

MORGAN STANLEY
Form FWP
November 29, 2018

December 2018

Preliminary Terms No. 1,253

Morgan Stanley Finance LLC
Registration Statement Nos. 333-221595; 333-221595-01

Dated November 28, 2018

Filed pursuant to Rule 433

Structured Investments

Opportunities in U.S. Equities

Dual Directional Trigger Jump Securities Based on the Performance of the S&P 500[®] Index due January 3, 2024

Fully and Unconditionally Guaranteed by Morgan Stanley

Principal at Risk Securities

The Dual Directional Trigger Jump Securities (the “securities”) are unsecured obligations of Morgan Stanley Finance LLC (“MSFL”) and are fully and unconditionally guaranteed by Morgan Stanley. The securities will pay no interest, do not guarantee any return of principal at maturity and have the terms described in the accompanying product supplement for Jump Securities, index supplement and prospectus, as supplemented or modified by this document. At maturity, if the S&P 500[®] Index, which we refer to as the underlying index, has **appreciated** in value by no more than 40%, you will receive for each security that you hold at maturity the stated principal amount of \$10 plus \$4.00. If the underlying index has **appreciated** by more than 40%, you will receive for each security that you hold at maturity the stated principal amount plus an amount based on the percentage increase of the underlying index. If the underlying index has **depreciated** in value but by no more than 20%, you will receive the stated principal amount of your investment plus a positive return equal to the absolute value of the percentage decline, which will effectively be limited to a positive return of 20%. However, if the underlying index has **depreciated** by more than 20%, you will be negatively exposed to the full amount of the percentage decline in the underlying index and will lose 1% of the stated principal amount for every 1% of decline, without any buffer. These long-dated securities are for investors who seek an equity index-based return and who are willing to risk their principal and forgo current income in exchange for the upside payment and absolute return features that in each case apply to a limited range of performance of the underlying index. **Investors may lose their entire initial investment in the securities.** The securities are notes issued as part of MSFL’s Series A Global Medium-Term Notes program. The securities differ from the Jump Securities described in the accompanying product supplement for Jump Securities in that the securities offer the potential for a positive return at maturity if the underlying index depreciates by up to 20%. The securities are not the Buffered Jump Securities described in the accompanying product supplement for Jump Securities. Unlike the Buffered Jump Securities, the securities do not provide any protection if the underlying index depreciates by more than 20%.

All payments are subject to our credit risk. If we default on our obligations, you could lose some or all of your investment. These securities are not secured obligations and you will not have any security interest in, or otherwise have any access to, any underlying reference asset or assets.

SUMMARY TERMS

Issuer: Morgan Stanley Finance LLC

Guarantor: Morgan Stanley

Maturity date: January 3, 2024

Valuation date: December 28, 2023, subject to postponement for non-index business days and certain market disruption events

Underlying index: S&P 500® Index

Aggregate principal amount: \$

- If the final index value is *greater than or equal to* the initial index value:

\$10 + the *greater* of (i) \$10 × the index percent change and (ii) the upside payment

- If the final index value is *less than* the initial index value but is *greater than or equal to* the trigger level:

\$10 + (\$10 x absolute index return)

Payment at maturity: *In this scenario, you will receive a 1% positive return on the securities for each 1% negative return on the underlying index. In no event will this amount exceed the stated principal amount plus \$2.00.*

- If the final index value is *less than* the trigger level:

\$10 × index performance factor

Under these circumstances, the payment at maturity will be less than the stated principal amount of \$10, and will represent a loss of more than 20%, and possibly all, of your investment.

Upside payment: \$4.00 per security (40% of the stated principal amount)

Index percent change: (final index value – initial index value) / initial index value

Absolute index return: The absolute value of the index percent change. For example, a -5% index percent change will result in a +5% absolute index return.

Index performance factor: final index value / initial index value

Initial index value: _____, which is the index closing value on the pricing date

Final index value: The index closing value on the valuation date

Trigger level: _____, which is 80% of the initial index value

Stated principal amount / Issue price: \$10 per security

Pricing date: December 28, 2018

Original issue date: January 4, 2019 (4 business days after the pricing date)

CUSIP / ISIN: 61768W111 / US61768W1119

Listing: The securities will not be listed on any securities exchange.

Agent:

Morgan Stanley & Co. LLC (“MS & Co.”), an affiliate of MSFL and a wholly owned subsidiary of Morgan Stanley. See “Supplemental information regarding plan of distribution; conflicts of interest.”

Estimated value on the pricing date:

Approximately \$9.465 per security, or within \$0.30 of that estimate. See “Investment Summary” on page 2.

Commissions and issue price:

Dual Directional Trigger Jump Securities Based on the Performance of the S&P 500® Index due January 3, 2024

Principal at Risk Securities

Investment Summary

Dual Directional Trigger Jump Securities

The Dual Directional Trigger Jump Securities Based on the Performance of the S&P 500® Index due January 3, 2024 (the “securities”) can be used:

As an alternative to direct exposure to the underlying index that provides a minimum positive return of 40% if the § underlying index has appreciated at all as of the valuation date and offers an uncapped 1-to-1 participation in the appreciation of the underlying index of greater than 40%.

§ To obtain a positive return for a limited range of negative performance of the underlying index.

§ To potentially outperform the underlying index in a moderately bullish or moderately bearish scenario.

If the final index value is less than the trigger level, the securities are exposed on a 1:1 basis to the percentage decline of the final index value from the initial index value. Accordingly, investors may lose their entire initial investment in the securities.

Maturity:	Approximately 5 years
Upside payment:	\$4.00 per security (40% of the stated principal amount)
Minimum payment at maturity:	None
Trigger level:	80% of the initial index value
Coupon:	None
Listing:	The securities will not be listed on any securities exchange

The original issue price of each security is \$10. This price includes costs associated with issuing, selling, structuring and hedging the securities, which are borne by you, and, consequently, the estimated value of the securities on the pricing date will be less than \$10. We estimate that the value of each security on the pricing date will be approximately \$9.465, or within \$0.30 of that estimate. Our estimate of the value of the securities as determined on the pricing date will be set forth in the final pricing supplement.

What goes into the estimated value on the pricing date?

In valuing the securities on the pricing date, we take into account that the securities comprise both a debt component and a performance-based component linked to the underlying index. The estimated value of the securities is determined using our own pricing and valuation models, market inputs and assumptions relating to the underlying index, instruments based on the underlying index, volatility and other factors including current and expected interest rates, as well as an interest rate related to our secondary market credit spread, which is the implied interest rate at which our conventional fixed rate debt trades in the secondary market.

What determines the economic terms of the securities?

In determining the economic terms of the securities, including the upside payment and the trigger level, we use an internal funding rate, which is likely to be lower than our secondary market credit spreads and therefore advantageous to us. If the issuing, selling, structuring and hedging costs borne by you were lower or if the internal funding rate were higher, one or more of the economic terms of the securities would be more favorable to you.

What is the relationship between the estimated value on the pricing date and the secondary market price of the securities?

The price at which MS & Co. purchases the securities in the secondary market, absent changes in market conditions, including those related to the underlying index, may vary from, and be lower than, the estimated value on the pricing date, because the secondary market price takes into account our secondary market credit spread as well as the bid-offer spread that MS & Co. would charge in a secondary market transaction of this type and other factors. However, because the costs associated with issuing, selling, structuring and hedging the securities are not fully deducted upon issuance, for a period of up to 6 months following the issue date, to the extent that MS & Co. may buy or sell the securities in the secondary market, absent changes in market conditions, including those related to the underlying index, and to our secondary market credit spreads, it would do so based on values higher than the estimated value. We expect that those higher values will also be reflected in your brokerage account statements.

MS & Co. may, but is not obligated to, make a market in the securities, and, if it once chooses to make a market, may cease doing so at any time.

Morgan Stanley Finance LLC

Dual Directional Trigger Jump Securities Based on the Performance of the S&P 500® Index due January 3, 2024

Principal at Risk Securities

Key Investment Rationale

The securities offer the potential for a positive return at maturity based on the absolute value of a limited range of the percentage change of the underlying index. At maturity, if the underlying index has **appreciated** in value by no more than 40%, investors will receive the minimum positive return of 40%. If the underlying index has **appreciated** in value by more than 40%, investors will participate on a 1:1 basis in the appreciation of the underlying index. If the underlying index has **depreciated** in value but by no more than 20%, investors will receive the stated principal amount of their investment plus a positive return equal to the absolute value of the percentage decline, which will effectively be limited to a positive return of 20%. However, if the underlying index has **depreciated** by more than 20%, investors will be negatively exposed to the full amount of the percentage decline in the underlying index and will lose 1% of the stated principal amount for every 1% of decline, without any buffer. **Investors may lose their entire initial investment in the securities.** All payments on the securities are subject to our credit risk.

Absolute Return Feature The securities enable investors to obtain a positive return if the final index value is less than the initial index value **but** is greater than or equal to the trigger level.

Upside Scenario if the Underlying Index Appreciates The final index value is greater than or equal to the initial index value. In this case, you receive for each security that you hold \$10 *plus* the *greater* of (i) \$10 *times* the index percent change and (ii) the upside payment of \$4.00 (40% of the stated principal amount). There is no maximum payment at maturity.

Absolute Return Scenario The final index value is less than the initial index value but is greater than or equal to the trigger level, which is 80% of the initial index value. In this case, you receive a 1% positive return on the securities for each 1% negative return on the underlying index. For example, if the final index value is 5% less than the initial index value, the securities will provide a positive return of 5% at maturity. The maximum return you may receive in this scenario is a positive 20% return at maturity.

Downside Scenario The final index value is less than the trigger level. In this case, the securities redeem for at least 20% less than the stated principal amount, and this decrease will be by an amount proportionate to the decline in the value of the underlying index over the term of the securities. Under these circumstances, the payment at maturity will be less than \$8.00 per security. For example, if the final index value is 35% less than the initial index value, the securities will be redeemed at maturity for a loss of 35% of principal at \$6.50, or 65% of the stated principal amount. There is no minimum payment at maturity on the securities, and investors may lose their entire initial investment.

Principal at Risk Securities

How the Securities Work

Payoff Diagram

The payoff diagram below illustrates the payment at maturity on the securities based on the following terms:

- Stated principal amount:** \$10 per security
- Upside payment:** \$4.00 per security (40% of the stated principal amount)
- Trigger level:** 80% of the initial index value
- Maximum payment at maturity:** None
- Minimum payment at maturity:** None. You could lose your entire initial investment in the securities.

Dual Directional Trigger Jump Securities Payoff Diagram

See the next page for a description of how the securities work.

December 2018 Page 4

Morgan Stanley Finance LLC

Dual Directional Trigger Jump Securities Based on the Performance of the S&P 500® Index due January 3, 2024

Principal at Risk Securities

How it works

Upside Scenario if the Underlying Index Appreciates. Under the terms of the securities, if the final index value is § greater than or equal to the initial index value, the investor would receive the \$10 stated principal amount *plus* the greater of (i) \$10 *times* the index percent change and (ii) the upside payment of \$4.00.

§ If the underlying index appreciates 10%, the investor would receive a 40% return, or \$14.00 per security.

§ If the underlying index appreciates 45%, the investor would receive a 45% return, or \$14.50 per security. There is no maximum payment at maturity on the securities.

§ **Absolute Return Scenario.** If the final index value is less than the initial index value and is greater than or equal to the trigger level of 80% of the initial index value, the investor would receive a 1% positive return on the securities for each 1% negative return on the underlying index.

§ If the underlying index depreciates 5%, the investor would receive a 5% return, or \$10.50 per security.

§ The maximum return you may receive in this scenario is a positive 20% return at maturity.

Downside Scenario. If the final index value is less than the trigger level, the investor would receive an amount § significantly less than the \$10 stated principal amount, based on a 1% loss of principal for each 1% decline in the underlying index. Under these circumstances, the payment at maturity will be less than \$8.00 per security. There is no minimum payment at maturity on the securities.

§ If the underlying index depreciates 40%, the investor would lose 40% of the investor's principal and receive only § \$6.00 per security at maturity, or 60% of the stated principal amount.

Principal at Risk Securities

Risk Factors

The following is a non-exhaustive list of certain key risk factors for investors in the securities. For further discussion of these and other risks, you should read the section entitled "Risk Factors" in the accompanying product supplement for Jump Securities, index supplement and prospectus. We also urge you to consult your investment, legal, tax, accounting and other advisers in connection with your investment in the securities.

The securities do not pay interest or guarantee return of any principal. The terms of the securities differ from those of ordinary debt securities in that the securities do not pay interest or guarantee the payment of any principal amount at maturity. If the final index value is less than the trigger level (which is 80% of the initial index value), the absolute return feature will no longer be available and the payout at maturity will be an amount in cash that is at least § 20% less than the \$10 stated principal amount of each security, and this decrease will be by an amount proportionate to the full amount of the decline in the value of the underlying index over the term of the securities, without any buffer. There is no minimum payment at maturity on the securities, and, accordingly, you could lose your entire initial investment in the securities.

The market price of the securities may be influenced by many unpredictable factors. Several factors, many of § which are beyond our control, will influence the value of the securities in the secondary market and the price at which MS & Co. may be willing to purchase or sell the securities in the secondary market, including:

§ the value of the underlying index at any time (including in relation to the trigger level),

§ the volatility (frequency and magnitude of changes in value) of the underlying index,

§ dividend rates on the securities underlying the underlying index,

§ interest and yield rates in the market,

§ geopolitical conditions and economic, financial, political, regulatory or judicial events that affect the component § stocks of the underlying index or securities markets generally and which may affect the value of the underlying index,

§ the time remaining until the maturity of the securities,

§ the composition of the underlying index and changes in the constituent stocks of the underlying index, and

§ any actual or anticipated changes in our credit ratings or credit spreads.

Generally, the longer the time remaining to maturity, the more the market price of the securities will be affected by the other factors described above. Some or all of these factors will influence the price you will receive if you sell your securities prior to maturity. For example, you may have to sell your securities at a substantial discount from the stated principal amount if at the time of sale the value of the underlying index is at or below the initial index value and especially if it is near or below the trigger level.

You cannot predict the future performance of the underlying index based on its historical performance. If the final index value is less than the trigger level, you will be exposed on a 1-to-1 basis to the full decline in the final index value from the initial index value.

The securities are subject to our credit risk, and any actual or anticipated changes to our credit ratings or credit spreads may adversely affect the market value of the securities. You are dependent on our ability to pay all amounts due on the securities at maturity and therefore you are subject to our credit risk. If we default on our § obligations under the securities, your investment would be at risk and you could lose some or all of your investment. As a result, the market value of the securities prior to maturity will be affected by changes in the market's view of our creditworthiness. Any actual or anticipated decline in our credit ratings or increase in the credit spreads charged by the market for taking our credit risk is likely to adversely affect the market value of the securities.

As a finance subsidiary, MSFL has no independent operations and will have no independent assets. As a § finance subsidiary, MSFL has no independent operations beyond the issuance and administration of its securities and will have no independent assets available for distributions to holders of MSFL securities if they make claims in respect of such securities in a bankruptcy, resolution or similar proceeding. Accordingly, any recoveries by such

Morgan Stanley Finance LLC

Dual Directional Trigger Jump Securities Based on the Performance of the S&P 500® Index due January 3, 2024

Principal at Risk Securities

holders will be limited to those available under the related guarantee by Morgan Stanley and that guarantee will rank *pari passu* with all other unsecured, unsubordinated obligations of Morgan Stanley. Holders will have recourse only to a single claim against Morgan Stanley and its assets under the guarantee. Holders of securities issued by MSFL should accordingly assume that in any such proceedings they would not have any priority over and should be treated *pari passu* with the claims of other unsecured, unsubordinated creditors of Morgan Stanley, including holders of Morgan Stanley-issued securities.

The amount payable on the securities is not linked to the value of the underlying index at any time other than the valuation date. The final index value will be the index closing value on the valuation date, subject to postponement for non-index business days and certain market disruption events. Even if the value of the underlying index appreciates prior to the valuation date but then drops by the valuation date to be below the trigger level, the payment at maturity will be significantly less than it would have been had the payment at maturity been linked to the value of the underlying index prior to such drop. Although the actual value of the underlying index on the stated maturity date or at other times during the term of the securities may be higher than the final index value, the payment at maturity will be based solely on the index closing value on the valuation date.

Investing in the securities is not equivalent to investing in the underlying index. Investing in the securities is not equivalent to investing in the underlying index or its component stocks. Investors in the securities will not have voting rights or rights to receive dividends or other distributions or any other rights with respect to the stocks that constitute the underlying index.

Adjustments to the underlying index could adversely affect the value of the securities. The underlying index publisher may add, delete or substitute the stocks constituting the underlying index or make other methodological changes that could change the value of the underlying index. The underlying index publisher may discontinue or suspend calculation or publication of the underlying index at any time. In these circumstances, the calculation agent will have the sole discretion to substitute a successor index that is comparable to the discontinued underlying index and will be permitted to consider indices that are calculated and published by the calculation agent or any of its affiliates.

The rate we are willing to pay for securities of this type, maturity and issuance size is likely to be lower than the rate implied by our secondary market credit spreads and advantageous to us. Both the lower rate and the inclusion of costs associated with issuing, selling, structuring and hedging the securities in the original issue price reduce the economic terms of the securities, cause the estimated value of the securities to be less than the original issue price and will adversely affect secondary market prices. Assuming no change in market conditions or any other relevant factors, the prices, if any, at which dealers, including MS & Co., may be willing to purchase the securities in secondary market transactions will likely be significantly lower than the original issue price, because secondary market prices will exclude the issuing, selling, structuring and hedging-related costs that are included in the original issue price and borne by you and because the secondary market prices will reflect our secondary market credit spreads and the bid-offer spread that any dealer would charge in a secondary market transaction of this type as well as other factors.

The inclusion of the costs of issuing, selling, structuring and hedging the securities in the original issue price and the lower rate we are willing to pay as issuer make the economic terms of the securities less favorable to you than they otherwise would be.

However, because the costs associated with issuing, selling, structuring and hedging the securities are not fully deducted upon issuance, for a period of up to 6 months following the issue date, to the extent that MS & Co. may buy or sell the securities in the secondary market, absent changes in market conditions, including those related to the underlying index, and to our secondary market credit spreads, it would do so based on values higher than the estimated value, and we expect that those higher values will also be reflected in your brokerage account statements.

The estimated value of the securities is determined by reference to our pricing and valuation models, which may differ from those of other dealers and is not a maximum or minimum secondary market price. These pricing and valuation models are proprietary and rely in part on subjective views of certain market inputs and certain assumptions about future events, which may prove to be incorrect. As a result, because there is no market-standard way to value these types of securities, our models may yield a higher estimated value of the securities than those generated by others, including other dealers in the market, if they attempted to value the securities. In addition, the estimated value on the pricing date does not represent a minimum or maximum price at which dealers, including MS & Co., would be willing to purchase your securities in the secondary market (if any exists) at any time. The value of your securities at any time after the date of this document will vary based on many factors that cannot

Morgan Stanley Finance LLC

Dual Directional Trigger Jump Securities Based on the Performance of the S&P 500® Index due January 3, 2024

Principal at Risk Securities

be predicted with accuracy, including our creditworthiness and changes in market conditions. See also “The market price of the securities may be influenced by many unpredictable factors” above.

The securities will not be listed on any securities exchange and secondary trading may be limited. The securities will not be listed on any securities exchange. Therefore, there may be little or no secondary market for the securities. Morgan Stanley & Co. LLC, which we refer to as MS & Co., may, but is not obligated to, make a market in the securities and, if it once chooses to make a market, may cease doing so at any time. When it does make a market, it will generally do so for transactions of routine secondary market size at prices based on its estimate of the current value of the securities, taking into account its bid/offer spread, our credit spreads, market volatility, the § notional size of the proposed sale, the cost of unwinding any related hedging positions, the time remaining to maturity and the likelihood that it will be able to resell the securities. Even if there is a secondary market, it may not provide enough liquidity to allow you to trade or sell the securities easily. Since other broker-dealers may not participate significantly in the secondary market for the securities, the price at which you may be able to trade your securities is likely to depend on the price, if any, at which MS & Co. is willing to transact. If, at any time, MS & Co. were to cease making a market in the securities, it is likely that there would be no secondary market for the securities. Accordingly, you should be willing to hold your securities to maturity.

The calculation agent, which is a subsidiary of Morgan Stanley and an affiliate of MSFL, will make determinations with respect to the securities. As calculation agent, MS & Co. will determine the initial index value, the trigger level and the final index value, including whether the value of the underlying index has decreased to below the trigger level, and will calculate the amount of cash you receive at maturity, if any. Moreover, certain determinations made by MS & Co., in its capacity as calculation agent, may require it to exercise discretion and make subjective judgments, such as with respect to the occurrence or non-occurrence of market disruption events § and the selection of a successor index or calculation of the final index value in the event of a market disruption event or discontinuance of the underlying index. These potentially subjective determinations may adversely affect the payout to you at maturity, if any. For further information regarding these types of determinations, see “Description of Securities—Postponement of Valuation Date(s),” “—Discontinuance of Any Underlying Index or Basket Index; Alteration of Method of Calculation,” “—Alternate Exchange Calculation in case of an Event of Default” and “—Calculation Agent and Calculations” in the accompanying product supplement. In addition, MS & Co. has determined the estimated value of the securities on the pricing date.

§ **Hedging and trading activity by our affiliates could potentially adversely affect the value of the securities.** One or more of our affiliates and/or third-party dealers expect to carry out hedging activities related to the securities (and to other instruments linked to the underlying index or its component stocks), including trading in the stocks that constitute the underlying index as well as in other instruments related to the underlying index. As a result, these entities may be unwinding or adjusting hedge positions during the term of the securities, and the hedging strategy may involve greater and more frequent dynamic adjustments to the hedge as the valuation date approaches. Some of our affiliates also trade the stocks that constitute the underlying index and other financial instruments related to the underlying index on a regular basis as part of their general broker-dealer and other businesses. Any of these hedging or trading activities on or prior to the pricing date could potentially increase the initial index value, and, therefore, the value at or above which the underlying index must close on the valuation date so that investors do not suffer a

significant loss on their initial investment in the securities. Additionally, such hedging or trading activities during the term of the securities, including on the valuation date, could adversely affect the value of the underlying index on the valuation date, and, accordingly, the amount of cash an investor will receive at maturity, if any.

The U.S. federal income tax consequences of an investment in the securities are uncertain. Please read the discussion under “Additional Information—Tax considerations” in this document and the discussion under “United States Federal Taxation” in the accompanying product supplement for Jump Securities (together, the “Tax Disclosure Sections”) concerning the U.S. federal income tax consequences of an investment in the securities. If the Internal Revenue Service (the “IRS”) were successful in asserting an alternative treatment, the timing and character of income § on the securities might differ significantly from the tax treatment described in the Tax Disclosure Sections. For example, under one possible treatment, the IRS could seek to recharacterize the securities as debt instruments. In that event, U.S. Holders would be required to accrue into income original issue discount on the securities every year at a “comparable yield” determined at the time of issuance and recognize all income and gain in respect of the securities as ordinary income. Additionally, as discussed under “United States Federal Taxation—FATCA” in the accompanying product supplement for Jump Securities, the withholding rules

Morgan Stanley Finance LLC

Dual Directional Trigger Jump Securities Based on the Performance of the S&P 500® Index due January 3, 2024

Principal at Risk Securities

commonly referred to as “FATCA” would apply to the securities if they were recharacterized as debt instruments. The risk that financial instruments providing for buffers, triggers or similar downside protection features, such as the securities, would be recharacterized as debt is greater than the risk of recharacterization for comparable financial instruments that do not have such features. We do not plan to request a ruling from the IRS regarding the tax treatment of the securities, and the IRS or a court may not agree with the tax treatment described in the Tax Disclosure Sections.

In 2007, the U.S. Treasury Department and the IRS released a notice requesting comments on the U.S. federal income tax treatment of “prepaid forward contracts” and similar instruments. The notice focuses in particular on whether to require holders of these instruments to accrue income over the term of their investment. It also asks for comments on a number of related topics, including the character of income or loss with respect to these instruments; whether short-term instruments should be subject to any such accrual regime; the relevance of factors such as the exchange-traded status of the instruments and the nature of the underlying property to which the instruments are linked; the degree, if any, to which income (including any mandated accruals) realized by non-U.S. investors should be subject to withholding tax; and whether these instruments are or should be subject to the “constructive ownership” rule, which very generally can operate to recharacterize certain long-term capital gain as ordinary income and impose an interest charge. While the notice requests comments on appropriate transition rules and effective dates, any Treasury regulations or other guidance promulgated after consideration of these issues could materially and adversely affect the tax consequences of an investment in the securities, possibly with retroactive effect. Both U.S. and Non-U.S. Holders should consult their tax advisers regarding the U.S. federal income tax consequences of an investment in the securities, including possible alternative treatments, the issues presented by this notice and any tax consequences arising under the laws of any state, local or non-U.S. taxing jurisdiction.

S&P® 500 Index Overview

The S&P 500® Index, which is calculated, maintained and published by S&P Dow Jones Indices LLC (“S&P”), consists of stocks of 500 component companies selected to provide a performance benchmark for the U.S. equity markets. The calculation of the S&P 500® Index is based on the relative value of the float adjusted aggregate market capitalization of the 500 component companies as of a particular time as compared to the aggregate average market capitalization of 500 similar companies during the base period of the years 1941 through 1943. For additional information about the S&P 500® Index, see the information set forth under “S&P 500® Index” in the accompanying index supplement.

Additional Terms of the Securities

Please read this information in conjunction with the summary terms on the front cover of this document.

Additional Terms:

If the terms described herein are inconsistent with those described in the accompanying product supplement, index supplement or prospectus, the terms described herein shall control.

Underlying index publisher: S&P Dow Jones Indices LLC

Postponement of maturity date: If, due to a market disruption event or otherwise, the valuation date is postponed so that it falls less than two business days prior to the scheduled maturity date, the maturity date will be postponed to the second business day following the valuation date as postponed.

Denominations: \$10 per security and integral multiples thereof

Trustee: The Bank of New York Mellon

Calculation agent: MS & Co.

Issuer notice to registered security holders, the trustee and the depository:

In the event that the maturity date is postponed due to postponement of the valuation date, the issuer shall give notice of such postponement and, once it has been determined, of the date to which the maturity date has been rescheduled (i) to each registered holder of the securities by mailing notice of such postponement by first class mail, postage prepaid, to such registered holder's last address as it shall appear upon the registry books, (ii) to the trustee by facsimile confirmed by mailing such notice to the trustee by first class mail, postage prepaid, at its New York office and (iii) to The Depository Trust Company (the "depository") by telephone or facsimile, confirmed by mailing such notice to the depository by first class mail, postage prepaid. Any notice that is mailed to a registered holder of the securities in the manner herein provided shall be conclusively presumed to have been duly given to such registered holder, whether or not such registered holder receives the notice. The issuer shall give such notice as promptly as possible, and in no case later than (i) with respect to notice of postponement of the maturity date, the business day immediately preceding the scheduled maturity date and (ii) with respect to notice of the date to which the maturity date has been rescheduled, the business day immediately following the actual valuation date for determining the final index value.

The issuer shall, or shall cause the calculation agent to, (i) provide written notice to the trustee and to the depository of the amount of cash, if any, to be delivered with respect to the securities, on or prior to 10:30 a.m. (New York City time) on the business day preceding the maturity date, and (ii) deliver the aggregate cash amount, if any, due with respect to the securities to the trustee for delivery to the depository, as holder of the securities, on the maturity date.

Additional Information About the Securities

**Additional
Information:**

**Minimum
ticketing size:** \$1,000 / 100 securities

**Tax
considerations:**

Although there is uncertainty regarding the U.S. federal income tax consequences of an investment in the securities due to the lack of governing authority, in the opinion of our counsel, Davis Polk & Wardwell LLP, under current law, and based on current market conditions, a security should be treated as a single financial contract that is an “open transaction” for U.S. federal income tax purposes.
