events and other factors that may offset or magnify each other, including:

Principal at Risk Securities

- o worldwide and domestic supplies of, and demand for, crude oil and natural gas;
- o the cost of exploring for, developing, producing, refining and marketing crude oil and natural gas;
 - o consumer confidence;
 - o changes in weather patterns and climatic changes;
 - o the ability of the members of Organization of Petroleum Exporting Countries (OPEC) and other producing nations to agree to and maintain production levels;
 - o the worldwide military and political environment, uncertainty or instability resulting from an escalation or additional outbreak of armed hostilities or further acts of terrorism in the United States, or elsewhere;
 - o the price and availability of alternative and competing fuels;
 - o domestic and foreign governmental regulations and taxes;
 - o employment levels and job growth; and
 - o general economic conditions worldwide.

These or other factors or the absence of such factors could cause a downturn in the oil and natural gas industries generally or regionally and could cause the value of some or all of the component stocks included in the share underlying index to decline during the term of the securities

§ The securities are linked to the iShares® MSCI Emerging Markets ETF and are subject to currency exchange risk. Because the price of the EEM Shares is related to the U.S. dollar value of stocks underlying the MSCI Emerging Markets IndexSM, holders of the securities will be exposed to currency exchange rate risk with respect to each of the currencies in which such component securities trade. Exchange rate movements for a particular currency

are volatile and are the result of numerous factors including the supply of, and the demand for, those currencies, as well as relevant government policy, intervention or actions, but are also influenced significantly from time to time by political or economic developments, and by macroeconomic factors and speculative actions related to the relevant region. An investor's net exposure will depend on the extent to which the currencies of the component securities strengthen or weaken against the U.S. dollar and the relative weight of each security. If, taking into account such weighting, the dollar strengthens against the currencies of the component securities represented in the MSCI Emerging Markets IndexSM, the price of the EEM Shares will be adversely affected and the payment on the securities may be reduced.

Of particular importance to potentially currency exchange risk are:

- o existing and expected rates of inflation;
- o existing and expected interest rate levels;
- o the balance of payments; and

o the extent of governmental surpluses or deficits in the countries represented in the MSCI Emerging Markets IndexSM and the United States.

All of these factors are in turn sensitive to the monetary, fiscal and trade policies pursued by the governments of various countries represented in the MSCI Emerging Markets IndexSM and the United States and other countries important to international trade and finance.

The market price will be influenced by many unpredictable factors. Several factors, many of which are beyond our control, will influence the value of the securities in the secondary market and the price at which MS & Co. may be willing to purchase or sell the securities in the secondary market. We expect that generally the level of interest rates available in the market and the value of each underlying on any day, including in relation to its respective initial level and downside threshold level, will affect the value of the securities more than any other factors. Other factors that may influence the value of the securities include:

Morgan Stanley Finance LLC

Jump Securities with Auto-Callable Feature due August 31, 2022

All Payments on the Securities Based on the Worst Performing of the STOXX® Europe 600 Banks Index, the SPDR® S&P® Oil & Gas Exploration & Production ETF and the iShares® MSCI Emerging Markets ETF

Principal at Risk Securities

- o the volatility (frequency and magnitude of changes in value) of the underlyings,

geopolitical conditions and economic, financial, political, regulatory or judicial events that affect the component stocks of the SX7P Index, the XOP Shares or the EEM Shares or securities markets generally and which may affect the value of each underlying,

- o dividend rates on the securities underlying the SX7P Index, the XOP Shares or the EEM Shares,

- o the time remaining until the securities mature,

- o interest and yield rates in the market,

- o the availability of comparable instruments,

o the composition of the underlyings and changes in the constituent stocks of SX7P Index, the XOP Shares or the EEM Shares, and

- o any actual or anticipated changes in our credit ratings or credit spreads.

Some or all of these factors will influence the price that you will receive if you sell your securities prior to maturity. For example, you may have to sell your securities at a substantial discount from the stated principal amount of \$1,000 per security if the price of any underlying at the time of sale is near or below its downside threshold level or if market interest rates rise.

You cannot predict the future performance of any underlying based on its historical performance. The value(s) of one or more of the underlyings may decrease so that you will receive no return on your investment and receive a payment at maturity that is less than 60% of the stated principal amount. See “STOXX® Europe 600 Banks Index Overview,” “SPDR® S&P® Oil & Gas Exploration & Production ETF Overview” and “iShares® MSCI Emerging Markets ETF Overview” below.

Not equivalent to investing in any underlying or the component stocks of the SX7P Index, the XOP Shares or the EEM Shares. Investing in the securities is not equivalent to investing in any underlying or the component stocks of the SX7P Index, the XOP Shares or the EEM Shares. Investors in the securities will not participate in any positive performance of any underlying, and will not have voting rights or rights to receive dividends or other distributions or any other rights with respect to stocks that constitute the SX7P Index, the XOP Shares or the EEM Shares.

Reinvestment risk. The term of your investment in the securities may be shortened due to the automatic early redemption feature of the securities. If the securities are redeemed prior to maturity, you will receive no further payments on the securities and may be forced to invest in a lower interest rate environment and may not be able to reinvest at comparable terms or returns.

The securities will not be listed on any securities exchange and secondary trading may be limited, and accordingly, you should be willing to hold your securities for the entire 4-year term of the securities. The securities will not be listed on any securities exchange. Therefore, there may be little or no secondary market for the securities. MS & Co. may, but is not obligated to, make a market in the securities and, if it once chooses to make a market, may cease doing so at any time. When it does make a market, it will generally do so for transactions of routine secondary market size at prices based on its estimate of the current value of the securities, taking into account its bid/offer spread, our credit spreads, market volatility, the notional size of the proposed sale, the cost of unwinding any related hedging positions, the time remaining to maturity and the likelihood that it will be able to resell the securities. Even if there is a secondary market, it may not provide enough liquidity to allow you to trade or sell the securities easily. Since other broker-dealers may not participate significantly in the secondary market for the securities, the price at which you may be able to trade your securities is likely to depend on the price, if any, at which MS & Co. is willing to transact. If, at any time, MS & Co. were to cease making a market in the securities, it is likely that there would be no secondary market for the securities. Accordingly, you should be willing to hold your securities to maturity.

Adjustments to the SX7P Index could adversely affect the value of the securities. The publisher of the SX7P Index may add, delete or substitute the stocks constituting the SX7P Index or make other methodological changes that

Morgan Stanley Finance LLC

Jump Securities with Auto-Callable Feature due August 31, 2022

Principal at Risk Securities

could change the value of the SX7P Index. The publisher of the SX7P Index may discontinue or suspend calculation or publication of the SX7P Index at any time. In these circumstances, the calculation agent will have the sole discretion to substitute a successor index that is comparable to the discontinued underlying and will be permitted to consider indices that are calculated and published by the calculation agent or any of its affiliates.

Adjustments to the XOP Shares or the EEM Shares or the indices tracked by such underlyings could adversely affect the value of the securities. The investment adviser to the XOP Shares and the EEM Shares, SSgA Funds Management, Inc. for the XOP Shares and BlackRock Fund Advisors for the EEM Shares (each an “Investment Adviser”), seeks investment results that correspond generally to the price and yield performance, before fees and expenses, of the relevant share underlying index. Pursuant to its investment strategies or otherwise, the Investment Adviser may add, delete or substitute the stocks composing the respective underlying. Any of these actions could adversely affect the price of the respective underlying and, consequently, the value of the securities. § The publisher of each of the share underlying indices is responsible for calculating and maintaining the relevant share underlying index. The publisher may add, delete or substitute the stocks constituting the relevant share underlying index or make other methodological changes that could change the level of the relevant share underlying index. The publisher of a share underlying index may discontinue or suspend calculation or publication of the relevant share underlying index at any time. In these circumstances, the calculation agent will have the sole discretion to substitute a successor index that is comparable to the discontinued share underlying index and is permitted to consider indices that are calculated and published by the calculation agent or any of its affiliates. Any of these actions could adversely affect the price of the XOP Shares or the EEM Shares and, consequently, the value of the securities.

The performance and market price of any of the XOP Shares or the EEM Shares, particularly during periods of market volatility, may not correlate with the performance of its respective share underlying index, the performance of the component securities of such share underlying index or the net asset value per share of the XOP Shares or the EEM Shares. The XOP Shares and the EEM Shares do not fully replicate their respective share underlying indices and may hold securities that are different than those included in the respective share underlying index. In addition, the performance of the XOP Shares and the EEM Shares will reflect additional transaction costs and fees that are not included in the calculation of the share underlying indices. All of these factors may lead to a § lack of correlation between the performance of XOP Shares or the EEM Shares and its respective share underlying index. In addition, corporate actions (such as mergers and spin-offs) with respect to the equity securities underlying the XOP Shares or the EEM Shares may impact the variance between the performance of XOP Shares or the EEM Shares and its respective share underlying index. Finally, because the shares of the XOP Shares and the EEM Shares are traded on an exchange and are subject to market supply and investor demand, the market price of one share of the XOP Shares or the EEM Shares may differ from the net asset value per share of the XOP Shares or the EEM Shares, respectively.

In particular, during periods of market volatility, or unusual trading activity, trading in the securities underlying the XOP Shares or the EEM Shares may be disrupted or limited, or such securities may be unavailable in the secondary market. Under these circumstances, the liquidity of the XOP Shares or the EEM Shares may be adversely affected, market participants may be unable to calculate accurately the net asset value per share of the XOP Shares or the EEM Shares, and their ability to create and redeem shares of the XOP Shares or the EEM Shares may be disrupted. Under these circumstances, the market price of shares of the XOP Shares or the EEM Shares may vary substantially from the net asset value per share of each respective underlying shares or the level of the respective share underlying index.

For all of the foregoing reasons, the performance of the XOP Shares or the EEM Shares may not correlate with the performance of its respective share underlying index, the performance of the component securities of such share underlying index or the net asset value per share of the XOP Shares or the EEM Shares. Any of these events could materially and adversely affect the price of the shares of each of the XOP Shares or the EEM Shares and, therefore, the value of the securities. Additionally, if market volatility or these events were to occur on any of the determination dates, the calculation agent would maintain discretion to determine whether such market volatility or events have caused a market disruption event to occur, and such determination may affect the payment on the securities. If the calculation agent determines that no market disruption event has taken place, the payment at maturity would be based on the published closing price per share of the XOP Shares or the EEM Shares on the applicable determination date, even if

Principal at Risk Securities

the XOP Shares or the EEM Shares' shares are underperforming its respective share underlying index or the component securities of such share underlying index and/or trading below the net asset value per share of the XOP Shares or the EEM Shares.

The antidilution adjustments the calculation agent is required to make do not cover every event that could affect the XOP Shares and the EEM Shares. MS & Co., as calculation agent, will adjust the adjustment factors for certain events affecting the XOP Shares or the EEM Shares. However, the calculation agent will not make an § adjustment for every event that can affect the XOP Shares or the EEM Shares. If an event occurs that does not require the calculation agent to adjust an adjustment factor, the market price of the securities may be materially and adversely affected.

The rate we are willing to pay for securities of this type, maturity and issuance size is likely to be lower than the rate implied by our secondary market credit spreads and advantageous to us. Both the lower rate and the inclusion of costs associated with issuing, selling, structuring and hedging the securities in the original issue price reduce the economic terms of the securities, cause the estimated value of the securities to be less than the original issue price and will adversely affect secondary market prices. Assuming no change in market conditions § or any other relevant factors, the prices, if any, at which dealers, including MS & Co., may be willing to purchase the securities in secondary market transactions will likely be significantly lower than the original issue price, because secondary market prices will exclude the issuing, selling, structuring and hedging-related costs that are included in the original issue price and borne by you and because the secondary market prices will reflect our secondary market credit spreads and the bid-offer spread that any dealer would charge in a secondary market transaction of this type as well as other factors.

The inclusion of the costs of issuing, selling, structuring and hedging the securities in the original issue price and the lower rate we are willing to pay as issuer make the economic terms of the securities less favorable to you than they otherwise would be.

However, because the costs associated with issuing, selling, structuring and hedging the securities are not fully deducted upon issuance, for a period of up to 6 months following the issue date, to the extent that MS & Co. may buy or sell the securities in the secondary market, absent changes in market conditions, including those related to the underlyings, and to our secondary market credit spreads, it would do so based on values higher than the estimated value, and we expect that those higher values will also be reflected in your brokerage account statements.

§

The estimated value of the securities is determined by reference to our pricing and valuation models, which may differ from those of other dealers, and is not a maximum or minimum secondary market price. These pricing and valuation models are proprietary and rely in part on subjective views of certain market inputs and certain assumptions about future events, which may prove to be incorrect. As a result, because there is no market-standard way to value these types of securities, our models may yield a higher estimated value of the securities than those generated by others, including other dealers in the market, if they attempted to value the securities. In addition, the estimated value on the pricing date does not represent a minimum or maximum price at which dealers, including MS & Co., would be willing to purchase your securities in the secondary market (if any exists) at any time. The value of your securities at any time after the date of this document will vary based on many factors that cannot be predicted with accuracy, including our creditworthiness and changes in market conditions. See also “The market price will be influenced by many unpredictable factors” above.

Hedging and trading activity by our affiliates could potentially affect the value of the securities. One or more of our affiliates and/or third-party dealers expect to carry out hedging activities related to the securities (and to other instruments linked to any underlying or the share underlying indices), including taking positions in stocks constituting the SX7P Index, the XOP Shares or the EEM Shares or taking positions in the XOP Shares or the EEM Shares, futures and/or options contracts on the SX7P Index, the XOP Shares, the EEM Shares, the share underlying § indices or their component stocks listed on major securities markets. As a result, these entities may be unwinding or adjusting hedge positions during the term of the securities, and the hedging strategy may involve greater and more frequent dynamic adjustments to the hedge as the final determination date approaches. Some of our affiliates also trade the stocks that constitute the underlyings and other financial instruments related to the underlyings on a regular basis as part of their

Morgan Stanley Finance LLC

Principal at Risk Securities

general broker-dealer and other businesses. Any of these hedging or trading activities on or prior to the pricing date could potentially increase the initial level of an underlying, and, therefore, could increase (i) the value at or above which such underlying must close on the determination dates so that the securities are redeemed prior to maturity for the early redemption payment (depending also on the performance of the other underlyings) and (ii) the downside threshold level for such underlying, which is the value at or above which such underlying must close on the final determination date so that you are not exposed to the negative performance of the worst performing underlying at maturity (depending also on the performance of the other underlyings). Additionally, such hedging or trading activities during the term of the securities could potentially affect the value of any underlying on the determination dates, and, accordingly, whether we redeem the securities prior to maturity and the amount of cash you will receive at maturity, if any.

The calculation agent, which is a subsidiary of Morgan Stanley and an affiliate of MSFL, will make determinations with respect to the securities. As calculation agent, MS & Co. will determine the initial levels, the downside threshold levels, the final levels, whether the securities will be redeemed on any early redemption date and the payment at maturity, if any. Moreover, certain determinations made by MS & Co., in its capacity as calculation agent, may require it to exercise discretion and make subjective judgments, such as with respect to the occurrence or non-occurrence of market disruption events, whether to make any adjustments to an adjustment factor and the selection of a successor index or calculation of the index closing value of the SX7P Index or the closing price of the § XOP Shares or the EEM Shares, as applicable, in the event of a market disruption event or discontinuance of an underlying. These potentially subjective determinations may affect the payout to you upon an early redemption or at maturity, if any. For further information regarding these types of determinations, see “Description of Auto-Callable Securities—Postponement of Determination Dates,” “—Alternate Exchange Calculation in Case of an Event of Default,” “—Discontinuance of Any Underlying; Alternation of Method of Calculation” and “—Calculation Agent and Calculations” in the accompanying product supplement. In addition, MS & Co. has determined the estimated value of the securities on the pricing date.

§ **The U.S. federal income tax consequences of an investment in the securities are uncertain.** Please read the discussion under “Additional Provisions – Tax considerations” in this document and the discussion under “United States Federal Taxation” in the accompanying product supplement for auto-callable securities (together, the “Tax Disclosure Sections”) concerning the U.S. federal income tax consequences of an investment in the securities. If the Internal Revenue Service (the “IRS”) were successful in asserting an alternative treatment for the securities, the timing and character of income on the securities might differ significantly from the tax treatment described in the Tax Disclosure Sections. For example, under one possible treatment, the IRS could seek to recharacterize the securities as debt instruments. In that event, U.S. Holders would be required to accrue into income original issue discount on the securities every year at a “comparable yield” determined at the time of issuance and recognize all income and gain in respect of the securities as ordinary income. Additionally, as discussed under “United States Federal Taxation—FATCA” in the accompanying product supplement for auto-callable securities, the withholding rules commonly referred to as “FATCA” would apply to the securities if they were recharacterized as debt instruments. The risk that financial instruments providing for buffers, triggers or similar downside protection features, such as the

securities, would be recharacterized as debt is greater than the risk of recharacterization for comparable financial instruments that do not have such features. We do not plan to request a ruling from the IRS regarding the tax treatment of the securities, and the IRS or a court may not agree with the tax treatment described in the Tax Disclosure Sections.

In 2007, the U.S. Treasury Department and the IRS released a notice requesting comments on the U.S. federal income tax treatment of “prepaid forward contracts” and similar instruments. The notice focuses in particular on whether to require holders of these instruments to accrue income over the term of their investment. It also asks for comments on a number of related topics, including the character of income or loss with respect to these instruments; whether short-term instruments should be subject to any such accrual regime; the relevance of factors such as the exchange-traded status of the instruments and the nature of the underlying property to which the instruments are linked; the degree, if any, to which income (including any mandated accruals) realized by non-U.S. investors should be subject to withholding tax; and whether these instruments are or should be subject to the “constructive ownership” rule, which very generally can operate to recharacterize certain long-term capital gain as ordinary income and impose an interest charge. While the notice requests comments on appropriate transition rules and effective dates, any Treasury regulations or other

guidance promulgated after consideration of these issues could materially and adversely affect the tax consequences of an investment in the securities, possibly with retroactive effect. Both U.S. and Non-U.S. Holders should consult their tax advisers regarding the U.S. federal income tax consequences of an investment in the securities, including possible alternative treatments, the issues presented by this notice and any tax consequences arising under the laws of any state, local or non-U.S. taxing jurisdiction.

STOXX® Europe 600 Banks Index Overview

The STOXX® Europe 600 Banks Index is one of the STOXX® Europe 600 Supersector indices that compose the STOXX® Europe 600 Index. Each of the 19 STOXX® Europe 600 Supersector indices is intended to track a supersector of the STOXX® Europe 600 Index, determined by reference to the Industry Classification Benchmark, an international system for categorizing companies that is maintained by FTSE International Limited. The STOXX® Europe 600 Banks Index includes companies in the banks supersector, which tracks companies providing a broad range of financial services. The STOXX® Europe 600 Index consists of the 600 largest companies by free-float market capitalization traded on the major exchanges of 18 European countries. The STOXX® Europe 600 Banks Index is calculated in euros and is reported by Bloomberg under the ticker symbol “SX7P.” For additional information about the STOXX® Europe 600 Banks Index, see the description of the Underlying in “Annex A: STOXX® Europe 600 Banks Index” below.

SPDR® S&P® Oil & Gas Exploration & Production ETF Overview

The SPDR® S&P® Oil & Gas Exploration & Production ETF is an exchange-traded fund that seeks to provide investment results that, before fees and expenses, correspond generally to the total return performance of publicly traded equity securities of companies included in the S&P® Oil & Gas Exploration & Production Select Industry Index®. The SPDR® S&P® Oil & Gas Exploration & Production ETF is managed by SPDR® Series Trust (“SPDR Trust”), a registered investment company that consists of numerous separate investment portfolios, including the SPDR® S&P® Oil & Gas Exploration & Production ETF. Information provided to or filed with the Securities and Exchange Commission by SPDR Trust pursuant to the Securities Act of 1933 and the Investment Company Act of 1940 can be located by reference to Commission file numbers 333-57793 and 811-08839, respectively, through the Commission’s website at www.sec.gov. In addition, information may be obtained from other publicly available sources. **Neither the issuer nor the agent makes any representation that any such publicly available information regarding the SPDR® S&P® Oil & Gas Exploration & Production ETF is accurate or complete.**

Tax

considerations:

Although there is uncertainty regarding the U.S. federal income tax consequences of an investment in the securities due to the lack of governing authority, in the opinion of our counsel, Davis Polk & Wardwell LLP, under current law, and based on current market conditions, each security should be treated as a single financial contract that is an "open transaction" for U.S. federal income tax purposes.

Assuming this treatment of the securities is respected and subject to the discussion in "United States Federal Taxation" in the accompanying product supplement for auto-callable securities, the following U.S. federal income tax consequences should result based on current law:

§ A U.S. Holder should not be required to recognize taxable income over the term of the securities prior to settlement, other than pursuant to a sale or exchange.

§ Upon sale, exchange or settlement of the securities, a U.S. Holder should recognize gain or loss equal to the difference between the amount realized and the U.S. Holder's tax basis in the securities. Such gain or loss should be long-term capital gain or loss if the investor has held the securities for more than one year, and short-term capital gain or loss otherwise.

In 2007, the U.S. Treasury Department and the Internal Revenue Service (the "IRS") released a notice requesting comments on the U.S. federal income tax treatment of "prepaid forward contracts" and similar instruments. The notice focuses in particular on whether to require holders of these instruments to accrue income over the term of their investment. It also asks for comments on a number of related topics, including the character of income or loss with respect to these instruments; whether short-term instruments should be subject to any such accrual regime; the relevance of factors such as the exchange-traded status of the instruments and the nature of the underlying property to which the instruments are linked; the degree, if any, to which income (including any mandated accruals) realized by non-U.S. investors should be subject to withholding tax; and whether these instruments are or should be subject to the "constructive ownership" rule, which very generally can operate to recharacterize certain long-term capital gain as ordinary income and impose an interest charge. While the notice requests comments on appropriate transition rules and effective dates, any Treasury regulations or other guidance promulgated after consideration of these issues could materially and adversely affect the tax consequences of an investment in the securities, possibly with retroactive effect.

As discussed in the accompanying product supplement for auto-callable securities, Section 871(m) of the Internal Revenue Code of 1986, as amended, and Treasury regulations promulgated thereunder ("Section 871(m)") generally impose a 30% (or a lower applicable treaty rate) withholding tax on dividend equivalents paid or deemed paid to Non-U.S. Holders with respect to certain financial instruments linked to U.S. equities or indices that include U.S. equities (each, an "Underlying Security"). Subject to certain exceptions, Section 871(m)

Morgan Stanley Finance LLC

Principal at Risk Securities

generally applies to securities that substantially replicate the economic performance of one or more Underlying Securities, as determined based on tests set forth in the applicable Treasury regulations (a “Specified Security”). However, pursuant to an IRS notice, Section 871(m) will not apply to securities issued before January 1, 2019 that do not have a delta of one with respect to any Underlying Security. Based on our determination that the securities do not have a delta of one with respect to any Underlying Security, our counsel is of the opinion that the securities should not be Specified Securities and, therefore, should not be subject to Section 871(m).

Our determination is not binding on the IRS, and the IRS may disagree with this determination. Section 871(m) is complex and its application may depend on your particular circumstances, including whether you enter into other transactions with respect to an Underlying Security. If withholding is required, we will not be required to pay any additional amounts with respect to the amounts so withheld. You should consult your tax adviser regarding the potential application of Section 871(m) to the securities.

Both U.S. and non-U.S. investors considering an investment in the securities should read the discussion under “Risk Factors” in this document and the discussion under “United States Federal Taxation” in the accompanying product supplement for auto-callable securities and consult their tax advisers regarding all aspects of the U.S. federal income tax consequences of an investment in the securities, including possible alternative treatments, the issues presented by the aforementioned notice and any tax consequences arising under the laws of any state, local or non-U.S. taxing jurisdiction.

The discussion in the preceding paragraphs under “Tax considerations” and the discussion contained in the section entitled “United States Federal Taxation” in the accompanying product supplement for auto-callable securities, insofar as they purport to describe provisions of U.S. federal income tax laws or legal conclusions with respect thereto, constitute the full opinion of Davis Polk & Wardwell LLP regarding the material U.S. federal tax consequences of an investment in the securities.

Trustee: The Bank of New York Mellon

Calculation agent: MS & Co.

Use of proceeds and hedging: The proceeds from the sale of the securities will be used by us for general corporate purposes. We will receive, in aggregate, \$1,000 per security issued. The costs of the securities borne by you and described beginning on page 3 above comprise the cost of issuing, structuring and hedging the securities.

On or prior to the pricing date, we will hedge our anticipated exposure in connection with the securities by entering into hedging transactions with our affiliates and/or third-party dealers. We expect our hedging counterparties to take positions in the XOP Shares or the EEM Shares, in stocks constituting the SX7P Index, the XOP Shares or the EEM Shares, in futures and/or options contracts on the SX7P Index, the XOP Shares, the EEM Shares, the share underlying indices or their component stocks listed on major securities markets, or positions in any other available securities or instruments that they may wish to use in connection with such hedging. Such purchase activity could potentially increase the initial level of an underlying, and, as a result, increase (i) the level at or above which such underlying must close on the determination dates so that the securities are redeemed prior to maturity for the early redemption payment (depending also on the performance of the other underlyings) and (ii) the downside threshold level for such underlying, which is the level at or above which such underlying must close on the final determination date so that you are not exposed to the negative performance of the worst performing underlying at maturity (depending also on the performance of the other underlyings). In addition, through our affiliates, we are likely to modify our hedge position throughout the term of the securities, including on the determination dates, by purchasing and selling the XOP Shares or the EEM Shares, the stocks constituting the SX7P Index, the share underlying indices, future or options contracts on the SX7P Index, the XOP Shares, the EEM Shares, the share underlying indices or their component stocks listed on major securities markets or positions in any other available securities or instruments that we may wish to use in connection with such hedging activities. As a result, these entities may be unwinding or adjusting hedge positions during the term of the securities, and the hedging strategy may involve greater and more frequent dynamic adjustments to the hedge as the final determination date approaches. Additionally, our hedging activities, as well as our other trading activities, during the term of the securities could potentially affect the value of any underlying on the determination dates, and, accordingly, whether we redeem the securities

Principal at Risk Securities

prior to maturity and the amount of cash you will receive at maturity, if any. For further information on our use of proceeds and hedging, see “Use of Proceeds and Hedging” in the accompanying product supplement.

Benefit plan investor considerations: Each fiduciary of a pension, profit-sharing or other employee benefit plan subject to Title I of the Employee Retirement Income Security Act of 1974, as amended (“ERISA”) (a “Plan”), should consider the fiduciary standards of ERISA in the context of the Plan’s particular circumstances before authorizing an investment in the securities. Accordingly, among other factors, the fiduciary should consider whether the investment would satisfy the prudence and diversification requirements of ERISA and would be consistent with the documents and instruments governing the Plan.

In addition, we and certain of our affiliates, including MS & Co., may each be considered a “party in interest” within the meaning of ERISA, or a “disqualified person” within the meaning of the Internal Revenue Code of 1986, as amended (the “Code”), with respect to many Plans, as well as many individual retirement accounts and Keogh plans (such accounts and plans, together with other plans, accounts and arrangements subject to Section 4975 of the Code, also “Plans”). ERISA Section 406 and Code Section 4975 generally prohibit transactions between Plans and parties in interest or disqualified persons. Prohibited transactions within the meaning of ERISA or the Code would likely arise, for example, if the securities are acquired by or with the assets of a Plan with respect to which MS & Co. or any of its affiliates is a service provider or other party in interest, unless the securities are acquired pursuant to an exemption from the “prohibited transaction” rules. A violation of these “prohibited transaction” rules could result in an excise tax or other liabilities under ERISA and/or Section 4975 of the Code for such persons, unless exemptive relief is available under an applicable statutory or administrative exemption.

The U.S. Department of Labor has issued five prohibited transaction class exemptions (“PTCEs”) that may provide exemptive relief for direct or indirect prohibited transactions resulting from the purchase or holding of the securities. Those class exemptions are PTCE 96-23 (for certain transactions determined by in-house asset managers), PTCE 95-60 (for certain transactions involving insurance company general accounts), PTCE 91-38 (for certain transactions involving bank collective investment funds), PTCE 90-1 (for certain transactions involving insurance company separate accounts) and PTCE 84-14 (for certain transactions determined by independent qualified professional asset managers). In addition, ERISA Section 408(b)(17) and Code Section 4975(d)(20) provide an exemption for the purchase and sale of securities and the related lending transactions, provided that neither the issuer of the securities nor any of its affiliates has or exercises any discretionary authority or control or renders any investment advice with respect to the assets of the Plan involved in the transaction and provided further that the Plan pays no more, and receives no less, than “adequate consideration” in connection with the transaction (the so-called “service provider” exemption). There can be no assurance that any of these class or statutory exemptions will

be available with respect to transactions involving the securities.

Because we may be considered a party in interest with respect to many Plans, the securities may not be purchased, held or disposed of by any Plan, any entity whose underlying assets include “plan assets” by reason of any Plan’s investment in the entity (a “Plan Asset Entity”) or any person investing “plan assets” of any Plan, unless such purchase, holding or disposition is eligible for exemptive relief, including relief available under PTCEs 96-23, 95-60, 91-38, 90-1, 84-14 or the service provider exemption or such purchase, holding or disposition is otherwise not prohibited. Any purchaser, including any fiduciary purchasing on behalf of a Plan, transferee or holder of the securities will be deemed to have represented, in its corporate and its fiduciary capacity, by its purchase and holding of the securities that either (a) it is not a Plan or a Plan Asset Entity and is not purchasing such securities on behalf of or with “plan assets” of any Plan or with any assets of a governmental, non-U.S. or church plan that is subject to any federal, state, local or non-U.S. law that is substantially similar to the provisions of Section 406 of ERISA or Section 4975 of the Code (“Similar Law”) or (b) its purchase, holding and disposition of these securities will not constitute or result in a non-exempt prohibited transaction under Section 406 of ERISA or Section 4975 of the Code or violate any Similar Law.

Due to the complexity of these rules and the penalties that may be imposed upon persons involved in non-exempt prohibited transactions, it is particularly important that fiduciaries or

Principal at Risk Securities

other persons considering purchasing the securities on behalf of or with “plan assets” of any Plan consult with their counsel regarding the availability of exemptive relief.

The securities are contractual financial instruments. The financial exposure provided by the securities is not a substitute or proxy for, and is not intended as a substitute or proxy for, individualized investment management or advice for the benefit of any purchaser or holder of the securities. The securities have not been designed and will not be administered in a manner intended to reflect the individualized needs and objectives of any purchaser or holder of the securities.

Each purchaser or holder of any securities acknowledges and agrees that:

(i) the purchaser or holder or its fiduciary has made and shall make all investment decisions for the purchaser or holder and the purchaser or holder has not relied and shall not rely in any way upon us or our affiliates to act as a fiduciary or adviser of the purchaser or holder with respect to (A) the design and terms of the securities, (B) the purchaser or holder’s investment in the securities, or (C) the exercise of or failure to exercise any rights we have under or with respect to the securities;

(ii) we and our affiliates have acted and will act solely for our own account in connection with (A) all transactions relating to the securities and (B) all hedging transactions in connection with our obligations under the securities;

(iii) any and all assets and positions relating to hedging transactions by us or our affiliates are assets and positions of those entities and are not assets and positions held for the benefit of the purchaser or holder;

(iv) our interests are adverse to the interests of the purchaser or holder; and

(v) neither we nor any of our affiliates is a fiduciary or adviser of the purchaser or holder in connection with any such assets, positions or transactions, and any information that we or any of our affiliates may provide is not intended to be impartial investment advice.

Each purchaser and holder of the securities has exclusive responsibility for ensuring that its purchase, holding and disposition of the securities do not violate the prohibited transaction rules of ERISA or the Code or any Similar Law. The sale of any securities to any Plan or plan subject to Similar Law is in no respect a representation by us or any of our affiliates or representatives that such an investment meets all relevant legal requirements with respect to investments by plans generally or any particular plan, or that such an investment is appropriate for plans generally or any particular plan. In this regard, neither this discussion nor anything provided in this document is or is intended to be investment advice directed at any potential Plan purchaser or at Plan purchasers generally and such purchasers of these securities should consult and rely on their own counsel and advisers as to whether an investment in these securities is suitable.

However, individual retirement accounts, individual retirement annuities and Keogh plans, as well as employee benefit plans that permit participants to direct the investment of their accounts, will not be permitted to purchase or hold the securities if the account, plan or annuity is for the benefit of an employee of Morgan Stanley or Morgan Stanley Wealth Management or a family member and the employee receives any compensation (such as, for example, an addition to bonus) based on the purchase of the securities by the account, plan or annuity. Client accounts over which Morgan Stanley, Morgan Stanley Wealth Management or any of their respective subsidiaries have investment discretion are not permitted to purchase the securities, either directly or indirectly.

Selected dealers, which may include our affiliates, and their financial advisors will collectively receive commissions or fees of \$4 for each security.

Additional considerations:

Supplemental information regarding plan of distribution; conflicts of interest:

MS & Co. is an affiliate of MSFL and a wholly owned subsidiary of Morgan Stanley, and it and other affiliates of ours expect to make a profit by selling, structuring and, when applicable,

Annex A: STOXX® Europe 600 Banks Index

We have derived all information contained in this document regarding the STOXX® Europe 600 Banks Index, including, without limitation, its make-up, method of calculation and changes in its components, from publicly available information, without independent verification. This information reflects the policies of, and is subject to change by, STOXX Limited. The STOXX® Europe 600 Banks Index is calculated, maintained and published by STOXX Limited. STOXX Limited has no obligation to continue to publish, and may discontinue publication of, the STOXX® Europe 600 Banks Index.

The STOXX® Europe 600 Banks Index is reported by Bloomberg L.P. under the ticker symbol “SX7P.”

The STOXX® Europe 600 Banks Index is one of the 19 STOXX® Europe 600 Supersector indices that compose the STOXX® Europe 600 Index. The STOXX® Europe 600 Index consists of the 600 largest companies by free-float market capitalization traded on the major exchanges of 18 European countries.

Each of the 19 STOXX® Europe 600 Supersector indices is intended to track a supersector of the STOXX® Europe 600 Index, determined by reference to the Industry Classification Benchmark, an international system for categorizing companies that is maintained by FTSE International Limited. The STOXX Europe 600 Banks Index includes companies in the banks supersector, which tracks companies providing a broad range of financial services.

Index Composition

The composition of each of the STOXX® Europe 600 Supersector indices is reviewed quarterly, based on the closing stock data on the last trading day of the month following the implementation of the last quarterly index review. The component stocks are announced on the fourth Tuesday of the month immediately prior to the review implementation month. Changes to the component stocks are implemented after the close on the third Friday in each of March, June, September and December and are effective the following trading day.

Corporate actions (including initial public offerings, mergers and takeovers, spin-offs, delistings and bankruptcies) that affect the STOXX[®] Europe 600 Index composition are reviewed. Any changes are announced, implemented and effective in line with the type of corporate action and the magnitude of the effect.

The free-float factors for each component stock used to calculate the STOXX[®] Europe 600 Supersector indices, as described below, are reviewed, calculated and implemented on a quarterly basis and are fixed until the next quarterly review.

Index Calculation

The STOXX[®] Europe 600 Supersector indices are calculated with the “Laspeyres formula,” which measures the aggregate price changes in the component stocks against a fixed base quantity weight. The formula for calculating each STOXX[®] Europe 600 Supersector index value at any time can be expressed as follows:

$$\text{Index value} = \frac{\text{free float market capitalization of the relevant STOXX}^{\text{®}} \text{ Europe 600 Supersector Index}}{\text{Divisor}}$$

The “free float market capitalization of the relevant STOXX[®] Europe 600 Supersector Index” is equal to the sum of the products of the price, number of shares, exchange rate from local currency, free-float factor and weighting cap factor for each component stock as of the time the relevant STOXX Europe 600[®] Supersector index is being calculated.

All components of each STOXX[®] Europe 600 Supersector index are subject to a 30% cap for the largest company and 15% cap for the second largest company. The weighting cap factors are published on the second Friday of the quarter, one week prior to quarterly review, implementation and calculated using Thursday’s closing prices. In addition, an intra-quarter capping will be triggered if the largest company exceeds 35% or the second largest exceeds 20%.

The divisor for each STOXX[®] Europe 600 Supersector index is adjusted to maintain the continuity of the STOXX[®] Europe 600 Supersector index values despite changes due to corporate actions. The following is a summary of the adjustments to any component stock made for corporate actions and the effect of such adjustment on the divisor, where shareholders of the component stock will receive “B” number of shares for every “A” share held (where applicable).

(1) Split and reverse split:

$$\text{Adjusted price} = \text{closing price} \times A / B$$

New number of shares = old number of shares \times B / A

Divisor: no change
(2) Rights offering:

If the subscription price is not available or if the subscription price is equal to or greater than the closing price on the day before the effective date, then no adjustment is made

Principal at Risk Securities

Adjusted price = (closing price × A + subscription price × B) / (A + B)

New number of shares = old number of shares × (A + B) / A

Divisor: increases

(3) Stock dividend:

(4) Stock dividend of another company:

Adjusted price = closing price × A / (A + B)

Adjusted price = (closing price × A – price of other company × B) / A

New number of shares = old number of shares × (A + B) / A

Divisor: decreases

Divisor: no change

(5) Return of capital and share consideration:

(6) Repurchase of shares / self tender:

Adjusted price = (closing price – capital return announced by company × (1-withholding tax)) × A / B

Adjusted price = ((price before tender × old number of shares) – (tender price × number of tendered shares)) / (old number of shares – number of tendered shares)

New number of shares = old number of shares × B / A

New number of shares = old number of shares – number of tendered shares

Divisor: decreases

Divisor: decreases

(7) Spin-off:

$$\text{Adjusted price} = (\text{closing price} \times A - \text{price of spun-off shares} \times B) / A$$

Divisor: decreases

(8) Combination stock distribution (dividend or split) and rights offering:

For this corporate action, the following additional assumptions apply:

Shareholders receive B new shares from the distribution and C new shares from the rights offering for every A share held.

If A is not equal to one share, all the following “new number of shares” formulas need to be divided by A:

- If rights are applicable after stock distribution
(one action applicable to other):

- If stock distribution is applicable after rights (one action applicable to other):

$$\text{Adjusted price} = (\text{closing price} \times A + \text{subscription price} \times C \times (1 + B / A)) / ((A + B) \times (1 + C / A))$$

$$\text{Adjusted price} = (\text{closing price} \times A + \text{subscription price} \times C) / ((A + C) \times (1 + B / A))$$

$$\text{New number of shares} = \text{old number of shares} \times ((A + B) \times (1 + C / A)) / A$$

$$\text{New number of shares} = \text{old number of shares} \times ((A + C) \times (1 + B / A))$$

Divisor: increases

Divisor: increases

- Stock distribution and rights (neither action is applicable to the other):

$$\text{Adjusted price} = (\text{closing price} \times A + \text{subscription price} \times C) / (A + B + C)$$

$$\text{New number of shares} = \text{old number of shares} \times (A + B + C) / A$$

Divisor: increases
